There has been much discussion about placing the Army and the Navy, and, in fact, our entire Military Establishment, under one central head, such as a secretary for national defense, with under secretaries in charge of the various branches. This plan, although not new, nevertheless, has much to recommend it. Certainly, it would place the authority over all branches of service in one official and much duplication of effort, with corresponding efficiency in results, should obtain. Any attempts to establish such a reorganization of our armed forces would, no doubt, meet with vigorous and vocal opposition from various sources, but in the absence of more plausible reason for opposition, it appears that future national defense and public security would be better served by such a consolidation.

Any policy with respect to universal training in peacetime will also be substantially affected by the vital needs of our country. We have never adopted universal training as a military policy of this Nation. If adequate and satisfactory international associations and commitments follow this war, then our vital defense needs, no doubt, will be so reduced as not to demand universal training. However, in event of the failure of adequate and satisfactory international commitments, and in event that we are thrown entirely upon our own resources for the defense of our country and our interests in a hostile world, or a world in which the substantial portion is hostile, then, no doubt, in the interest of national security, universal training would be the only substantial guaranty for the immediate availability of great defensive power for our country.

In event universal training should become a part of our military policy, the general program outlined by the national defense act, and to which I have referred before, could be readily adoptable. National Guard units and facilities could be easily available within the States for the training of their proportionate numbers, and the Regular Army, through expansion of its facilities, could accommodate and train proper increments and groups. The particular method of training and of organization would consist of details that could be routinely worked out. But universal training, if necessary, and if a part of our policy, could also be adequately and efficiently conducted and administered without the necessity of converting our Nation into a vast military establishment under complete Federal control and dominion.

In any event, the policy of retaining sectional authority and control must be continued in peacetime as a civilian and State responsibility and right so far as the mass of our defense forces is concerned.

There are, of course, many sound and practical individuals who view universal military training as a necessary step in our post-war military policy and, no doubt, under the tension of war, many people would approve and advocate such a policy; whereas, with the return of peace the demand for such policy might diminish in the public mind. In any event, such a far-reaching program and policy will require the mature and studied consideration of the American people and its necessity will be governed by future events.

In conclusion, may I again point out that we are a nation of peace and peaceful pursuits; that our institutions are built upon the basis of peace and individual opportunity and that any military policy must serve these ends. It is, of course, our ideal and goal to outlaw war and to avoid its destruction. Disarmament is a worthy goal providing that, with disarmament, the ends of peace and of our system of government and our national responsibilities can be served. But peaceful nations only invite destruction when they disarm or so weaken themselves as to be unable to protect their system and their ideals, by force if necessary, against international banditry and savagery. Peace-loving nations can neither relax their vigilance nor weaken their physical power until, through experience and the proof of time, the power and the will for agression and destruction have been eliminated from those nations or groups of nations where vandalism breeds.

Until such time as practical assurance and proof are apparent, we as a nation must assume and discharge the ultimate responsibility for our own integrity, sovereignty, and safety. We must maintain our idealism and our goals, we must discuss our policies among ourselves, as a people, and our Nation must understand and approve their execution. I believe it was Theodore Roosevelt who said, "Speak softly, but carry a big stick," and the frontiersman, who sought to establish his home and secure the benefits of comfort and peace, nevertheless, looked constantly to his priming and kept his powder dry.

We must avoid military dominance of our Nation and keep the military subservient to our civil processes, but, at the same time, in our civil progress we must not permit our strength to be foolishly dissipated and unusable against the time of possible vital need.

The following resolution was adopted by the Conference of Governors May 31, 1944, at Hershey, Pa.:

"V. POST-WAR MILITARY POLICY

"*Resolved*, That we, the Governor's Conference, believe that the determination of our post-war policy and the size of our post-war Military Establishment should be deferred until after the cessation of hostilities because the dimensions of our post-war Military Establishment can better be determined then, and because those now serving in our armed forces may be accorded a voice in such determination.

"We believe that the post-war Army of the United States should conform generally to the act of June 3, 1916, as amended to date, retaining a National Guard as provided in said act."

Freemen Versus Slaves

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Clinton (Mass.) Daily Item of February 28, 1945:

FREEMEN VERSUS SLAVES

There are living in Clinton and contiguous towns thousands of men and women who have seen the productivity of the American people in industry and agriculture grow to three times that of any other nation on earth and from 10 to 20 times that of Asia, where the great masses of population reside.

These residents are convinced that this added productivity is a manifestation of the resourcefulness of a free people which will continue to grow and expand without limit if individual freedom is preserved.

The living standards of the American people have kept apace with this increased productivity and even during the worst of the long depression which continued until World War No. 2 started, America was able to support its unemployed, the ill-clothed and the ill-housed, on a higher living standard than that enjoyed by the skilled mechanics in the countries of the old world.

In a nutshell, this is the history of a free representative republic and it should not be lightly tampered with or abridged.

We are in the midst of a great war with 12,000,000 of our sons and brothers fighting for their country in all parts of the globe. The issues of the war are deep, tempers are uncertain, and regardless of the magnificent victories already achieved it will necessarily be a great many years before complete peace can be restored on this earth.

We cannot afford to resort to any expediency which sacrifices an iota of the principles of a free people under the illusion that it is merely temporary.

"They that can give us essential liberty to obtain a little temporary safety deserve neither liberty nor safety," wrote the wise sage, Benjamin Franklin, many years ago and these words are just as true today as they were when they were penned.

Naturally, everybody is worried by the obvious lack of interest in the war effort on the part of many Americans and are disturbed by their unwillingness to accept war jobs, but should we not carefully look into the cause of such conditions and cure them at the source rather than put despair in the hearts of men by selling them down the river in bondage?

We must remember that it is the invisible chains that clank the loudest in the hearts and souls of men and women.

Today you can travel from Maine to the Golden Gate and scarcely see a flag flying from any home.

In World War No. 1, to the contrary, there were few homes that did not respectfully raise its flag in the morning and take it down reverently at night.

This, in turn, was coupled with enthusiastic and patriotic cooperation in the conservation of wheat, in gasless Sundays and meatless days, in restrictions in the operation of saloons and a hundred and one other helpful and cooperative activities.

The oil industry and many others set up voluntary cooperative groups that performed a truly magnificent job in supplying our war needs. So outstanding was this performance that Clemenceau said we "had floated to victory on oil."

But in those war days we were told the truth, the whole truth, and nothing but the truth, and more than 2,000,000 American boys were landed in France.

What has caused the difference between that period and this? It is a lack of candor and frankness to the people, the application of heat in the forms of threats, intimidation and coercion, and many times downright falsehoods respecting the progress and conduct of the war, coupled with outrageously optimistic statements such as the silly, asinine, and untruthful pretense for more than 3 years that the end of the war is just around the corner.

Of course no informed person believed any such rot, but the veil of secrecy, at Washington, was so thick that only a few could penetrate it.

It is a matter of record that within the past 15 months men employed in one of America's vast shipyards, working as free men have increased their productivity per man 50 percent.

These men, given incentive pay, have increased their earnings 30 percent and the cost of ships for the Government has been considerably reduced over the former figures.

In that shipyard alone, more than 7,000 men working with tools have enjoyed average earnings of more than $100 per month and they earned every penny of the sum because they have produced ships with fewer man-hours than was ever before recorded anywhere in the history of the world.

In the oil industry similar conditions are reported. With a slight increase in employment the oil industry of America has increased its cutput nearly 40 percent and at the same time has enormously improved the quality to meet the exacting war demands.

Why then, in face of these and countless other facts that might be cited, do we find requests and arguments for the conscription of 18,000,000 men?

America has not failed. It is absolutely futile for the Government to attempt to cover up its own shortcomings in leadership by piling threat upon threat, intimidation upon intimidation, and coercion upon coercion.

Freemen produce best and a host of witnesses back up this statement through the years.

Little wonder that the farmers and agricultural leaders of America have solidly taken their stand against any measure to conscript American labor.

Industry is unanimously opposed to it because management knows that slave labor is not only worthless labor, but poisons everything it touches and undermines the productivity of freemen.

The heads of the labor unions have taken a strong stand against the proposal, although Messrs. Browder and Hillman are apparently still chuckling in their tents because they know full well that such legislation as has been proposed at Washington will reduce American productivity to that of the old world, cut our standards of living, and make us ripe for the adoption of the old world Communistic philosophies.

The art of production and the art of destruction are as far apart as the poles.

Give us honest, truthful, and inspiring leadership on the home front and American production will give to the armed forces everything they can conceivably use.

The pending manpower bill takes us back to the ante bellum days and it is just as true today as it was in Lincoln's time that this Nation cannot endure half slave and half free.

The sinister purpose of the propcsal before Congress is that those who espouse it really seek to be given the power to enslave 18,000,000 of their fellowmen, including the soldiers and sailors as they return, for an indefinite period which may well last for a generation in the twilight zone between war and peace.

An Independent Dealer Throws Light on the Oil Cartel

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. COFFEE. Mr. Speaker, my attention has been called to a very serious situation that confronts independent oil wholesalers throughout the east coast of the United States. If the information now before me is true there has been built up a gigantic domestic oil cartel under the guise of solving the oil transportation problem. Instead of facilitating the movement of petroleum products to the shortage areas on the east coast a virtual embargo has been placed thereon. Unless you are a member of the exclusive cartel an independent oil company is not permitted to move petroleum products into the shortage area.

This country opposes as a policy the operation of cartels in foreign trade. We should be as diligent in the prevention of cartels in our domestic industry. The workings of this oil cartel have been described in detail in a letter by Mr. Fred W. Herlihy of the Power Oil Co., Orangeburg, S. C., addressed to the Attorney General of the United States. It is hoped that the Attorney General will thoroughly investigate the situation and put an end to the nefarious activities. The letter from Mr. Herlihy to the Attorney General, dated February 14, 1945, follows:

FEBRUARY 14, 1945.

Hon. FRANCIS BIDDLE,

Attorney General, Washington, D. C.

DEAR SIR: When you affixed your signature of approval to P. A. W. Directive No. 59, did you realize you were giving your consent to the foundation stone of one of the greatest monopolies ever to exist? Did you realize you were aiding the very thing you are supposed to prevent and fight?

The fact that such a directive was needed in the petroleum industry at that time is not questioned, but I do not believe that you have the knowledge that by subsequent regulations and orders (which did not carry your approval), independent competition has been throttled. Let me explain to you how this has been accomplished.

Schedule A of Petroleum Directive No. 59 set forth the names of certain companies as original suppliers. The fact that many names of companies who prior to the war had shipped petroleum products into the territory, now known as district No. 1, were left off this list and several names of large companies who prior to the war had never shipped a drop of petroleum products into district No. 1 are included, is evident proof that this list was made arbitrarily.

Despite the fact that the preamble of Directive No. 59 states that all methods and means of transportation were to be efficiently utilized, it was possible for some ingenious jobbers to transport petroleum products by the same methods used by the larger companies. Such quantities of products brought into district No. 1 by these jobbers were known as being outside of No. 59.

Even though these additional supplies were greatly aiding jobbers in shortage areas and contributing to the alleviation of this short product, an attempt was made to outlaw such supplies by an order known as PAO No. 5. In brief, this order required that a "permit" be issued before moving any product into district No. 1 which was not scheduled under Directive No. 59. The teeth in this order is that any product moved without a so-called permit would not carry compensability for excess transportation costs as refunded by Defense Supplies Corporation. Such excess costs were evidently incurred, but were to be given to only a privileged few while the balance had to stand their own excess costs, even though such costs were refunded from monies of a corporation of the United States. The writer had the personal assurance of the then director-in-charge of district No. 1 that no permits would be refused. Shortly after PAO No. 5 was revoked permits were given freely. Gradually they were discontinued and now the securing of a permit is an impossibility. The only excuse needed for the rejection of a permit is, "You were not an original supplier." Under the regulation, of course, an original supplier does not need a permit.

A district is divided into zones. The zones are subdivided into supply terminal areas (S. T. A.). The noose was further tightened by prohibiting the movement of products from one S. T. A. to another. Again refusal of excess transportation costs is the whip. The control of profitable movement of petroleum products is now complete.

In order that you might understand how this control works, I would like to present my own case as a concrete example. My company is what is known as a branded jobber, that is, we buy from one supplier and sell under that supplier's brand. Prior to the war, and in fact until May 1943, all the gasoline necessary to supply the rationed demand (as determined by O. P. A.) of our stations and commercial accounts was sold to us by this one company. Until this time we were not curtailed in any way. We were getting our supply from the pipe-line terminal at Spartanburg, S. C. On May 15, 1943, without previous notice or warning, our supply was drastically curtailed. Realizing that this reduced supply would not take care of the bona fide rationed demand, it became necessary to secure a portion of my supplies elsewhere. These were purchased from various suppliers, but it appeared that any arrangement which was made was only temporary and that as soon as a source of supply was secured, for some reason or other it was soon terminated. This condition existed until the first of this year. Beginning in January all sources of supply had been exhausted except for movements which had to be made by the permit arrangement referred to above. Many of my essential commercial accounts and all of my dealers have been out of gasoline since the first of the year. Some were fortunate enough to secure gasoline from other companies, such as Standard, Gulf, Texaco, and American. I freely gave my permission to the dealers to use my equipment in order to secure any available product.

Realizing that such a condition could not continue, I discussed this matter with the officials of P. A. W. in Washington, and they advised me to go to New York. This I did, spending 4 days there, but was unable to secure a P. A. W. permit for the importation of gasoline despite the fact that my prewar supplier was unable to furnish me with the necessary quantity of product. The only excuse which P. A. W. gave me for not issuing a permit was that I was not an original supplier before the war. They stated that it was up to my original supplier to furnish me with the necessary quantity of product, which I proved to the P. A. W. officials by factual information that it was necessary for me to have to furnish rationed demand. The changing of my source of supply from the pipe line terminal at Spartanburg to the ocean terminal at Charleston was the greatest factor in curtailing the ability of my supplier to furnish me with the necessary amount. Due to the loss of our tankers Charleston was put on a barge program to be fed by the Trans-Florida pipe line and barges through the Inter-Land Waterway. This program has never worked, nor has it been possible for any of the companies to bring into the southeastern ports the necessary amount of product. A major oil company selling all their products through direct operation is free to move products into any portion of the zone. However, an independent jobber is entirely limited to that product available in his particular supply terminal area. While supply terminal areas fed by the pipe line have been operating at 100 percent of the nominations made by the oil companies, the coastal supply terminal areas have been given as low as 42 percent of the product nominated for that particular area. This was caused by the failure of the barge program and the inability to deliver the product to the area needed.

It would appear that regardless of proven ration demand and the amount of coupons issued by the O. P. A., an independent jobber is entirely at the mercy of those people controlling the source of supply. Despite the fact that the original supplier of a jobber is unable to furnish ration demand does not seem to be enough excuse for P. A. W. to deviate from their present hard-and-fast rule that no permits will be issued to anyone not on the original supplier's list.

Continuance of the present situation for another 2 months' period will result in bankruptcy of my oil business. I am not looking for profit at this time, but I am trying to hold together my organization and maintain a status quo position as that held prior to the war. I have lost four accounts in the past month and a half, and as long as they can secure their supplies from other companies I in no way can blame them for leaving me.

I ask that you make an immediate investigation of these facts as set forth, and I will be glad to come to Washington to contribute in any way any additional information which you may desire.

Very truly yours,

POWER OIL CO.,
FRED W. HERLIHY.

Poland Day

EXTENSION OF REMARKS
OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. D'ALESANDRO. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a speech I made last Sunday, which was proclaimed Poland Day by Governor O'Conor, of Maryland, and also a copy of the proclamation.

I am very happy to be present and join with you in the celebration of Poland Day and also wish to congratulate Governor O'Conor for proclaiming today Poland Day and his request to observe today as a day of prayer to the end that liberty and peace may be restored to Poland and that her people soon again in work out their future free from oppression.

The Polish people have been tragically oppressed. They have been hammered and tested in fires of affliction and have developed a quality of character, a religious faith, a self-defendence, a passion for freedom, an industry, and a courage, which makes them among the choice people of the world. We have millions of Poles in America as our fellow citizens and they have added enormously to our strength and to our progress.

America sympathizes with the people of Poland. America goes further. America is determined to do everything within its power to bring about that victory which means the reestablishment of Poland as an independent nation, with the right of the people of that country to go forward in an effort to obtain those national aspirations that will be consistent with their own best interests, and for a decent future world.

To the Polish Nation, therefore, on this occasion, we send our salute, our praise, our faith, and our prayers, to those who suffer, to those yet in arms all our trust and help, and the Poles, wherever they may be, have our solemn pledge of common fighting purposes, that her enemies shall go down and that Poland shall rise again.

I join with all of you in earnest hope there will be a lasting peace and out of it will emerge a strong Poland.

Out of the peace to come there must also be a better understanding of the problems of the Polish people. We in this country are going to help Poland economically and in every other way we can. We want her to become a strong, independent, prosperous nation under a government selected by the Polish people. The Nation Poland was before the Nazi invasion we want to see a readjustment of the boundaries by agreement arrived at through the council of nations to be set up under the Dumbarton Oaks agreement. Once and for all Poland must become and remain a nation of Polish people not under any alien government.

I know the results of the Yalta Conference are a great disappointment to you, and I for one share in the hope that the agreement is not final and will be amended in the future.

I am confident that America will do everything in its power to aid Poland and that the conference at San Francisco in April will go forth to advance the Polish cause.

EXECUTIVE DEPARTMENT,
Annapolis, Md.

GOVERNOR'S PROCLAMATION, POLAND DAY, MARCH 4, 1945

Whereas the Polish people, by their tenacious and courageous fight against hopeless odds in this greatest of all wars for the freedom of mankind, have truly merited achievement of their national aim, the restoration of Poland as an independent nation; and

Whereas American citizens of Polish extraction now total many thousands in the armed forces of the United States; and

Whereas Poland has contributed magnificently to the advancement, culture, and scientific knowledge of the world through such men and women as Kosciusko, Pulaski, Madame Curie, Joseph Conrad, Chopin, Paderewski, and many others: Now, therefore,

I, Herbert R. O'Conor, Governor of the State of Maryland, do hereby proclaim Sunday, March 4, as Poland Day in Maryland and urge our people to observe this day by special prayers to Almighty God, to the end that liberty and peace may be restored to this brave country, and that its people soon again may have the opportunity to work out their future free from oppression and with renewed faith in the justice of their national aspirations.

Given under my hand and the great seal of the State of Maryland, at the city of Annapolis, on this 23d day of February, in the year of our Lord, 1945.

HERBERT R. O'CONOR,
Governor.
ARTHUR J. MCWILLIAMS,
Secretary of State.

Marquis Childs Supports Program for an International Peace Patrol of the Air to Prevent Future Wars

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I am inserting in the RECORD at this point an article by Marquis Childs appearing in the Washington Post. In this article Mr. Childs argues in support of the program to establish an international peace patrol of the air to prevent future wars.

On January 30 of this year, in an address appearing on page 635 of the CONGRESSIONAL RECORD, I outlined my own views on this subject under the title of "Peace—If We Want It" and detailed the reasons why I have proposed the establishment of an international peace patrol of the air as an effective device for preventing war. Since that time I have had a large number of letters and articles forwarded to me in support of this proposal, and I am gratified to learn that in writing from the headquarters of the Mediterranean Allied Air Command, Mr. Childs is in thorough accord with such a proposal.

The article follows:

WASHINGTON CALLING

(By Marquis Childs)

COMBINED AIR FORCE

HEADQUARTERS, MEDITERRANEAN ALLIED AIR COMMAND.—Under this command, which to a casual observer seems outside the main focus of the war, are thousands of planes and hundreds of thousands of men—more planes than the German Luftwaffe had at the height of its power.

The Mediterranean command includes Italy, southern France, the Balkans, and a part of the Middle East. It covers a complexity of political as well as technical troubles and, in some respects, seems to me to suggest a working design for the future.

In the course of this quiet swing through the European war, I have written a great deal about our air power. There are several reasons for this. One is that, with customary thorough organization, the Army Air Forces have made it possible to see their operations in every phase. But a more important reason is my conviction that the future belongs to the air.

The future in peace, no less than in war, is in the airplane and we have, it seems to me, only begun to understand the social and political implications of this machine that has annihilated space.

Two weapons have come out of the war with profound meanings for the years to come—jet-propulsion planes and rocket bombs. If we allow those weapons, with their astonishing potentialities, to be developed by rival nationalisms for war-making purposes, then our civilization, which may just avert complete disaster this time, will certainly be destroyed once and for all.

It is with this threat in mind that I see portents of hope in the air force that has been put together in the Mediterranean, for it is truly an international air force.

Under Lt. Gen. Ira C. Eaker, here in this part of the world that was the cradle of our civilization, nine nationalities are flying daily missions to defeat Germany. In Eaker's squadrons are pilots and crews from Brazil, Greece, Poland, France, New Zealand, South Africa, Australia, Great Britain and the United States.

Moreover, the command is truly international. Usually in combined operations—for example, between British and Americans—two officers, one of each nationality, are assigned to the same task. Here in the Mediterranean, one officer is assigned to do a job regardless of nationality. It seems to work with a reasonable degree of harmony.

Presumably, when the war is ended, this international command will be dismantled. But why should it necessarily be taken apart? Why should it not serve as a nucleus for an international air force to keep peace?

It seems too valuable a precedent to discard lightly. It offers a working formula for the kind of cooperation that must come if we are to rescue ourselves from ultimate and final doom.

Eventually, in peacetime, this international force could be expended to include all nationalities in proportion to their air strength. Here is no less than the pattern for a United Nations air force. To wipe out the start that has been made here would seem to be a tragic waste. Sooner or later, in peace as in war, we must come to some such internationalism of the air.

The maturity and responsibility shown by airmen such as Eaker give the hope that this is not just a remote ideal but a real prospect for the post-war future.

Eaker's organizational genius has long since been demonstrated. It was almost 3 years ago today that he arrived in England, with five other officers and a briefcase full of plans, to help organize the Eighth Air Force. What he did in England is history, and the course of the war is so swift that today it seems almost like ancient history.

Now, in the Mediterranean, he has played an important part in the assembling of this extraordinary international air armada.

Inevitably, as head of such a force, Eaker has to make decisions with broad political and diplomatic implications. So far as I have been able to judge, he has moved through troubled waters in this part of the world with great skill.

He has formed a friendship with Yugoslavia's Marshal Tito. His knowledge of the ins and outs of the Balkans and the Mediterranean is broadened by daily contacts.

Britain's Air Chief Marshal, Sir Arthur Tedder, is a counterpart of Eaker in the new internationalism of the air. There are others like them on both sides of the Atlantic.

Here, perhaps, is the formula for the future. If only we have the wisdom to make use of the lessons learned in war, then all this seemingly endless horror may not have been in vain.

Broadcasting Congressional Debates

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. COFFEE. Mr. Speaker, there is now pending in the Congress, House Joint Resolution 89, a bill to provide for the broadcast on the radio of congressional debates and proceedings under certain safeguards. A similar measure has been introduced in the Senate by the eminent and scholarly Senator from Florida, CLAUDE PEPPER.

This proposal has elicited much favorable comment from columnists, editors, and radio speakers. Among the interesting editorials which have discussed the suggested congressional broadcasts is one from the Journal of Commerce of Chicago, Ill.

Here it is:

LENDING OUR EARS

The proposal to broadcast proceedings of Congress is being taken seriously by such groups as labor unions, farmers, teachers, and church and women's societies who regard the idea as a logical extension of the pioneer day town meeting. Those who are supporting the resolution introduced by Senator PEPPER, of Florida, and Representative COFFEE, of Washington, to put the lawmakers on the air believe that it can be more than a dull recitation of the CONGRESSIONAL RECORD.

Under one suggestion, a debate in the House of Representatives would be broadcast during daytime hours and a transcript of important to Senate proceedings would be played at night. Thus, if a housewife tired of a weeping widow on a daytime program she could turn her attention to the greater problems of the Nation, or the world, and at night, when the infantile quiz programs palled on the listener, he could do a little brain work by trying to follow a Senator's reasoning.

Supporters of the Pepper-Coffee resolution are primarily interested in having the people generally listen to discussion of world security and allied matters, but they also point out that many other topics of wide concern to the citizens will soon be coming up in Congress, such as compulsory military training, social security, low-cost medical care, employment, rehabilitation of veterans, and taxes, to name a few.

The more optimistic advocates of the proposal believe that its adoption would have a beneficial effect on Congress. They have hopes of shorter and meatier speeches, less demogoguery and an end of filibustering, on the theory that listeners would become mutinously impatient with parliamentary trickery and bombast.

There is no question that stimulation of interest in congressional activities is desirable, particularly with a good many major problems to be tackled in the near future, and the broadcasts might stir an awakening on the part of housewives who listen to the radio while doing their work. If proper safeguards were adopted against congressional pests and bores and the broadcasts limited to matters of national interest, the plan might bring government closer to the citizens.

Ralph W. Page Writes in Philadelphia Evening Bulletin About War Money

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. VOORHIS of California. Mr. Speaker, a short time ago I introduced H. R. 2098.

I am very gratified indeed to be able to include with my remarks the column on the general subject of this bill and the problem it seeks to remedy, written by Mr. Ralph W. Page in the Philadelphia Evening Bulletin for February 22, 1945.

A PROPOSAL FOR "WAR MONEY"

(By Ralph W. Page)

WASHINGTON, February 22.—Practical men engaged in industry and finance are disturbed over the enormous and increasing national debt. They are willing to grant that they were mistaken about the size of the debt the country could stand. But arithmetic warns them that there is a limit—and that the result of exceeding it could be the catastrophe of inflation or even repudiation.

The repayment of the debt itself is not the main difficulty. This might be refunded and carried indefinitely. But the interest charges can reach a point where they cannot be met. Also, under our fiscal system accumulating bonds can be used as the basis for many times their face value of bank credit—thus creating an overwhelming flood of money. To avert this palpable danger the conservative advocate caution in Government spending for any purpose.

On the other hand the radicals or liberals propose that the spending proceed and the

debt mount to any degree necessary to keep everyone employed and to provide the social services they believe the people are entitled to. However, they admit that there exists some limit beyond which bonds and money lose their value and purpose.

So they devise various arguments to prove that this point is not reached until everyone is productively employed and they propound schemes to halt the process at that point. These schemes, being untried, are anathema to their opponents.

So far both factions have assumed that this system of issuing bonds and creating debt is the only conceivable source from which Government can obtain money over and above receipts. They both—and all of us—face a dilemma. If we spend too little we cause the calamity of a depression. If we spend too much we ruin the whole business.

Into this impasse JERRY VOORHIS, of California, injects a novel and daring idea. He believes the country can finance both the war and expanding economy of the ensuing peace without creating any more national debt.

He wants the Government to give his plan a trial for the rest of the war. And for this purpose he has introduced a bill in the House of Representatives.

The outline, though startling is simple.

He proposes that, instead of issuing interest-bearing bonds for all expenditures beyond receipts, the Government shall pay such expenses with a separate kind of war money. This cash, or greenbacks, would be legal tender for purchases, to pay debts and taxes. But he would take most of it out of circulation by requiring every bank to keep 100 percent of such currency in its vaults. Since practically all our money lands up in the banks, his contention is that the ultimate result would merely be that the banks would have bales of this money instead of interest-bearing bonds stowed away to balance their liabilities against deposits of such currency.

It isn't surprising that this plan isn't immediately adopted. But considering the stakes involved, it is strange that Congress will not even discuss it. And it is a fact that objectors find it much easier to ignore it than to refute it. VOORHIS is a scholar, steeped in the lore and history of money, and a very formidable antagonist in any debate on the subject. It would be interesting if he could obtain a national audience.

Modification of Little Steel Formula

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

OFFICE OF ECONOMIC STABILIZATION,
Washington, D. C., March 3, 1945.

Hon. PHILIP J. PHILBIN,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN PHILBIN: I have read with interest your letter of March 2 regarding the application of various labor organizations for modification of the so-called Little Steel formula, in which you urge immediate consideration of the problem looking toward an equitable readjustment of the entire wage-price structure.

The National War Labor Board has for some time past been conducting a comprehensive study of this particular problem. The public members of this Board recently submitted a report of their views based upon the results of this study. In their opinion no modification in the Little Steel formula is merited at this time—in fact, their report is adverse to such action.

The industry and labor members of the Board are now preparing their comments upon the report of the public members. These will be submitted to me very shortly. I will then transmit the full report of the Board to the President along with a statement of my conclusions respecting the problems involved.

I appreciate your informing me of your interest.

Very truly yours,

FRED M. VINSON,
Director.

Administration of Fiscal Policy

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. REED of New York. Mr. Speaker, I know that thoughtful citizens are becoming deeply concerned over the rapidly increasing complexity of the Federal Government. It has become a bewildering maze of bureaucratic activities, which in thousands of cases presents a picture of useless duplication of effort at a tremendous cost to the taxpayers. Under leave to extend my remarks in the Appendix of the RECORD, I am including under unanimous consent an article entitled "Administration of Fiscal Policy," by Charles C. Abbott, which appeared in the Harvard Business Review in the autumn number, 1944:

ADMINISTRATION OF FISCAL POLICY

(By Charles C. Abbott)

(At the present time, even if a fiscal and monetary policy to complement and supplement the activities of private business were adopted, there is no possibility under the present arrangements and within the organization of the Federal Government of its being made operative and effective.—Beardsley Ruml.)

Among the doctrines developed by social scientists during the last 20 years, the ideas which have come to be associated with the term "fiscal policy" appear to possess great significance for the management of business enterprise. The above quotation from Beardsley Ruml raises questions which neither businessmen nor Government officials can afford to ignore.

The ideas constituting what may be called the "fiscal-policy concept" are in some respects an outgrowth of the measures for "control of credit" undertaken by the Federal Reserve System and by the central banks of other countries during the 1920's; in part they stem from the attention given to "welfare economics" since the turn of the century. They now pertain to a vast range of governmental activities—to taxation, exation, exchange control, public works, tariffs, and the construction of the annual budget, to name but a few.

Financial operations of the Federal Government have always been matters of great moment to businessmen. And many of the individual ideas now generally regarded as constituent parts of the fiscal-policy concept are far from new. But the association and commingling of many of these ideas so as to produce a more or less integrated body of doctrine are more characteristic of the thought of the last two decades than they are of the financial and economic thinking of any other period.

Thus, current fiscal-policy doctrine constitutes an important part of the economic environment within which business enterprise now operates and within which it will operate in the postwar period. Moreover, recent developments have greatly augmented the significance which these ideas possess for business management. The number and the magnitude of Federal financial activities have grown tremendously during the last dozen years, as have the number of points of contact between Federal financial activities and business operations. And it may be confidently predicted that in the post-war period Federal financial operations will be on so large a scale that their importance for business undertakings will be far greater than was the case before the war.

In order to preclude any misapprehension, it should be made clear at this point that the importance of the post-war fiscal operations and policies of the Federal Government will be at least as great for the numerically largest element in business, the employees, as for the managers, the creditors, or the owners.

This article endeavors to place current thinking about fiscal policy in a useful perspective, particularly for business managers. The scope of the ideas contained in this body of doctrine must first be indicated and what appear to be major assumptions underlying these views must be summarized. Attention can then be directed to administrative mechanisms available for placing these policies in operation and to administrative difficulties that in the past have been encountered in implementing fiscal policies and that will, apparently, be met in the future. These difficulties will serve as a point of departure for suggesting proper and feasible objectives of fiscal policy and areas of public financial management in which reform is needed if policy is to be effective.

FISCAL POLICY AS COMMONLY DEFINED

The scope of the fiscal-policy concept as defined in many circles, though by no means everywhere, can be succinctly indicated through a series of quotations from writers on this subject.

One of the most eminent commentators, Alvin H. Hansen, outlines the concept as follows:

"For the public economy, expenditures ought to be weighed not in terms of the profit and loss of the state itself, but rather in terms of the effect of such expenditures on the full and efficient functioning of the economy as a whole. Fiscal policy is an important instrument for maximizing the real income of the community and for regulating the distribution of income and wealth."[1]

Abba P. Lerner expresses almost the same sentiments:

"The first condition for the survival of economic liberalism * * * is the permanent elimination of the twin evils of unemployment and inflation. This can be achieved by making it the primary function of Government finance to keep the level of monetary demand for goods and services in every country sufficient to give employment to all who seek it and yet not more than sufficient—because that would result in inflation. All other considerations or principles of Government finance must yield to this principle of functional finance. The first casualty is the principle that over any fiscal year the Government must spend no more than it collects in taxes. The second is any international monetary system that involves the maintenance of fixed rates of exchange

[1] Alvin H. Hansen, Fiscal Policy and Business Cycles (New York, W. W. Norton Co., 1941), p. 187.

between the currencies of different countries."[2]

In his study of recent financial history, G. Griffith Johnson, Jr., makes the significance of certain fiscal developments very clear:

"The implications of the abandonment of the gold standard for credit control and the Federal Reserve System were, of course, fundamental in character. The traditional regulating medium of international gold movements was abolished, and the internal credit structure was isolated from direct foreign monetary influences. * * * The deliberate departure from gold may be said to have marked in this country the transition in the status of monetary control from a supposedly technical nonpolitical function to an admittedly coordinate instrument of political policy."[3]

One final reference, from Fortune, summarizes the matter:

"Considered fiscally, the Government's prime task is to keep national purchasing power in balance with production, preventing it from falling so low as to produce deflation or from rising so high as to produce inflation. This involves the use of all of Government's fiscal and monetary powers—borrowing, spending, taxation, monetary regulation, regulation of banks and financial markets. These powers must be used in harmony. If deflation occurs and the Government sets out to overcome it, a deflationary tax policy cannot be allowed to cancel out an inflationary spending policy. If war or some other cause makes inflationary spending compulsory, deflationary taxes must be used to keep the economy in balance."[4]

What is the substance of these views? What is their meaning for business management?

Underlying assumptions: There are a number of underlying assumptions that seem common to these quotations and to many other writings on fiscal policy:

(1) One assumption, with which most persons will agree, is that the Federal Government's financial operations, the embodiment of its policies, cannot fail to be of immense importance to business. In the language of the technician, fiscal policies cannot be neutral, cannot be without influence on the economy.

(2) There is a further assumption at the heart of much theorizing about fiscal policy: That the Government can have and will have a single comprehensive, integrated, and logically consistent fiscal policy, or at least a group of logically consistent policies. This assumption will seem to many people to be of more doubtful validity.

(3) Many businessmen, basing their judgment on experience with practical affairs, will also question this cognate assumption: That all the manipulative devices and techniques needed for implementing a comprehensive and consistent policy are adequately known and understood, and that the Government either has or could readily obtain a full complement of the tools needed to execute its wishes—for instance, rediscount rate control, alterations in rates of spending, taxation, and tariff adjustments.

(4) Finally, many persons will disagree with the generally implicit assumption that the economy and the economic process can realistically be viewed, in mechanistic terms, as a kind of machine controllable by financial actions. It will not be in accord with their experience that a given amount of additional pressure on the accelerator increases the rate of business activity just so much, or that a measured amount of pressure on the brake brings down the rate of activity to the exact desired level.

Economic stability: In addition to these underlying assumptions it is to be noted that, from the point of view of the authors quoted, the primary goal of fiscal policy is economic stability—that stability to be maintained permanently at such volume of output as provides a high level of employment and maximizes the real income of the Nation. A redistribution of wealth or of income, should that step be necessary; a revaluation of the currency in terms of gold or of the currencies of other nations, if such a measure be required; an abrogation of a contract, such as the promise to pay debts in gold, should that kind of violation prove essential; these, or all other economic measures, become simply means to the end of maintaining economic stability.

This is indeed a materialistic aim to be made the primary purpose of government and of society. And to the businessman, the investor, or the employee, attempting to do business with the Government, this view of fiscal policy implies that, when any contract made by the Government is contrary to current fiscal policy, the Government need not and should not keep its bargain.

Range of Government activities. Analysis of much of the more elaborate theorizing about fiscal policy also indicates that the range of governmental activities, both executive and legislative, which must be woven together if there is to be a coordinated and logically consistent body of policy is very large. As a minimum, the concept appears to contemplate fusing the following governmental activities: Taxation, especially income taxation, both personal and corporate; Federal Reserve policy, including discount rate control, open-market operations, and changes in the reserve requirements of member banks; public spending, whether for the support of the Army, direct relief, slum clearance, or any other purpose; tariff making and tariff adjustment; lending operations of governmental agencies, such as the Reconstruction Finance Corporation, and of quasi-governmental agencies, such as the Federal Reserve banks; the management of the public debt, including the rate of interest paid, the proportions of long-term and short-term obligations outstanding, and the placement of the debt in the hands of banks and insurance companies and elsewhere; international capital movements, particularly those made for public account, as in the case of the operations of the Export-Import Bank; extra financial measures for the control of commodity prices, such as the activities of the Office of Price Administration; and last, but by no means least, the process by which the Federal Budget is put together, appropriations made, and Government expenditures controlled, including the work of the Bureau of the Budget, various congressional committees, and the General Accounting Office.

Clearly, these doctrines contemplate also a close coordination between the fiscal policies of the Federal Government and the fiscal policies of the separate States, counties, municipalities, and so forth. The extremely complex operational problems and the constitutional questions involved in such coordination are not considered here. But such matters are of great practical significance.

A single, integrated policy: This definition of current fiscal doctrine raises two important questions: (1) Should the Federal Government have a single, integrated policy? (2) Could the Government, as presently organized and in the light of political realities, adopt a single policy, and more important, make it effective?

The answer to the first question appears to turn not only on the propriety of the objectives of such a policy but also, since this is in part an administrative question, on the administrative feasibility of the objectives. Policies which take as an avowed goal meticulous regulation of very many parts of the economic process seem both improper and impracticable. On the other hand, were the administrative mechanisms in existence which are needed to implement policy, an effective policy confined to the objectives indicated in the latter part of this study—the protection of the Federal Government's credit, the provision of a stable monetary unit, the protection of savings, and the provision of an adequate flow of capital and credit—would constitute a most constructive development in the eyes of many persons.

The answer to the second question must in large measure be conditioned by individual judgments regarding administrative difficulties inherent in the process. In view of the administrative techniques available and in view of the ways in which governmental committees, departments, and agencies actually operate, is it reasonable to expect that the Government can coordinate so large a number of separate activities and direct them toward a single and relatively specific goal? Furthermore, is it really desirable for the Government to adopt and embark upon a course of action that seemingly would leave the administrators of a large group of individual Government agencies with little, if any, flexibility or ability to adapt themselves to changing conditions?

Administration, be it noted, is a matter of considerable importance in this area. For a policy that is poorly or ineffectively administered, that is beyond the abilities of the administrative mechanism and is not put into operation, serves only to produce confusion, frustration, and pessimism among those subject to it. It gravely hinders such persons in the carrying on of their daily work.

Many of the discussions and presentations which are most concerned with defining the over-all objectives of fiscal policy are least concerned with the problems and mechanisms of public financial administration, with the types of organizations, administrative techniques, mechanisms of executive control, and abilities of personnel needed to put into operation and make effective their plans. Although many studies of fiscal policy are at pains to make the maintenance of a high level of employment—unquestionably a most desirable goal—a permanent function of the Government, such studies are little concerned with the fact that limitations to effective governmental action do exist. Nor do they have much interest in determining the character of these limitations or where they lie. As a consequence of this omission, such studies often suffer from a lack of realism. It is not too much to say that this apparent or actual ignorance of matters pertinent to public financial administration invalidates many of their political recommendations.

PUBLIC FINANCIAL ADMINISTRATION

It is generally agreed that in the determination and execution of governmental fiscal policies four major processes can be distinguished: (1) Formulation and adoption of the annual financial program, including revenues, expenditures, and numerous ancillary or peripheral activities, such as lending to business concerns, management of the public debt, subsidy payments, and foreign lending on Government account; (2) collection of the revenues; (3) receipt, custody, and disbursement of cash and the general management of the Treasury's resources; and (4) accounting for and reporting the financial condition and operations of the Government, including not only Government departments but Government agencies, like the Tennessee Valley Authority and the Commodity Credit Corporation.

One of the most careful inquiries into this general subject, by a congressional committee, gives the following definition:

---

[2] Abba P. Lerner, Economic Liberalism in the Post-war World," Post-war Economic Problems (New York and London, McGraw-Hill Book Co., Inc., 1943), p. 132.

[3] G. Griffith Johnson, Jr., The Treasury and Monetary Policy, 1933-38 (Cambridge, Harvard University Press, 1939), p. 18.

[4] Our Form of Government, Fortune, vol. XXVIII, No. 5, Supplement (Nov. 1943), p. 4.

"Governmental financial administration consists of a series of related activities involved in planning, conducting, controlling, and reporting the financial operations of the Government." [5]

One authority, D. T. Selko, states:

"To permit efficient conduct of financial functions as well as to provide effective means for their control, systematic provision must exist for estimating revenue requirements; laying and collecting taxes; planning, authorizing and directing expenditures; receiving, keeping and disbursing money; recording and reporting financial information; and accounting for the use of all public funds." [6]

It is common knowledge that in the Federal Government a distinction is necessarily made between budgetary or administrative management and what may be termed protective or proprietary management of the Government's resources. The first type of management—concerned with formulating the annual financial plan of the Government, controlling the rate of expenditure, proposing new governmental activities, and coordinating the different parts of the Government's business—is centered in the executive branch of the Government. The second type of management—concerned with appropriating money for particular purposes and with ensuring that funds are expended in accord with such purposes—is centered in Congress. But in the broad view, public financial administration "is not so much the question of organization of a single agency with respect to given objectives as it is the establishment and maintenance of relationships between and among agencies which necessarily exist separately." [7]

The Bureau of the Budget: It is true that the Bureau of the Budget occupies a most strategic position as regards the formulation of fiscal policy and the control of financial administration; that the Budget system's purpose is "to provide central fiscal management of the administrative machinery of the Government." [8] But there are in fact numerous political and administrative limitations on the Bureau's operations, even inside its own sphere of administrative machinery. And notwithstanding the Bureau's many admirable achievements, the record of recent years gives little reason to suppose that it serves, or is intended to serve, as an effective link between policies such as have commonly been advocated by fiscal-policy theorists and the actual administration of public finances, or as a coordinating body between the legislative and executive elements in public financial administration.

BACKGROUND OF THE FISCAL-POLICY CONCEPT

Three distinct lines of development have led to the present status of fiscal-policy doctrine: (1) The evolution of the Government agencies whose actions embody governmental financial policy, such as the Treasury, the Federal Reserve System, and the Reconstruction Finance Corporation; (2) changes in the various types of operations which these agencies have undertaken from time to time and, even more important, changes in the motives that lay behind their operations; (3) the recent growth of the fiscal-policy concept, of the idea that the financial operations of all Government bodies whose actions are believed to influence business activity could be and should be integrated in such a way as to further a predetermined objective.

Various governmental activities of immediate concern to fiscal policy, such as the making of appropriations from the Government's funds, the levying of taxes, and the imposition of tariffs, have existed since the beginning of the country's history. The same may be said of a number of the governmental agencies essential to the implementation of fiscal policy, such as the Treasury and various of the bodies concerned with tariff-making.

But before the creation of the Federal Reserve System in 1913 and the passage of the Budget and Accounting Act in 1921, the United States lacked some of the more important agencies which modern thinking conceives as necessary to implement a fiscal policy. And not until 1923 or 1924 did the Federal Reserve System initiate open-market operations; even then the objective was credit control rather than fiscal policy. Only in 1926 was the Congressional Joint Committee on Internal Revenue established. Not until about 1933 did the Treasury find it necessary to make comprehensive analyses of the effects of particular taxes a permanent part of its work, and not until 1938 did it set up its Division of Tax Research.

Moreover, only since 1932 have many agencies whose operations must now be thought of as pregnant with fiscal implications come into existence—for instance, the Social Security Board, the Reconstruction Finance Corporation, the Federal Deposit Insurance Corporation, the Export-Import Bank of Washington, the Farm Credit Administration, the Securities and Exchange Commission, and the Home Loan Bank System.

And it is only since 1922 that the older agencies have been given many of the powers most significant in this connection—for instance, the power of the Federal Reserve System to alter member bank reserve requirements and the management by the Treasury of the currency stabilization fund. As a matter of fact, even among the agencies that were in existence before 1932, those motives now commonly designated as "fiscal-policy considerations" exerted little influence—the Treasury and the congressional committees interested in taxation and responsible for revenue legislation did not direct their actions with an eye toward creating or maintaining economic stability, redistributing wealth and income, or steering a meticulous course between unemployment and inflation.

As for the doctrines associated with the present fiscal concept, they first appeared prominently in the work of economists and financial writers in the middle 1930's. The events of the great depression and the rise of new types of economic controls in totalitarian states stimulated the development of this type of thinking. The growth since 1932 of governmental agencies, particularly of executive agencies, and the rise of a multitude of administrative techniques and activities that are of significance in this area have provided additional material for theorizing on the subject. Thus, within the last 15 or 20 years the elaboration of fiscal-policy doctrines has gone hand in hand with the growth of governmental institutions empowered, if not designed, to put many of these doctrines into effect.

FUTURE SIGNIFICANCE OF FISCAL POLICY

To gage the importance to business of post-war fiscal policy, take only two points of reference: Management of the Federal debt and open-market operations of the Federal Reserve System.

Management of the Federal debt: It is generally thought that the United States will emerge from the present war with a Federal debt in the neighborhood of two hundred and fifty to three hundred billion dollars. If the pattern of debt maturities that existed in the first quarter of 1944 is projected, 18 percent of the debt, or some $45,000,000,000, assuming a $250,000,000,000 total, will be in the form of demand obligations at the end of the war; another 22 percent, or $55,000,000,000, will be floating debt of a maturity of 1 year or less; and, including the demand and floating debt, 58 percent, or $145,000,000,000, will be either payable on demand or redeemable within 5 years. These figures, moreover, exclude obligations the Treasury will incur because of tax refunds due in the postwar period, as well as certain other liabilities, and it is conceivable that such obligations may be substantial.

Thus it seems plain that one of the major tasks of the Treasury in the immediate post-war period will be the management of the debt, i. e., the redemption or refunding of obligations coming due and of obligations presented for payment. This will be a considerable undertaking, regardless of whether the Government follows a policy of increasing or decreasing the proportion of short-dated debt outstanding and of whether the Budget is balanced or not.

Furthermore, no matter what the policy followed by the Treasury, it will influence considerably the flow of purchasing power and thus will affect intimately not only the financial world but also the corner grocery store and the national corporation listed on the New York Stock Exchange.

It is reasonable to expect that some portion of the bonds held by individuals and corporations will either be presented for redemption or offered for sale at the termination of hostilities. Unless the Treasury has a surplus of revenue at that time, or unless new savings then currently accruing in society not only are sufficient but also are held by those willing to supply the funds needed to meet those offerings, or unless there is a combination of these situations, the ultimate source of the buying power to take the bonds off the market—whether offered for sale or for redemption—must be the banking system.

Suppose only 5 percent of the debt, $12,500,000,000 or $15,000,000,000 thus seeks new ownership. This is a very substantial dollar figure; and the fiscal authorities will be faced with serious problems, whether the bonds are absorbed through direct purchase by banks for their own account, through bank loans to individuals wishing to purchase the securities, through a reduction of the Treasury's general funds, or through further Treasury borrowing from the banks and the creation of additional bank credit.

Open-market operations: Such a shifting in the ownership of the debt will also be of immediate concern to the Federal Reserve System, particularly in its open-market operations.

Open-market operations, the purchase and sale by Federal Reserve banks of Government securities, are designed to influence, among other things, the reserve position of member banks. Such operations are one of the traditional measures of fiscal control, and they have been made use of for many years. But a considerable relocation of the public debt is only one of the forces which will affect open-market technique and the nature of open-market operations in the post-war period.

The sheer scale of the post-war Federal debt will by itself constitute a new element in the money and capital markets. For some years after the war the Federal Reserve banks will need, as during the conflict, to take special cognizance of Treasury policy in their purchases and sales of Government bonds, and not to confine their attention to business activity, money rates, and bank reserves. Consequently, quantitative credit control may be extremely difficult, and more emphasis than formerly may be placed on qualitative controls.

The unprecedented growth in the volume of currency outstanding also represents a new element in the situation. As of April 1944

---

[5] Investigation of Executive Agencies of the Government, Preliminary Report of the Select Committee to Investigate the Executive Agencies of the Government, pursuant to Senate Resolution 217 (74th Cong.), 75th Cong., 1st sess., Rept. No. 1275, p. 65.

[7] Ibid., p. 118.

[8] Gustave A. Moe, The Bureau of the Budget and Governmental Budgeting in Wartime, N. A. C. A. Bulletin, volume 25 (September 15, 1943), p. 44.

the amount had risen to over $20,500,000,000. Should a considerable portion of this currency outstanding be returned to the banks after the war, the reserve position of the banks will be commensurably enhanced, and open-market operations aimed at influencing the reserves of member banks may have to reckon with flows of currency into and out of banks of a magnitude not hitherto experienced.

Finally, one of the byproducts of war production and the geographical placement of war contracts has been not only a large but a very uneven growth of deposits as among different parts of the country and as among individual banks. While total bank deposits in the country, exclusive of Government and interbank deposits, increased some 40 percent in the 2 years ending December 31, 1943, in some States deposits more than doubled in that 2-year period.[9] Should many banks, as seems possible, lose large portions of their new war deposits in a relatively short period of time after peace returns, and should other banks gain them, open-market operations will necessarily be most intimately affected by this shifting of deposits between individual institutions. In fact, maintenance of sufficient banking liquidity to permit such shifting may of necessity be one of the major objects of governmental fiscal policies, not only because of the interest of the Treasury and the Federal Reserve banks but because of the even more direct concern of the Federal Deposit Insurance Corporation.

FISCAL ADMINISTRATION

What governmental bodies must be reckoned with in fiscal administration? What powers and activities of these bodies must be coordinated if there is to be an integrated and effective policy? What experience have we had with ineffective policies? What evidence does the record of recent years afford regarding administrative limits to effective governmental action?

Governmental bodies with fiscal and financial powers: It would be extremely difficult, perhaps impossible, to give a complete list of the legislative and executive bodies—to say nothing of their powers—whose actions influence fiscal and financial administration. The following quotation will serve to indicate the magnitude of the problem involved merely in surveying these agencies:

"This is a partial list (wartime agencies are omitted) of Federal agencies and their subagencies whose supervisory or independent borrowing or lending powers affect fiscal and monetary policy.

"Executive Office of the President: Bureau of the Budget.

"Department of the Treasury: Bureau of the Comptroller of the Currency, Fiscal Service, Stabilization Fund.

"Department of Agriculture: Commodity Credit Corporation, Farm Security Administration, Farm Credit Administration, Rural Electrification Administration, Federal Crop Insurance Corporation.

"Department of Commerce: Reconstruction Finance Corporation, Export-Import Bank of Washington, Federal National Mortgage Association of Washington.

"National Housing Agency: Federal Home Loan Bank System, Home Owners' Loan Corporation, Federal Savings and Loan Insurance Corporation, Federal Housing Administration, Federal National Mortgage Association, Federal Public Housing Authority.

"Federal Reserve System.

"Federal Deposit Insurance Corporation.

"General Accounting Office.

"Securities and Exchange Commission."[10]

Were the appropriate wartime agencies included this list obviously would be very much longer.

When the legislative bodies responsible for certain portions of the Government's financial operations are taken into account, the problems involved in formulating and administering a coordinated fiscal policy are still further increased. The following statement, published in 1940, gives a hint of this aspect of the matter.

"Revisions are more frequent in the case of internal revenue than in the case of the tariff, and are likely to consist of adjustments in selected taxes rather than general revision of the laws. There has been a new tax law approximately every 2 years since the World War, and since 1922 at least one a year. In addition to these major acts there have been a host of special acts during this same 20-year period carrying taxing provisions. Recent examples are the Liquor Taxing Act of January 11, 1934; Social Security Act of August 14, 1935; Bituminous Coal Act of April 26, 1937; and Carriers' Taxing Act of June 29, 1937."[11]

Actually, it is quite likely that changes in the tax situation wrought by rulings of the collector of internal revenue and by decisions of the Supreme Court have occasioned businessmen more difficulty and have been more disruptive of business plans than have even the frequent changes in the written law. In passing it is worth noticing that the Attorney General's office currently handles annually some 6,000 Federal tax cases, and that in 1942 such cases constituted 39 and 47 percent of all civil cases in the first and third circuits.[12]

In the light of the manifest difficulty of bringing into view all the Government agencies which have fiscal and monetary powers, and in the light of the immeasurably greater difficulty of integrating their actions into a consistent policy, the naked statement that it must be the primary function of "Government finance to keep the level of monetary demand for goods and services in every country sufficient to give employment to all who seek it and yet not more than sufficient."[13] seems far removed from the world in which we live and the practical considerations which induce business managers to provide employment. Admirable as such sentiments may be, they gloss over vital problems of administration and divert attention away from the essential question of what is administratively feasible. And, as has been noted earlier, the great difficulty with an ineffective or inoperative policy is that it immensely increases the problems of those persons nominally subject to it and thereby often goes a long way toward defeating its own purpose.

Unquestionably it is true that "there is imperative need for the coordination of all bodies possessing fiscal and monetary powers in the Federal Government to facilitate the proper use of such powers for the maintenance and restraint, when respectively necessary, of the demand for goods and services."[14]

But the danger of such well-intentioned generalizations lies in the fact that they fail to indicate that limits to effective governmental action do exist. The unsophisticated reader, not warned of the realities of political life, assumes only too readily that attainment of the goal is just around the corner.

Government corporations: Pertinent in this connection is a brief discussion of Federal corporations. Many of these organizations were created to carry out individual governmental policies containing important financial and monetary implications. Yet the autonomous or semiautonomous existence of these bodies, together with the large number of them instituted during the last 15 years, represents one of the greatest impediments in the way of implementing an articulated and consistent fiscal policy.

One recent attempt to survey the total number of Government corporations and corporate agencies lists upwards of 60 incorporated and unincorporated agencies or groups of agencies, counting as a single agency in each case the banks for cooperatives, the Federal home loan banks, the Federal Intermediate Credit Banks, the Federal land banks, the Federal saving and loan associations, and the production credit corporations and associations.[15]

It is generally agreed that one of the prime purposes leading to the creation of Government corporations has been their freedom from the "Government process," particularly the rules and regulations which bind the Government departments as regards Budget procedure, the borrowing of money, the issue of obligations, the type of accounts rendered, the acquisition of property, the method of purchasing materials and supplies, and the regulations governing appointment and promotion of personnel. The following quotation high-lights this point:

"Many of them [Government corporations] enjoy a degree of financial autonomy carefully withheld from Government departments and bureaus, such as independent borrowing power, establishment of a revolving fund, and freedom from auditing and budgetary control. Financial autonomy, however, implies a shift in fiscal responsibilities from the Government to its instrumentalities. As we gather from experience of the past decade, these prerogatves can greatly hamper a consistent fiscal policy and even conceal the Government's financial status.

"Budgetary control by Congress may be weakened while the goal of a balanced Budget loses its traditional function as a touchstone of sound fiscal policies. Moreover, by transferring expenditures of the Federal Government to independent agencies by increasing "contingent liabilities," and by other more elaborate devices * * * the balancing of the Budget may be made a mere formality or a fiction."[16]

The operations of these autonomous agencies are of particular significance when the possibility of implementing a fiscal policy is being considered. One other quotation makes this explicit:

"There is a considerable volume of transactions in regard to which the Treasury acts as a bank, handling funds not subject to control by the warrant system, and for which, therefore, the Treasurer of the United States cannot be held properly accountable. * * *

"Deposits in these accounts * * * are made to the credit of disbursing officers and are not subsequently covered into the Treasury. Disbursements are made without appropriation and without audit by the General Accounting Office.

"The financial statement of the United States, contained in the Annual Report of the Comptroller General for 1939, reports that the Treasurer had liabilities to the amount of $643,684,362.55 in the form of special accounts * * * and depositary accounts of governmental corporations and agencies. * * *

[9] Geographical Distribution of Bank Deposits, Federal Reserve Bulletin, 1943, and Distribution of Bank Deposits by Counties, December 31, 1942, December 31, 1943, and Increase or Decrease, Treasury Department, Office of the Secretary (March 1944).

Some indication of the volume of special deposit transactions is indicated by the fact that 47 agencies, representing approximately 40 percent of these special deposit liabilities as of June 30, 1938, collected over $1,000,000,000 in special deposits during the month of June 1938 alone. It is remarkable that such a large volume of business is transacted and that such large expenditures are made by governmental agencies, wholly without audit, without accountability, and without reports to Congress except such as the agency itself sees fit to render or such as Congress by special legislation requires." [17]

Such a statement acquires particular cogency when it is recalled that public financial officials in general agree that the actions of agencies so financed that they need not appear annually before the legislative branch to request appropriations are particularly difficult to shape to over-all governmental policies, whether the policies are determined by the executive or the legislative branch. State highway departments that have the exclusive use of proceeds of the gasoline tax are a case in point, as were the offices of State fish and game commissioners when hunting and fishing licenses were a fruitful source of revenue.

Conflicts between policies. In view of the number of government bodies with fiscal powers, it is not surprising that in the last 25 years there have been numerous instances in which the course followed by one governmental body was in direct conflict with the courses pursued by other agencies, committees, or administrators, at least so far as the effects upon the economy of the country were concerned. Such situations give real substance to the question: What are the practical administrative limitations to the governmental process, and where do they lie?

Perhaps the most famous instance of conflicting policies in recent years was the insistence of the Federal Government during the 1920's, on the one hand, that reparations and war debts should be paid and, on the other hand, that a high tariff should be maintained.

In the latter 1920's one of the striking conflicts, and one which perhaps contributed in no small measure to the final upsurge of the bull market and its ultimate crash, was the discrepancy in the spring of 1928 between the course followed by the Federal Reserve System in its purchase of acceptances and its action as regards open-market operations and rediscount rates. During 1927 the actions of the System had been, on the whole, directed to stimulating business activity. In January 1928 the System reversed its position and began to sell Government bonds; on February 3, the New York discount rate was raised from 3½ to 4 percent. The sale of Government bonds continued through July, and the New York discount rate was raised twice, once in May and once in July. Notwithstanding these restrictive measures, the Federal Reserve System, wholly contrary to its customary practice during the 1920's, continued after the turn of the year to buy acceptances, so that its total holdings, instead of declining seasonally, remained almost constant from December through May. Consequently, the funds which member banks lost because of the Federal Reserve banks' sales of Government bonds were in large measure restored to them by the continued, contraseasonal purchases of acceptances by the System. Thus the restrictive measures applied through sales of bonds and through increases in discount rates were very largely nullified at a point in the business cycle which was of crucial importance in credit control.

One of the most glaring recent conflicts of policy was the imposition of the social security program in 1935, with its deflationary implications, at a time when over-all Federal policy was admittedly aimed at economic recovery. Equally serious as a conflict in policy was the increasing burden of double taxation placed on corporate earnings during the 1930's. This burden was imposed at a time when the avowed over-all Federal policy was "economic recovery," at a time when one of the crying needs of the country was an enhanced flow of funds, particularly equity money, into business enterprise. But the growing severity of taxes, placed both on corporate earnings before payment of dividends and on the same earnings when paid to stockholders as dividends, continually diminished the attractiveness of equities to potential investors and tended to retard the flow of equity money into business.

Consider, also, the various types of mechanisms used to construct industrial facilities during the war. There have been the Emergency Plant Facilities contracts, the activities of the Defense Plant Corporation, the certificates of necessity, and the use by the armed services of their own appropriations for this purpose. In addition to, and separate from, these mechanisms there has been the allocation, up to June 30, 1943, of $870,000,000 of lend-lease funds for the purpose of expanding production facilities in the United States and the expenditure of some $600,000,000 of such allocations. This situation presents, if not a conflict in policies, at least a substantial duplication of activity.

Inoperative policies: In addition to cases where two or more mutually contradictory policies were pursued by the Government at one time, numerous instances can be found where a declared policy was inoperative, often because its aim was too high or because it was so finely gaged that the existing administrative mechanism could not put it into effect. Illustrations of this character indicate clearly that there are limits to the effective administrative action of governmental bodies or administrators.

It would be a bold man who would argue that the restrictive measures taken by the Federal Reserve System in 1928 and 1929 controlled the speculative boom in the stock market, even though the System's operations no doubt tempered the movement. It would be equally pretentious to argue that the cheap-money policy of the Federal Reserve banks and of the administration in the early 1930's led to any appreciable increase in the lending of commercial banks. Nor is there reason to believe that the forced devaluation of the dollar in 1933, allegedly undertaken at least in part to raise commodity prices, exerted any very considerable effect, except to a limited extent in the case of commodities entering into international trade.

Real control of the rate of Federal expenditure is implied in much fiscal-policy doctrine. For example:

"The central idea is that Government fiscal policy, is spending and taxing, its borrowing and repayment of loans, its issue of new money, and its withdrawal of money, shall all be undertaken with an eye only to the results of these actions on the economy and not to any established traditional doctrine about what is sound or unsound." [18]

But how is this control to be exercised, when the statement can be made that:

"The present accounting system of the Government is badly scattered and presents a rather incongruous mixture of antique and modern practices. Essential parts of the system are now found in the Treasury Department * * * the General Accounting Office, and in the various operating bureaus, departments, and etsablishments. * * * Consequently, prompt and detailed information for financial management by the President cannot be produced * * * it is virtually impossible to get out timely general reports on the financial condition of the Government." [19]

The methods of controlling expenditures—in the sense of accounting control—also deserve consideration. Responsibility for most kinds of control is located in the Bureau of the Budget and the General Accounting Office. By the establishment of these two agencies it was hoped to lessen the need for types of control measures formerly used, such as itemized appropriation bills and congressional investigations. Even under the new system, however, and even when appropriation bills are itemized, there is a question whether the control is as tight as is sometimes assumed. Although many appropriations are made on an annual basis, and although apportionments of annual appropriations into the amounts which may be spent each month by a department are controlled by the Bureau of the Budget, the Bureau does not allot a department's total appropriation as between individual divisions, officers, and bureaus.

"Thus it would be possible for one bureau within a department to have exceeded its apportionment under one allotment and been supported by a transfer from another allotment without the knowledge of the Bureau of the Budget." [20]

Furthermore, expenditures made by Government corporations and expenditures made from certain other types of special accounts are not subject to the supervision of the Bureau, or, in a number of instances, to that of the General Accounting Office.

To take another type of instance, the circumstances surrounding the issuance by the Comptroller General of General Regulation No. 84 suggest that the regulation, at least temporarily, failed of its purpose.

"This regulation provided for the complete resymbolization of all receipt and appropriation items, effective July 1, 1936. It was accompanied by a digest of symbols, containing several hundred pages, which did not reach the Treasury Department and the other departments and establishments until several days after the effective date. At that time the accounts for the fiscal year beginning July 1 had already been set up in the Treasury and in the accounting offices of several departments and agencies." [21]

A case selected from still another area of fiscal management may prove illuminating. In his message to Congress of April 14, 1938, President Roosevelt proposed to increase the available resources of the banking system and expressed the hope that Federal banking supervision could be better coordinated. One of the major results of this expression was a revision of the procedure in bank examination promulgated by the Comptroller of the Currency and agreed to by the Secretary of the Treasury, the Board of Governors of the Federal Reserve System, and the Directors of the Federal Deposit Insurance Corporation.[22] In this regulation the methods of appraising bonds in the investment portfolios of banks were dealt with, and it was stated:

"Group I securities are marketable obligations in which the investment characteristics are not distinctly or predominantly speculative. This group includes general market obligations in the four highest grades and unrated securities of equivalent value.

[17] D. T. Selko, op. cit., pp. 464–465.

[20] D. T. Selko, op. cit., p. 161.

[21] A. E. Buck, op. cit., p. 23.

[22] Revision in Bank Examination Procedure and in the Investment Securities Regulation of the Comptroller of the Currency, Federal Reserve Bulletin, vol. 24, No. 7 (July 1938), p. 565.

Group II securities are those in which the investment characteristics are distinctly or predominantly speculative. This group includes general market obligations in grades below the four highest and unrated securities of equivalent value."

It seems reasonable to question the effectiveness, from an administrative point of view, of a regulation that used so ambiguous a phrase as "predominantly speculative" and which could not be interpreted without reference to the privately owned and sponsored bond rating services, which are organizations not mentioned directly in the regulation. There also seems to be a question whether it is in the public interest for a governmental policy to be predicated on the continuing honesty, accuracy, and existence of private organizations that have no responsibility or obligation, at least in the pertinent connection, to any governmental body.

One further aspect of this subject may be mentioned. An essential mechanism in administrative control of expenditures is the object classification of the Federal Government, more especially in connection with the objects for which appropriations are made. The complete Federal object classification is alleged to be distinctly out of date, and there is doubt whether its character is such as to give as good a control of expenditure as is often assumed in fiscal-policy doctrine. To take one detail:

"Gasoline, for example, is extensively used by a large department for stationary engines and for trucks and automobiles. In terms of object classification, therefore, it can be listed under either Supplies and Materials or Travel. Under existing conditions the money can be diverted from one use to another practically without restraint.[23]

Lack of flexibility in spending: A look at the record of new activities entered upon by the Federal Government and the attendant record of spending does not sustain the implication, inherent in much fiscal-policy doctrine, that Government expenditure not only should but can be turned on and off like water from a tap.

Against the simplified dictum that the Government "can reduce total spending by spending less itself or by raising taxes so that taxpayers have less money to spend" [24] can be set specific instances in which the Federal Government could not reduce its spending.

In 1937, when President Roosevelt instructed all executive agencies to set up 10 percent of their appropriations in a reserve fund, it was found that several agencies could not comply with this order and continue their operations. The question is raised as to how far the President can manage directly the expenditures of the executive branch.[25]

Spending begets an organization of spenders—an administrative staff as a minimum, supported by an administrative budget, to supervise the outlay of the appropriation. Spending necessarily produces records, and records in the Government seem to have a will and an ability to survive and perpetuate themselves that is almost independent of the desires or actions of the record keepers. Very often it results in the acquisition by the Government of assets that must be preserved and maintained—office furnishings, if nothing more.

Almost always it fathers projects which will take some months or years to complete and which must be continued or else result in a complete waste of the public moneys already spent. By its nature it develops, from out of its own administrative organization, experts who can, from their familiarity with the records which they themselves keep, assemble more facts in its defense than can be brought to bear by its opponents who do not have ready access to the information. Above all spending establishes a host of vested interests that range from the employees actually on the pay roll to the business firms and local government bodies in the districts where the funds are spent.

Director of the Budget Lord stated:

"There is never hope of completing a project or abandoning it for some new activity of greater importance and promise. Like Tennyson's brook the old job goes on forever. I am convinced we are carrying on work on which we have spent and are spending good Government money with little or nothing to show for the expenditure."[26]

And as a former Acting Director of the Budget has said:

"When the need for Government activity along a certain line declines the agency concerned generally finds some means of continuing that activity as fully as before and will be likely to continue to so continue it unless there is an agency of Government charged with the continuous duty of studying the Federal structure to prevent such superannuation."[27]

Thus it may be that the administrative aspects of spending and of controlling spending are, in many instances, of more real importance to the economy and to the individual taxpayer than are the intellectual justifications for increasing or decreasing the outlay of Federal funds. The bald statement that "the chief technical problem of fiscal policy in the business cycle is * * * to design formulas for public finance which, as a part of the regular system, make room for deficit spending during depressions by securing the building up of corresponding surpluses in good years" [28] so greatly oversimplifies the problem as to be quite misleading.

The bounds of administrative feasibility

It is evident that within the last 25 years, to go no further back, numerous examples can be found of conflicts and contradictions within and among the operations of governmental bodies. Also can be found instances in which declared policies simply were not operative. All the foregoing illustrations will perhaps serve to show that the governmental process works effectively only within the bounds of what is administratively feasible, and that there are in fact as well as in theory very real administrative limitations to governmental power.

The significance of such considerations, particularly to business operations, is very great. For it is unreasonable of businessmen to expect governmental policies to be effective beyond the bounds of administrative feasibility.

The location and character of these limits cannot be explored here, but three observations are appropriate:

"One possibility seems particularly disquieting; namely, that the total deficit burden may reach a point at which it is doing more to hold business back than current spending is doing to stimulate it, and still it may be true that the immediate effect of more spending will be a temporary stimulus. * * *[29]

"Objectives with widespread support include maintenance of real national income at a high level, prevention of inflation. * * * The war has taught us that such comprehensive objectives can be achieved only through the utilization of many material and spiritual forces. Central banks * * * cannot achieve them alone.[30]

"Quantitative control of member bank reserves has always been a blunt and limited instrument, capable of moving in a desired general direction, but without certainty, precision, or discrimination." [31]

In substance, the preceding analysis suggests that some of the most ambitious aims contained in fiscal policy theorizing do not fall within the area of what is politically and administratively practicable, and that as a consequence the more extravagant expectations of the results obtainable through fiscal policy and financial operations are, in practice, likely to end in disappointment. The social desirability of sketching plans and raising hopes which cannot be fulfilled or of arguing the merits of policies which cannot be made effective lies beyond the limits of this study. But this consideration is a question which cannot properly be omitted in an appraisal of the related subjects, fiscal-policy theory and public financial administration.

CONCLUSION

This study has outlined the dilemma that confronts the businessman and the public official:

On the one hand, we know that the financial operations of the Federal Government in the period following the war will be of so great a magnitude as to affect intimately many portions of the economy. Furthermore, the proliferation in recent years of governmental financial activities and the multiplication of the points of contact between public financial administration and business enterprise assure that many business decisions will be directly influenced by governmental attitudes and activities. In view of the tremendous scale of Federal financial operations inevitable during the next generation, the prospect of a multitude of congressional committees and executive agencies pursuing courses largely if not entirely independent of each other, and often contradictory, is most distressing, perhaps intolerable.

On the other hand, the more ambitious goals of many current fiscal-policy doctrines clearly are beyond the capabilities of the existing mechanisms of public financial administration and for the most part are far removed from the purposes for which such mechanisms were created. Thus, were such objectives adopted by Federal agencies, the probable result would be "confusion worse confounded." Even were the Federal administrative machinery greatly increased, it seems likly that the new bureaucracy might find the objectives set for it beyond the limits of effective governmental action. Furthermore, if—as is contemplated in some

fiscal policy discussions[32]—governmental bodies took as their field of operations the manipulation of the gross income, the wage bill, the cost of materials, the salaries, the depreciation allowances, the tax liabilities, the net earnings of individual firms, the distribution of such earnings, and the rate of investment in particular companies, then the necessary amount of regulation would leave little discretion to business managers and would result in an economy highly regimented.

Possible solution. In what direction should the solution of this dilemma be sought? What line of action should the makers of public policy seek to follow in the public interest? What kind of reorganized governmental procedure should the businessman advocate in order that he be able to formulate working hypotheses regarding future events—hypotheses necessary to him in the management of his affairs?

As a first approximation, it may be stated that at least two types of reform are called for: (1) A reorganization of the Federal bodies whose activities are of fiscal significance, so that policies when and as adopted by the Government can be made effective; (2) a reformulation and simplification of the objectives of fiscal policy.

In order to make Federal fiscal procedure a more effective instrument for carrying out fiscal policy, improvement in the following areas of Federal financial management is imperative:

1. The appropriations procedure of the Congress—to the end that fewer types of appropriation bills be made use of and the possibility increased that the Congress consider all appropriation legislation as a unit.

2. The ways and means whereby the Congress views as a unit both the revenues and the appropriations of the Federal Government.

(3) The degree of coordination among the several standing congressional committees which are concerned with fiscal matters, in particular; in the House, the Committees on Appropriations, Banking and Currency, Coinage, Weights and Measures, Expenditures in Executive Departments, and Ways and Means; and in the Senate, the Committees on Appropriations, Banking and Currency, Expenditures in the Executive Departments, and Finance.

(4) The Federal accounting system—to the end that there be established a single, centralized accounting system that will produce quickly and easily those types of information necessary for effective financial administration.

(5) The financial operations of all Government corporations and independent executive agencies—to the end that the financial activities of all such bodies be brought within the orbit of the existing budgetary procedure and subjected to legislative scrutiny.

(6) The concentration of administrative responsibility for the operations of all executive agencies whose duties are primarily of a financial or fiscal character. (Such responsibility might be concentrated in one or perhaps two officials of Cabinet rank, or conceivably in a new Cabinet position created specifically to assume some or all of it.)

The reformulation of the purposes of fiscal policy should set objectives that are within the abilities of the administrative mechanisms of public financial management, in recognition of the fact that in actuality there are things which even the Government cannot do, for administrative if not for legal reasons.

These objectives must include and probably should be confined to:

1. The protection of the Federal Government's credit.

2. The provision of a monetary unit the value of which is subject to and determined by an objective test, and the purchasing power of which is not subject to wide variation, nor to political manipulation, nor to the threat of political manipulation.

3. The organization of a system of financial institutions that will, on the one hand, safeguard the savings and cash balances of the people and will, on the other hand, furnish credit and capital to business enterprise on terms suited to the needs of the economy.

Other Federal activities which from time to time may appear to be necessary or desirable for the welfare of the State should be adopted or rejected on their own merits—for instance, the provision of social security, the control of margin requirements for loans made against the collateral of stocks and bonds, or the extension of credits to the governments of foreign countries. Even though such measures affect the financial condition of the Federal Government, they should be appraised and then either advocated or combatted because of their own virtues or defects, not because their acceptance or refusal would facilitate or impede the basic purposes of fiscal policy.

Finally, so-called objectives of fiscal policy which in the light of experience lie beyond the competence of public financial administration and are outside the range of effective governmental action, at least in peacetime, should be dismissed as impractical goals, the pursuit of which serves only to obscure issues of basic significance. In this category, for instance, are precise control over the prices of individual commodities and meticulous regulation of the rates of public and private spending.

One further word of caution may be permissible. If, in the post-war period, the Federal Government fails to achieve some of the more elaborate aims posited by ambitious fiscal-policy doctrines, this failure should not be so much attributed to flaws in an admittedly imperfect economic system as to a failure on the part of fiscal-policy enthusiasts to recognize that there are in fact definite limitations on the governmental process and bounds beyond which administrative action is not effective. If the more modest and the basic objectives of fiscal policy are not achieved, if the policies themselves are not clear and understandable, if within reasonable limits they are not effective, if they do not encourage and assist business enterprise to provide employment and carry the necessary tax burden, such failures should be placed where they rightly belong—at the door of defective formulation of policy and of bad administration, rather than on the step of the existing economic structure and business practice.

Much of the internal history of the war agencies of the Federal Government, particularly those agencies which took Federal activities into new fields—for instance, the War Production Board, the Office of Price Administration, the Office of Lend-Lease Administration, and the Board of Economic Warfare—is to be written in terms of attempts to create organizations that, in an administrative sense, were workable and effective. It will be most expensive for the country if, ultimately, the post-war fiscal history of the Nation is written in terms of attempted policies that were beyond the limits of administrative feasibility or were extraneous to the reasonable needs of a peacetime economy, or if the Nation's post-war fiscal history is punctuated by a series of unsuccessful efforts to construct effective administrative organizations equal to the tasks imposed on them.

[32] See, for instance, Charles E. Noyes, Economic Freedom (New York & London, Harper & Bros., 1943), p. 53.

The Spirit of '76 Marches On

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem:

"THE SPIRIT OF '76 MARCHES ON"

Raise it up where the wild winds blow,
Out in the vast Pacific seas,
Out where the men of freedom beat
The hordes of evil to their knees,

Raise it up on the foeman's isle,
To float in grandeur in the skies,
This flag for which a freeman fights,
Or, facing the odds of battle, dies;

Up with the symbol of the bold,
The glorious guerdon of brave men,
That all the Nation's folk may feel
The spirit of seventy-six again!

—*Joe Colton.*

A Plea for an Amicable Modus Vivendi Between the Arab and Hebrew Peoples in Palestine

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. COFFEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very significant message sent to the delegates of the six Middle Eastern states convening now in Cairo. Mr. Peter H. Bergson and Mr. Theodore Bennahum, members of the Hebrew Committee of National Liberation, have conferred with the Honorable Mahmoud Hassan, Egyptian Minister to Washington, before he departed for Cairo and through him the communication to the Cairo conference has been transmitted. I believe this message to be of special importance because it is a direct step toward the reconciliation of the Hebrew and Arab peoples who are the two main factors in any decision which can be made regarding Palestine. The message follows:

The Hebrew Committee of National Liberation has sent to the delegates of the six middle eastern states convening now in Cairo a message of "brotherly greetings and sincere wishes for the success of their endeavors to achieve unity and independence of the great Moslem peoples of the Near East."

Deploring the interference of "foreign self-interested powers," the Hebrew committee offered a policy of reconciliation looking toward the building up of Palestine (with the Arabs as equal partners) as "a free and democratic state in which Hebrews and Arabs will enjoy full equality of citizenship and government as fellow builders of a renascent civilization."

Mr. Peter H. Bergson and Mr. Theodore Bennahum, member of the Hebrew committee, have conferred with the Honorable Mahmoud Hassen, Egyptian Minister to Washington, through whom the communication to the Cairo conference has been transmitted. It is understood that the Minister is about to depart for Cairo to confer with his government.

The text of the communication follows:

"On behalf of the Hebrew Committee of National Liberation I send you our brotherly greetings and sincere wishes for the success of your endeavors to achieve unity and independence of the great Moslem peoples of the Near East. Regardless of the unfortunate and artificial misunderstandings in recent years in Palestine, which arose solely from the instigation of foreign self-interested powers, the outstanding historic fact remains that whenever Moslems and Jews happened to live together, not only did they enjoy the warmest mutual respect and friendship, but the happy juxtaposition greatly contributed to the advancement of civilization and humanity at large. There is no reason why the Hebrew people, whose national territory from ancient times has been Palestine, and those Arabs who for many generations have lived there, should not form one free and democratic state, in which they will enjoy full equality of citizenship and government, as fellow rebuilders of an ancient glory.

"Our martyred people do not seek domination, but only a chance to survive with the dignity of human beings, and to enjoy freedom. We are sure that the sentiments of understanding and sympathy for the plight of our people, expressed by the most eminent Egyptian lawyers—Abdel Fattah el Sayed Bey, Tewfik Doss Pasha, and Hassan Hosni—at the recent Cairo trial, were not merely perfunctory and professional utterances but a further expression of the conscience and grandeur of Islam. As soon as this superficial issue between the renascent Hebrew Nation of Europe and Palestine and the Arab community in Palestine is resolved, we are sure that all Hebrews will welcome the prospect of a free Palestine participating in a larger regional constellation of middle eastern states. With this in view we hope that an understanding between the Hebrew Nation and the noble Moslem peoples of the Middle East will be a benediction for all mankind.

"We pray for the blessings of the Lord upon your peoples and that your deliberations may be guided by a spirit of true justice which is the highest wisdom.

"I beg to assure Your Excellency of my esteem and consideration.

"PETER H. BERGSON,
"Chairman, Hebrew Committee of National Liberation."

Go To It, Mr. President

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Indianapolis Star:

GO TO IT, MR. PRESIDENT

That was a great report to the American people, Mr. President. You spoke to all the people as the representative of all the people. Your report and your comments were frank and presented in simple language which all can understand and which the American people appreciate.

There was not one word of incrimination in anything you said. You frankly declared your understanding of, your support of, and your allegiance to the Constitution. You told the world that the peace will not be your peace, not a Democratic Party peace, not a Republican Party peace, but a people's peace based on what the American people know and applaud as plain common sense.

In your report you were a leader in every sense of the word, Mr. President. You told us what we wanted to know. You promised to keep us advised. You gave assurances of thoroughgoing bipartisan representation in international conferences planning for world organization and international cooperation. You brilliantly avoided the mistake of your illustrious predecessor, Woodrow Wilson.

We have opposed you bitterly in the past on many issues, mainly on your multiple-term ambitions, but on the basis of your report yesterday and on your assurances of adherence to common sense and constitutional processes we pledge you our wholehearted support in your determination to create a world organization based on international good will and understanding.

Go to it, Mr. President. The American people are for you and with you. But for the sake of America and the world, stay on the beam.

West Presents Its Case

EXTENSION OF REMARKS
OF
HON. WALTER K. GRANGER
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial from the Standard Examiner, of Ogden, Utah, which, in my opinion, reflects the thinking of the people of the West with respect to industrial plants that have been established there during the war. This editorial clearly sets forth the determination of our people to maintain facilities that will utilize our raw materials of the West and remove the shackles of discrimination that have been imposed upon them all together too long:

WEST PRESENTS ITS CASE

It seems to us that the best way to tell our readers about the purpose and significance of the Western States Conference Steel Committee meetings in Salt Lake City and Geneva this week is to re-tell the story of the orchard heaters.

A California manufacturer set out to make orchard heaters for the big market in the citrus area of California only to discover that eastern manufacturers can sell heaters to Californians at a price which the California manufacturer must pay merely for the steel that is required to make an orchard heater.

Morris B. Pendleton, who manufactures tools in Los Angeles, told the story and described why the handicap to western steel manufacturing exists. Said he:

"The West enjoys an equitable position with respect to lumber, copper, aluminum, oil, ceramics, agriculture, and other products. We now feel we are entitled to an equitable position in steel.

"Present practice forces western manufacturers to pay approximately $21 per ton more for our steel made in the West now, or about $12 pre-war. This is a penalty for the western manufacturer and amounts to the equivalent of a subsidy of $21 a ton to our eastern competitors, giving them unfair advantage. Such unfair advantages are not in accordance with a free-market economy on which American business has been founded."

So long as the West lacked a steel industry western manufacturers saw little hope of escaping from a colonial position with regard to steel, but when the needs of war caused the construction of the huge plant at Geneva and the smaller plant at Fontana, hopes were aroused. If these plants can be retained as permanent industrial resources in the West and the inequitable steel price system altered so that western manufacturers may obtain steel at prices their eastern competitors enjoy, a vast new field of manufacturing is opened up for western industrial enterprise.

The steel committee of the Western States Council was appointed to strive for this objective. The Utah Conference just completed was an educational preparation for the battle to come. There was a war-of-nerves aspect to this conference. The Western States built up their case solidly and logically, as follows:

Arthur J. Boynton, a Chicago engineer with an international reputation as a steel industry authority, described the factors which have made for successful steel manufacture in the principal steel manufacturing centers of the world.

Dr. J. R. Mahoney, of the University of Utah, whose confident statements about Geneva's ability to produce steel at economic prices in peacetime have stood up under scrutiny, said that the factors for success described by Boynton exist at Geneva.

Then Mr. Pendleton, the Los Angeles manufacturer, said the West is determined to consolidate its gains (including the western steel industry) "and will provide a surprisingly large market for steel."

F. T. Letchfield, San Francisco industrial engineer, demonstrated that the industrial development of the West must continue because of economic forces at work, which economic forces are stronger than any political efforts which may be brought to bear in opposition.

On top of all this Senator RALPH O. BREWSTER of Maine said the Mead committee (formerly Truman committee) will insist upon the speedy, just, and antimonopolistic disposal of Government steel plants for postwar operation. He upheld the Western States in their determination to obtain an equitable position in steel, so the West may manufacture steel products on a fair competitive basis with manufacturers in other sections of the country.

The railroads made haste to inform the conferees that the West can look to them to assist, by appropriate rate action, the realization of western ambitions.

This boils down to the exciting truth that the Western States have given good and proper notice:

1. That if anybody has an idea the war-built western steel industry can be scrapped and the pre-war status quo be restored he had better rid himself quickly of that idea.

2. That a surprisingly large market for steel will develop under western post-war industrial programs and the steel makers who possess the Geneva and Fontana facilities should have an advantage over others seeking to sell in this market.

3. That the West will insist upon receiving price benefits to flow from the location of steel plants in proximity to western users of steel and no longer will endure the practice of charging prices for western steel as if it were made in Pittsburgh or Chicago with the cost of a long haul added to the price although the long haul never is made.

This is the war of nerves that is preceding an actual industrial revolution, but there are plenty of signs that the war of nerves may be

so effective as to bring about the results desired. For persons who have taken the time to investigate have reported that the West means business and the West is united and cooperative as it never was before. Making use of a heroic quotation, "We have just begun to fight."

Radio Station WHA, University of Wisconsin

EXTENSION OF REMARKS

OF

HON. ROBERT K. HENRY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. HENRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to express my sincere greetings and congratulations to the University of Wisconsin radio station WHA, and its staff, for its record of service to the State of Wisconsin and for its position of leadership in the Nation, by including the text of Joint Resolution No. 38, which was adopted by the Assembly and the Senate of the State of Wisconsin on February 21, 1945:

Resolution congratulating radio station WHA and its staff upon its completion of 25 years of service to the people of the State, and commemorating its founding

Whereas the University of Wisconsin radio station WHA, situated on the campus of the university in the city of Madison, county of Dane, in the State of Wisconsin, has completed 25 years of broadcasting service to the State; and

Whereas Station WHA is identified as the oldest station in the Nation, having begun its scheduled program service as early as February 1919; and

Whereas Station WHA has maintained a position of national leadership in radio education, with a record of 22 program awards and honors won in competition in the American exhibition of education radio programs during the years from 1937 to 1944, and is the recipient of Variety Magazine's 1938 award for outstanding public service broadcasting and the George Foster Peabody award for educational program excellence in 1943; and

Whereas Station WHA brings to the farmers and homemakers of the State daily programs of practical benefit and educational value; and

Whereas Station WHA inaugurated the programs known as the School of the Air and the College of the Air in the State of Wisconsin, providing instructive courses from the kindergarten to the university level for school and home listening; and

Whereas Station WHA affords generous opportunities for practical study, training, and experience in radio leading to professional careers for many students: Now, therefore, be it

Resolved by the senate (the assembly concurring), That this legislature hereby extend to the University of Wisconsin radio station WHA and its staff sincere greetings and congratulations on its twenty-sixth anniversary for its record of service to the State and its position of leadership in the Nation; and be it further

Resolved, That a plaque commemorating the founding of the University of Wisconsin radio station WHA be placed by the board of regents of the university with the assistance of the State engineer at a suitable location on the university campus in Madison, to observe appropriately this historic contribution to the development of radio broadcasting.

By Senators Madsen and Knowles.

Was read.

The joint resolution was considered at this time, upon motion of Senator Madsen, with unanimous consent.

The joint resolution was adopted.

Ordered messaged to the assembly at once.

Disposal of Surplus Property

EXTENSION OF REMARKS

OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. RICHARDS. Mr. Speaker, the American people would like to know just where their tax dollars go in connection with the disposal of surplus property. The clothing, trucks, and hundreds of other items being used by the armed forces were purchased with funds levied from the people of America and with funds borrowed on their credit which their grandchildren will be repaying. They therefore have a right to know as much as possible about the disposal of those goods which are declared surplus to the needs of the armed forces. We passed legislation here setting up an organization to direct the disposal of surplus property, and perhaps as a whole that organization will function well, but I have taken note of incidents which seem not in accord with the intent of Congress in connection with surplus property. I wish to direct attention to a matter which if indicative of a widespread policy forbodes scandal and loss for the people of the country.

This matter was brought to my attention by an American soldier who sent me a copy of an advertisement from a Birmingham, Ala., newspaper. The advertisement included the following information:

Paul has to move by January 10.

Due to conditions over which we have no control, our lease has been terminated and we are forced to vacate our present location by January 10. We have just been in the market and have huge supplies of used Army goods on hand. Therefore, we are sacrificing entire stock of used United States Army goods at ridiculous prices. Special discounts on quantity purchases.

Twenty-five thousand used United States Army raincoats. A gondola car has just arrived with thousands of used good Army raincoats. All coats are in A–1 condition. Buy two or three at this low price. $1.25.

Three thousand five hundred used United States Army steel lockers. A regular $6.95 value for a low price. Used steel lockers, each with tray. Ideal for storage uses—for tools, for odds and ends. A splendid value at $1.50.

Ten thousand pairs used United States Army shoes. All shoes have good uppers and double soles. Ideal for workmen and sportsmen. You'll have to wait on yourself. No shoe stamp necessary. $1.50.

Mail orders filled. Add 25 cents for handling charges. Make checks payable to Paul Locascio, 2221 First Avenue, N., Birmingham.

The soldier who wrote me added "I know Army units which need A–1 raincoats" and "the Army will not sell rebuilts to its members at the above prices."

My first quarrel is with the Army for disposing of such property as surplus. Surely there are men in the service who will in the future need raincoats and who will need shoes and steel lockers. It is entirely possible that the raincoats and shoes are actually not good enough for men in the service. They may be too worn for use; but surely a steel locker which is used for storage purposes would not so deteriorate that it would be worthless to the Army and not needed at some time.

In the second place, I cannot understand why one individual is permitted to acquire goods of this nature in such bulk.

Finally, I fail to see how these goods can be sold at the prices given. Surely if this dealer is selling raincoats at $1.25, lockers at $1.50, and shoes at $1.50 he purchased them—I presume through the Procurement Office of the Treasury Department—at a much lower figure. It would be interesting to know just what the American taxpayers paid for each one of these raincoats, each one of the lockers, and each pair of the shoes. I assume that these goods were sold to the highest bidder. Would it not have been wiser to cancel the sale, readvertise the goods, and try to get a better price for them?

This war is not over by a long shot. If the end of the war were in sight and the Army and Surplus Property Administration were afraid they were going to get caught with a lot of not-too-attractive surplus material on hand, there might have been some excuse for dumping it in this manner. But good raincoats are hard to get and so are shoes and steel lockers, and the chances are they will continue to be hard to get for quite some months yet. This fact further underscores my contention that it is ridiculous to dispose of these goods at what this Birmingham dealer refers to as "ridiculous prices." If he can sell them at ridiculous prices, he bought them at ridiculous prices, and the American people who paid for them in the beginning are the losers.

I hope that this House will keep the Surplus Property situation under the closest scrutiny and keep such incidents as this to which I have referred at a minimum. If we do not, then I predict that the virtual giving away of our surplus property will be the major scandal of this war.

The Ruhr Valley

EXTENSION OF REMARKS

OF

HON. C. JASPER BELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. BELL. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting

the column Random Thoughts, written by Henry J. Haskell, editor of the Kansas City Star, and printed in that paper on Sunday, February 25, because of its reference to the Ruhr River Valley in Germany, which our troops are now fighting to capture.

Mr. Haskell's description of the great strategic importance of the Ruhr Valley's war production to the Nazi War effort is such that I know every Member of the Congress will want to read it. I am certain that when you read it, you will be better able to understand the real reason why the Germans have fought so stubbornly to protect the valley and why our air forces have pounded away at it for months.

It is possible that in the German strategy of warfare that so many troops were withdrawn from the eastern front that the Russian Army was able to forge ahead rapidly, more rapidly than American, Canadian, and British troops have on the western front. Certainly, Germany's manpower yet remaining would not have been able to fight at top efficiency on both the eastern and western fronts and my reading of Mr. Haskell's article has led me to believe that Nazi generals would have chosen to protect the Ruhr at the expense of everything else.

Mr. Haskell's column is as follows:

RANDOM THOUGHTS

Twenty-odd years ago the Ruhr was much in the news as it is today. At that time the French were occupying the district in order to collect reparations, much to the indignation of the Germans and many sympathetic British and Americans. The Germans protested payment was impossible—and then when their turn came in the Second World War they ruthlessly collected from the conquered countries far more than they had been called on to pay after the first war.

We happened to be in Paris in 1923 and we kept hearing about trouble in the Ruhr until we were goaded into going there to look things over. It was an overnight run of 12 hours from Paris to Dusseldorf, a city of 500,000 that stands on the east bank of the Rhine which at this place is about the size of the Missouri at Kansas City.

The Ruhr gets its name from the river Ruhr which empties into the Rhine 20 miles north of Dusseldorf. Normally the district is a beehive of coal and steel lying between the Ruhr River and the Rhine Canal. It is shaped like a piece of pie. The point of the piece is at the junction of the Rhine and the Ruhr. The pie extends about 40 miles to the east and is perhaps 20 miles wide at its widest point. It includes an important part of German industry with the big Krupp works at Essen as its chief glory.

We had heard numerous complaints of the harshness and brutality of the French forces of occupation. At least one American liberal weekly was having fits about it. So every chance we had we inquired of Germans as to what they knew. All of them had heard tales but these were vague. They chiefly centered about the misconduct of French Moorish troops toward German women. So we called on General Degoutte, commanding the forces of occupation, for explicit information. He sent for the records. Thirteen complaints had been received. On investigation and trial, four stood up and the soldiers involved had been punished. But, referring to older records, the general said there had been just as many instances of this sort before the war when German garrisons were in the Ruhr.

When the French moved into the district to try to collect reparations they had been met by passive resistance and the closing of many factories, so there was an unemployment problem. General Degoutte, who seemed a humane man, deplored the suffering this had occasioned among families. The responsibility, he said, lay with the German Government. If it had made an honest attempt to live up to the treaty there would have been no Ruhr occupation. As to trouble between the French soldiers and the German population, he insisted it was negligible. Indeed, he had had to issue an order against too much fraternizing between the troops and the civilians.

If we would like to conduct a personal investigation of conditions, he would be glad to provide facilities. Lieutenant Labouchere responded to his ring. The lieutenant, a handsome, agreeable young man with an Oxford accent, was a cousin of the British journalist Labouchere, familiarly known as "Labby," who long published a weekly paper in London. It was agreed that the officer would call at the hotel the next morning with a military car to take us on a tour of inspection.

When we started out Labouchere's great ambition seemed to be to make sure that we talked with as many Germans as possible. Otherwise our reports might be challenged at home as one-sided. We had a military map showing the coal mines, of which there must have been hundreds, and we drove for 30 miles through what seemed one endless city studded with the stacks of factories.

Our way lay through the Rhine Valley to Duisburg at the mouth of the Ruhr, which was about like the Kaw at Kansas City. There we crossed into Ruhrort, the largest river port in the world with 23 miles of docks. It is the center of a great system of inland waterways and in normal times handles 20,000,000 tons of freight a year. All this in barges that do not draw more than 8 feet of water. Shows what can be done with a 10-foot channel, and what might be done with a 9-foot channel in the Missouri.

We reached the Kaiserhof hotel at Essen in time for luncheon with a group of smart French engineer officers and then the lieutenant turned us loose at Krupp's to get the German side. The original plant was built around a coal mine and as it expanded the mines expanded so that on the occasion of our visit the buildings were four and a half miles long by two wide, and the company got all the coal it needed for operating with 50,000 men from under the site of the plant. Most of its ore at that time came from Sweden.

An official of Krupp's took us in charge. He spoke excellent but gloomy English. Under questioning he admitted that for a year during the period of greatest inflation the company had got its work done virtually for nothing. That is, it had paid the workers in scrip to be redeemed in currency that was almost worthless when it reached Essen. Also, as we recollect, the company had wiped out its bonded debt without expense when the gold mark, 25 cents, was worth a trillion paper marks, and the British Government was able to buy a consulate by foreclosing a large mortgage for exactly tuppence ha' penny, or 5 cents.

As we were to learn later the opportunity to beat down wages and get rid of debts was what prompted the big industrialists to bring on the inflation that was so ruinous to the middle class Germans. When the big boys had got all the profits possible out of the inflation they permitted Dr. Schacht to stop it overnight.

Taxes were next on the Krupp man's list. They were ruinous, he said. But when pressed with the figures we had been able to gather in Dusseldorf, he admitted that the government had been able to collect only nominal taxes for the 2 preceding years. So the company wasn't in real distress over taxes.

Although we didn't know it at the time, we later came to recognize all such abounding wails, which wouldn't bear investigation, as part of the German plan to organize world sympathy on the ground that the German lamb had been brutally assailed by the surrounding wolves.

Our informant was sure the French were out to ruin the Ruhr and he predicted that grass would be growing in the streets of Essen within 5 years. In the light of events it is too bad he wasn't right.

"Look at the Ruhr," he proceeded, according to our notes of the conversation. "We produced here normally every day coal enough to load a procession of trains, and there were additional hundreds of trains of raw material and finished products. It was a most complicated transportation system. We had everything worked out with electric switches and an intricate schedule for shunting cars. The French came in and disrupted it all. They have wedged the switches and sent a few trains back and forth, operating them like tram cars, and not daring to send them closer than an hour apart. This in the Ruhr where we used to run a train every minute."

Some of these details we think are still pertinent. If the efficient operation of the Ruhr district 20 years ago required the running of a train a minute, we don't see how there could have been much production in the last few months under the heavy bombing that has been constantly carried on.

Address of Maj. Gen. Archer L. Lerch

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Maj. Gen. Archer L. Lerch, the Provost Marshal General, to the Forum of the Cooperative Committee, Wednesday, February 28, 1945:

On December 7, 1941, the United States took its first prisoner of war in World War No. 2—the Japanese sailor manning the baby submarine caught at Pearl Harbor. He is in the United States today, but is far from alone. As of February 15, 1945, there were 359,624 prisoners of war held in the continental limits of the United States—306,226 Germans, 50,570 Italians, 2,828 Japanese. They were held at 141 base camps and 313 branch camps, located in every State in the Union.

My purpose is to tell you what the War Department is doing with these hundreds of thousands of prisoners. I propose to tell you how we work them, how we feed them, how we guard them, and how we carry out the terms of the Geneva Convention. I shall try to make a clear presentation of the War Department's program for handling enemy prisoners of war in this country.

First, let me say that our policies in handling prisoners of war have changed greatly with experience. In 1941 and in 1942 we considered prisoners only as a security problem. They were a necessary result of warfare and were a drain on the manpower of our Army, which had to furnish guards and administrative overhead to run the camps. We locked them up tightly in barbed-wire enclosures, we posted guards around the fences, fed them, housed them—but got nothing in return for our trouble except the insignificant labor that they did within the enclosure, mostly directed toward their own housekeeping work.

They were nothing but an economic and administrative burden.

As the war progressed, however, and we got thousands of new prisoners, we began to look upon them as an untouched pool of available manpower, present in this country at a time when manpower was a desperately needed commodity. In the latter part of 1942 and early 1943 our work program began to get under way—modestly at first, to be sure, and confined almost entirely to work on Army posts. The prisoners were put to work for post engineers, building and repairing roads, doing carpentry and various forms of maintenance labor; for the post quartermaster, where they worked in the laundries and as stock clerks; for the post motor pools, where they greased, washed, repaired, and serviced nontactical vehicles.

By 1943, the manpower problem was becoming even more acute, but at the same time our prisoners were increasing in number, due to the German reverses in Africa. From June 1943 through January 1944, thousands of prisoners—former members of the Afrika Korps—were shipped to this country.

So, in this country, we found ourselves in this position—we had a manpower shortage but we had the men to help overcome that shortage—prisoners of war. We therefore inaugurated our contract labor program, which I would like to explain to you in some detail.

In effect, the program simply is this:

We told the farmers and the contractors of the Nation that they could use prisoner of war labor under two conditions:

1. That under no circumstances could prisoner labor compete with free labor;

2. That under no circumstances could one employer use prisoners at a lower wage than he would have to pay civilians because that would result in one employer being subsidized to the detriment of his neighbor.

Then we set up safeguards to insure that our two policies were carried out. To insure that prisoners do not compete with free labor, we made it mandatory that every prospective employer of prisoner of war labor first obtain certification from the local office of the War Manpower Commission that there is no free civilian labor in the community to do the type of job that he needs done.

We insured fair application for our second policy by having the same local representative of the War Manpower Commission certify the prevailing wage for that type of labor.

When those two steps have been completed, the prospective employer can come to the Army and the Army will furnish him prisoners if they are available.

Now you may wonder about the pay of prisoners. Let me assure you that the prisoners never see the money paid for their labor by the contractor. The contractor's check is deposited directly into the Treasury of the United States. The prisoners receive only the 80 cents a day proposed by this country to Germany at the beginning of the war as the pay of all prisoners of war, who work. Germany works our men and pays them 70 pfennigs a day which I am told is equivalent in purchasing power to the 80 cents that we pay their prisoners.

That's the way we set up the program. Now let's see how it's working. You'll probably be surprised to know that it has developed into a $100,000,000-a-year business. One hundred million dollars—that's the amount realized by the Government of the United States from the labor of prisoners of war during 1944. Here's how the $100,000,00 sum was realized:

Private contractors paid the Government over $22,000,000 after deducting contract allowances for transportation, housing, and subsistence. This profit to the Government was possible because of the program I have just outlined to you—because we required the employer to pay the same rate per unit of work completed that he would have paid free civilian labor had it been available but we paid the prisoners who did the work only 80 cents per man per day—80 cents in canteen coupons, incidentally. We don't give them any cash.

The War Department realized an estimated saving of over $80,000,000 from the prisoners who did work on Army posts, camps, and stations throughout the country. Prisoners working for the Army performed a total of 19,567,719 man-days of work, ranging from such highly skilled work as watch repair to common maintenance labor.

You may be interested in knowing the total man-days worked for private contractors during 1944. Altogether, the prisoners did 10,181,275 man-days of work for contract employers. The bulk of this work was in agriculture, which accounted for 5,705,909 man-days.

From one border to the other, the prisoners worked on the Nation's farms, replacing the farm labor that had gone to war or had migrated to industrial towns attracted by higher paid war jobs. In the South the prisoners picked cotton, cut sugarcane, harvested peanuts and tobacco, cut pulpwood. In the West they gathered the sugar beets and grains. In the North and East they canned fruit and vegetables and harvested many other farm crops. In two counties alone in Kentucky they were credited with saving 2,200 acres of tobacco last fall. I have a letter from the county agent of Franklin County, Ky., in which he says: "I feel sure that at least 1,200 acres of tobacco alone were saved in Franklin County, which would have been lost had we not been able to secure prisoner-of-war labor." And a letter from the president of Woodford County, Ky., Farm Bureau, in which he says: "You may be interested to know the prisoners helped to save approximately 1,000 acres of tobacco in this county."

In addition, they worked for private contractors and for Government installations.

This work program, I assure you, does not violate in any way terms of the Geneva convention.

Let's talk for a few minutes about the Geneva Convention.

The Geneva Convention, which is adhered to by the War Department, is law. I would like to emphasize that point. It was signed by the several powers on July 27, 1929, was ratified by the Senate of the United States on January 7, 1932, signed by the President on January 16, 1932, deposited with the Government of Switzerland on February 4, 1932, and proclaimed to the world by the President of the United States on August 4, 1932. That convention was ratified and proclaimed in accordance with the provisions of the Constitution of the United States. Article 6 of the Constitution provides that "This Constitution and the laws of the United States which shall be made in pursuance thereof and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land. * * *"

That treaty was made in time of peace when presumably heads were cool and presumably reason prevailed. The world generally was most critical during World War No. 1 when the German Kaiser described the treaties by which his nation was bound as "scraps of paper." It is the solemn duty of the War Department, at least until "the supreme law of the land" has been amended by authority competent to amend it, to carry out the provisions of the law.

A few pertinent provisions of the Geneva Convention are here cited:

(a) They (meaning prisoners of war) must at all times be humanely treated and protected, particularly against acts of violence, insults, and public curiosity.

(b) Prisoners of war have the right to have their person and their honor respected.

(c) The power detaining prisoners of war is bound to provide for their maintenance.

(d) Prisoners of war shall be lodged in buildings or in barracks affording all possible guaranties of hygiene and healthfulness.

(e) The food ration of prisoners of war shall be equal in quantity and quality to that of troops at base camps.

(f) Canteens shall be installed in all camps where prisoners may obtain, at the local market price, food products and ordinary objects.

(g) The use of tobacco shall be permitted.

(h) So far as possible, belligerents shall encourage intellectual diversions and sports organized by prisoners of war.

(i) Belligerents may utilize the labor of able prisoners of war, according to their rank and aptitude, officers and persons of equivalent status excepted.

(j) It is forbidden to use prisoners of war at unhealthful or dangerous work.

(k) Labor furnished by prisoners of war shall have no direct relation with war operations. It is especially prohibited to use prisoners for manufacturing and transporting arms or munitions of any kind, or for transporting material intended for combatant units.

(l) Punishments other than those provided for the same acts for soldiers of the national armies may not be imposed upon prisoners of war by the military authorities and courts of the detaining power.

(m) In no case may prisoners of war be transferred to penitentiary establishments (prisons, penitentiaries, convict prisons, etc.) there to undergo disciplinary punishment.

(n) Prisoners of war shall be subject to the laws, regulations, and orders enforced in the armies of the detaining power.

(o) Subject to the approval of the camp commander, prisoners of war are allowed to appoint their own spokesman. In officer camps the senior officer is the spokesman. The last provision is not construed to require us to maintain in the spokesman's position any individual who refuses to cooperate with the American authorities. In many cases noncooperative spokesmen have been relieved and replaced by others who were willing to cooperate.

Any deviation on our part from terms of the Geneva Convention probably would result in instant retaliation by the German Government against the thousands of American prisoners of war held by Germany.

The War Department has an abundance of evidence which leads it to believe that our treatment of German prisoners of war has had a direct effect in securing better treatment of American prisoners held by Germany. There was a recent item in the New York Times to the effect that French and Russian prisoners in Germany have been reduced to eating rats. That isn't true of Americans. Our information indicates that American prisoners receive between 1,200 and 2,000 calories of food per day from the Germans. That is the same ration fed the German soldier at base camps and it is the same that the German civilian gets. It isn't as much as the average American civilian eats. It isn't as much as the American soldier at a base camp eats. The Red Cross supplements that diet with a weekly 11-pound parcel which results in the American prisoner of war in Germany receiving 3,500 calories of food per day—which is as much as the average American civilian gets.

In an article appearing in the Washington Sunday Star on February 18, 1945, Maurice Pate, of the American Red Cross, said:

"The greatest single factor which gives us strength in getting relief and maintaining regular communication with our prisoner kin is the scrupulous attitude of the American Army in fulfilling the Treaty of Geneva toward enemy prisoners. Some have lightly called this policy of our Army mollycoddling. The truth is that the Army has maintained the highest discipline in handling enemy prisoners. It treats these men strictly but fairly and has obtained from them millions of valuable man-work hours." Also not to

be overlooked is the fact that strict adherence to the Geneva convention by the American forces has served to lower the fighting morale of the German troops.

A story in point was filed recently by Victor O. Jones correspondent for North American Newspaper Alliance from somewhere in Holland. Mr. Jones had watched in amazement as Ninth Army troops took strong fortifications around Bruchelen without resistance. Mr. Jones talked to some of the prisoners and then he wrote:

"We asked all the prisoners whether they had been afraid of mistreatment after capture. They all said their officers had told them they'd be shot or tortured, but that they hadn't believed it because they had letters from captured comrades who told them British and American treatment of prisoners was excellent.

"It may burn you up to hear that German prisoners are getting cigarettes when you can't, but it's not a big price to pay when you can get guys like these to come out of strong bunkers without firing a shot. After the Ninth Army troops took Bruchelen without resistance they were surprised by the strength of some of its fortifications. The main body of Germans had retired, but a die-hard rear guard had been left behind with instructions to fight to the last bullet. If they'd done so our casualties might have been much heavier than they were. From that point of view, our policy of living up to the Geneva Convention is smart tactics, even without considering other angles."

All individuals who have anything to do with the prisoner-of-war program have constantly in mind one dominating thought, and that is to do everything humanly possible to insure that our own people in the hands of the enemy have all of the benefits of the Geneva Convention which it is possible for us to get for them, and to insure in every way possible their early return to their homes in this country in as good physical and mental condition as is possible. To accomplish this we are ever on the alert to avoid anything which will give the enemy an excuse for failing to give to our men everything to which they are entitled or cause the enemy to do anything which would interfere in any way with their return to their homes in good physical and mental health.

The War Department believes it essential to pursue a program which will protect the Americans in enemy hands and eventually bring them safely back to the homes they have so gallantly defended. The necessity for such a policy was recognized by the House Military Affairs Committee, which, following an investigation which failed to substantiate any of the numerous coddling rumors, reported as follows:

"The provisions of the Geneva Convention of 1929 are obviously being carried out to the letter and it is well indeed that such is the case, since the slightest deviation therefrom on our part would instantly result in more than retaliatory measures on the part of our enemies against American prisoners of war in their hands. Such a contingency must not be overlooked for a single instant."

Now let's talk a little about so-called Nazi domination of the camps. A lot has been said about that, one way or the other. The public has received much misinformation on the subject. A writer for a magazine of wide circulation and splendid reputation did a story on prisoner-of-war camps which was published last fall. So far as I have been able to determine, that writer had never been in a prisoner-of-war camp, and had not talked to anyone in the Provost Marshal General's Office or in the office of the Bureau of Public Relations. Unfortunately, the article was republished in a popular magazine digest which has a circulation of several millions. The article was replete with errors and untrue statements. The War Department has always welcomed editors, publishers, and accredited writers to any camp they wish to visit. The writer in question chose to write without knowing the facts. I'd like to give you the facts.

The War Department early became aware that Nazi elements would try to dominate the camps, and early measures were adopted to cope with the situation. It has not been easy; the very nature of the problem indicates that it would not be easy.

It required painstaking intelligence work, screening and more screening to separate the good from the bad. Mistakes have been made, but they have been few considering the magnitude of the job and the difficulties under which it proceeded. Over 300,000 Germans—enough to completely populate a city the size of Jersey City, Denver, or Omaha—have poured into this country from inbound troop transports bound for prisoner-of-war camps. Some among them were Gestapo men, but they all looked alike, talked alike, and to an untrained eye, thought alike. There were eyes in the War Department, however, that were not untrained, and today the known trouble makers have been segregated. The noncooperative prisoners are in separate compounds or separate camps from the cooperative prisoners. Officers are segregated from enlisted men. No prisoner of war exercises command over any other prisoner of war.

An additional precaution has been taken. Every camp has posted on the prisoner-of-war bulletin board a notice stating that any prisoner who fears for his own safety need only report that fear to the nearest American officer or enlisted man and he will be given protection.

Now, that method of handling the prisoners is working. Altogether we have had only five murders and two forced suicides that could be attributed to Nazi methods. Those accused of the crimes have been tried. The sentences have not been officially announced. We have had none since April 1944. That's not a high record. The murder and suicide rate among German prisoners of war is lower than the rate shown by insurance statistics for the general German public in time of peace.

There has been a great deal of interest in another subject—escapes of prisoners of war. So let's discuss escapes. As of February 26—last Monday—there had been 1,354 escapes, but only 19 (13 Germans and 6 Italians) were at large on that day.[1] That figure fluctuates from day to day. All 25 prisoners from the highly publicized Papago Park escape have been recaptured.

The total number of escapes sounds large, but let's look at the reason for them. If the War Department and the American people were willing to place all prisoners of war behind barbed wire, feed them, care for them, but get nothing in return for their trouble, then I believe we could prevent practically all escapes.

The War Department, however, does not think that such a program is justified during a time of war and during a time of manpower shortage. Instead it has worked the prisoners. I have outlined that work program earlier in this article—a work program that resulted in a total of 29,750,992 man-days of work by prisoners of war during 1944 at an estimated value to the Government of $102,000,000.

Now balance that record against the escapes—"absentees" would be a better word since none of the escapes have been permanent and most have consisted simply in having a prisoner slip away from a work detail, only to be picked up a few hours later and returned to camp. A compilation of periods escaped prisoners were at large during the period from November 1942 to December 31, 1944, shows that 648 prisoners were at large 1 day or less; 148 were at large 2 days; 111 were at large 3 days; 48 were at large 4 days; 31 were at large 5 days; 116 were at large 5 to 14 days; 31 were at large 14 or more days.

[1] On March 1, 1945, the number was 12, 6 Germans and 6 Italians.

Now, even though we do send the prisoners out to work rather than keep them behind permanent walls and receive no labor from them, our escape rate is practically the same as the escape rate from Federal penitentiaries. During the year ending June 30, 1944, the Federal prisons had an average population of 15,691, from which 60 men escaped, for a rate of 0.44 percent. During a like period we had an average population of 288,292, from which there were 1,036 escapes, for a rate of 0.45 percent.

We have shot 56 prisoners who attempted to escape. Thirty-five of these died; 21 were wounded. Our guards have been taught to shoot to kill, if necessary, to prevent escape.

The threat of sabotage of escaped prisoners of war has not materialized. To date there have been no reports of sabotage or attempts to commit sabotage by escaped prisoners of war and nearly every offense committed by them can be traced to their efforts to elude capture. Of the 15 crimes reported as having been committed by escaped prisoners of war, and for which the prisoners of war were tried by courts martial, 12 involved theft of motor vehicles. The remainder were thefts of clothes, money, and other valuables obviously intended for use in furthering their escape. So much for German prisoners of war.

Finally a word about Italian Service Units, who they are and what they do.

Italian prisoners are divided into two groups. One group, largely composed of Fascists, are treated as regular prisoners of war. The other group consists of prisoners of war who have volunteered to assist our war effort. They have been formed into Italian Service Units organized along the lines of American Service Units.

The status of those Italian Service Units has often been misunderstood. There often has been confusion between regular Italian prisoners of war and members of Italian Service Units. Stories of freedom given to I. S. U.'s have been exaggerated. Here are the facts:

These men are strictly volunteers. Before they are assigned to the units they must state in writing: "I promise that I will work in behalf of the United States of America at any place on any task except actual combat, and that I will assist the United States to the best of my ability in the prosecution of its cause against the common enemy, Germany." They are then carefully examined by our military intelligence and assigned only if approved as trustworthy. If at any time they fail to carry out their work they are immediately returned to the regular prisoner-of-war status.

Though in a special status, the I. S. U. men are still prisoners of war. From the standpoint of the value we receive, the big difference is that they can be used on any task short of combat, whereas regular prisoners of war cannot be used in tasks having direct relation with war operations. Their contribution to the war effort is impressive. They have been turning in better than 1,000,000 man-days of work a month for us.

These 33,000 volunteers have been formed into 192 Italian Service Units located at 66 different stations scattered through 25 States, from Oregon to Louisiana, from California to New England, on the Canadian and Mexican borders, on the Great Lakes and the Gulf of Mexico. They are worked in general depots, arsenals, ordnance installations, ports of embarkation, Army posts, camps, and stations. They load and unload trucks and railroad cars and ships, they crate and handle heavy equipment, they build roads, salvage and reclaim many items, they repair and process vehicles and serve as clerks, to name but a few of the many things they do. They are not permitted to work directly with or around explosives, which is about their only restriction.

For the 6-month period ending December 31, 1944, members of Italian Service Units

contributed over 6,000,000 man-days, exclusive of time lost because of sickness or other reasons. The chief of transportation utilized over 2,000,000 man-days at ports of embarkation and holding and reconsigning points where these units expedited the dispatch of war material overseas. The New York port of embarkation alone used 585,352 of these man-days during this period. The chief of ordnance used 1,364,374 man-days at ordnance depots and arsenals where units were engaged in assisting in the shipment of vital ordnance matériel to the ports of embarkation. The Quartermaster General used nearly 800,000 man-days in the preparation of supplies for shipment to the ports. The chief of engineers used over 333,000 man-days. Posts, camps, and stations used nearly 750,000 man-days devoted to repair of motor vehicles and their reconditioning and preparation for overseas shipment, salvage, and general housekeeping and maintenance.

In all instances where Italian Service Units have been used, they have supplemented American civilian labor where an acute shortage threatened to disrupt operations essential to the war effort.

Officials have declared flatly that without the services of these men their shipping schedules of critically needed matériel could not have been met, that bottlenecks could not have been overcome, and that production could not have been increased.

For all their work, they are the lowest paid class of workers in our war effort. They get $24 a month, one third of which is in cash. In many places they work a 58-hour week and, where their program calls for orientation courses, special training and drills in addition to their work, they put in 66 hours a week. At one ordnance depot, 215 I. S. U.'s raised $155 for the National War Fund out of their $8 a month in cash.

Despite all reports, their privileges are relatively few. In view of their co-belligerent status, the stigma of wearing "PW" stamped clothing is removed and they are issued United States uniforms (normally class B) with an "Italy" insignia on the left shoulder, and with plain bone buttons in place of regulation metal buttons. They are not enlisted in our Army. They are allowed to go about their work without armed guards, but under supervision. They are permitted to make visits to post exchanges, theaters, and chapels on the post, and occasional group recreational trips off military reservations under the supervision of American military personnel. If transportation is required on these trips, the men charter and pay for the bus out of their earnings. Only short trips are authorized. The War Department also permits them to be visited by friends and relatives of whom they have many in this country. Those privileges can be restricted any time the post commander considers it desirable.

The I. S. U. adds up very simply: we use the work these men do because it helps shorten the war.

While members of Italian Service Units are still prisoners of war, it must be remembered that Italy has recently received sweeping concessions from the Allies. She can now appoint and receive ambassadors and ministers to and from other nations. She has regained the right to enact her own laws and decrees without submitting them to the Allies for approval. She may appoint, without Allied approval, all but a few highly important officials. In short, as stated in a United Press dispatch from Rome on February 25, 1945, she has all but regained her complete independence. Remember this when you think of Italian service units, and when you read about certain privileges given to them which are not given to other prisoners of war.

I have mentioned the fact that the War Department has always welcomed editors, publishers, and accredited writers to any camp they wish to visit. To those who are working on special stories which may touch upon parts of the prisoner-of-war program which for policy reasons have not been publicized, off-the-record conferences have been granted for the purpose of insuring the accuracy of the story and protecting the program. In spite of this, the War Department has been constantly subjected to what appears to be, in some cases, deliberate harassment, and in many, many cases, well-meant, but ill-founded criticism. The activities of radio commentators and writers have resulted in thousands of letters from persons all over the country. It is the policy of the War Department to answer each of these letters individually and carefully. We believe that anyone who takes the time to write a letter with reference to prisoners of war is entitled to a careful reply. Preparation of those replies requires thousands of much-needed man-hours. We are glad to answer those letters. That is part of our job. If we have any complaint, it is against those who are in a position to tell the truth to the public but who, failing to avail themselves of opportunities to check their information for accuracy, encourage the writing of letters based on inaccurate information which they have given. A recent example is a story which received Nation-wide publicity to the effect that the Philadelphia Quartermaster Depot was manufacturing 200,000 pairs of pajamas for German prisoners of war. That story brought in some 125 letters, each of which required an explanation to the effect that the 200,000 pairs of pajamas were being made, not for German prisoners of war, but for our own people in the hands of the Germans.

In view of the fact that any minor incident relating to prisoners of war appears to have great news value, you may well expect in the future, as in the past, to hear and read of incidents involving mishandling of prisoners of war. When you hear them or read them I trust that you will consider that there are some twenty or thirty thousand American officers and soldiers handling some 350,000 prisoners of war. No matter how well intentioned or how industrious each of the American officers and soldiers may be, sometime, somewhere some of them are certain to make mistakes. All I can ask of you is that you do not permit the relation of a few of the incidents to convince you of the instability of the whole program.

There is evidence to indicate that some of the unfortunate incidents, such as the recent case of the hand-painted Nazi rag-flag at Papago Park, have been the direct result of prisoners' desire to obtain unfavorable publicity for their captors. If so, they have found plenty of encouragement among a few writers and commentators who have failed to check the accuracy of their stories prior to publication.

The War Department realizes that the handling of over a third of a million enemy soldiers and the obtaining of the maximum return from their labor is a tremendous job, but we feel it is not alone a War Department job—it is the Nation's job. It is your job as well as mine. It is well, therefore, that we counsel together, frankly, openly, and understandingly, to the end that the job may be well done.

St. Lawrence Waterway

EXTENSION OF REMARKS

OF

HON. HARRY L. TOWE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. TOWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose a resolution passed by the New Jersey State Legislative Board of the Brotherhood of Locomotive Firemen and Enginemen sent to me by Mr. John Kortes, legislative representative:

Whereas the development of the proposed St. Lawrence waterway and power project will divert men and materials from the defense and other industrial plants where they are most urgently needed at present, and will be in the future as a post-war readjustment measure; and

Whereas the development of the proposed waterway cannot be considered as a post-war or national defense measure because our men will return and find their jobs gone and even under the most optimistic circumstances as a defense measure, it would take until the late sixties of this century to complete if started now; and

Whereas the development of this waterway would divert port tonnage from the existing railway and terminal facilities on the Atlantic Seaboard and add a destructive element of competition to the existing railroads and industrial terminal facilities on this Atlantic Seaboard, which have been developed out of private funds and the sweat and blood of those of us who are here and now employed, together with those who have left to fight for our country, this was built and organized to serve the existing and adequate shipping and industrial terminals, thereby effecting seriously the eastern seaboard and depriving these workers of a livelihood in those States; and

Whereas, the desirability of the waterway as a transportation facility is open to serious question, enough to warrant defeat of this measure, because the waterway could be used only 7 months of the year, and expenditure of large sums of public money for the creation of a new part-time facility to serve a limited area of the country is an economically unsound use of public funds; and

Whereas the United States, under the agreement with Canada, is called upon to bear a disproportionate share of the costs, while advantages which might ensue would largely benefit Canada; and

Whereas the United States through the waterway would involve another risk of attack, which fact will require a still further expenditure for the protection of our shores from the north, which we believe would require a new treaty to be written between these two nations; Therefore be it

Resolved, also by the Members entrusted with this most vital legislation effecting the eastern seaboard that a vote of "Nay" be entered for them on the proposed St. Lawrence waterway bill, H. R. 671.

Philadelphia Should Be Designated as Permanent Home of the United Nations

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. WOLVERTON of New Jersey. Mr. Speaker, we stand upon the threshold of great events. There is none more important than the conference to be held at San Francisco, Calif., opening April 25, 1945.

At this conference 39 nations of the world will gather to create a pact to make secure the future peace of the world.

If such an agreement is to prove successful, in the years ahead, it must recognize and establish those principles of liberty, freedom, and democracy that were first enunciated at Philadelphia, Pa., as the foundation of this great Nation.

In view of this no city in all the world could more appropriately be designated as the permanent home of the United Nations.

In this connection I desire to call attention to a well-considered and forceful editorial appearing March 5, 1945, in the Philadelphia Record, of which J. David Stern is publisher, reading as follows:

PHILADELPHIA, HOME OF UNITED NATIONS

The City of Brotherly Love should be the permanent home of the United Nations.

Independence Hall, recognized throughout the world as the birthplace of political liberty and democracy, is the shrine around which the United Nations Council buildings should be grouped.

Modern air travel neutralizes geographic position. Since all parts of the world are within 60 hours of each other, we need no longer choose a location because of travel convenience.

Freed from space consideration, this modern world can give due weight to spiritual values.

Philadelphia, more than any other city in the world, embodies those spiritual values which would inspire and strengthen the United Nations Council.

Its very name is an inspiration as are the ideals of its founder, William Penn, a pioneer in liberalism and tolerance. Its most illustrious statesman, Benjamin Franklin, was America's first "Citizen of the world," who was almost as familiar a figure in Paris and London as on Chestnut Street.

Because we live so close to Independence Hall, we may not fully appreciate its significance to the rest of the world. In this building was formulated the most effective Constitution in the history of the world, as well as the principles of national freedom and individual rights. These must be the fundamentals of an organization designed to preserve world peace.

It is most fortunate that this building is so beautiful from an architectural standpoint. Its fine proportions and quiet dignity have impressed the thousands of pilgrims from all parts of the globe who have visited the New World's shrine of liberty.

It is easy to visualize Independence Hall as the center of a group of buildings designed to house a world organization. Already the Independence Hall Association has planned and advocated removing all buildings in front of Independence Hall between Fifth and Sixth and extending a great mall northward to the Delaware River Bridge Plaza.

Enlarging this project somewhat, plenty of room would be provided for the United Nations establishment in a section of the city which is largely obsolescent. From a mere materialistic standpoint, Philadelphia could well afford to donate all necessary land for such a development as well as to extend broad and convenient boulevards to appropriate airfields and seaplane bases.

Just as when distinguished company is coming for dinner, the home is spruced up so Philadelphia would be awakened from its lethargy to clean up its rivers and streets, remove the Chinese wall, beautify the approaches to the city and improve other areas which we have allowed to deteriorate.

There are many reasons why the United Nations should not move into the buildings of the League of Nations in Geneva. Not only would such a connection with a dismal failure in world relations be a bad beginning, but Europe, storm center of the world, is not the logical place for the peace center of a new world.

We believe the peoples of this earth have greater confidence in America's strict adherence to its professed ideals and principles than they have in any other country. The pessimists see the greatest danger to future peace in the rivalry of Great Britain and Russia for dominance in Europe. While in past ages the high mountains of Switzerland immunized it from European conflict, the development of the airplane has leveled those mountains so that today, politically speaking, Switzerland is in the center of a dangerous plateau.

This reasoning would appeal not only to France and smaller European countries, but to the peoples of Asia, Australia, and Africa. The only objection might come from South American republics, some of which are still jealous of their great northern neighbor.

Thanks to the inspired leadership of President Roosevelt, this Nation has won a dominant position in world affairs. Its generous treatment of its allies entitles it to prime consideration in choosing a location for world headquarters.

The greatest democracy in world history, it has developed an enlightened attitude towards smaller nations as evidenced by granting independence to the Philippines and its good-neighbor policy in South America.

Therefore, it is most fitting that the home of the United Nations should be within our borders. It is most fitting that the men and women who administer the world organization should gain daily inspiration from the shrine where the ideals of modern government were born. It is peculiarly appropriate that the organization dedicated to world peace should make its home in this great city whose founder dedicated it by name to the highest ethical concept—the universal brotherhood of man.

The RECORD calls upon the good citizens of Philadelphia to take immediate steps to present the claim of Philadelphia to its just heritage.

Copies of this editorial are being sent to the appropriate officials, including the mayor of Philadelphia, the Governor of the Commonwealth of Pennsylvania, our Representatives in the United States Senate and House of Representatives, as well as to the President of the United States.

What Industry Wants

EXTENSION OF REMARKS

OF

HON. FRITZ G. LANHAM

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. LANHAM. In accordance with permission granted to extend my remarks in the RECORD, I am inserting for the information of the Congress an editorial entitled "What Industry Wants," which appeared recently in the Fort Worth Star-Telegram and several other papers:

WHAT INDUSTRY WANTS

James A. Farley, former Postmaster General, in an address to the Alabama State State Chamber of Commerce in Birmingham, expressed great faith in the future industrial development of the South, and at the same time threw out a suggestion which, if heeded, might materially speed that development. He pointed out that the constitutions, laws, and tax systems of the Southern States have been built through the years to fit the needs of an agricultural community where the dependence for the great bulk of revenue is upon ad valorem taxes. While not posing as either a tax expert or a lawyer, he called attention to the fact that there may be in some of these States laws that bar their industrialization. There is food for thought in the suggestion which local and regional chambers of commerce would do well to consider carefully.

Mr. Farley, whose wide acquaintance with businessmen and political figures throughout the country has put him in position to know whereof he speaks, said that what investors first look for in seeking locale for an operation is stability and fair laws which are fairly administered. "No man," he said, "can afford to invest funds in an area that lacks staunchness, continuity, and philosophy in government. Constant change, new panaceas, and wild thetories in government frighten investment away. Take stock of your situation; eliminate unfair and arbitrary barriers, and induce business to come."

That sounds like plain, down-to-earth common sense, as was his admonition that the South "make no effort to buy business." He deprecated the practice of giving free sites to industries, years of tax exemption, special concessions, and such things as an inducement to locate in a given place. Mr. Farley undoubtedly is correct when he says that legitimate business does not ask and would not have such baubles, and the business that does demand them is worth looking into.

Drafting of Farm Labor

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. CRAWFORD. Mr. Speaker, the policy which is now being so aggressively followed by the President, General Hershey, and many of the local draft boards, of taking into the military forces the young, the experienced, technically trained, and mechanically qualified farmers of this country, is such a live issue, and the present apparent shortage of foodstuffs and the need for increased production as announced by the War Food Administrator prompts me to place in the RECORD the constructive letter which is written by an important farmer who resides in my district, Mr. Walter Nobis, of Fowler, Mich.

The letter follows:

LETTERS TO THE EDITOR

FOWLER, MICH., *February 11, 1945.*

DEAR EDITOR: People don't understand. I have lived all my life on the farm. Someone must tell the people what us farmers really do to keep life in the human body. So I will try to explain the best I can.

Where does the medicine come from which is healing thousands of wounded soldiers, besides all the other people here on earth? Peppermint oil comes from the farm as well as other oils and ingredients of salves; all gauze which is used to wrap wounds comes from the farm.

The shoes which you are wearing today come from some farm animal's hide. The clothing you and I are wearing today comes from some farm. All the food that you and I live on is a product of the farm. Your automobile, the gas and oil, the fabric in the cushions, the steel in its body, the tires on its wheels are all farm products. The radio you are listening to is a farm product. Yes, the table and all your furniture comes from some trees grown on some farm. Your cooking ware, your rugs, carpets, linoleum, all come from the farm.

The house you are living in; all the material such as lumber, cement, bricks, plaster, paper, paint, and varnish come from the farm. The tents that our soldiers are living in, their shoes, and all their clothing are farm products. The gas you cook with and the pipes that carry it through to your stove all come from the farm. The wire that brings you electricity and the dynamos that make the electricity are made from farm products.

Some of the city folks think they could get along without the farmers. The paper you are reading now or perhaps you have been reading God's Book, the Bible—this paper and the ink used in printing on it are farm products. If you are a smoker the tobacco and also the paper in your cigarette or cigar are products of the farm.

I could write much more about the farm. Only 16 percent of the population of the United States are farmers. In peacetime as well as war we have produced for our country. We have produced much food and clothing for lend-lease as well as for our soldiers and civilian population.

We want you people in the cities to have what you want to eat. You are entitled to have a living, but our President has ordered Hershey to take the farmers from the farm and the draft boards are doing it now. We farmers have pleaded with our draft boards. We have asked our Government time and time again to leave us enough help so we can give you what you need. We have been turned down. Our President says farming isn't essential.

Food is getting scarce. When you go to your grocery now and ask for some certain food and the grocer says he is out—well, that is already bad. But when you come direct to the farmer as many of you city people are already doing, or to the country grocery store, and find that they haven't got what you want—and this is already happening—I warn you, it will get worse. But I ask you not to get mad at us farmers. Put the blame where it rightly belongs. We farmers want you to have what you want and when you want it.

We farmers are not organized and maybe it is God's will that we don't organize. Sometimes a large organization makes wrong decisions which benefit but a few and drag all the other members down instead of up. Maybe this would happen if we farmers were organized and our leader would call a strike. You people in the city would suffer.

No, we farmers don't want to strike. We want to feed you the best we know how.

Have you ever given it a thought that we farmers are supplying the finished product which is so essential to your life and also most of the raw materials which you work into a finished product. This is what gives you a job and pays you money so you can buy the food we farmers are so glad to produce for you.

Don't damn us farmers if you can't get what you want to eat. But pray to your God to give us men that will leave us help on the farm so we can produce.

We know that all are not farmers. We also know that all are not machinists. Everyone at his or her place. Too many lifetime farmers have already been taken from the farms. I pray to my God to put fear in the heart of the man who places his hand on the Bible and swears his allegiance to God and country. This is too many times done, but soon forgotten. But, remember, God does not forget.

WALTER NOBIS.

Lend-Leasing of Post-War Aid

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. VORYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the United States News:

LEND-LEASING OF POST-WAR AID—INDUSTRIAL ASSISTANCE TO FRANCE AS PATTERN OF NEW UNITED STATES POLICY

THIRTY-YEAR PAYMENT PERIOD, WITH LOW INTEREST RATES, TO SPEED ECONOMIC RECOVERY

Lend-lease for war, amounting to date to more than $38,000,000,000, now is put to its first use as a means of post-war financing for America's Allies. The starting amount—$900,000,000 to France—is modest, but may be accepted as a symbol of more to come.

Russia is reported to be interested in negotiating about $6,000,000,000 of post-war loans on a lend-lease basis. Britain may want a substantial amount if other countries find that this means of financing is satisfactory. China, too, will be in the market and there may be others.

Use of lend-lease as a lending agency accomplishes a number of purposes. For one thing, it skirts the Johnson Act, which now bars loans to nations in default on their debts to the United States. France could not obtain a loan except through lend-lease until repeal of the Johnson Act. The same is true of Britain and Russia. For another thing, lend-lease terms can be lenient. The French are to be given 30 years to pay for their lend-lease goods at 2⅜ percent interest.

At the same time restrictions are being imposed. Goods involved in any lend-lease agreements must be delivered by July 1, 1948, unless Congress extends the act. Deliveries also must be related to defense—at least indirectly. Shipments cannot include luxuries, such as household vacuum cleaners or passenger cars.

An issue about lend-lease is being raised as a result of these developments. Lend-lease began as a device to remove the dollar sign from munitions shipments. Goods were shipped according to need. Settlements were deferred. All shipments were designed to bolster the fighting power of allies. That was and is the war phase of lend-lease.

However, the Lend-Lease Act contains section 3–c, which has escaped general attention, although the section has been described in detail in the United States News. This section permits post-war deals to be made if they are negotiated before July 1, 1945, and provide for deliveries before July 1, 1948. Now the Administration is asking for an extension of the act and of section 3–c as well.

That would enable the Administration to ship vast quantities of tools and machines and supplies for post-war rebuilding for as long as 3 years after the end of the war with Japan. The type and volume of shipments could be determined by the President. The Lend-Lease Administration still has almost $30,000,000,000 which could be used for this purpose.

Opposition to post-war use of lend-lease already is developing among Republicans in Congress. Closed hearings are being held by the House Foreign Affairs Committee, and Representative VORYS (Republican), of Ohio, heads a group now trying to impose a flat ban against using lend-lease for post-war purposes. The group also wants to eliminate section 3–c from the act.

The French agreement—the first to be reached under section 3–c—is expected to point up the present examination of the lend-lease program.

What the French get, actually, is equipment and supplies to restore their war-battered industry. The $900,000,000 worth of heavy equipment will go far toward repairing and rebuilding the French transportation system. It includes locomotives, freight cars, merchant ships, harbor craft, barges, and a fishing fleet. Also, the agreement provides for metal-working machinery, mining machinery, and tools to rebuild the French armaments industry. These can be bought for a 20-percent down payment and annual installments for 30 years at 2⅜ percent interest.

Another $1,675,000,000 is promised in industrial supplies. About half of this is to be cotton cloth to stock the textile industry, steel, and other metals, chemicals, synthetic rubber, drugs, and medical supplies. Food for war workers, gasoline and oil, hand tools, trucks, and other short-lived equipment, as well as the shipping required for delivery, also are provided. If these supplies are not used for war production, they can be bought on the same terms as the heavier goods.

A new Russian agreement now is being negotiated along lines of the deal made with France. Russia is in the market for vast quantities of machinery and supplies to speed the industrialization of the country. The figure often reported—$6,000,000,000—amounts to almost as much lend-lease, including purely military supplies, as the Soviet Government has received during the war. In other words, Russia seeks easy terms for as much peacetime equipment as has been delivered in war equipment.

The type of material Russia wants is indicated from deliveries already made. These include $890,000,000 worth of machine tools for Russian war plants, thousands of locomotives and railroad cars, 487,000 tons of railroad rails, 2,120,000 tons of steel, and 733,000 tons of other metals. After the war, Russia will need power plants, telephone, telegraph and radio equipment, as well as industrial machinery and supplies.

Ownership of tools and equipment delivered under Lend-Lease remains with the United States Government. The French agreement is a sign, however, that deals will be made to transfer title to Allied governments after the war. Some machine tools already have been sold to Britain, and section 3–c could be used for more deliveries. The British, for example, must build 450,000 new houses quickly and now are getting 30,000 prefabricated houses under Lend-Lease. They also want to modernize coal mines, textile mills and other plants, which could be interpreted as being as important against Japan as French industry now is against Germany. Under the same reasoning, China's needs would be larger.

The French agreement thus is a clue that the Administration plans to use its Lend-Lease authority as a pump-priming device to maintain United States exports until other arrangements can be worked out.

Jersey Earthquake

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. AUCHINCLOSS. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I wish to include therein a release issued by the New Jersey Taxpayers Association entitled "Jersey Earthquake."

This has to do with the proposed construction of a deep-water canal across the State of New Jersey to accommodate sea-going ships. The cost is estimated to be in the neighborhood of $200,000,000, and practically every civic body in the State from the Governor and the State legislature down has protested against its construction.

One aspect which is of great concern in this proposal is that it would seriously jeopardize the potable water supply of the entire northerly part of the State, thereby affecting industries large and small, to say nothing of the homes located in cities, as well as in the country.

JERSEY EARTHQUAKE

Keep the salt water out of that family tea kettle! This is not idle advice, but a warning on what may happen if efforts to rejuvenate the dormant New Jersey ship canal project prove successful.

How can sea water get into that tea kettle? The digging of the ship canal would cut like an earthquake across the waist of the State at its narrowest width, drain off many wells supplying farms and communities in the area and let in salt water from the sea to mix with the fresh water in the locks.

The seepage of sea water into Jersey's drinking water supply would be only a foretaste, as it were, of the many other penalties that the State would suffer by the digging of the ship canal. At least 15 square miles of rich, income-producing farmland in Somerset and Hunterdon Counties would be inundated and several village communities wiped out by the construction of a gigantic reservoir needed in the project. Across State, the canal would cut three main trunk railroad lines and 29 public highways. To knit the rupture of these traffic lanes, the State would be compelled to build high-level bridges across the canal at 15 crossings. Add to this schedule of dollar miseries stored up for the Garden State, an annual loss of more than $1,500,000 in local tax ratables and over $1,000,000 in farm products, and the full implications of a trans-State ship canal begin to emerge.

For over 30 years the Army turned thumbs down on this canal project as impractical, unnecessary, and excessive in cost for the benefits claimed for it. But in 1942 the Army approved the project and a $199,000,000 canal construction bill was introduced in the House by Representative Sutphin, of New Jersey. The New Jersey Legislature memorialized Congress to defeat the project and the Sutphin bill died in the House. Within recent weeks, somebody has applied the pulmotor to this old horse and the ancient animal is trying to get up on his legs again.

In a timely warning, the New Jersey Taxpayers Association declares that "the Nation can ill afford an outlay of between two hundred and three hundred million dollars for this project whose usefulness is open to doubt," and adds: "Nor is the State of New Jersey in a position to bear the huge expenditure of public funds which the project would entail."

This man-made earthquake across the good lands of New Jersey would rock the taxpayers from Sussex to Cape May.

Little Preference To Be Shown Veterans and Farmers in Disposition of Surplus Property

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a letter I have received from Mr. Robert A. Hurley of the Surplus Property Board.

I am disappointed to learn that veterans and farmers will receive no appreciable preference in the disposition of surplus property. It is my purpose to endeavor to obtain for veterans and farmers a meaningful preference. I feel the membership of the Congress intended that veterans and farmers receive a worthwhile preference when the Surplus Property Act was passed.

The letter follows:

FEBRUARY 19, 1945.

Hon. LINDLEY BECKWORTH,
United States House of Representatives, Washington, D. C.

DEAR MR. BECKWORTH: This will acknowledge your letters of February 8 and 12, inquiring about the preference to be accorded to farmers and veterans in the purchase of surplus property.

While there is still some disagreement about provisions of the Surplus Property Act, our lawyers are of the opinion that there is no way under the act that any price preference can be extended to veterans or farmers. Their preference exists in an opportunity to buy before the property is offered for sale to others except to Federal, State, and local governments and nonprofit institutions, which have a higher priority under the law.

As you know, further provisions of the act limit the preference to veterans to assistance in the establishment and maintenance of their own small business, professional, or agricultural enterprise. Section 17 provides in addition that farmers and farmer cooperative associations shall have surplus property offered in such quantities in rural areas and in such manner that they will have equal opportunity with others to purchase surplus property. We are now working on regulations to be issued by the Surplus Property Board which will so far as possible fulfill all of these priorities. You will recognize, however, that we can go only so far in our rules as the disposal agencies which actually sell the property are equipped with personnel and money to conduct such operations. The more we try to sell to individuals, the more expensive the operations become and the more difficulty we have under present manpower shortages in securing competent personnel.

I want to assure you that all of us are acutely conscious of the problem you raise and we will do everything in our power to find a satisfactory solution in accordance with the spirit of the act.

Sincerely yours,

ROBERT A. HURLEY,
Surplus Property Board.

Federal Loans

EXTENSION OF REMARKS
OF
HON. JOE B. BATES
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. BATES of Kentucky. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post:

FEDERAL LOANS

The President deserves warm congratulations on his choice of Judge Fred Vinson, one of the Nation's ablest and most seasoned public servants, to fill the office of Federal Loan Administrator. The office is one which has tremendous implications for our postwar economy. The powers inherent in it, and the very broad uses to which they can be put, were recognized by both the proponents and opponents of the George bill through which Congress recently divorced the Government's several lending agencies from the Department of Commerce. Wisely and effectively administered, these agencies can prove a potent force in the promotion of full production and employment.

Judge Vinson is, from every point of view, the logical choice for the post. As Director of Economic Stabilization, he has won the respect even of those upon whom he found it necessary to impose the curbs his office was established to administer. He has displayed strength, poise and judgment in dealing with the powerful forces which, left unrestrained, would have wholly disrupted the stabilization program. He has had broad experience with the country's economic needs and problems and has shown imagination and insight in his approach to them. He will bring to his new assignment a practical outlook not limited to conventional banking concepts and at the same time the kind of vision that is rooted in realism.

Judge Vinson will take over the lending agencies in what is essentially a time of transition. Their war activities are now nearing completion. They must begin planning for the tasks of reconversion and postwar expansion. It is a good time, therefore, to make a thoroughgoing study of the war activities engaged in by the Reconstruction Finance Corporation, the Defense Plant Corporation, the Metal Reserve Company, the Rubber Reserve Company and the other quasi-independent corporate bodies under Jesse Jones' stewardship. Judge Vinson should be enabled to assume his responsibilities without any embarrassments hanging over from the past. In justice to himself as well as to the American public, he should insist upon a searching investigation of these agencies by the Comptroller General.

The R. F. C. was empowered to make loans to any business enterprise when capital or credit, at prevailing rates for the character of the loan applied for, were not otherwise available. This is a power which can serve greatly to foster new undertakings and,

through expanding competition, to keep the free enterprise system genuinely free. But it will advance this purpose only if its lending functions are energetically, yet discriminatingly, applied. Credit is like some drugs. In the hands of those who know its powers but also its dangers, it is helpful and healing. With misuse, with carelessness, with habitual indulgence to excess, it can become demoralizing, disintegrating and destructive. Judge Vinson, we believe, has the will to use Government credit effectively for the common welfare and the judgment to use it wisely.

The Royalty Issue

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star:

THE ROYALTY ISSUE

There is doubt in the minds of some that John L. Lewis is wholly serious in his attempt to levy what is in effect a private tax of 10 cents on each ton of coal mined, the proceeds to be paid into a union fund which unquestionably would be controlled by him. Mr. Lewis seems to be serious enough. He has served notice that the coal operators must accede the miners the right to live—which in his estimation means yielding to his demands. "If you don't accede it," he says, "we will take it anyhow." Furthermore, Mr. Lewis has a perfectly valid precedent in the Government's weak surrender to James C. Petrillo, head of the American Federation of Musicians, who demanded and secured the right to levy a union tax on the manufacture of phonograph records. If the consuming public can be taxed for the benefit of the musicians, Mr. Lewis might ask, why cannot the consumers be taxed for the benefit of the miners?

Events will show whether the mine union head intends to make a fight on this point. But the fact that he has made the demand, coupled with Mr. Petrillo's earlier success in the same field, should be sufficient to impress anyone with the seriousness of the issue which has been raised.

There is a distinction to be made between the Lewis methods and his stated objectives. Mr. Lewis says that the $60,000,000 a year which would be raised by the 10-cent royalty would be used to provide the miners with such things as medical service, hospitalization, and health insurance, and for their economic protection. That the miners, not to mention millions of other workers, need better health facilities is hardly debatable. And they will get them, in one way or another. But it does not follow that the public should submit to a private tax by Mr. Lewis to that end.

His inclusion of the economic protection objective raises immediate doubts. That could mean anything he wanted it to mean, including, in peacetime, political contributions. But this is an issue which goes deeper than doubt as to the validity of one of Mr. Lewis' objectives. It involves a principle of primary importance.

If a union has the right to levy a private tax for a desirable purpose, it has the right to levy a tax for any purpose not specifically forbidden by law. And, except in wartime, the law puts virtually no restraint on unions in this respect. Furthermore, if it is right to levy a 10-cent tax on the production of a ton of coal, what assurance is there that the tax will not be boosted to a dollar a few years hence? And if it is right for unions to tax the production or sale of coal and phonograph records, there is not the slightest reason why they should not levy similar taxes on the production of automobiles or washing machines or clothing or even a loaf of bread.

Since these taxes ultimately would be paid to the unions by the consuming public, and since the public would have no effective control over the union officials levying the taxes, it seems obvious that a serious question of public policy is involved. In that sense, this is not a dispute between Mr. Lewis and the coal operators, but rather a dispute to which the consumers of every union-made product are actual or potential parties.

National Board of Rural Letter Carriers Association—Comments on H. R. 2071

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the National Rural Letter Carrier:

H. R. 2071

We are all much interested at this time in H. R. 2071, the bill which would reclassify the salaries of postal employees.

Your national board members, while in session here in Washington, have spent much time studying this legislation and discussing it with Members of Congress. As we have said before, the bill as introduced is not considered "perfect" so far as rural carriers are concerned. However, we are requesting that some changes be made in the legislation before it is taken up in the House for consideration there.

Certainly, from a broad, over-all viewpoint, this legislation is such that it well merits the support of the Congress and of the public in general. It can "stand on its own feet" in most respects, and we cannot help but feel that when the proper time comes the Members of Congress will be willing to give it favorable consideration.

When the so-called $400 bill was up in the Seventy-eighth Congress it was very evident that the general public throughout the country is convinced that postal employees need and deserve an increase in pay. When the general public lets its sentiments be so well known as was the case during the Seventy-eighth Congress there must be merit involved.

The postal employees have carried on in spite of additional work, increased living costs, and many other handicaps resulting from present-day conditions. Theirs is a service to the people of America, and wartime conditions haven't stopped that service. The postal employee deals in a commodity which cannot be weighed in pounds or sold on a dollar-and-cents basis. He deals in service to the American public, and we do not believe that at this time the American public and the Members of Congress will fail to recognize this fact.

Federal Loans

EXTENSION OF REMARKS
OF
HON. JED JOHNSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. JOHNSON of Oklahoma. Mr. Speaker, the appointment of Judge Fred M. Vinson by the President to the important office of Federal Loan Administrator to succeed the Hon. Jesse Jones has met with the hearty approval, I am sure, of all Members of both Houses of Congress who personally know the distinguished jurist.

Fred Vinson has made good on every job he has ever tackled and there is no question but that he will do so again in this, his latest and most important field of endeavor.

Under the leave granted me I am including as a part of my remarks an editorial appearing in today's Washington Post, one of the Nation's widely read and influential daily newspapers. The editorial in question follows:

FEDERAL LOANS

The President deserves warm congratulations on his choice of Judge Fred Vinson, one of the Nation's ablest and most seasoned public servants, to fill the office of Federal Loan Administrator. The office is one which has tremendous implications for our post-war economy. The powers inherent in it, and the very broad uses to which they can be put, were recognized by both the proponents and opponents of the George bill, through which Congress recently divorced the Government's several lending agencies from the Department of Commerce. Wisely and effectively administered, these agencies can prove a potent force in the promotion of full protection and employment.

Judge Vinson is, from every point of view, the logical choice for the post. As Director of Economic Stabilization, he has won the respect even of those upon whom he found it necessary to impose the curbs his office was established to administer. He has displayed strength, poise, and judgment in dealing with the powerful forces which, left unrestrained, would have wholly disrupted the stabilization program. He has had broad experience with the country's economic needs and problems and has shown imagination and insight in his approach to them. He will bring to his new assignment a practical outlook not limited to conventional banking concepts and at the same time the kind of vision that is rooted in realism.

Judge Vinson will take over the lending agencies in what is essentially a time of transition. Their war activities are now nearing completion. They must begin planning for the tasks of reconversion and post-war expansion. It is a good time, therefore, to make a thoroughgoing study of the war activities engaged in by the Reconstruction Finance Corporation, the Defense Plant Corporation, the Metals Reserve Company, the Rubber Reserve Company and the other quasi independent corporate bodies under Jesse Jones' stewardship. Judge Vinson should be enabled to assume his responsibilities without any embarrassments hanging over from the past. In justice to himself as well as to the American public, he should insist upon a searcing investigation of these agencies by the Comptroller General.

The R. F. C. was empowered to make loans to any business enterprise when capital or

credit, at prevailing rates for the character of the loan applied for, were not otherwise available. This is a power which can serve greatly to foster new undertakings and, through expanding competition, to keep the free enterprise system genuinely free. But it will advance this purpose only if its lending functions are energetically, yet discriminatingly, applied. Credit is like some drugs. In the hands of those who know its powers but also its dangers, it is helpful and healing. With misuse, with carelessness, with habitual indulgence to excess, it can become demoralizing, disintegrating, and destructive. Judge Vinson, we believe, has the will to use Government credit effectively for the common welfare and the judgment to use it wisely.

The Price of Gold

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. ENGLE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement to the press by Senator SCRUGHAM of Nevada, and an article from the Los Angeles Herald-Examiner:

Senator JAMES G. SCRUGHAM, Democrat, of Nevada, coauthor with Senator ERNEST W. MCFARLAND, Democrat, of Arizona, of a bill to increase the price of gold to $56 per ounce instead of reducing the gold reserve to 25 percent, today took sharp issue with W. Randolph Burgess, president of the American Bankers Association, on the latter's statement that increasing the price of gold would be more inflationary than decreasing the gold reserve.

The Nevada Senator said that judging from statements by Gov. Marriner Eccles of the Federal Reserve Board and Burgess' statement yesterday before the Senate Banking and Currency Committee, inflation already has occurred and this appears to be an attempt to adjust the gold reserve to permit still greater expansion of the currency.

"Mr. Burgess," commented Senator SCRUGHAM, "stated that he is a hard-money man. Yet he is deliberately playing into the hands of the managed currency clique by committing himself to the principle of shrinking the gold backing behind Federal Reserve notes. This seems to me completely illogical. I do not believe that increasing the price of gold is one whit more inflationary than gradually traveling down the path to a 100 percent managed currency.

"When the price of gold last was raised no dire consequences resulted. This was carried out by the Government at the recommendation of Professor Warren, an outstanding economist. Now that a similar recommendation has been made by Members of Congress it is declared to be all wrong.

"There obviously is no more danger to war bond holders in a $56 price than in reducing the reserves proportionately. As a matter of fact, the value of gold should increase as world trade expands to form a solid foundation for that trade and to maintain the confidence of the people. Obviously, if currency expansion has reached the point testified to by Eccles and Burgess we must have more gold and at a higher price in order to support it. It was not long ago that we heard complaints about having too much gold—now apparently we have too little and have to spread it thin. Let us stop being inconsistent and go forward with orthodox banking with plenty of metallic reserves."

[From the Los Angeles Examiner of March 1, 1945]

ADVANTAGES IN GOLD PRICE BOOST POINTED BY BANKER

(By Carl S. Kelty)

Proposal to increase the United States buying price for gold to $56 an ounce from the current $35 already has touched off a wave of discussion pro and con. The program was advanced formally by introduction of a bill in the United States Senate by Senators SCRUGHAM (Democrat), Nevada, and MCFARLAND (Democrat), Arizona.

Certain advantages which would accrue to the national economy from the proposed boost in the price of gold were pointed out in Los Angeles by Victor H. Rossetti, leading banker. Mr. Rossetti is longtime president of the Los Angeles Clearing House Association and president of the Farmers' and Merchants' National Bank. (He himself always places his bank presidency first.)

The program was advanced by the Senators as an alternative to legislation permitting reduction of the gold reserve coverage to 25 percent of Federal Reserve System obligations.

Mr. Rossetti did not comment himself definitely in favor of the plan offered by the Senators, but suggested the primary importance of maintaining a metallic basis for the country's currency and credit structure. He said if the price of gold were fixed by international agreement the fact would tend to create confidence in currencies everywhere, serving as a sustaining influence in our world economy.

The United States Treasury statement issued yesterday in Washington showed total holdings of monetary gold amounted to $20,506,144,592 on February 26. An advance in the price of gold from $35 to $56 would equal 60 percent, and applied to the Treasury's gold assets would increase their value by $12,308,682,355.

Mr. Rossetti commented that the United States contribution to the proposed world bank might be taken from the "profit" arising from his mark-up. He said he favored the bank as planned at the Bretton Woods Conference, but was still on the fence respecting the international fund.

He pointed to the latest issue of the Federal Reserve Bulletin showing gold assets on November 30 last were represented by $18,581,000,000 Treasury gold certificates, $1,800,000,000 in the exchange stabilization fund, $143,936,342 balance of increment arising from reduction in the weight of the gold dollar, and $156,039,431 held as a reserve against United States notes and Treasury notes of 1890.

The bank president emphasized that he felt a metallic media base nonvariable in value character was essential to a stable currency and credit structure upon which the national economy rests.

"Admittedly gold is the monarch of our economy, otherwise why the present gold reserve requirement of 40 percent against our outstanding Federal Reserve notes and 35 percent against deposits" he asked, "with reduction of such percentages to an over-all 25 percent being now proposed.

"Also, capital of the proposed International Bank is to be gold holdings of the subscribing nations.

"No one man has the solution," he commented, "but in the light of discussion the answer will be found."

An additional advantage which might be expected to follow an increase in the price of gold, Mr. Rossetti said, would be to stimulate employment in gold mining and the purchase of mining machinery and equipment.

"If the proposed increase in price would incite overproduction, as contended by some," he continued, "increased labor and material costs would tend to restrain that trend, and if needs be, an excise tax could be imposed, with increment accruing to the Government of the producing nation."

This country has been losing gold to our Latin-American neighbors as the result of our purchases of commodities at greatly inflated prices, he observed. Would there not be some justification, he asked, for paying for such imports in gold at an appreciated value?

Stop Appeasing Franco Fascist Spain

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. COFFEE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include hereinbelow self-explanatory newspaper articles discussing Franco Fascist Spain, careful reading of which I urge upon my colleagues:

[From the Columbia (S. C.) Daily Record]

COMMON SENSE IN DIPLOMACY

The Government of Guatemala has severed diplomatic relations with the Franco Government in Spain.

The Franco regime, the Guatemalans set out, is "of a totalitarian type whose ideology and procedure are repugnant to the principles of the Guatemalan revolution and the postulates of a democracy. The Spanish Falange constitutes a reactionary focus whose maneuvers represent a risk for continental security and perturb the tranquillity and peace of the Guatemalan Republic."

These charges are, of course, true. They have been true ever since Franco came to power in Spain with the help of Mussolini and Hitler. They apply with equal force to every republic in the Western Hemisphere which subscribes to democratic institutions.

And, therefore, Guatemala's downright and straightforward action is perhaps even a little embarrassing to the United States, the sponsor of the Monroe Doctrine, which still maintains amicable relations with the Franco regime. The trouble with Guatemala is that it is trying to apply common sense to diplomacy.

[From the Chicago Sun]

CHURCHILL AND FRANCO

Winston Churchill may be little interested in encouraging Spanish democracy. There are no signs that he has ever been much disturbed by Spanish fascism as such. But there is one thing about Mr. Churchill: He detests snakes in the grass. Therefore when a sneaking Franco assumed that, just because Mr. Churchill was opposed to communism, he might be inclined to double-cross Britain's ally Russia by entering a pact with Spain against the spread of bolshevism, the puppet butcher of Madrid made a fatal mistake.

That is the prime explanation for the fearful whiplashing which Mr. Churchill, as reported by Frederick Kuh, of our London bureau, recently administered to Franco in reply to the latter's communication offering such an alliance. Obviously, also, the Prime

Minister could have had nothing but contempt for Franco's offer to mediate between Allies and Axis. But the suggestion of an anti-Russian alliance was the unforgivable sin. How Josef Stalin must have enjoyed the copies of the interchange of letters with Franco which Mr. Churchill sent him.

Presumably, Mr. Churchill's rage, having destroyed the kindly sentiments which he expressed toward Franco last spring, will hasten the Caudillo's inevitable fall. If only Don Juan the Bourbon, who hopes to replace him, would write a letter as loathsome as Franco's to Mr. Churchill, we might really find the Prime Minister on democracy's side as regards Spain.

Meantime, for the United States, the pertinent thing to say to Franco is what little Guatemala, alone among American nations, has had the courage to say so far: The Franco regime is repugnant to democracy and us; Falange activities menace American security; therefore we break relations.

[From the Asheville (N. C.) Daily Citizen]

BRASS IN MADRID

Francisco Franco, the little dictator of Fascist Spain, has a colossal nerve. Recently he proposed to Prime Minister Churchill that Spain and Britain unite in effect against Russia, which has a 20-year treaty of mutual alliance with Great Britain.

The correspondence has been kept secret, but it is reported that Mr. Churchill used cold and biting terms in rebuffing this piece of effrontery. It would be refreshing if the democratic world could be let in on the language of the Churchillian rebuke. All too recently it has suffered in silence as Franco plied it with scorn.

Spain under Franco has earned no right to decent commerce with the United Nations. In all probability the Franco dictatorship realizes this. It is making a brash effort to gain the good graces of the winning side in a war which had its inception on Spanish soil.

The effort will fail. It will fail because Britons and Americans and certainly Russians find themselves repelled by all that is Francoist Spain.

Tens of thousands of Spanish Republicans still languish in Spanish jails. Even if the blandishments of Franco could be accepted, his rule has increased rather than relieved the misery of the Spanish masses. Freedom of worship is prohibited in that country, and there has been consistent persecution of Protestant clergymen. So much for domestic Spain.

As a European power, the Spanish Nation has sided shamelessly with the Axis. It is said that Mr. Churchill returned to Madrid a bill of particulars in this respect. We have only to reread recent European history to gain an inkling of Spain's acts of hostility and to read documents made public a few months ago by Ex-Ambassador Hayes to learn the whole story.

The Franco appeal to Britain is a fantastic misreading of the whole spirit and temper of the United Nations grand alliance. The Iberian dictator has lost his grip of realities: he speaks for a Spain of inquisitions and galleons that is out of place in the modern world.

[From the St. Louis (Mo.) Post-Dispatch]

STRAWS IN THE SPANISH WIND

Franco Spain's pretensions of neutrality, and occasionally of friendship for the Allies, are of such transparent phoniness that nobody should be fooled. The reaction to recent events, as reported to the New York Times by a Madrid correspondent, shows plainly enough where official sympathies really lie.

The Spanish press, the reporter says, expresses considerable concern over the new French-Russian treaty. Following the established Fascist line, it views this as a dangerous symptom of communism's march to power, and discusses at length what one publication calls "the Red-infiltrated committees of liberation" over Europe. Another popular topic is the Nazi drive on the western front, which brings forth large headlines, prominent display of German communiques, and dire anouncement of Allied disaster.

Another item of evidence that Spain still clings loyally to the Axis is the speech of Lord Templewood, formerly Sir Samuel Hoare, a few days after his retirement as British Ambassador to Madrid. Here was a veteran appeaser, one of the ardent advocates of friendship with Franco, telling the House of Lords that Spain, during the greater part of his stay there, was virtually a German-occupied country, where the Gestapo spied on him, attempted to buy off his staff, and stirred up anti-British riots. The state of affairs in Spain must have been bad indeed to bring denunciation from this advocate of temporizing policies.

These are just a few among the many straws in the wind to indicate that the Spanish regime is just as pro-Axis as in the days when Franco used to congratulate Hitler openly on his victories.

The Nurse Draft

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. LeFEVRE. Mr. Speaker, once again Congress is called upon to rectify an error apparently made by those in charge here in the War Department.

I deeply regret that we are asked to resort to the drafting of nurses and I sincerely hope that through the planned concentrated effort of recruiting these vitally necessary nurses to start on March 5, that the 16,000 to 18,000 nurses now needed, will have volunteered before this bill goes into effect.

Those Members of Congress, who have this particular problem on hand and who have visited our hospitals, both abroad and here at home, have testified as to the dire need for these gallant women. Therefore, I intend to support the bill, which, although in its present form is not satisfactory, I feel certain will be amended to come nearer satisfying all concerned. It is the solemn duty of the Congress to see to it that the men in our armed forces have adequate nursing care.

If we need 60,000 nurses to give our boys, sick and wounded, prompt and careful attention, then we must have the nurses. To save the lives of our soldiers would justify a vote for this bill.

However, we cannot help but wonder the whys and wherefores of some things we have heard and know from our own experiences.

I recall one case that was brought to my attention, when a perfectly healthy young girl, a graduate nurse, was rejected for being 15 pounds overweight. As I recollect she reduced about 6 pounds but still was rejected. This girl was so disheartened that I can well imagine the feeling of those hundreds of other patriotic young ladies who have been rejected because they were a mite too short or a trifle too tall. I understand they have recently decided to waive some of these minor rigid qualifications.

To date these nurses in the service have worked so strenuously and have done such an admirable service for our country that we naturally hesitate when asked to vote for a bill which will take away from these nurses any display of voluntary patriotism.

As a Member of the Congress, I must face the facts in the case with the view of being of all possible aid to our boys who are now fighting a war that this Nation might live in peace.

Kick-backs on Contracts

EXTENSION OF REMARKS

OF

HON. CARTER MANASCO

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. MANASCO. Mr. Speaker, the Committee on Expenditures in the Executive Departments became alarmed last year over the practice by subcontractors under cost-plus-a-fixed-fee or cost reimbursable contracts of the United States of paying fees or kick-backs, or of granting gifts or gratuities to employees of cost-plus-a-fixed-fee or cost-reimbursable prime contractors or of higher tier subcontractors for the purpose of securing the award of subcontracts or orders.

As a result of findings made by the Comptroller General's office, I introduced in this session H. R. 131, for the purpose of preventing payment of kick-backs by subcontractors and to authorize the General Accounting Office to examine the books of subcontractors under cost-plus-a-fixed-fee or cost reimbursable contracts of the United States. Hearings were held on H. R. 131 by the Committee on Expenditures in the Executive Departments. Hon. Lindsay Warren, our able Comptroller General, appeared before the committee and made a most convincing argument in favor of passage of some legislation on this subject. Mr. Warren pointed out several cases where huge fees had been paid by subcontractors to obtain contracts, and, of course, in the settlement of the accounts of the prime contractor, these kick-backs were eventually paid by the taxpayers of the United States. This practice is commonly known as commercial bribery, but under existing law there is no way to prohibit such evil practices.

Representatives of the War Department, Navy Department, and the Maritime Commission appeared before the committee. These representatives all favored legislation to stop payment of kick-backs, but opposed the section authorizing audits of subcontractors by the General Accounting Office. The Com-

mittee on Expenditures in the Executive Departments feels that the General Accounting Office should audit the expenditure of every dollar of the taxpayers' money. The committee also felt that a penal provision should be included in the legislation. As a result of our hearings, the bill was redrafted and H. R. 2284 was reported by the committee, which included penal provisions.

We realize that in wartime, cost-plus-a-fixed-fee or cost-reimbursable contracts are necessary in order to meet production demands of our armed forces. We realize that battle tests show the immediate necessity of change and improvements of weapons of war, and we do not have time to prepare specifications and let contracts under competitive bids. We realize that a contractor, knowing that a few days after he has started work on a contract would be called upon by representatives of the armed forces to make drastic changes in design which would require re-tooling at great additional cost, would not be willing to bid on such contract. We want our armed forces to have the best equipment available, and would not for 1 minute stand for freezing designs when we know that those designs are made obsolete by battle tests.

It has been estimated by some that the cost-plus-a-fixed-fee or cost-reimbursable contracts have cost the taxpayers of this country $50,000,000,000. Of course, we do not object to spending every dollar necessary to win this war and save as many lives of our boys as possible; but we do object to spending one dollar unnecessarily.

This week a bill will pass the House to raise the debt limit to $300,000,000,000. The interest alone on this staggering sum will amount to almost $7,000,000,000 annually. We know that a minimum of $5,000,000,000 per year will be required to pay compensation, insurance, pensions, hospitalization, and training of our returning veterans. We know that after this war we of necessity will have to maintain a strong army and navy. If we keep the weapons of war apace with the times, we must spend a minimum of $10,000,000,000 per year on our armed forces. The normal functions of our Government will require the expenditure of a minimum of $8,000,000,000 per year. We must provide a debt-retirement fund to pay off the staggering war debt, and this will require billions more. We cannot afford to drain off all the tax money, for a sufficient amount must be left to our States and local political subdivisions to carry on their normal functions and to meet the tremendous impact of unemployment after the war. It does not take a mathematician or an economist to figure out why it is necessary for us now to save every dollar possible. We must be prepared for our national income to drop to $100,000,000,000 or less, unless we have inflation. Unborn generations will be paying this war debt. If we permit unnecessary waste, these unborn generations might decide to repudiate our war debt.

Our system of private enterprise will face a severe test when this war is over. We know that less than 1 percent of the subcontractors have been guilty of paying kick-backs, but this 1 percent might be used by some rabble rouser to convince uninformed people that our system of private enterprise is all wrong and that Government ownership should extend to all fields of endeavor.

Some people say that investigations should not be made while we are waging war. I know and you know that sooner or later investigations will be made. If we have any dirty linen, we should wash it now, and if we wait until after the war is over, when people have forgotten the threats to our existence, when people are struggling for a mere existence, the linen might be badly torn.

No honest subcontractor has anything to fear by having his books examined by the General Accounting Office. This procedure will protect the honest subcontractor. It will remove any suspicion that might now exist, and give him a clean bill of health. The mere fact that there is such a law as H. R. 2284 on the statute books will prevent the vicious practice of kick-backs and will save millions of dollars. I sincerely trust that this bill will become law in the early future. Its passage will convince the people that the Congress of the United States is making an effort to protect their tax dollars.

Petroleum Administration for War

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks, I include a copy of a letter addressed by a constituent, Mr. Ernest C. Bratt, to the Attorney General of the United States under date of March 2, 1945.

As will be noted the letter is written on behalf of the small oil companies doing business in these war times and finding themselves in an unfavorable position due to the operation of Directive 59 and certain orders issued by the Petroleum Administration for War.

The letter contends that the direct result of the combination of P. A. W. orders and Directive 59 is to deny the right of the small operator to share proportionately with major oil companies and other large operators the available petroleum products, the ultimate result of which is the impoverishment of the small operators while the balance sheets of the large ones show ever greater profits.

The letter states the conviction that the small oil company should be permitted to import petroleum products in accordance with the original regulation No. 1 of the Defense Supplies Corporation and that its amendment No. 3 and all orders and directives to the contrary, issued by P. A. W., are discriminatory, monopolistic, and detrimental to the war effort.

The letter follows:

STERLING STATIONS, INC.,
Fitchburg, Mass., March 2, 1945.

The Honorable FRANCIS BIDDLE,
Attorney General of the United States,
Washington, D. C.

MY DEAR SIR: As a small oil company doing business in these wartimes we find ourselves in an unfavorable position due to the operation of Directive 59 and certain orders issued by the Petroleum Administration for War.

This letter is addressed to you because under Directive 59 there seems to be absolutely no provision for relief provided for others than original suppliers of that directive, which is a voluntary agreement of major oil companies and some of the large independent operators, sanctioned by the War Production Board by authority of the President under Public Law 603.

We wish to call to your attention certain facts in connection with the operations of Petroleum Administration for War and Defense Supplies Corporation which we consider are entirely at variance with the principles of American government and which tend to restrain trade and encourage monopolistic practices.

It appears to us P. A. W. is using its powers to make Directive 59 a vehicle for setting up and maintaining monopolies and to restrain small operators from obtaining equality of treatment in the matter of supplies of gasoline and heating oils as well as equal compensation under the provisions of Petroleum Compensatory Adjustments Regulation No. 1 of Defense Supplies Corporation.

D. S. C. by amendment No. 3 to regulation No. 1 actually implements P. A. W.'s Petroleum Administration Order No. 5.

By definition Directive 59 proclaims certain arbitrarily selected companies as original suppliers. This directive was largely the product of officials of these original suppliers.

P. A. W., which is administered by governmental edict, is likewise staffed, especially in its key positions by personnel who are on loan from the largest of these same original suppliers.

With the above facts in mind, we refer to the order issued by Petroleum Administration for War, PAO 5, which as now amended virtually prohibits (except by special permits) the importation into district 1 of heating oils, gasoline or products to be used in blending of motor fuels by others than original suppliers; thereby eliminating the possibility of independent marketers to augment their supplies with which to meet their rationed demands.

In a letter dated July 1, 1943, W. P. B.—

Charged O. P. A. with the petroleum rationing program by which authority it establishes the rationed demand—

Charged P. A. W. with the petroleum supply program by which authority it controls available supplies.

We contend that P. A. W.'s actions since January 21, 1943, have been such as to funnel supplies through these arbitrarily selected agencies called "original suppliers," rather than encourage and facilitate movements of gasoline and fuel oils into district 1. We give you, for instance, these facts that there is purchasable quantities of heating oils and gasoline from time to time which are not brought into district 1 by these original suppliers. These supplies, for which transportation is also available, would be, and have been from time to time, made available to such independent operators as ourselves, but because of the application of PAO 5, and its various amendments, we have been unable to obtain the necessary permits for such imports. We understand that these original suppliers are not interested in importing all the gasoline and fuel oils that are available for the simple reason they cannot control its distribution after

the material is received and hence would be taking upon themselves operations from which they would derive only the very small profit allowed them in the handling of such material under Directive 59.

As a result there are shortages of heating oils and gasoline which could be relieved at least in part by importations of small companies if PAO 5 had not been issued.

PAO 5 as originally issued simply barred shipments of gasoline into district 1 by tank car except to original suppliers and on permit. On September 24, 1943, P. A. W. issued an amendment which broadened the scope of the original order so that shipments into district 1 by tank car, boxcar, inland waterways tanks or barge were barred, and it also extended the order to include any of the so-called principal products, which meant that it now included kerosene and fuel oil as well as gasoline.

The latest amendment goes still further and interprets "principal petroleum products" to mean automotive gasoline or any petroleum component which is used for automotive gasoline, or the ultimate use of which is for blending into automotive gasoline; in addition to fuel oils.

Under PAO 5 and its amendment it is possible for small operators to import materials covered by it only as permits are issued. When the order was originally made effective, such permits were readily obtainable. Shortly afterwards, however, P. A. W. required sales and purchase figures before considering applications for permits. Printed forms for obtaining such figures were not available because such forms required approval of the Budget Commissioner. P. A. W. bypassed such approval and simply had forms mimeographed, which served their ends as well. Sales and purchase statistics over a period of years beginning with 1941 to the date of the current request were required to be furnished on such forms. Upon receipt of such inormation some permits were issued. Since that time, however, permits have been generally refused to small operators.

May we point out:

1. Regulation No. 1 of Defense Supplies Corporation, a subsidiary of R. F. C., and a Corporation set up with public funds, was originally written so as to permit anyone who had the facilities for so doing to import petroleum products into district 1 by tank car or any other method available. Through this Corporation the additional cost of importing material through these substitute methods was borne by the Corporation through a system whereby operations and costs were audited and D. S. C. collected a revenue from all such products brought into district 1 regardless of method, to help defray the cost of maintaining the Corporation.

2. By amendment No. 3 to its regulation No. 1, D. S. C. has changed its original regulation so that such imports are only paid for by D. S. C. when and if they are not in violation of any P. A. W. order, such violations being determined solely by P. A. W. This effectively forces compliance with P. A. W. orders as imports to district 1 by substitute method would be economically impossible without D. S. C. subsidies.

3. We cannot believe that Defense Supplies Corporation has the right to pay a so-called original supplier extra transportation costs for a movement of petroleum products from a point, for example, in district 3 to a point in district 1, and refuse another claimant such extra transportation costs for the identical movement of identical products. Such action appears definitely discriminatory.

After the importation of gasoline as such was prohibited, some independent operators classified as "secondaries" —a term used in Directive 59 to distinguish them from original suppliers and dealers—were able to find supplies of natural gasoline and naphtha, learn how blending of such materials was accomplished, and have thus obtained motor fuel for their legitimate rationed demands. Such imports, however, are prohibited by the latest amendment to P. A. O. 5, which is made effective as of March 1, 1945.

We have discussed with officials of P. A. W. in New York the fact that we and others have by this method augmented the supplies available for motor vehicles, and suggested, inasmuch as there has been no time in the past 2 years when there has been a sufficient supply of automotive gasoline to meet the demands as allowed by O. P. A., that we could see no reason for P. A. W.'s action in refusing to allow us to import such very necessary materials for the furtherance of not only civilian needs but the needs of war plants and war workers. The only reason for P. A. W.'s objection to our activities we have been able to obtain from such officials is that our imports created "maldistribution."

("Maldistribution" apparently means the distribution of rationed petroleum products other than in accordance with the 1941 historic sales position of original suppliers, and it does not take into account distribution according to ration demands authorized by O. P. A.)

A case which was pointed out is that of a retail dealers who obtained his gasoline from an original supplier and was satisfied as to the fairness of that original supplier in distributing available gasoline. This party, however, complained that a competitor in the position to import supplemental materials was able to have additional supplies and consequently complainant suggested that he receive part of such gasoline.

P. A. W., however, seems to take the position it would prefer to stop practically all imports by secondaries rather than find a better way of distributing them. This seems to us, in general, to be the attitude of P. A. W. Their principal desire appears to be the channeling of all materials through original suppliers and not the furtherance of all possible means of bringing supplies into district 1.

We contend that the direct result of the combination of P. A. W. orders and directive 59 is to deny the right of the small operator to share proportionately with major oil companies and other large operators the available petroleum products, the ultimate result of which is the impoverishment of the small operators while the balance sheets of the large ones show ever greater profits.

We are convinced that we should be permitted to import petroleum products in accordance with the original regulation No. 1 of the Defense Supplies Corporation, and that its amendment No. 3 and all orders and directives to the contrary, issued by P. A. W., are discriminatory, monopolistic, and detrimental to the war effort.

We urge your immediate consideration of the issues involved.

Respectfully submitted.

ERNEST C. BRATT.

4–H in Victory and in Peace

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I submit a copy of a speech made by Mr. Donald F. Sullivan, of Potsdam, N. Y., at the National 4–H Goals for Victory breakfast, at the Hotel Willard, Washington, D. C., on Tuesday, March 6, 1945. Mr. Sullivan is the winner of two 4–H national championships, winning the national boys' leadership contest and the national garden championship in the national junior vegetable growers' contest:

One of the finest opportunities 4–H offers its members is the chance to travel to important 4–H events and meet the people that attend them. However, an occasion like this is rare, and I consider it a great honor to have the privilege of addressing such a distinguished audience as this.

This week is National 4–H Mobilization Week all over America. This week farm boys and girls who are not already 4–H Club members are being given the opportunity to join. At this time many are finding out new facts about the many values of being a 4–H Club member, and a few are hearing about 4–H for the first time. It's always a pleasure for those of us who have been fortunate enough to have been 4–H members for some time, to tell these boys and girls just what 4–H can do for the individual, his family, and his community.

Briefly, 4–H Club work teaches the individual how to do his work more efficiently, how to keep accurate records, and make exhibits of work that has been well done; it teaches him how to think clearly—especially in working out his own problems; it develops character and it develops leadership ability in the individual.

Perhaps an example would illustrate this best. Three years ago a 10-year-old farm boy joined our 4–H Club. He was quite interested in poultry, so the first year, with money that he had earned by drawing wood to the house in his handwagon, he bought 25 chicks. He took care of them himself from the very start—saw to it that they had the proper food, good housing, etc. Of course he asked advice from his parents and 4–H leader occasionally, but he did all the work himself. When it came time for the county fair he exhibited, and was thrilled to win a blue ribbon on one of his pullets. This spurred him on, and the second year he quadrupled his project to 100 chicks, and also had a garden and dairy project. He took complete care of the garden—that was his own domain. That year he received several awards at the fair, and also received honors at the County Achievement Day—where 4–H boys and girls who have done outstanding work in their projects are given recognition. Last year, his third, he raised 300 chicks, added another calf to his growing herd, and of course, had the garden. He manages his own projects—decides where he will market his eggs and for how much, keeps excellent records, and is putting away a little money for good use later on. At the tender age of 13 this boy has practical experience in three lines of farming—through which improved methods have taught him how to do some kinds of work better than men twice or three times his age. He is truly learning by doing, but his work is not spectacular. It is only typical of that being done by the one and three-quarter million 4–H members in the United States.

4–H strives to develop leadership qualities in its members. The 4–H meeting, which is a monthly affair for every 4–H Club, helps best to develop that quality. The president and officers of the club have the responsibility of leading the club in its business meeting, and every member is held responsible for some task; whether it be planning a club exhibit, demonstration, leading singing or cheering. I like to think of a 4–H meeting as an "education in democracy." Members have an opportunity to express their own views, make decisions, and they must abide by them. Learning to think for themselves as they do, they go into the world with a head on their shoulders—with an ability to think their problems out clearly. Often we see boys and girls who are very shy and bashful at first, gradually emerge as real leaders as a result of this training. This training is of great

practical value to the community. Our community, for example, consistently looks to the 4–H Club for leadership in planning Red Cross benefits, obtaining subscriptions for War bonds ,and in collecting scrap. We obtained subscriptions for over $8,000 in bonds in the Fourth War Loan Drive, and collected over seven tons of paper last year. Communities always take pride in having organizations that will shoulder responsibilities like this.

Along with a program for "better living on the farm," I'm sure we'd all agree that a happy home is the goal of every family. And what will bring that out better than parent and children doing their work together, each one helping the other. Through a desire to have their children do well, parents usually work with and encourage them in their projects. This advice and help is always a stimulus to the 4–H member; and, the effect of helping their children use new and better methods often teaches the parents. So, in some cases, the old phrase, "Like father, like son" is often reversed. In like manner, this corporation in the home builds better families—more content than ever to enjoy the pleasures of home. Likewise, in these days when juvenile delinquency is a serious problem in many cities, we farm youth consider ourselves fortunate in having an organization that fosters the best social and recreational activities.

In building sound youth and strong leaders, 4–H is definitely looking toward the future. Every part of our program is aimed toward emphasizing practices that will be of use to these boys and girls when they are on their own. We should give serious thought to the importance of this. Today, our Nation's leaders are discussing the problems America will face in the post-war period. We should remember, however, that these men will not be facing these problems when they arise, they will not have to cope with them. No, these are the problems for future America, for the citizens of tomorrow, the youth of today. We will face serious, thought-provoking problems in that period. What, for example, is the answer to the problems of great food surpluses in the post-war period? We will be producing more than ever, but our present lend-lease market will be greatly diminished. Will it mean low prices, another depression? No; that won't happen, because we won't let it. There will be a need for greater efficiency on our part then and it will be up to us as individuals to utilize every method for more efficient food production that is advanced by our agricultural colleges, and as leaders we must spread these ideas to our neighborhoods and communities, so we can help to maintain and raise the standard of living of our communities. Indeed, the challenge is great, but with resourcefulness and aggressiveness we shall meet it and insure a better future for America.

Although the problems we will face are great, opportunity lies ahead. It only remains for us to develop those opportunities and become better farmers; yes, better Americans.

The Tydings Amendment, the Flannagan Resolution, and the Lemke Resolution

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. PHILLIPS. Mr. Speaker, it is not necessary to remind you, Mr. Speaker, of the serious situation which exists in the rural areas of the United States as the result of General Hershey's directive of January 3. We thought this was corrected by his telegram of January 22. We now find that telegram to have been largely ineffective, perhaps because of other information going out from the national office of selective service. It would seem, unfortunately, that the draft boards are expected to disregard what is generally called the Tydings amendment and to draft farm workers irrespective of their essential need in agriculture.

There was no such intention on the part of Congress when the Tydings amendment was adopted. I call attention today, Mr. Speaker, to the fact that this amendment was adopted subsequent to the passage of the Selective Service Act. There should be no question in the minds of anyone but that the Tydings amendment is the law right now.

What I want particularly to call to your attention, Mr. Speaker, is what this present confusion is doing to the dairy business of the United States. I have in my hand a letter from the assistant secretary, and active manager, of the Natural Milk Producers Association of California. From his letter, I quote the following:

> The California dairy industry will certainly be wrecked if General Hershey persists in his announced intention of drafting all agricultural workers below 26 years of age. Of course, I am thinking of milkers, whose places simply cannot be filled by inexperienced men. After the original excitement about agricultural workers 2 months ago, the best advice we could get was that the Tydings amendment would protect bona fide milkers in these essential jobs. Now Hershey's statement as per the enclosed clipping, has today upset everyone again. One of our best dairymen, milking 180 cows at Hynes, has just phoned me that 3 of his regular milkers have been reclassified I–A and had their preinduction physical examination. Of course he has filed a Form 42–A appeal which may mean just nothing at all. He asks my advice as to selling his cows and quitting, thinking he had better do so while cows are getting a good price and before others get caught in the same way. What can I tell him? If I say the Tydings amendment clearly protects men regularly engaged in and necessary to agriculture, and he hangs on, and his men are drafted and he gets only a sacrifice price for his cows, who is to blame? The worst feature of this situation is the lack of integrity. Apparently no statement or promise from the administrative branch is worth anything.
>
> I cannot figure out this whole "manpower" mess, with shipyards here cutting down on working hours and laying off men—7,500 in the last 3 weeks at Cal-Ship alone.

I call particular attention to the fact that men are actually being laid off in the shipyards in California, and I say this in view of the passage, under tremendous administration pressure, several weeks ago of the bill which makes it possible for civilians to be impressed into service in the United States. This was not the story we heard on the floor of the House, from the administration leaders, when the bill was under discussion.

This is the first time to my knowledge that the national office of Selective Service has stepped forward and simply said that the draft boards of the United States should ignore the law. Up to this time, General Hershey has attempted, in my opinion at least, to follow the law very carefully and to do a good job. The question naturally arises, therefore, Was this done of General Hershey's own initiative? The answer is obviously "no." Even his directive of January 3 says that it was the President himself, through Justice Byrnes, who decided that the Tydings amendment no longer had any force, and that the need of young men in the Army was greater than the need of these same young men on the farms, although taking them without replacements would mean shutting down the farms or closing the dairies. The Constitution says, as was pointed out on the floor of the other body, on February 8, that "the Congress shall have power to raise and support armies." When we have a situation where one man in the United States can, of his own authority, set aside the laws of Congress and say that they shall be disregarded, then we no longer function under constitutional government in the United States, even in time of war emergency.

The Flannagan resolution—House Joint Resolution 106—was passed more than a week ago. The Lemke resolution—House Concurrent Resolution 27—I understand from the majority leadership, is to be set for Friday. It is important that it pass. Congress is entitled to know the facts about this situation.

Proposed Amendments to Federal Trade Commission Act

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. REECE of Tennessee. Mr. Speaker, recently I introduced H. R. 2390 which is a bill to amend the Federal Trade Commission Act. The purposes of this proposal are:

First. To afford effective judicial review of the Commission's cease-and-desist orders;

Second. To limit the aggregate amount of penalties which may be assessed for a single violation of Commission orders; and

Third. To avoid conflict with the Federal Food, Drug, and Cosmetic Act by defining more clearly the Commission's jurisdiction as to food, drugs, devices, and cosmetics.

1. EFFECTIVE JUDICIAL REVIEW

As the law is now, the scope of judicial review of the Commission's orders to cease and desist is so narrow as to afford hardly any relief at all. In an increasing number of cases the courts are declaring their impotence to review the findings of fact or the application of the remedy—or to prevent an unauthorized proceeding.

They hold that they may not act by injunction or by declaratory judgment

in advance of a Commission proceeding and final order. The latest holding on that was during the past year in *Miles Laboratories, Inc.*, v. *Federal Trade Commission* (140 Fed. (2d) 683, certiorari denied, 88 L. Ed. 1174), where, in so holding, the Court explained that "if the question were open it might very well be argued" that the company had not violated the law.

They hold that they may not act after a proceeding by the Commission where the findings of fact are "supported by evidence." A recent case which reviews numerous court decisions on the subject is Jacob Siegel Co. against Federal Trade Commission, decided November 30, 1944, by the United States Circuit Court of Appeals for the Third Circuit. The court affirmed the Commission's order that the company cease using its trade-mark "Alpacuna" which it had used on overcoats for 14 years. As it did that, the court said it thought "strongly that the order is far too harsh."

On February 1, 1944, the Circuit Court of Appeals for the Second Circuit rendered a similar decision. It affirmed a Commission order, saying that the Supreme Court had as much circumscribed the powers of the courts to review the decisions of administrative tribunals in point of remedy as the powers have always been circumscribed in the review of facts. The Court said that if it thought itself free to control the remedy it "might be satisfied to modify the order"—*Herzfeld* v. *Federal Trade Commission* (140 Fed. (2d) 207, 208).

Likewise, the courts hold that they are bound by the Commission's judgment as to the quality and sufficiency of the evidence. In *Segal* v. *Federal Trade Commission* (142 Fed. (2d) 255) the Court observed that a part of the testimony was "obviously biased" and said:

> Even so, if the Commission wished to rely upon such testimony, we may not intervene, whatever might be our own indisposition to accept what he said.

The situation, therefore, is, as described by the Circuit Court of Appeals for the Second Circuit (*John Bene* v. *Federal Trade Commission* (299 Fed. 468, 471)—that:

> The Trade Commission * * * is called upon simultaneously to enact the roles of complainant, jury, judge, and counsel.

Violations of its decisions—reached through the enactment of such combined roles—are punished by heavy monetary penalties. Such decisicns are res judicata against the trial court—*U. S.* v. *Willard Tablet Co.* (141 Fed. (2d) 141); *U. S.* v. *5 Cases Capon Springs Water*, decided February 14, 1945, by United States District Court for the Southern District of New York. And the appellate courts are obliged to sustain its decisions in spite of the fact that the weight of the evidence may be strongly to the contrary. The courts need read only one side of the case, and, if they find any evidence there, the administrative action is to be sustained and the record to the contrary ignored.

The bill would cure this. It would enable the courts to examine the evidence on behalf of the respondent and to assure the decision of these cases according to the weight of the evidence. The amendment is not an innovation. The Walsh-Healey Act requires that the findings of the Secretary of Labor must be supported "by the preponderance of the evidence" (U. S. C., title 41, sec. 39). Under the Commodity Exchange Act orders of the Commission reviewing or revoking designations of contract markets must be supported "by the weight of the evidence" (U. S. C., title 7, sec. 9).

But, aside from any question of precedent, the nature of the Commission's proceedings is such as to make it highly appropriate for the courts to review the whole record of the evidence upon which the Commission has acted. Commission cases involve decision on pure questions of fact—questions peculiarly within the province of the courts. By empowering the courts to review the facts, the amendment draws upon the fundamental offices and the historical experience of the judiciary and operates to separate, in a substantial degree, the prosecution and judicial functions which, as the law now stands, are combined in the Commission.

The combination of these functions in Commission cases is an outgrowth of administrative law as applied to rate making and formulation of rules and regulations of general applicability. That type of administration is illustrated in proceedings to promulgate standards which are applicable to a class. Expert knowledge is required to formulate them and there is necessity that the standards be uniform throughout the whole country and as to all persons and commodities subject to them.

But it is an entirely different matter when that procedure is applied to the administrative adjudication of specific cases. For instance, it requires no expert knowledge on the part of the Federal Trade Commission to adjudicate questions of false advertising. The courts are competent to determine those questions. For generations courts have tried cases which involve fraud, deceit, perjury, slander, unfair competition. The courts are the real experts.

In addition, the proposed amendment would empower the courts to modify orders of the Commission as in the judgment of the reviewing court the circumstances of the case require.

2. LIMITATION OF THE AGGREGATE AMOUNT OF PENALTIES

As the law now stands, there is a civil penalty of not more than $5,000 for violation of a Commission order to cease and desist. It is applicable to "each violation". In dealing with advertisements, for example, each advertisement could be a separate violation, and the aggregate multiplied by $5,000. This is not an extravagant statement. Advertisements are disseminated by various media—individual mailings, newspapers, magazines, radio, road signs, car cards, posters, circulars, and so forth. One advertisement, held to be a violation of a cease and desist order, could, for example, be multiplied as to the number of violations by every publication of the advertisement by these several means. Also, an order may include numerous prohibitions. One advertisement may violate several prohibitions in one order. Thus, the violations may be multiplied both by the number in a single advertisement and by the number of publications thereof.

So far there have been no cases in which judgments for excessive penalties have been entered. But they have been sought. For instance, in *U. S.* v. *Holst* (D. C. S. D. Iowa, 1939), the Government claimed penalties of $50,000. A consent judgment for $2,000 was entered. In *U. S.* v. *John Petrie* (D. C. Ill., 1939) penalties of $30,000 were sought. A judgment for $2,500 was secured. In *U. S.* v. *K & S. Sales Co.* (D. C. Ill., 1939) penalties of $10,000 were sought. Judgment for $4,500 was given. In *U. S.* v. *Piuma*, 40 Fed. Supp. 119 (D. C. Cal. 1941, aff'd. 126 Fed. (2d) 601, certiorari denied, 317 U. S. 637) a single advertisement was published in 13 different newspapers. The complaint charged each such publication as a separate violation, and asked $5,000 for each such violation. The court allowed an amount of $250 for each violation, or a total of $3,250.

The proposed amendment is for the purpose of putting a ceiling on the accumulation of penalties. The amount of the ceiling is not important. The principle is.

3. JURISDICTION OF THE COMMISSION AS TO FOOD, DRUGS, DEVICES, AND COSMETICS AND THE FEDERAL FOOD, DRUG, AND COSMETIC ACT

The bill seeks to overcome conflict in jurisdiction with the Federal Food, Drug, and Cosmetic Act, approved June 25, 1938 (U. S. C., title 21, sec. 301), which applies to the composition, labeling, and distribution of food, drugs, cosmetics, and therapeutic devices. It is administered by the Food and Drug Administration of the Federal Security Agency. The Federal Trade Commission Act, as amended by the Wheeler-Lea Act, approved March 21, 1938 (U. S. C., title 15, sec. 41), is designed to prevent the false advertisement of foods, drugs, cosmetics, and therapeutic devices.

The Federal Food, Drug, and Cosmetic Act and the Wheeler-Lea Act were enacted by the same Congress—the Seventy-fifth, third session. They were considered and reported by the same committee of the House of Representatives; that is, the Committee on Interstate and Foreign Commerce, and by the same subcommittee of that committee. It was the intention then to formulate a pattern of regulation which would operate smoothly as a whole without conflict between the two laws.

Conflict, however, has developed. It has grown largely out of the administration of section 15 (a) of the Federal Trade Commission Act. That section expressly excludes "labeling" from the definition of the term "false advertisement." The purpose of the exclusion was to prevent dual administration, the regulation of labeling being under the Federal Food, Drug, and Cosmetic Act. The Federal Trade Commission Act, however, does not define the word "labeling." The bill proposes that the definition which is contained in the Federal Food, Drug, and Cosmetic Act be incorporated expressly in the Federal Trade Commission Act.

There has also developed confusion as to the meaning of other provisions of section 15 (a)—those provisions which deal with failure of advertisements to reveal facts material in the light of express representations or material with respect to consequences which may result from use of a commodity to which an advertisement relates under the conditions prescribed in the advertisement, or under such conditions as are customary or usual. Those provisions were to reach advertisements which, although not false by express statement, were misleading by indirection, implication, and ambiguity. They were not requirements for advertisements to contain directions for using and various warnings with respect to contraindications—which matters are expressly dealt with in the Federal Food, Drug, and Cosmetic Act as to labeling—unless the affirmative and express portions of the advertisements were such as to make some disclosure of directions or warnings necessary to avoid an otherwise misleading representation. Likewise, those provisions were not to require in advertisements warnings against use of a product for purposes and in ways not prescribed in the advertisement or not customary or usual.

It was thought that this had been made clear by the committee report in the House of Representatives on the Wheeler-Lea Act—Report No. 1613, August 19, 1937, Seventy-fifth Congress, first session, page 5—and by the conference report—Report No. 1774, Seventy-fifth Congress, third session, page 10. However, the section has been invoked in proceedings to order the inclusion in advertisements of warnings of various kinds, including warnings against excessive and unrecommended uses and use in cases involving idiosyncrasies or allergic conditions. It has also been utilized by the Commission upon occasion to accomplish what seemingly amounts to indirect control of labeling.

The proposed amendment of section 15 (a) seeks to overcome such confusion by deleting the language which has apparently been the basis for misunderstanding and by inserting language which more clearly expresses what the section sought to accomplish. The inserted language has been taken from the opinion of the Supreme Court in *United States* v. *Ninety-Five Barrels* (265 U. S. 438). Construing the phrase "false or misleading in any particular" in the Food and Drugs Act of 1906, the Court said pages 442–443:

> The statute is plain and direct. Its comprehensive terms condemn every statement, design, and device which may mislead or deceive. Deception may result from the use of statements not technically false, or which may be literally true. The aim of the statute is to prevent that resulting from indirection and ambiguity, as well as from statements which are false. It is not difficult to choose statements, designs, and devices which will not deceive. Those which are ambiguous and liable to mislead should be read favorably to the accomplishment of the purpose of the act.

The proposed new section in the bill is for the purpose of ending, by express statement, dual jurisdiction between the two statutes in question. In framing the section, language already used by the Congress has been employed—that is, the language used in the Federal Food, Drug, and Cosmetic Act—to prevent dual jurisdiction with another statute; in that case the Meat Inspection Act (U. S. C., title 21, sec. 392). That some definite assurance is necessary is best shown in a statement by the Commission itself in a brief recently filed in the Circuit Court of Appeals for the Seventh Circuit, *Dearborn Supply Company* v. *Federal Trade Commission*, decided December 23, 1944 (146 Fed. (2d) 5). The Commission said:

> The contention that the Commission has no jurisdiction over labeling (petitioner's brief, pp. 27–39) is based on the provision of section 15 of the Federal Trade Commission Act, which "for the purposes of sections 12, 13, and 14" excludes "labeling" from the statute's definition of a "false advertisement" of foods, drugs, and cosmetcs (52 Stat. 116; 15 U. S. C. A., sec. 55). This exclusion, we think, was intended to apply only in proceedings under sections 13 and 14 of the statute (15 U. S. C. A., secs. 53, 54), to enjoin or criminally prosecute the dissemination of false advertisements in violation of section 12 (15 U. S. C. A., sec. 52), and was not intended as a limitation upon the Commission's jurisdiction to suppress false labeling by an administrative order to cease and desist.

The importance of correcting this conflicting situation, and the importance of providing effective judicial review, is emphasized by the decision in *United States* v. *Willard Tablet Co.* (141 Fed. (2d) 141). On March 7, 1944, the Circuit Court of Appeals for the Seventh Circuit held that a decision by the Federal Trade Commission was res judicata against the district court in a case brought by the Food and Drug Administration involving the same questions, saying:

> We, therefore, have the incongruous situation of one branch of the Government approving the method now pursued by the claimant and another branch seeking to condemn.

Radio Address of Hon. Thomas J. Lane, of Massachusetts

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include my radio speech over WLAW, Lawrence, Mass., on the special radio broadcast of that station, in honor of the birthday of George Washington, February 22, 1945.

The address follows:

It is the American destiny that, in periods of crisis, we have a vast democratic reservoir of human resources, from which to draw the leadership that sees us through. Washington, Lincoln, Wilson, Roosevelt, in each of the trials that beset our developing nationhood, the opportunity and ability was there for democracy to prove its vitality, its wisdom, its evolutionary greatness.

These were men like ourselves, not kings or dictators. In the hearts of freemen everywhere, they justify belief in the fundamental goodness of the individual man.

George Washington, born an aristocrat, was a passionate believer in human liberty. On his plantation he employed both servants and slaves, and in his will he set the slaves free. In addition, he established a fund for the support of those who had worked for him for many years, so that the old slaves would not be left in want. Long before the Civil War, Washington and Randolph were the only ones out of all the southern planters of that time who disliked the custom of human slavery, who actually freed their slaves. Some of Washington's slaves lived for 40 years after he gave them freedom, and they lived in the peace and security which the benevolent Father of the Country provided for them.

From the classic busts and the commanding dignity of the paintings by which Washington is represented to us, we are apt to get the impression that he was a cold, aloof personality. On the contrary, he was a very human being.

Few people know that Washington laid out the District of Columbia. He picked out the 10-mile square and had it surveyed. He invested his own capital in real estate there in order to further the development of the area. Brick houses, intended to serve as residences for Congressmen, were built by him. Such foresight can be thoroughly appreciated in the city of Washington today, where some 30 new Congressmen have been unable to find living accommodations.

Washington, though a surveyor by profession, was also an accountant, a reclamation engineer, a builder of canals, a pioneer, a financier, and a college president.

His first business interest was in the management of his landed estates, comprising 9,000 acres of land along the banks of the Potomac. It was a poor business when he inherited it but he set to work with a will to make it prosper. He could see that the land was played out from the constant raising of tobacco crops so he developed the culture of wheat. He erected a distillery in order to make a different disposition of his product. He built a mill and sent the wheat into market under his own brand. Far ahead of his time, he realized the need for diversification in agriculture. Different crops were planted and prize blooded stock was imported to raise better cattle. Washington was constantly seeking improved agricultural implements. He was a creative farmer, who not only made a living out of the farm but greatly improved its value. Farmers of today will understand that this is no mean accomplishment in itself.

He had great faith in the West and sensed the part it was to play in the development of the young country. He was a builder of the canals that would help to bind the different parts of the Union together. History records that he was the first man to conceive the idea of the Erie Canal. He foresaw exactly what President Roosevelt has in mind; namely, the possibility of linking the Great Lakes with the Mississippi tributaries, particularly the Ohio, by a system of canals. Some of these canals were built and there is a project drawn up today for a great system of internal waterways in that region. George Washington was not only a great soldier and a great statesman, he was a typical American of his period. His curiosity about any and all things; his many activities; his business enterprise; his inflexible honesty and his feeling for his fellowmen; all these qualities, by his example, established a healthy standard for the new-born nation.

As Americans we laugh at the idea of supermen. We prefer our leaders to be representative of the people and personally interested in their welfare. We want human beings to lead us, not self-appointed Caesars. We cherish in them the feeling that they are with the people, as we cherish a friend or

good neighbor who is with us in time of trial. And so our hearts warm toward the figure of an officer from Virginia who wrote to the patriot leaders at Boston who were being punished by an alien authority because they stood up for human liberty, "If need be I will raise 1,000 men, subsist them at my own expense, and march myself at their head for the relief of Boston." That officer was George Washington.

We like to think of the time that he put up at Andover or the time he stopped to have his horse's shoe repaired at Marston's Forge in Methuen. Above all, we like to think of that historic day, July 3, 1775, when he took charge of the ragged Continental Army under the famous elm at Cambridge. Today we realize the great heart of the man as he reviewed the 16,000 raw troops he was to lead against the professional soldiers of a powerful enemy. His men were dressed in anything from motley uniforms to leather hunting coats and work clothes. They were armed with muskets of every size and variety. Few of them had any knowledge of soldiering or of the importance of military discipline.

The prospect must have seemed hopeless but there was not only skill and experience in this man Washington, there was character that makes for true leadership, that gives to the men who follow that extra margin of courage and faith that is needed to win. At the outset he refused to accept any pay for his services and dedicated himself to the task of vindicating the rights of man. In the face of impossible odds he overcame a long series of hardships and reverses and turned a succession of defeats into a great and final victory.

Never once did he falter in his purpose. The winter after Burgoyne's surrender was one of bitter privation for the American Army and the memory of it has come down to us as one of the most inspiring epics of courage in our history. While the enemy troops were feasting in Philadelphia, Washington's tattered legions were starving at Valley Forge. In this winter of extreme cold, the men had to sleep on the ground without blankets. Many were without shoes and their footsteps could be traced in blood upon the snow. Washington said of these martyrs to liberty; "Naked and starving as they are, we cannot enough admire the incomparable patience and fidelity of the soldiery." A doctor with the troops wrote: "Barefoot he labors through mud and cold with a song in his mouth, extolling the war and Washington." In the loyalty and devotion of the men, a loyalty rendered by free men with full heart and faith, we see the full measure of Washington's greatness.

Washington had been a member of the Virginia Assembly in colonial times, a soldier in the French and Indian War, a member of the Continental Congress, commander of the Revolutionary armies, a member of the convention that drafted the Constitution, the presiding officer of that body, to earn from his fellow Americans the tribute "First in war, first in peace, and first in the hearts of his countrymen."

Unanimously the Presidential electors chose him to become the first Chief Executive of the United States. He was a military hero, but more than that, he was an American, and he angrily rejected those who advised that the new Nation should be governed by a monarchy or a dictatorship. Of his own free will he returned to Congress the symbol of his military authority, his commission, for once and for all. He did not have to depend upon force and fear for his fame. He was to be known through all of time as George Washington, a man among men, loved and respected alike by the free and those who yearn to be free.

Even at the greatest moment in his career he kept his head. During the journey from his home in Virginia to New York City he passed through one triumphal arch after another, welcomed along the way with lavish ceremonies and greeted by crowds that had come from all over the Nation to throw flowers at his feet. But the dignity of Washington, his everlasting sense of responsibility to the people, was above all petty vanity.

Just before he assumed the office of President he had written to a friend that his "feelings were not unlike those of a culprit going to his execution." His diary reveals that at this moment his mind was "oppressed with more anxious and painful sensations than he had words to express." These were not the thoughts of a man lusting for the false power of a tyrant. They were the confessions of a man ready to take the advice of the people, of his associates and friends, and to rule in the constitutional manner of the democratic way of life.

We reverence the name of George Washington * * * not as a demi god, but as a fellow human being whose uncompromising honesty and respect for the people, set an example that all of us might well follow.

How different was he from the raving demagogues and bullying dictators of today who are leading their peoples to destruction. Washington spoke as one of the many when in his inaugural address he said: "The preservation of the sacred fire of liberty and the destiny of the republican model of government are justly considered, perhaps, as deeply, as finally, staked on the experiment entrusted to the hands of the American people."

This was the great responsibility he enunciated for us. One great problem of the young democracy was that of making universal * * * in thought and action * * * the faith necessary to sustain it. And that problem remains with us each day of our national existence. At times we have been lulled into a feeling of false security * * * and at those times we came close to losing our national birthright. There are some among us who think that liberty was inherited and thus take it for granted. We, of this solemn year of 1945 know better. We know that democracy is ours to keep or lose, if we falter in our work or in our faith.

The lesser faith of the 1920's and 1930's must be redeemed by the greater faith of today. We are finding that faith again in many places, on the bloody beaches of Iwo Jima and in the anxiety and resignation that are testing so many of our homes.

It is not danger that troubles us. It is the lack of a clear and confident vision of our future that raises doubts in the minds and hearts of some of our citizens. Never before, even in the terrible winter of Valley Forge, on the fields of Gettysburg, or the Marne, have our people lost confidence in their destiny. The people were right, in the time of Woodrow Wilson, when they realized that their country had become a world power with responsibility to the world. They were right, under Roosevelt, when they realized that the Nation must organize itself against the violence of booms and depressions, and must solve the senseless riddle of want in the midst of plenty. If the faith of our people in these splendid objectives was not completely realized, they should not have surrendered to doubt.

In the present crisis we are prepared to surmount every ordeal, every set-back, and sacrifice on the road to final victory. But when that victory is won, the job remains half done. With renewed faith in our purpose, we must work through every difficulty, and every compromise, for the goal of world security that will enable us to develop the spiritual and cultural resources of our civilization.

We must see ourselves as a great nation and act accordingly. We are undecided and nervous because the responsibility for western civilization has passed into our hands. Confronted with this, there are some who look back longingly to the smaller duties of a simpler past.

Every great man in our history has pointed forward to the duty that is ours. Washington, the father of our country, was the first to point the way.

To honor him this day, let us hold high the faith in America which he bequeathed to us. Let us move forward through war and peace to feel again the exhilaration and confidence that have made us what we are. Then, and then only, shall we be equal to our mission.

Scrap Metal United States Sold to Japan Still Being Used to Kill Yanks

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. JOHNSON of Indiana. Mr. Speaker, the following article, which appeared in the Washington Times-Herald on March 3, is a grim reminder of the administration's actions in permitting American scrap metal to be shipped to Japan before Pearl Harbor. It shows why Japan has been able to carry on the war against the United States:

SCRAP METAL UNITED STATES SOLD TO JAPS STILL BEING USED TO KILL YANKS

COLUMBUS, OHIO, March 2.—American scrap metal exported to Japan under the Roosevelt administration before Pearl Harbor still is being used to kill and maim American fighting men after more than 3 years of war, it was disclosed today in a report issued by metallurgists of the Battelle Memorial Institute of Columbus.

The Battelle Institute is the largest independent industrial research organization in the world.

In a study made for the Army and Navy ordnance departments and the Office of Scientific Research and Development, the metallurgists used a spectroscope to identify American scrap as part of the metal being used in Japanese munitions.

SCRAP STILL IN USE

"The laboratory data shows, from the presence of residuals, that the scrap which the United States sold to Japan before the war plays a considerable part in the munitions being used against us," the report said.

Such residuals form a pattern, made up of certain characteristic percentages of metals, that could have come only from American scrap, the metallurgists explain. The spectroscope, used to identify the presence of atoms by the light they emit, shows whatever trace of any metal is present, even down to one part in a million.

HAD RAW MATERIALS

The report suggests that the Japanese did not have to extract the excess metals from the scrap because they were so well supplied with raw materials.

American exports of scrap metal to Japan during the years 1933 to 1940, inclusive, amounted to more than 10,000,000 tons, Department of Commerce figures show. Total exports for those years came to 20,000,000 tons.

In 1931, the United States exported 60,000 tons of iron and steel scrap to Japan, and in 1932 it exported 165,000 tons. Under the New Deal, for the years 1933 through 1940, the annual tonnage was 1,262,000 tons. The highest reported figure was for 1939, when it rose to 2,270,000 tons.

FLYNN IS CAUSTIC

Japan attacked China on July 7, 1937. John T. Flynn, in his article entitled "The Truth About Pearl Harbor," said: "Under our neutrality law * * * it became the duty of the President to stop all shipments of munitions to either country. The President, however, refused to do this." Flynn observed that "the Government sent its sympathy to China and its scrap iron to Japan."

On May 5, 1937, A. C. Moore, president of the Chicago Railway Equipment Co., protested to the administration as follows:

DISADVANTAGE TO UNITED STATES

"It would seem that it is not part of wisdom for this country to make it too easy for Japan and certain other countries to take large amounts of available scrap to be used in connection with armament expansion, to their own advantage and to the disadvantage of the United States."

It was not until late in 1940 that restrictions were placed by the New Deal on scrap shipments to Japan.

Rural Electrification

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. RANKIN. Mr. Speaker, as I have said before, our rural-electrification program has meant more to the farmers of this country than anything else ever undertaken by the Government of the United States.

After 12 years of service in this cause, in which I have gone through every phase of the program, I am prepared to say that nothing that has ever been done for the farmers of this Nation begins to compare with it.

Instead of being a socialistic program, it is the greatest promoter of individualism of any movement in which the farmers have been involved. They are paying for it themselves, and at the same time making their homes more pleasant, more profitable and more attractive.

The Rural Electrification Administration is today headed by Hon. William J. Neal, of New Hampshire. Under his leadership this program is progressing successfully and satisfactorily to the vast majority of the people involved.

Under permission granted me to extend my remarks, I am inserting an address delivered by Administrator Neal before the third annual meeting of the National Rural Electric Cooperative Association at San Antonio, Tex., on January 16, 1945.

It reads as follows:

I appreciate your invitation to appear on the opening day's program of this working conference. I am also happy to bring you at this time the greetings of Hon. Claude R. Wickard, Secretary of Agriculture, and assure you of his abiding interest in the success of the R. E. A. program.

First, I want to take this opportunity to congratulate your Association upon its good fortune in securing such outstanding leaders in the field of rural service as those who are appearing upon your program.

This afternoon I propose to discuss the progress that has been made by the Rural Electrification Administration during the past year, and some of those immediate problems which must be given consideration by all of those who are interested in achieving our goal of bringing central station electric power to every farm home in America.

I am confident that there is no group that has a more sincere interest in the future success of rural electrification than the board members and managers of the cooperatives to whom this agency has loaned funds. As a farmer, as a former director of a R. E. A. cooperative, and as one who has completed more than 20 years of farm organization leadership, I have faith in the ability of rural people to chart a constructive program for their own advancement. At the same time, I cannot be unmindful of the responsibility which rests upon us together to meet the demands of future electric service that come from 6,000,000 rural families still in darkness.

You are not unfamiliar with the fact, I am sure, that during the past decade rural electrification has made tremendous strides. The R. E. A. Cooperatives may take justifiable pride in the part they have played in making this great record. Today more than 1,200,000 rural families, small businesses and community facilities are served by R. E. A. financed electric distribution cooperatives and power districts.

Since I last met with you in Chicago, we have been continuously endeavoring to meet our day to day operating problems in a more satisfactory manner. We have had the good fortune to benefit by some of the most favorable legislati n since the inception of the program. We have, by greater unity in our efforts and better coordination of our activities with other public agencies, dealt with problems detrimental to the advancement of rural electrification; and we have achieved real success in bringing forth a program for the rapid electrification of rural America in the post-war period.

During the past fiscal year, which ended June 30, 1944, R. E. A. allotments were slightly less than $32,000,000, which is approximately five times the amount allotted during the preceding fiscal year. In the first half of our present fiscal year, R. E. A. has advanced to its cooperative borrowers $18,700,000, which is a quarter of a million dollars more than was advanced during the entire previous year.

R. E. A. borrowers are continuing to show, as in the past, that they are managing their business affairs soundly. At the end of December, delinquencies in the payment of principal and interest more than 30 days overdue were less than $280,000, compared with advance payments over amounts currently due of more than $18,000,000. In connection with these advance payments, however, we must remember that comparatively few borrowers have reached maximum debt service requirements.

As you know, wartime regulations limiting extension of electric facilities have changed from time to time during the year. Changes in these regulations have at times been liberalized and at times have become more restrictive. In the main, they have reflected the judgment of our war agencies in weighing the labor-saving advantages of electric power to farm production against the availability of critical materials used in the construction of these facilities. Our construction program in different sections of the country has reflected the application of these regulations to the type of farm production in the area. Notwithstanding these restrictions in the use of material and the extreme difficulty experienced by cooperative management in securing necessary manpower, R. E. A. borrowers have, for over a year, been bringing electric service, for the first time, to more than 10,000 farmers per month.

The current rate of farm connections is equivalent to approximately 50 percent of the greatest construction record ever achieved by R. E. A. in any pre-war year. According to the best available estimates, between 65 and 70 percent of all of the new farm connections during the past 18 months have been made by R. E. A.-financed systems.

The fact that the percentage of new farm connections to R. E. A. systems is of record-breaking proportions is a glowing tribute to the leadership of these farmer-owned cooperatives. It is no less an indication of the constructive assistance provided by R. E. A. personnel.

During the past 18 months Congress has dealt kindly with the R. E. A. program. Appropriations in each instance have been consistent with what appeared to be the requirements of the program at the time.

On September 21, the President signed the so-called Pace Act, which extended indefinitely the life of the Rural Electrification Administration, provided unlimited authorization for loan funds, permitted amortization of R. E A. loans over a period of 35 years, and reduced the interest rate to 2 percent. This 2-percent rate represents a reduction in interest on our present loans of more than $2,000,000 annually and, together with the longer amortization period, will enhance immeasurably the ability of R. E. A. cooperatives to provide complete area-wide electrification. The fact should not go unnoticed that the major provisions of this constructive legislation have been advocated in vain by the friends of R. E. A. in Congress for several years. Success in this effort was finally achieved when the provisions of this legislation were included in a general farm measure and received the consideration of committees which were principally concerned with developing constructive agricultural progress.

Within the year there has been a rising tide of activity on the part of private power companies in many sections, and others unsympathetic with our cooperatives, to retard the prospect of securing low-cost electric power in rural areas. These efforts have taken various forms, included among them are so-called offers of rate reduction, which would reduce rates to what the utilities refer to as being properly considered "farm business," at the same time offering a restrictive or higher rate to loads of minimum kilovolt-ampere requirements or small rural communities of 250 inhabitants.

Such restrictions go far beyond the limitation on the definition of rural areas in the Rural Electrification Act. I have no hesitancy in telling you that until the time when the Congress sees fit to further restrict the Rural Electrification Act, it will not be our policy to give administrative approval to this type of contract.

These contracts with rate reductions and dual rate provisions are frequently accompanied by an insistent demand for a contract of longer term than that generally approved under established R. E. A. policies. The experience of R. E. A. has clearly shown that the trend of power costs is downward, particularly in those sections where there is immediate prospect of developing, in the public interest, the power resources of the area. Wholesale power without restrictive resale requirements is a necessary prerequisite to rapid area-wide electrification. Notwithstanding anything you may have heard to the contrary, you are definitely advised that there has been no change in R. E. A.'s policy on the approval of wholesale rate contracts nor is there any prospect of a change in that policy. I would like, also, to give you assurance that we do not intend arbitrarily to refuse administrative approval of fair contracts at reduced rates unless we feel sure, beyond a reasonable doubt, that more advantageous rates are a possibility in the not too far distant future.

That is exactly the position which was taken by R. E. A. in the consideration of recent proposals made to cooperatives in

Texas where restrictive rates were offered which seemed to be so low that it was difficult to refuse their acceptance.

The unreasonableness of the Commissions in two neighboring States in ordering restrictive rates of this type has resulted in the launching of a study to devise a plan for public power development throughout the entire Southwest. This study is being aggressively pursued under the leadership of the Southwestern Power Administration of the Department of the Interior. R. E. A. and the Department of Agriculture are cooperating wholeheartedly in an effort to complete the study at an early date. The magnitude of this plan and rural electrification's stake in its success is significant. In this vast area extending into 6 States there are more than 918,000 unserved farms and rural nonfarm dwellings. Power requirements for those consumers alone would ultimately exceed 1,300,000,000 kilowatt-hours annually. Rates lower than any yet experienced in these States are a definite probability for all cooperatives in the area.

During the past year, I think we have made real progress in effecting more complete coordination of our efforts in the Pacific Northwest with the Bonneville Power Administration. This agency is making a tremendous contribution to the success of the R. E. A. program in that section of the country. The low cost of wholesale power to the cooperatives and the announcement of a 3½-mill ceiling a few months ago is making it possible for cooperatives to operate and meet their obligations with a density of eight-tenths of a consumer per mile. Our experience in the T. V. A. area, I am sure, will enable us to coordinate our progress most effectively in the great river valley plans now in prospect.

No doubt all of you have by now seen the R. E. A. statement entitled "Rural Electrification After the War." Many of you have helped, individually and jointly, in building up this study and in supplying the information on which this statement is based. The Rural Electrification Planning Committee of your association has made its contribution. You will, therefore, be pleased to know that it has been released as the official statement of the United States Department of Agriculture on this vital subject.

I feel sure that the principles and objectives set forth will be wholeheartedly supported by electric cooperatives everywhere. Here are the objectives: (1) Electric service to all rural people, (2) full application of electricity to farm production and farm living, (3) full use of electricity for rural community welfare, and (4) full rural industrial use of electricity.

These objectives are an essential part of the constructive program for American agriculture which Secretary Wickard discussed last August before the House Special Committee on Post-War Economic Policy and Planning. Rural electrification is absolutely essential in the attainment of the following eight major aims advanced by the Secretary: (1) Full production at maximum efficiency; (2) Equal living standards for farm and city families; (3) equal protection for all types of farmers; (4) soil conservation and improvement; (5) conservation and improvement of forest resources; (6) encouragement of the family type farm; (7) retirement of submarginal land and reclamation and cultivation of potentially good farm land; and (8) improvements in the marketing of farm products.

The desire of Congress to help rural people to help themselves with this great program for completing the electrification of rural America is clearly indicated in the recent passage of the Pace Act and in the introduction of legislation presented by Senator LUCAS of Illinois. The necessity for this latter type of legislation became clearly apparent as the preparation of R. E. A.'s plan for a post-war program advanced.

Comprehensive studies of the remaining unserved territory is necessary if construction of the facilities to serve all of the people in these areas is to be accomplished at the lowest possible cost consistent with sound engineering principles.

In addition to this, farmers, regulatory bodies, public agencies, and the R. E. A. cooperatives need the definite assurance that funds are available for not less than a 3-year constructive program on an area-wide basis. It is our considered opinion that if the R. E. A. as now constituted can have the support of this legislation it will be possible for electric service to be made available within 5 years after the war to the overwhelming majority of the 6,000,000 rural homes in America now without electric service. Such a program will open a market for industry and labor in this 5-year period of some $4,500,000,000.

Our conclusions are based upon the assumption that a considerable part of the electric connections of the future will be made by private utilities. They are based on the assumption that R. E. A. cooperatives now organized and yet to be organized will have the benefit of a moderate acquisition program at low-cost level and that they will have an opportunity to bring complete electric service in those areas which are rightfully theirs. It is based upon our faith in the public-spirited attitude of R. E. A. cooperative boards of directors and the resourcefulness of cooperative managers. It is based upon the assumption that the preparation, both on the part of R. E. A. and the cooperatives, which will be adequate to make it possible to launch a fast-moving, hard-hitting program as promptly as the availability of material and manpower will permit.

Such a program is a worthy challenge to R. E. A., to the Department of Agriculture, and to this association.

Nurses' Draft Bill

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. PHILBIN. Mr. Speaker, I do not believe that the crusading spirit and self-sacrificing heroism of the angels of mercy and "sainted" women who have cared for our wounded, healed the sick and comforted the dying can be engendered by compulsion. Such selfless devotion to humanity, as has been shown by our war nurses, springs from innate impulses of nobility, not from regimentation.

In its unamended form, this bill is the rankest discrimination against one of the finest groups of women in the country. It is pyramided discrimination because it works not only against the class—the nurses, but a class within the class—the cadets. Fortunately this has been corrected by amendment. In effect this bill will dry up the voluntary response of high-minded young women for the nursing profession and this will lead ultimately and inevitably to the necessity for permanently drafting all student nurses. In turn, other professions and callings will have to be tapped by compulsion to supply the needs of industry, finance and public-service activities. Then we will have total regimentation of women as they have in certain European nations and which some people want here where the status of woman is little above that of the medieval serf. This process degrades and debases the dignity, beauty, grace, and spiritual and moral qualities of women and is totally unworthy of our American way of life, in fact, it is obnoxious to all our conceptions of the high estate and respected station of American mothers, sisters, wives, and sweethearts whom we do not like to regard as potential draftees.

When we drafted men we did not single out mechanics or cooks. By the same token, it is unfair to draft women solely because they are nurses. Who would presume to question the inspiring record of our war nurses, who have rallied voluntarily and willingly to the urgent and most compelling calls of duty from the fox holes of Bataan, and the malarial swamps of the South Pacific to the deserts of Africa and the icy blasts of the Arctic.

To draft nurses now without giving them the same chance that the WAC's and the WAVES and other servicewomen had to enlist of their own accord, in an effort to hide the blunders and bad judgment of others, is absolutely indefensible. It is an unwarranted stigma and I repeat, the rankest discrimination against one of the finest groups of women in America.

And for what? Resolved to finality, according to the Army, just to raise about 5,000 women for service as nurses. About 9,000 colored nurses have not been utilized, about 2,500 male nurses are unused. About 2,000 conscientious objectors willing to do nursing work have not been called; no effort has been made to utilize some of the personnel of other women's services, or some of the limited-service groups, although practically every hospital in the country is efficiently serviced by student nurses properly supervised.

No real, determined recruitment drive has been instituted by the Army up to this time in order to get required nurses by voluntary means, though the admiral in charge of Navy nurses has stated that the results of his modest drive for recruits were most gratifying. The Navy does not need this draft, and neither does the Army, if it makes a real recruitment drive.

Why not try the voluntary method, the American method, before resorting to compulsion? It is reasonable to suppose that our devoted patriotic nurses would respond in sufficient numbers with the right kind of an appeal and much faster than a similar number can be secured under the selective service system. And there are many fine nurses over 45 years of age who would respond if given a chance.

The nurses earnestly want to serve. They want to meet all the needs of the wounded, the disabled, and the sick. All citizens and certainly every Member of this body, wants to make sure that our

boys are adequately cared for. It is late indeed for some people in responsibility to be awakening to the fact that all-out war means casualties and casualties mean hospitals, doctors, and nurses in quality, distribution, and sufficiency, and in time.

There is abundant authority in the record of these hearings to warrant the conviction that nurses can be procured more quickly, more satisfactorily and more efficiently through voluntary methods based on an appeal to patriotism under the leadership of their own group, rather than by totalitarian coercion. Let us give these noble women the chance to demonstrate, as I am confident they will, that they are ready and willing to do their full duty. Sixteen thousand of them have applied for enlistment since January 6. Get behind a recruiting drive now and in my opinion the desired number of nurses will soon be obtained. Compulsory draft should be the very last, and not the first, resort. Let us cling to the American way until it is demonstrated to be unworkable and unsuited to our requirements. Let us not stigmatize these fine women, because unlike some other groups, they are without strong organized support but, helpless and defenseless, relying solely on Congress for justice.

I will for these reasons vote against the draft of women nurses.

The Flag on Iwo Jima

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. ROBERTSON of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address from Guam by Secretary of the Navy James Forrestal on February 25, 1945:

Up the precipitous side of a 600-foot extinct volcano, so precipitous that it seemed almost vertical, went a platoon of American marines. Even through a glass they seemed tiny figures scrambling skyward against a background of blue. And then a few minutes later, from the thousands of throats, upon ships, on land and on the sea came the sudden cry, "There goes the flag."

That was how the Stars and Stripes went up in the first island of Japan's outer rim of island defenses. It was at 11, Friday, February 23, 9, Thursday night, New York. We saw that flag going up half way on the journey to shore with Lt. Gen. Holland Smith, of the United States marines. It was the high point in a week of hard fighting, fighting which continues and will continue for some days to come. The Japs don't want to lose Iwo Jima. It's the first step in a sequence of doom for their homeland. They have put into it every kind of defense and they have had years to plan that defense.

As you know by now, Iwo Jima is a tiny island 5 miles by 2½, coming to a tapering point at its southern end. Its terrain, unlike that of some other atolls we have taken, rises some distance from the sea, Mount Suribachi, where our flag went up on Thursday, being its highest point. Its beaches are soft volvanic ash, so loose and crumbling that one marine said it was like trying to dig a fox hole in a bag of wheat.

The Japs took full and skillful advantage of that terrain and of the fact that there could be no technical surprise as to where an enemy would land. We had to land on the beaches and it had to be a frontal assault. They had planted mortars, rocket-gun emplacements, and artillery all over that grim and barren island, so that there were streams of converging fire at the beachhead on which the marines had to come scrambling in from the sea.

Iwo Jima had had a powerful working over even before the 800 ships of Vice Admiral Turner's expeditionary force launched their attack 1 week ago today. It had been hit by the bombers of the Army Air Forces for 70 days in succession. Three days before D-day our battleships, our cruisers, and our destroyers pounded the island with naval gun fire. Each day since then they have poured thousands of tons of 16-, 14-, 8-, 6-, and 5-inch shells into its defenses. Even the 40-millimeter antiaircraft guns have been employed against that shore line. The escort carriers put on air strikes with torpedo planes, dive bombers, and rockets, sometimes as many as 20 missions a day. And just to help out in between their missions of bombing Japan the planes of the fast carriers of Admiral Spruance's fifth fleet, as well as some of the battleships of that same aggregation of power, joined up after their first raid on Japan to contribute to the pounding. All of this tremendous weight of metal thrown at Iwo Jima did not extinguish its defenses.

The Japs, as they had done at Tarawa and at Kwajalein and at Saipan and Guam, had deep burrows under the shelving ridges of Mount Suribachi and caves along the rising shore line to the north. Some of these caves had connecting galleries and they will be taking dead Japs, and some live Japs even, out of them probably for many weeks to come.

But in spite of all the skill of the Japanese defenses, the marines went ashore and they have exacted since a 4-to-1 toll in death from our enemies.

Let me interject here that the tremendous stream of metal thrown on Iwo Jima sharpens again the necessity for the continued output of munitions in our plants at home. Only because of that rain of metal could the island be reduced at all. Because of it our ratio of losses is far less than it otherwise would have been.

As Fleet Admiral Nimitz has said, it was our policy in the past to have an unstoppable margin of power in these attacks—a steam roller, as he puts it. That steam roller saves us many lives. It will take the output, however, of many factories and hard work by all hands in those factories for months to come if we are to keep that edge of power.

I came from Iwo Jima by destroyer to this island of Guam—now, you might say, the Times Square of the Pacific. In the 7 months since we landed Guam has been transformed. The Seabees have built 150 miles of roads. They put in air fields; they built hospitals, and are now building a naval drydock. The Navy has restored the native villages and 20,000 of these amiable people have trouped back from the hills to take up life again in villages that have been made available to them by the Americans. And churches have been reestablished; 6,000 of their children are attending schools with native teachers. They are violently pro-American.

America is on the march in the Pacific—a march back to civilization, order, and decency. You can see it in islands like Guam and Saipan; you can see it in the glad and serene faces of the natives who again are clean and well fed.

The way back is being cleared by fighting men from every State in our Union—bluejackets, marines, soldiers, and airmen. You can be confident of them, of naval airmen who have done a tremendous job in this Iwo Jima operation, of the marines, of the Army forces. And you can be confident of their leaders—of men like Fleet Admiral Nimitz, Vice Admiral Turner, Lieutenant General Harmon, Lt. Gen. Holland Smith, Major General LeMay, of the Twenty-first Bomber Command; and finally of that glorious aggregation of fighting men, the Fifth Amphibious Corps of the marines, which under Lt. Gen. Harry Schmidt's direction, is leading the fighting at Iwo Jima.

It's a great team and Americans can be proud of it and of the country that produced them.

The Need for Small Dams Becomes Apparent

EXTENSION OF REMARKS

OF

HON. EARL WILSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bedford (Ind.) Daily Times-Mail:

THE NEED FOR SMALL DAMS BECOMES APPARENT

Whether Congressman EARL WILSON's proposal for a series of small dams is the proper substitute for the proposed big Shoals Dam is something for the engineers to settle. But, any person who took a quick glance Monday at White River, or any of the small creeks which form its tributaries, will realize that our Congressman is on very firm ground in advocating small dams for this area, regardless of the outcome of the Shoals project.

We happened to see Leatherwood Creek. It has risen from a tiny stream to a torrent overnight. Every other creek in the county has done the same thing.

The most striking aspect of the week was the muddy, brown color of the water. It takes no engineering experience to see that the best topsoil in the county was being washed away.

Highways can be blocked by water. That is a temporary condition, but soil carried away is gone forever, and this county cannot afford to have its soil carried down the river. There has been too much erosion already, and this is a type of damage which cannot be repaired.

Congressman WILSON is one of the few people who have had a broad gage view of the entire water problem in southern Indiana. He opposed the Shoals Dam because he felt that in doing so he was representing the wishes of the majority of the people in his district. Rightfully, he views his job as that of a representative.

There is very much more to the water problem in this area than mere flood control for the White, Wabash, Ohio, and Mississippi Rivers. Monday morning certainly proved that. The biggest problem is to keep local rainfall for local use, to prevent soil erosion, to raise the underground water level so that wells and springs will not dry up in the early summer, so that Lawrence County farmers will not have to haul water for themselves and their livestock; so that Leatherwood and all the other creeks in the county will not jump from a dry bed to flood within 24 hours. Those vital aspects of water control have been largely overlooked. It is a mistake to

call the situation by the name "flood control"; it should be called water control and preservation. How many thousand cubic feet of soil were washed away Monday would be difficult to estimate, but it is a stupendous amount, and exactly the same thing happens every time this area has a heavy rainfall. We can expect about five or six more similar experiences before the summer dry spell. This is what EARL WILSON wants to correct.

Water is a terrific force. It was the original source of power for American industry. It has produced great wealth when regulated. When unregulated, it has been the Nation's greatest expense. The cost of the 1937 flood in property destruction alone would have more than paid for all the dams which need to be built. The Nation paid the price of neglect, and will pay it again unless proper precautions are taken to prevent any further repetitions.

Missouri has set an excellent example of water control. The topography of the country in Missouri is quite similar to that of Indiana, flat or rolling in the north, and hilly in the south. The University of Missouri took the leadership of the water-control movement, and has succeeded amazingly well. Recent reports made by Chester Davis, president of the St. Louis Federal Reserve Bank, indicate that almost every Missouri farm now has a pond of water. Some of these ponds have been built privately; many have been built by State and county officials. One positive result of this program has been a marked decline in the number of dry wells. Southern Indiana could do very well to follow this splendid example. The movement must be widespread. Individual efforts, no matter how praiseworthy, can accomplish little. The project must cover a large area.

Monday morning should put an end to the dispute about the Shoals Dam. Perhaps the big dam is a national need. Certainly small dams and ponds are an immediate local need. The productivity of Lawrence County farms, especially those on hillsides, has been declining for years; chiefly due to the sudden heavy rains and the swollen creeks of muddy, brown water. The time for action is right now. Every rainfall aggravates the situation.

Office of Price Administration

REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. MORRISON. Mr. Speaker, approximately 1 week ago today three Congressmen—two Democrats and one Republican—were grossly insulted and put out of an O. P. A. advisory committee meeting by O. P. A. officials while they were doing their duty as duly elected officials of the Government and elected representatives of the people, when they attempted to attend an important strawberry advisory committee meeting at the request of their constituents back home.

Being one of those three, I can assure the membership that it was only at the urgent request of my constituents and at the request of the Louisiana advisory committee member, who was elected by the O. P. A., that I was present.

The meeting was vitally important to the people of my district, since the State of Louisiana is the largest strawberry producing State in the United States.

I had thought that with this unusual, unfair, and grossly insulting treatment toward Members of this body, namely, Mr. JENNINGS and Mr. EARTHMAN, of Tennessee, and myself, that Mr. Chester Bowles would at least have the courtesy to apologize for the action of his department to the whole membership for this gross mistreatment and insult. However, 1 week has gone by and not a word from Mr. Bowles. I personally know of my own knowledge that Mr. Bowles had full knowledge of the whole affair since it occurred 1 week ago. This Congress has been good to Mr. Bowles, and, notwithstanding the high-handed, insulting, and, in many instances, unfair treatment of various Members of Congress, it has always given him the benefit of the doubt. Frankly, by such continued acts of the O. P. A., and by his silence, he has thereby demonstrated that he holds for Congress contempt rather than an attitude of appreciation for what Congress has done for him.

As far as I am personally concerned, the O. P. A. did me a favor by asking me to leave the advisory committee meeting, as I think from the usual results of such meetings that very little is accomplished, in view of the present O. P. A. attitude, and I was thereby spared a very boring day with arrogant and bigoted subordinates whom Mr. Bowles has put in charge of all policies of the O. P. A.

I cannot help but believe and realize that Chester Bowles is responsible for the direct and gross maladjustment and maladministration of many departments of the O. P. A. He has begged for mercy from this body when he has wanted something like the continuation of an O. P. A. act, of the passage of a bill that his attorneys have prepared, or adequate funds to more than take care of his overstaffed bureaucracy with the cunning and smoothness of an actor of the Barrymore type. He is the best I have ever seen when it comes to currying favor or favorable feeling toward him with a few leaders in this Congress. At whitewashing, evading issues, and insulting the rank and file membership of Congress, he is the best that Washington has ever seen. Congress has given every department head the benefit of the doubt once. If he takes advantage of the situation, it is his fault the first time. If he does so the second time, Congressmen consider it is their fault and, frankly, from what many members have told me, they are sick, tired, and disgusted with Chester Bowles and his O. P. A. I am sure that every Member of this House feels that there should be a price control act, but, on the other hand, they do not feel that they, as duly elected representatives of the people that form a distinct branch of this Government, should thereby have to suffer the arrogance, intolerance, and gross insults of a bureau chief like Chester Bowles.

Frankly, from my experience, while I have not necessarily been successful with every request that was sought by me for a constituent of my district from other department heads, still I have always been treated with decency, courtesy, and as a duly elected representative of the people by every department in Washington with the exception of the O. P. A. I do not believe that the membership of this House will tolerate any department head that allows his department to grossly and unfairly mistreat and insult one, two, three, or more members of this body. Leon Henderson was not a big enough man to browbeat Congress and I do not think that Chester Bowles is either. In fact, I doubt that at any time when the O. P. A. was under the control of Henderson that there was such a disorganized mess of chaos as now exists under the arbitrary, arrogant, and uncalled for dictatorial rule of Chester Bowles.

Red Cross Month

REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. FLOOD. Mr. Speaker, this is Red Cross month. During this month, the Red Cross is asking for $200,000,000 from the people of America to carry on its work. That sounds like a huge sum. But when you measure those dollars in the terms of the aid and comfort and relief they will bring to thousands of our fighting men all over the world, you will never be able to give enough.

Today, I would like to ask you to stop for a few minutes and think of just what your contribution to the Red Cross accomplishes. Some of us are not fully aware of just what the Red Cross does for our armed forces. Some of us are inclined to think vaguely of the Red Cross as an organization set apart from our daily lives, to which we are asked to give each year. But the Red Cross is us. It is you and I and the man next door. The Red Cross is our medium for helping and comforting and cheering our loved ones overseas.

When we give to the Red Cross, we are providing a tired soldier with a bed in which to sleep in one of the hundreds of Red Cross Clubs scattered all over the world today. We are providing a lonely soldier with companionship and entertainment, a chance to talk to someone from home. When we give to the Red Cross, we are reassuring an anxious soldier by making it possible for him to hear through the Red Cross that his wife and baby are doing well. When we give to the Red Cross, we are providing a hungry soldier behind the barbed wire of a prisoner-of-war camp with food. We are providing a wounded soldier, desperately in need of blood, with life.

The Red Cross has over 7,000 men and women serving our armed forces overseas. They are stationed wherever our fighting men may be—at isolated bases in Alaska, in north Africa, on the Italian line, in China and India and Burma, the islands of the Pacific, Belgium, Germany, and France.

They are the field directors who crawl into fox holes to deliver a reassuring

word from home, to distribute comfort articles, cigarettes and gum. They are the clubmobile girls who serve hot coffee and doughnuts up near the front where the shells are crashing. They are the hospital workers, bringing to our wounded the small extra comforts and attentions we would bring them were they at home—writing a letter for a boy whose hands are hurt, reading to a boy who is blind. They are the club workers whose Red Cross Clubs range from a grass shack in New Guinea or a Nissen hut in Iceland to a palace in Italy, a chateau in France * * * clubs which they have made as much like home as possible, clubs in which our G. I.'s can find American food, American music, companionship and entertainment and help.

These Red Cross workers are serving our fighting men for us—they are comforting and cheering and helping them in our name. When we give to the Red Cross, we are making this service possible, we are giving to our own boys now thousands of miles from home. Through these workers, in the services they offer, our men feel the touch of home, feel us near them and behind them and with them no matter how far away they now may be. Theirs is the need we must meet, theirs is the want we must fill. It is up to us to keep the Red Cross at their side.

Veterans' Investigation

REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. PHILBIN. Mr. Speaker, because of numerous very serious, well authenticated complaints that have reached me requesting my official intercession and action, and that are arriving daily in increasing volume, I have today introduced a resolution to investigate alleged intolerable conditions and other irregularities affecting our returned veterans hospitalized in Government institutions throughout the country and in overseas theaters.

These complaints, as to the hospitals they embrace, indicate a general unsatisfactory atmosphere which more closely resembles concentration camps than hospitals—harsh discipline, poor food, unreasonable restrictive regulations, inadequate treatment, and inconsiderate attitudes on the part of superiors, and are so broad in scope and serious in character as to be beyond total correction by the agencies in charge of the various hospitals involved without congressional action.

So general are these criticisms and complaints about the administration of several Government hospitals that I believe that the whole question of the care and treatment of our returned veterans, particularly those unfortunates who are psychoneurotic or mentally afflicted as a result of war service, and who have in some cases undergone horrifying experiences on battle fronts overseas, ought to be carefully reviewed by the Congress. Indeed all aspects of veterans' relief and rights must be reviewed.

Everyone agrees that we must maintain the very highest standards in dealing with the supremely urgent problem of the care of the wounded and the mentally afflicted, and, therefore, if reports reaching me are true, even in part, the situation cannot be corrected too quickly. A fearless investigation will enable Congress to act. It will stimulate early correction.

The American people insist that these boys who have offered their all to their country and have returned broken in body or mind shall be given the best treatment that can be procured in wholesome, pleasant surroundings under considerate supervision, so they will feel that they are not ordinary soldiers in the ranks subject to harsh rigorous military discipline, but rather are truly the wards of the Government upon whom every possible solicitude is being bestowed looking to their early restoration to full health and strength and, where possible, to civilian life. Of course, for those unfortunates who cannot be so restored, there should be most humane and considerate treatment. Such policies, if wisely administered, would not impair or thwart the maintenance of order and sound discipline in veterans' institutions, and I refer to all institutions where veterans are being treated.

I am conscious that these problems are of great breadth and that the large influx of wounded and disabled presents unusual difficulties that ought to have been anticipated and provided for. I do not impugn the sincerity or good intentions of the officials in charge of our Government hospital programs. Most of them are conscientiously striving to discharge the duties imposed upon them, and most of them are doing a good job in the light of existing facilities and available personnel.

But there are evidences of uncoordinated efforts, retarded execution of previous plans for necessary expansion, unsound over-all administrative policies and failure to meet the urgent necessities of thousands of war heroes who have returned from the fighting fronts wounded, battle-scarred, and mentally upset.

I am very much disappointed that the Board of Hospitalization of the Veterans' Administration has not acted as yet upon the proposal that I made some time ago to institute smaller rest homes throughout the country where nervous and mental cases might be hospitalized in environments removed from the institutionalized routine of larger hospital units whose atmosphere often aggravates, rather than improves, frequently occurring types of mental disorder.

I have had my attention directed to pathetic cases of boys who have returned home, shell-shocked and mentally broken, yet who are not so seriously afflicted as to be put into overcrowded surroundings with incurable cases. The fact regrettably is at present, that in some hospitals the various types of mental cases are not segregated and I think this is not only most unfair to the boys themselves, but, if permitted to continue, will produce most unsatisfactory conditions that will retard or prevent the recovery of many boys who, with proper treatment, care, and secluded environment might be speedily restored to full mental and physical vigor.

There is no room for the philosophy of the "brass hat" or "mailed-fist institutionalized dictator" in the care and treatment of our veterans. We must have an ample number of the most capable, most kindhearted and sympathetic qualified men, professional and otherwise, that can be found, and we intend to see to it that we will have them. Billions are being and will be spent for this purpose and we want concrete results. We will not tolerate incompetence, arrogance, carelessness, and harsh, ruthless discipline in connection with the treatment of these heroes. They will be dealt with humanly and decently, so far as possible, just as they would be dealt with in their own homes by their own doctors and families, and that spirit and intent of Congress must and will be given effect.

The problem of care and treatment for all our wounded, disabled, and mentally afflicted veterans is one of the greatest rehabilitation problems and most sacred trust we have, and it cannot be complicated by unwise and improvident administration. We must put it on a firm basis and weed out at once those administrators and those policies which are leading to criticism.

This proposed investigation will disclose all the facts relating to undesirable conditions in Government hospitals and permit curative remedies. It will also keep efficiency at a high pitch, put a stop to abuses and maltreatment, where uncovered, and result in beneficial expansion and integration of the whole hospital-rehabilitation program.

Every phase of rehabilitation and hospitalization, care, treatment, rights, benefits, and privileges must be investigated, including the quality and adequacy of medical and nursing services.

I bringing forward at this time the very critical question of hospitalization and care of returning veterans, I am acting with certain reluctance and hesitancy. It is not at all pleasant for me to have to present evidence to this House which, if true, is in effect a scathing indictment of the Veterans' Administration. I am conscious of the past meritorious service rendered to thousands of veterans by that agency. I am aware also of the high concept of duty and the long years of devoted public service rendered by General Hines whom I hold in highest respect as to his character, ability, zeal, and sincerity. Very many other executives and employees of the Veterans Administration have contributed valuable service to the Nation and our veterans.

I have also been conscious of the very heavy burdens of administration imposed on this agency by the accumulation of

new legislation dealing with the problems of World War No. 2 and like all other Members of this Congress have been willing to permit reasonable time and opportunity for adjustment and adaptation to these new laws and grave new problems.

For these reasons, like other Members, I am sure, I have been patiently waiting to observe some evidence that the Veterans' Administration was taking up the slack, so to speak, and grappling successfully with these new and pressing problems. In fairness, I admit that progress has been made in some directions, and to some limited extent. The backlog of cases waiting determination has been gradually cut down though the number is still very substantial and many veterans are suffering inordinate and unreasonable delays and thereby hardship and misery, because of failure to settle their cases expeditiously. Desirable expansion of facilities has been accomplished, new construction undertaken, new district offices opened, additional personnel hired, but the capacity of the program still lags far behind the needs and demands of the veteran. What is worse, in its broader aspects, little or no headway has been made in replacing outmoded and out-dated policies and techniques with the new available advances of science and medicine which are required to adapt the work and methods of this agency to the modernized world.

Rightly or wrongly, the impression is quite general throughout the country that the Veterans' Administration is moribund and ineffectual—frozen to bureaucratic modes developed within its framework for over a quarter of a century, not possessed of the vitality, the fresh point of view or the administrative capacity to take hold of and successfully solve the multifold and gigantic problems of hospitalization and rehabilitation that must be solved and solved completely and promptly in order to prevent suffering, misery, and death and indeed to insure humane treatment and just consideration to millions of our returning heroes.

An article in the March issue of Cosmopolitan magazine entitled "Third Rate Medicine for First Rate Men" collates and presents startling and convincing evidence that many of our veterans are being neglected and denied the basic rights, benefits, and privileges which Congress has provided for them. This very comprehensive and well documented article which, through the courtesy of the publishers, I have the privilege to place on the desk of every Member of Congress, constitutes a challenge to this body which in the interests of humanity and justice and regardless of any other consideration of personality or past merit must be promptly accepted by the House.

If the shocking facts presented in detail by this article are true, then the Congress cannot move too quickly to eradicate the unsavory conditions and failures that have resulted in such horrible and incredible treatment of our gallant war heroes.

Let me touch briefly upon a few of the basic specifications against the administration of veterans' legislation as evidenced by material I have in my files.

First. Bureaucratic red tape throttling the granting of relief, loans, and educational privileges authorized by the G. I. bill of rights.

Second. That the latest advances of medical science have not been comprehensively or fully utilized, particularly in the treatment of tuberculosis or psychiatric patients.

Third. Overcrowding of hospitals, whereby available space is taken up to accommodate more than the capacity originally provided.

Fourth. Unreasonable delays in adjudicating cases.

Fifth. Narrow interpretation of the G. I. bill resulting in the denial of grants of loans and educational privileges.

Sixth. Failure to expand hospital construction program rapidly enough, thereby making overcrowding necessary.

Seventh. Inadequate numbers of doctors and nurses to carry the load.

Eighth. Inadequate research activities and many other serious difficulties and shortcomings.

Mr. Speaker, that is just part of the sad story told by one of our country's most substantial and reputable periodicals. Coupled with the other evidence of delay, neglect, failure to realize or grapple with the magnitude of the problems confronting it, lack of comprehension and grasp of the broader enlightened policies required by new developments in science and medicine, failure to break away from old and outmoded techniques of an established bureaucracy and launch forth boldly upon new methods and new facilities, the contents of this article demand an immediate, thorough, and impartial investigation by this body.

This inquiry cannot be further delayed. If these facts are true and correct, if these charges can be substantiated in whole or in part, then the Congress must take speedy and effective action to apply drastic corrective remedies. Such an inquiry would be just to all concerned. It would give those involved an opportunity to meet and, if possible, refute the charges made. It would enable Congress to acquire all the pertinent facts relating to the whole question of the administration of veterans' legislation. It would lay a firm foundation for additional necessary laws.

I urge the Rules Committee to report this resolution back to the House forthwith, or as soon as possible, with the recommendation that it be passed. This is the only way we can do complete justice to the millions of brave American boys who have offered and sacrificed their life's blood and their all in order to save our democracy and our country. For us to do less is a dishonor and stigma upon the sacred cause for which they fought and died. In the name of our gallant sons who have fallen in battle, I earnestly urge the early adoption of this resolution. It follows:

Resolved, That a committee comprised of five members of the Committee on World War Veterans' Legislation and six other Members of the House, all to be designated by the Speaker or a duly authorized subcommittee or subcommittees thereof, is authorized to conduct an investigation into alleged intolerable conditions, irregularities, and hindrances affecting war veterans and members of the armed forces in connection with hospitalization, medical and nursing services, compensation, pensions, vocational guidance, and training, and all other matters bearing upon the welfare of veterans and their dependents regarding rights, benefits, privileges, and preferences to which these groups may be entitled under existing legislation.

The committee shall investigate all hospital facilities, the status, needs, and progress of the hospital-construction program, other facilities contemplated by present legislation, the personnel, the food, the discipline, restrictive regulations, care and treatment, and all other matters affecting the rehabilitation and care of returned veterans, with particular reference to wards of the Government, now hospitalized in Government institutions, wherever situated, and to prepare and submit to Congress recommendations for remedial legislation to eliminate undesirable conditions, unsatisfactory administrative practices, to provide abundant facilities, and to insure efficient, proper, and generous care and treatment for patients in Government institutions, veterans, and service men and women.

The committee shall report to the House as soon as practicable during the present Congress the results of its investigations, together with such recommendations for legislation and changes of policy and program as it deems desirable.

For the purpose of this resolution the committee, or any subcommittee thereof, is authorized to sit and act during the present Congress at such times and places within the United States, or elsewhere, if deemed necessary, whether or not the House is sitting, has recessed, or has adjourned to hold such hearings, to require the attendance of such witnesses and the production of such books, papers, and documents, and to take such testimony as it deems necessary. Subpenas may be issued under the signature of the chairman of the committee or any member designated by him and may be served by any person designated by such chairman or member.

Public Health and the Doctors

EXTENSION OF REMARKS
OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7 (legislative day of Monday, February 26), 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Public Health and the Doctors," which I delivered at the New York Times Hall in New York City on February 7, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

First I want to read a story that appeared recently in the columns of the illustrious newspaper that is sponsoring this forum:

"DONATIONS MAY SAVE EYESIGHT OF GIRL, 4

"ASHTABULA, OHIO, December 25.—Because of the generosity of friends, neighbors, and total strangers who read of her plight, 4-year-old Barbara Ann Rigo will have a chance this Christmas for one of the greatest of all gifts—normal sight.

"For the past year Barbara has been losing the sight of her right eye as the result of a growth which, doctors said, could be removed only by surgery. To be successful the operation must be performed within the next 5 or 6 months.

"The little girl's parents, Mr. and Mrs. Frank Rigo, Jr., have been saving and scrimping during the year from her father's salary as a railroad employee to raise money for the operation.

"Recently, when they had just about reached their goal Mrs. Rigo lost her purse, containing all their savings, in Pittsburgh, where she was visiting relatives.

"Readers of a Pittsburgh paper which printed a story on her loss contributed $150 toward replacing the savings, and friends and neighbors of the Rigos chipped in to make up the difference.

"The happy parents completed arrangements yesterday to have the operation performed at a hospital in Pontiac, Mich., as soon as possible."

Now, when I first read this story, I was filled with a sense of shame. Shame that such a thing should happen in this country where we have the best medical skill and equipment in the world. Shame that the Rigo family should have to skimp and save for a year before they could afford the operation to save their little girl's eyesight. Shame because, when misfortune befell them, they had to depend upon the charity of friends, neighbors, and total strangers.

In its broader outlines, the story of the Rigo family is not unusual. Inability to secure medical care when needed is characteristic of many American families.

The results of this tragic deficiency in American life are to be seen in the selective service rejection rates which were revealed last July to the Senate Subcommittee on Wartime Health and Education, of which I am chairman.

We discovered, at the July hearings, that four and one-half million young men in the prime of life had been found unfit to serve their country as soldiers because of physical and mental defects. In all, between eight and nine million men—about 40 percent of the 22,000,000 men of military age—are unfit for general military duty.

Moreover, and this is the most telling fact—at least one-sixth of the rejected men had defects which could be easily remedied. This in itself is a serious indictment. But additional evidence of neglect is afforded by a study which compared the selective service medical records of men in Hagerstown, Md., with the school health records obtained by examination of the same individuals during their childhood. The comparison showed that many of the defects for which men were rejected had been discovered as much as 15 years earlier while the registrants were students in high school and grade school. In the intervening years, nothing had been done about them.

The chief reason for this dismal state of affairs becomes clear when we contrast the high cost of good medical care with the low income levels of a majority of the American people.

Authoritative and conservative estimates show that the average cost of good medical care today is about $150 per family per year. This would be 5 percent of the income of a family that receives $3,000 a year. Seventy percent of the families in the United States, however, have incomes of less than $3,000, and 50 percent have less than $2,000. Even if we leave out of consideration entirely the fact that many families have need of medical services costing much more than the average figure of $150 a year, it is evident that a majority of the population cannot meet the costs of proper medical attention.

Seemingly, the only solution of this problem is a method of payment by which the risks may be distributed among a substantial proportion of the people and the costs of illness over a long period of time.

Today there is general agreement on this score among all serious and open-minded students of the subject. All except a few die-hards who refuse to be moved by facts now accept the principle of prepayment, and I believe this represents real progress over the unenlightened invective that pervaded the atmosphere in such discussions at this not very many years ago. There is still sharp disagreement, however, over the form that the prepayment system and the group financing shall take.

Advocates of voluntary insurance claim that such plans will eventually meet the needs of most of the people. Others assert that voluntary systems can never reach a really significant proportion of the population, and that compulsory health insurance and tax-supported services must be provided if anything like full coverage is to be achieved.

You have heard arguments on both sides of this question tonight. The Senate committee, of which I am chairman, has not yet decided which of these alternatives combines the most advantages and promises the most in terms of greater health, happiness, productivity, and longevity. We do not feel that, as far as we are concerned, all the evidence is in. We have listened receptively to all who have shown a sincere desire to solve this perplexing problem in a way that will benefit the people and make America a stronger, more vigorous nation. We shall continue to conduct our inquiry in this spirit, and we are willing to try to reconcile opposing viewpoints in a way that will be fair to all groups concerned.

But we are not going to settle for half-way measures or patchwork proposals. If the voluntary systems offered are to gain our approval, they must meet certain conditions.

First, the medical care given must be complete care. By that I mean hospitalization, general medical care, including all modern diagnostic and preventive services, and dental care. Insurance against so-called catastrophic illness, or aganist a portion of the medical bill, will not suffice, because we do not want people to wait until a catastrophe strikes before they see the doctor.

Secondly, the cost of the service to the individual must be low enough so that most of the people can be included in the system. Unless we achieve full employment at high wages, this will require governmental subsidies.

Thirdly, the service rendered must be of high quality and so organized that it can be provided economically. This means additional facilities, more and better-trained doctors, and group practice. We cannot accept pill-bag medicine or a fee-for-service system in which every specialist to whom a patient is referred during the course of an illness gets a separate fee. Such an arrangement would be prohibitively expensive. Also, it would be unsatisfactory from the standpoint of coordination of the various doctors' findings.

It is because of the obvious lack of modern clinical facilities in many parts of the country that the committee has recommended a hospital and health center planning and construction program to cover the entire Nation. We propose networks of facilities integrated on a regional or State basis so as to make high-quality care available to every citizen regardless of where he may live. This recommendation has been embodied in a bill, S. 191, upon which we expect to hold hearings soon.

We have made this recommendation first because the need is obvious and agreement in the need is general. But facilities alone are not enough. We must also see to it that people will be able to use the facilities. This will require health insurance and tax-supported services for those ineligible for insurance or unable to afford it.

We must also have more trained personnel to staff our medical facilities. We propose Federal loans or scholarships to medical and dental students, with special incentives to induce young practitioners to settle in rural and other shortage areas. We believe that returning medical officers should also be encouraged to take up rural practice.

Finally, we propose that the Government continue in peace, as it has in war, to aid medical research.

Achievement of a national health program rests, in the last analysis, with the people themselves. They must want it and they must work for it. I sincerely believe that the people do want such a program, and that they are willing to work for it. But they must have something definite to mobilize for—they must have a program to rally around. The mapping of the broad outlines of such a program is the job of Government in consultation with the representatives of the American Medical Association and other professional societies, the trade unions, business and consumer organizations, leaders of enlightened public opinion, like the New York Times, and far-sighted citizens like our gracious hostess, Mrs. A. H. Sulzberger, who organized this forum.

The program I have just described has been evolved in this manner—the democratic manner. We do not intend to regiment doctors or to interfere with the right of any patient to choose his physician.

It is admittedly a program that is broad in outline, and many of the details are lacking. But at least we are on our way. With the marvelous resources at our disposal there is no reason why we should not develop the finest health program the world has ever known.

Address by Hon. Walter F. George, of Georgia, on Freedom of Religion

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7 (legislative day of Monday, February 26), 1945

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able radio address on the subject Freedom of Religion, delivered by the Senator from Georgia [Mr. GEORGE] on March 4.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This morning I am speaking upon the Baptist Hour, and it is fit that I should dwell for a few moments upon the part Baptists have played in the establishment of religious freedom.

The Constitution of the United States, which public servants are sworn to support, provides the legal basis for the freedoms the people of this country now enjoy. This immortal document, as school children know, is divided into three parts: The Preamble, the Constitution proper, and the Amendments.

The Preamble sets forth the aims of the Government and is as follows: "We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare and secure the blessings of liberty to ourselves and our posterity, do establish and ordain this Constitution for the United States of America." The founding fathers, in these terse and profoundly meaningful words describe the ends they sought through the establishment of a central Federal Government.

The Constitution set up the machinery for a democratic government and its framers endeavored, as far as humanly possible, to

safeguard the rights and to conserve the interests, common to all the people. In this document only one reference was made to religion. And yet it must be remembered that the basic philosophy underlying the Constitution is the concept of human liberty as the inalienable rights of the individual as a responsible moral being.

The closing words of article VI declare that "no religious test shall ever be required as a qualification for any office or public trust." Under this, no man, legally chosen, could be deprived of serving his country on account of either his religion or his lack of religion. Justice Joseph Story, commenting on this clause said that "it had a higher object; to cut off forever any pretense of any alliance between church and state in the National Government." This, however, was not the interpretation placed upon article VI when the document was presented to the several States for ratification. Throughout the country the fight raged and the proposed Constitution in general, in particular, and in detail was strongly assailed and stoutly defended. The point at which it was most strongly criticized was its lack of a bill of rights. The charge was made that the framers of the Constitution had provided no adequate guarantees for the preservation of the human rights for which the glorious revolution had been undertaken and for which the Revolutionary War had been fought. The American Bill of Rights must be rightly interpreted as a reaffirmation of those immemorial rights of free men sacred against all government, whether local or general.

Thomas Jefferson wrote from Paris in 1788 that "were I in America, I would advocate it (the Constitution) warmly till nine (States) should have adopted, and then just as warmly take the other side till the declaration of rights is annexed to it."

The State conventions of New York, Pennsylvania, New Hampshire, Virginia, North Carolina, and Rhode Island expressed anxiety because civil and religious liberty had not been fully safeguarded. Several of these States previously had enacted a State declaration or bill of rights. Virginia hung in the balance. Patrick Henry, George Mason, James Monroe, Benjamin Harrison, John Tyler, William Grayson, and other leaders opposed the adoption of the Constitution. James Madison returned late to enter the State campaign. The Baptists, now grown to be the most numerous religious body in the State, were the protagonists of complete religious freedom. For 2 hours Madison addressed the crowd, made up largely of Baptists that had assembled at Orange Court House, and when he finished Elder John Leland, the foremost Baptist minister of that day, urged everyone to vote for James Madison as their representative to the State convention called to ratify the Constitution. He was elected. In the meeting of that body Madison, through argument, persuasion, and promises, won the vote for adoption.

Between 1766 and 1778, 42 Baptist ministers had been arrested and imprisoned by the Colonial authorities of Virginia, acting in accordance with existing laws, and the charge against each of them was preaching the Gospel contrary to the canons of the Established Church. Patrick Henry pleaded in their defense. Thomas Jefferson sought to protect them through the introduction of a bill known as "An act for establishing religious freedom," which became law in 1786. But the man to whom all lovers of religious liberty in this country owe the greatest debt is James Madison, who richly deserves the title which history has bestowed upon him, namely, "The Father of the Constitution." This man appeared repeatedly in the court of his own country to defend Baptist nonconformists. In 1774 he denounced that diabolical, hell-conveived principle of persecution that had thrust many Baptist ministers into jail. In 1776 he supported Jefferson's measure for religious freedom, and in 1786 successfully carried through its enactment by the Virginia Assembly. In 1788, he pledged his efforts to secure amendments to the new Constitution, that would be incorporated as a bill of rights, and when the new Congress met, he fulfilled his pledge, and on December 15, 1791, he witnessed a great scene, the incorporation of the first 10 amendments, our Bill of Rights, which become thereby a part of the fundamental law of the land. The first of these amendments to the Constitution is the foundation of complete freedom of religion in the United States: "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof."

The first declaration in support of religious liberty ever uttered in the English language was made by the General Baptists in 1611, who had fled from England to Holland, in order to escape persecution. A portion of this group returned to their native land. One pastor after another was imprisoned in Newgate jail. The faithful congregation continued to meet somewhere in Old London, and from this dingy meetinghouse "there flashed out, first in England, the absolute doctrine of religious liberty." In 1614, Leonard Busher, a Baptist layman, addressed to James I "A Plea for Liberty of Conscience." In 1620, a group of Baptists made A Most Humble Supplication to the King's Majesty for religious freedom. In 1636, Roger Williams and his fellow believers in religious liberty formed a compact made by the new settlers of Providence Plantations, by which they were to be governed. In the interest of freedom of conscience they limited the power of this government to "only in civil matters." This was the first community in Christian history from A.D. 320 to A.D. 1636 in which religious freedom was fully assured. In 1663, Dr. John Clarke, pastor of the Newport Baptist Church, Rhode Island, secured from Charles II, a royal charter which set up the first government under the English crown which guaranteed "full liberty in religious concernments." In 1774, Isaac Backus, representing the Warren and other Baptist associations, made the first plea to the Continental Congress that religious as well as political freedom should be sought for in the conflict upon which this country was about to enter. In 1774 the Baptists of Virginia were the first religious body to declare their support of the American Revolution. In 1788, the Baptists of the United States stood unitedly for the adoption of an amendment to the Constitution that would provide religious freedom.

John Locke, the eighteenth century philosopher, declared that "the Baptists were the first and only propounders of absolute liberty, just and true liberty, equal and impartial liberty," and George Bancroft, statesman and historian, asserted that "freedom of conscience, unlimited freedom of mind was first a trophy of the Baptists."

In 1788, 13 small colonies separated by distance, cultural background, and religious beliefs were seeking to form a single national organization. Today a world, brought through the radio and the airplane into relations closer than our colonial fathers ever dreamed to be possible, is trying to form a single world organization. For its full realization the United Nations need to agree upon common aims, and these should be set forth in an international preamble, a world constitution, erecting the machinery for a working cooperation of the United Nations, and an international bill of rights in which the basic, inalienable rights of mankind shall be declared and means provided for their protection.

The United Nations stand today where our forefathers stood more than a century and a half ago. The wisdom of the decisions they made in 1788 and in 1791 are evidenced in the freedom our citizens enjoy and in the progress our Nation has made. Because of this America has an unescapable obligation to lead the United Nations into a world organization, embodying the principles and safeguarding the freedoms that have made the United States the freest, the greatest, and the most prosperous nation on earth. Freedom of religion is vital and essential to any world organization that shall endure and prosper.

Twenty-six years ago Woodrow Wilson, in whom centered the hopes of millions eager for the freedoms we enjoyed in America, presented a plan for a league of nations to secure peace and democracy for all. The World War had ended. The peace delegations of the nations were gathered in Paris. President Wilson presented to the commission on the drafting of the covenant for the League of Nations a proposed covenant that embodied the ideals and principles that have made our Nation free. Article VII of Mr. Wilson's covenant dealt with the freedom of religion and read as follows:

"Realizing religious persecution and intolerance as fertile sources of war, the powers signatory hereby agree, and the League of Nations shall exact from all states seeking admission to it, the promise that they will make no law prohibiting or interfering with the free exercise of religion, and that they will in no way discriminate, either in law or in fact, against those who practice any particular creed, religion, or belief, whose practices are not inconsistent with public order or public peace."

From February 3 to February 13, 1919, the Commission on the Drafting of the Covenant of the League considered this proposal, which was, in effect, the international proscription of religious persecution. On February 13, in the absence of President Wilson, the other members took final action. On that fatal day the Commission decided that, "in view of the complications of this question, it would be preferable to omit this article altogether," and perhaps in so doing the seeds of World War No. 2 were sown. Had President Wilson's proposal been adopted and properly implemented by the nations composing the League of Nations, the whole course of recent history would have been radically changed. The persecution of the Jews and other religious minorities would have been prevented and the whole world wolud have known a new birth of freedom.

The Baptists played an important part in the securing for this Nation the benefits of religious liberty. They face today a far greater opportunity than that which confronted our spiritual forefathers. They are called to bring to bear their influence upon those who shall participate in the Conference of the United Nations when they meet together to create a world organization having for its object the maintenance of a just and durable peace. The Baptists of America cannot do better than to endorse in principle the proposal made by President Wilson and secure the signatures, not only of the Baptists of this Nation, now more than 11,000,000 in number, but also the signatures of other millions of Americans of other congregations who share with them a like devotion to freedom of religion.

St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7 (legislative day of Monday, February 26), 1945

Mr. MEAD. Mr. President, I ask unanimous consent to have inserted in

the RECORD a statement which I received from Mr. Ralph M. Andrews, executive vice president of the Buffalo Chamber of Commerce, Buffalo, N. Y.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ST. LAWRENCE SEAWAY AND POWER PROJECT—JOINT STATEMENT OF THE NIAGARA FRONTIER

The Niagara Frontier reasserts its continued unqualified opposition to the proposed St. Lawrence seaway and power project. The project would be economically unsound and a waste of public funds. It would be harmful to labor, industry, and existing transportation agencies. It is not needed because present transportation and power facilities have stood the test of peak wartime production and have proved ample to carry the load. If considered at all, it should come before the United States Senate in treaty form in compliance with the Constitution. The following unitedly subscribe to this statement:

Black Rock Manufacturers Association, John P. Maddigan, president; Broadway - Fillmore Association, Thomas A. Boris, managing director; Buffalo Business Federation (representing 43 civic associations), Samuel D. Lunt, president; Buffalo Chamber of Commerce, George A. Newbury, president; Buffalo City Planning Association, Inc., Milton C. Guggenheim, president; Buffalo Federation of Women's Clubs, Mrs. George M. Nelson, president; Buffalo Food Brokers Association, W. J. Reilly, president; Buffalo Foreign Trade Association, Aubrey W. Crawford, president; Buffalo Junior Chamber of Commerce, Harry H. Schall, president; Buffalo Passenger Association, W. I. Gates, president; Buffalo Traffic Club, Robert T. Loveland, president; Building and Construction Trades Council of Buffalo and Vicinity, C. J. Rosenberger, secretary; Building Owners and Managers Association of Buffalo, Alan F. Schnell, secretary; Central Railway Club of Buffalo, W. J. Sheridan, president; City of Buffalo, Mayor Joseph J. Kelly; Corn Exchange of Buffalo, O. E. Auerbach, president; Delaware Avenue Association, Inc., Carlton C. Jewett, president; Elmwood Business Association, Inc., Robert W. Hopkins, secretary; Erie County Board of Supervisors, Roy R. Brockett, chairman; Fillmore Avenue Businessmen's Association, Arthur E. Lawrence, secretary; Flour, Feed, and Cereal Workers' Union, Local 19184, A. F. L., David Jameson, financial secretary; Forest District Civic Association, George A. East, president; Frontier Laundry Council, Harry D. Wemple, secretary-treasurer; Genesee-Jefferson Businessmen's and Taxpayers' Association, Inc., Dr. Charles D. Blaser, president; Genesee-Walden Businessmen's Association, George J. Sattler, president; Grain Elevator Employees Local 1286, Owen J. Kavanagh, president; Grain Shovelers Union Local 109, I. L. A., Thomas F. Merrick, president; Great Lakes District, International Longshoremen's Association, Simon P. O'Brien, president; International Longshoremen's Association, Local 1622, Edward J. Hennessey, president; International Shipmasters Association (Buffalo Lodge), O. A. Toale, president; Lackawanna Chamber of Commerce, Theodore Wiencek, executive secretary; Lockport Chamber of Commerce, Mrs. A. Milne Judd, secretary; Main Street Association, Alan F. Schnell, manager; Master Plumbers Association of Buffalo, N. Y., Frank G. Dittly, president; Medical Society, county of Erie, Louise W. Beamis, M. D., secretary; Niagara Frontier Industrial Traffic League, Karl S. Wright, president; Niagara Frontier Planning Association, Dr. J. Albert Hobbie, president; Niagara Frontier Planning Board, Chauncey J. Hamlin, chairman; Niagara Frontier Society of Industrial Engineers, P. J. Pakurar, president; Niagara Frontier Superintendents Association, Charles H. Youst, chairman; North Jefferson Businessmen's Association, J. Leslie DeYot, president; Pioneer Civic Association of South Buffalo, Hugh R. Shreenan, president; Port of Buffalo Defense Committee, Thomas C. O'Brien, chairman; Propeller Club, George W. Martin, president; Railroad Workers League of Western New York (representing 21 railroad brotherhoods and auxiliaries), Christy A. Buscaglia, counsel; Railway Business Women's Association of the Niagara Frontier, Helen M. Bruell, president; Real Estate Owners Taxpayers League, Inc., Wm. J. J. Kunzie, president; Shirley-Summit Park Association, Benjamin Eichberg, secretary; South Buffalo Business Men's Association, Inc., A. R. Boulden, secretary; Town Club, Inc., Mrs. George E. Prechtel, president; Transportation Club of Buffalo, Harry K. Thomas, president; Trucking Federation of Niagara Frontier, Carl L. Biers, president; United Taxpayers' League of Buffalo, Inc., E. C. St. Clair, secretary; War Emergency Committee of Standard Railway Labor Organizations, S. W. Dobbins, chairman; West Side Businessmen's Association, Inc., Thomas Reppenhagen, president; William Street Businessmen's Association, Inc., Michael Reinhardt, president.

The Christian Church: What of Its Future?

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. BENDER. Mr. Speaker, the following address was delivered by Mr. John D. Rockefeller, Jr., on January 31, 1945, at a dinner given by the Protestant Council of the City of New York to launch a wider program of service to church and community by the council and its six constituent organizations. This council was formed to promote the coordination of different religious and welfare activities in New York, and one of its foremost aims is to obtain a continually closer relationship with the Catholic and Jewish faiths, in the belief that sectarian differences must be laid aside if the greater goal is to be attained. Seldom has there appeared in our time a more moving statement of the great principles of our faith than that found in Mr. Rockefeller's address. He expresses the thoughts of millions in this country, and outside of it as well, who share his vision and long for its realization.

The address follows:

THE CHRISTIAN CHURCH: WHAT OF ITS FUTURE?

(By John D. Rockefeller, Jr.)

Not many weeks or months had elapsed after this World War began before there was presented to our vision a picture so horrible it hardly seemed that it could be true.

It appeared that hell had broken loose and that millions of evil spirits had become incarnate in human form and were going about the earth committing atrocities and acts of cruelty beyond belief.

In the face of this awful picture it is not strange that we should ask ourselves the question, Has Christianity failed?

But there is another picture which the war has painted. In it we see millions of men and women who are exemplifying in their daily lives, in the most commonplace fashion, unselfishness, generosity, loyalty, self-sacrifice, and other characteristics and qualities which command the admiration of the world. Unconsciously these people are reflecting Christ's spirit. Whether they know it or not, their inspiration comes from the God of all good deeds. Yet many of them have no church affiliations, for too often the church seems to them quite apart from their lives, an institution which has little contact with or understanding of their problems, since theirs is fundamentally a religion of deeds, not of creeds; expressed in life, not in words.

We turn from this picture with a glow in our hearts and say with renewed faith: "Christianity has not failed; churches may have failed, but not Christianity. For never in the history of the world was Christianity a more vital force in human life than it is today."

THE CHURCH REBORN

In the presence of this great host of noble men and women, who, generally, have not come from the church, although directly or indirectly all have been more or less influenced by it; who, many of them, have faced death, have lived a life far worse than death, have sacrificed their all, we ask, "What of the future of the Christian church?"

Will these people, after the experience through which they have passed, find in the church generally as it exists today the recognition, the association, the guidance, and the inspiration which they need and have a right to expect? Regretfully we must answer, "No." For the church has learned too little to speak their language, to think in terms of their environment, to meet their needs.

If this be true, one of two things is inevitable. Either this unorganized spiritual force which is silently dominating millions of lives will not be conserved, or the church must have a new birth if it is to meet this marvelous opportunity and great human need.

Let us picture, for a moment, this reborn church.

It would be the church of the Living God.

Its terms of admission would be love for God, as He is revealed in Christ and His living spirit, and the vital translation of that love into a Christlike life.

Its atmosphere would be one of warmth, freedom, and joy, so sympathetically and distinctly manifest as to attract and win into its fellowship all those who are striving to live useful and worthy lives.

It would pronounce ordinance, ritual, creed, all nonessential for admission into the Kingdom of God or His church. A life, not a creed, would be the test.

Its object would be to promote applied religion, not theoretical religion.

As its first concern it would encourage Christian living 7 days a week, 52 weeks a year.

It would be the church of all the people, of everyone who is fighting sin and trying to establish righteousness; the church of the rich and the poor, the wise and the ignorant, the high and the low—a true democracy.

Its ministers would be trained not only in the seminaries, but in some form of work-a-day life, so that they might acquire a personal knowledge of practical problems. Thus they would live in closer touch with humanity, would better understand and sympathize with human difficulties, and would exert their influence as much in living as in preaching.

A UNITED CHRISTIAN LEADERSHIP

Would that I had the power to bring to your minds the vision as it unfolds before me.

I see all denominational emphasis set aside.

I see cooperation, not competition.

In the large cities I see great religious centers, wisely located, adequately equipped, strongly supported, ably led, inspiring their members to participation in all community matters.

In smaller places, instead of half a dozen dying churches, competing with each other, I see one or two strong churches, uniting the Christian life of the town; great economy in plant, in money, in service, in leadership; the money thus saved available for home and foreign mission.

I see the church, through its members, molding the thought of the world and leading in all great movements.

I see it literally establishing the Kingdom of God on earth.

Shall some such vision as this be realized? Upon the answer to that depends in large measure the future of the Christian church.

We have been considering the demand for a united Christian church from the point of view of the world's need for Christian leadership. There is another motive, not less compelling, urging the churches on toward that end. It is the necessity for cooperation if the forces of righteousness are to triumph in the eternal warfare against the forces of evil. The forces of evil, united on the common ground of their nefarious interests, are ever ready for aggressive action; while the forces of righteousness although seeking a common goal are frequently so preoccupied with their individual interests and petty differences that their attack upon the common foe is too often belated and not infrequently scattered and ineffective.

Christian men and women must come to see that only by the fullest cooperation and the setting aside of emphasis on nonessentials can the many branches of the Christian church, standing together on the common ground of Christianity, hope for victory in this great warfare against sin.

THE SPIRIT GIVETH LIFE

When Christ came into the world, He found the church loaded down with ritual and formalism. Every minutest detail of daily life was regulated by religious enactment. In the eyes of the church the most religious man was not he who gave to the poor, who helped the unfortunate, who was unselfish, meek and lowly, but he who kept most punctiliously every jot and tittle of the law. The spirit of religion had been displaced by empty form.

To establish spiritual righteousness in the world, to build up an internal rather than an external religion, to emphasize the responsibility of the individual to his Maker, was Christ's mission on earth.

Few and simple were the forms He set up or sanctioned, such as baptism and the Lord's Supper, but they were wonderfully beautiful and filled with sacred inspiration.

Baptism is an ordinance of profound symbolic meaning. Christ Himself was baptized. He did not, however, make baptism a condition of church membership.

The Lord's Supper is a sacrament, also rich in symbolic beauty. In this day of materialism, far be it from any true follower of Christ to minimize the spiritual value of these symbols; rather should they be preserved and guarded.

On the other hand, in the face of the great problems of sin, of evil, and of spiritual hunger which confront the world today, can we imagine that, were Christ to come to earth again, He would regard the observance or nonobservance of these and other ordinances and individual beliefs, or the manner in which they are observed, as of sufficient importance to justify controversy among His followers, and their separation into rival factions?

Can we fancy Him giving His approval to such a course, resulting as it does too often in relaxing the warfare against the common enemy, sin, and in causing men to forget their common responsibility, the needy brother?

THE SOUL AND ITS GOD

Let ordinance, creed, ritual, form, Biblical interpretation, theology, all be used to enrich worship, and to bring the believer into a fuller understanding of Him Whom we worship, as each individual or separate church may find them helpful toward that end. But God forbid that they should ever, any of them, divert the attention from, or be regarded as a substitute for, that personal, spiritual relation between the soul and its God which is the essence of true religion.

God forbid that they should be allowed to cause divisions among the followers of Christ or be set up as barriers at the door of any branch of the church of the Living God.

What the world craves today is a more spiritual and less formal religion. To the man or woman facing death, great conflict, the big problems of human life, the forms of religion are of minor concern, while the spirit of religion is a desperately needed source of inspiration, comfort, and strength.

I plead not for a modification of form but for its subordination to the spirit; not for the abolishing of ordinance and sacrament but for their voluntary rather than obligatory observance.

As we face then the world's need of great spiritual leadership, that humanity may be brought into vital daily relationships with a living God, and that all the forces of righteousness may be united in an eternal warfare against the forces of evil, we ask again the question, "What of the future of the Christian church?" This is the answer which I give you:

If the various divisions of the church as it is organized today catch the vision, have the breadth, the tolerance, the courage, and, setting aside all nonessentials, all barriers, will stand upon the bedrock principles of God's love and Christ's living spirit, "not satisfied," as Donald Hankey has said, "until the church is the church of all good men and women, until all good thoughts and deeds are laid at the feet of the Lord of all good life," the church of the living God will come into being, ushering in a new era of Christian unity.

What an opportunity. What a privilege. What a duty. In God's name, I ask, does anyone dare let it pass?

WHAT MEN SEEK IN THE CHURCH

What I have said thus far is the substance of an address which I made during the First World War. The convictions then expressed have only grown upon me with the passing years. I voice them tonight with even greater assurance as to their timeliness and present applicability. The bitter lessons taught by World War No. 1 have not saved us from the vastly greater conflagration of today. Nor has the church during the past quarter century put its house in order and with unity of action opposed the advancing hordes of the godless.

Today, as always, humanity craves the substance of religion; while churches too often emphasize the form. Men have long looked to the Christian church for religious training and spiritual inspiration that they may acquire both the knowledge and the will to make wise decisions and to take right actions in their daily lives. Their natural craving for religious guidance must not be repelled by alphabetical lists of denominational churches and agencies, when what they seek is so fundamental, and sectarian differences are so superficial. Rather should they be able to get in any Christian church, whatever the style of its architecture or the shade of its belief, the spiritual wisdom and strength which they need to fit them for practical daily living.

To say that no progress has been made toward the resolving of denominational barriers during this quarter century would be unjust to various groups which have made earnest efforts along those lines and definite advance. But to say that any broadly conceived, concerted movement to that end is under way, which is generally participated in, would be equally untrue.

Toward religious cooperation more progress has been made, although it has been too slow and too little. The movement in the interest of which we are gathered here tonight gives promise of significant possibilities in cooperation. Six interdenominational groups representing Protestant interests in Greater New York have come together in the Protestant Council of the City of New York to confer together, to plan together, to finance their needs together, and let us hope increasingly work together. The relationship is as yet only partially developed. There are many questions to be worked out. How successful and effective the organization may become, time only will tell. But granting its weaknesses and imperfections, like the Dumbarton Oaks conference in the political field, it is a start in the right direction. It is an important experiment in religious and welfare cooperation on a significant scale.

On February 3, 1943, the cargo transport *Dorchester* was torpedoed at 1:15 a. m. and sank within 25 minutes in iceberg waters, 90 miles from Greenland. As the ship went down, four chaplains—one a Catholic, one a Jew, two Protestants—were on the deck encouraging the men and passing out life belts. When there were no life belts left, they took off their own and gave them away. These chaplains were last seen standing arm in arm praying.

As they went to their death united in the service of their common Lord, so let us, the living members of the great religious faiths they represent, go forward, shoulder to shoulder, as a united army, fighting evil, establishing righteousness, brothers in service, sons of the one God and Father of us all.

Cartels: What Shall We Do About Them?

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7 (legislative day of Monday, February 26), 1945

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cartels: What Shall We Do About Them?" written by Milo Perkins.

I have obtained from the Public Printer an estimate of the cost of printing this article. The estimated cost is $169, but I believe that it would be abundantly worth while to have the article in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CARTELS: WHAT SHALL WE DO ABOUT THEM?

(By Milo Perkins)

Completely open competition in international trade is dead for the foreseeable future. Businessmen of several foreign nations have already decided to conduct a large part of their foreign trade after the war through cartels, and it seems certain that their governments will support them. This decision will not only affect every American who does business abroad, but will deeply influence the domestic economy of the United States. This is a fact which there's no getting round.

Obviously most Americans don't like it. President Roosevelt and Secretary Hull have both recently denounced cartels, as have other American leaders ranging from Thurman Arnold to Eric Johnston. A devastating case has been made against cartel operations in the past few years. The popular imagination has been caught by congressional revelations indicating that the Nazis outwitted us by using their industrial combines to make cartel deals with our firms—deals which helped the German war effort and damaged ours.

We Americans still believe in free markets where the best man has a sporting chance to win. We distrust big combinations of industrial power, and cartels are certainly powerful. If tariffs are to be written for American industries we prefer that our own Government should write them; cartels in effect often write their own prohibitive tariffs when they agree to parcel out countries to their members on a monopoly basis. We believe in a free enterprise system, with its profits and loss; cartels seek to establish a controlled profit system without loss. The whole notion of cartelized foreign trade goes against our grain.

But it will do us little good simply to wave our arms—as we have been doing—in righteous indignation. We'll have to do better than that or we shall be outsmarted and outgeneraled.

The first thing we must do—and it had better be soon—is to face the facts as to what cartels are, why they are, and what the chances are of their being eliminated from international trade after the war, or even relegated to a minor role. Then we may be able to decide on an American policy which will have a chance of working.

First of all, what are international cartels and what do they do?

They might be described, loosely, as worldwide trusts, combines, or monopolies. An international cartel is an agreement among producers in various countries for joint action to achieve stability in a given industry. Sometimes this means raising prices and trying to hold them up, sometimes it means trying to avoid a price collapse which would bring heavy losses. In either case, the cartel tries to increase the income of its members by weakening competition. All cartels are in business to keep prices at levels which could not be held if free competition existed. (This is particularly true in times of depression; in good times, cartel prices are occasionally lower than the prices that would result from free competition.)

Cartels are very numerous. In 1939, according to one count, there were no less than 179 world-wide cartel arrangements, of which 133 covered manufactured goods, 32 covered minerals, and 14 covered agricultural products and services. Out of the total of 179, American firms participated in 109. (Since then the Department of Justice has started proceedings against some 40 of these, and it is said that 15 or 20 more are scheduled for investigation.) Many cartel arrangements have been in abeyance during the war, either because connections with cartel members in enemy countries have been cut or because war operations have been so profitable as to make cartel restrictions unnecessary to bolster up the companies' income; but in the two decades before the war they had been making rapid strides.

Not only were there strictly foreign cartels, many of long standing, in which no American firms participated directly but which covered commodities we needed to import, such as rubber, tea, quebracho, quinine, tin, nickel, and industrial diamonds; but there were also cartels in which American firms joined—in chemicals, plastics, pharmaceuticals, electric lamps, photographic materials, aluminum, magnesium, and other metals. Sometimes the member companies made a single agreement; sometimes there was a series of little agreements on specific products made by a single industry (these were frequently informal and very hard to prove).

The devices used by cartels to stabilize prices have been many and ingenious. Sometimes they have done outright price fixing. Sometimes they have divided markets between members so as to give them monopolies in specified sales areas: "You let me have Europe to myself and I'll let you have the United States." At other times cartels have not only done this but have joined hands in developing the market in a third area. For example, not only did Du Pont and Imperial Chemical Industries agree that Du Pont should have the United States market and that I. C. I. should have most of the British Empire but the two companies worked together through jointly owned subsidiaries in Argentina and Brazil. These companies, known as Duperial, sold the products of both members. South American businessmen feel that the cartel thus discouraged the growth of South American chemical industries.

Sometimes cartels have rigidly limited each member company's production and have relied on that rather than upon specific price agreements, to keep prices in line. (Members have been fined for exceeding their quotas, the amount of the fine being distributed among the other companies. The German steel industry, for example, paid a fine of some $10,000,000 in 1 year during the 1930's while it was producing more than its cartel allocation permitted.)

Another thing that cartel members often do is to swap patents and technical processes. This gives each member a pool of scientific knowledge much bigger than it could command by itself. It also saves the time that might be lost in lawsuits over patent rights (and thus sometimes enables you and me to get the product more quickly). The swapping of patents may take place without any money changing hands—just a gentlemen's agreement to keep out of each other's backyards—or a considerable sum may be paid in cash. Suppose, for example, that a European company holds a patent on a chemical which can be used in several different trades. It may say to an American company, "I'll let you use my patent, but only on condition that you use it only in such-and-such a trade and in such-and-such an area"; in a case like that there may be a cash payment.

Obviously the firm which can make an international patent swap gets a big advantage over its rivals at home—though it is hard to say how much of this advantage comes directly from the swap and how much of it comes from the fact that in this scientific age the big company with a well-financed research staff and an international sales organization has a tremendous lead over its smaller competitors anyhow.

Before the war, certain American electrical-equipment companies got a distinct advantage from being tied in, through patent agreements, with a well-organized international cartel. It has been charged that you and I paid higher prices for electric light bulbs as a result, and that the use of fluorescent lighting in our homes was delayed.

Patent arrangements usually protect American companies from foreign competition (because the foreign companies stay out of the United States market) and frequently from domestic competition (because their American rivals don't hold the necessary patents).

Such patent agreements can lead to gross abuses. An arrangement among American, British, and German chemical companies made possible the sale of the same plastic material to commercial molders at 85 cents a pound and to dental laboratories at $45 a pound; it has even been charged that research men were put to work to adulterate the material for the 85-cent market, without injuring its quality, in order to protect the $45 market. International patent agreements may also endanger our military security, as did those which restricted the production of magnesium in this country before the war in order to protect the market for aluminum. But things do not always work that way. Our American bombing missions over Germany have used 100-octane gas, synthetic rubber tires, and synthetic toluene explosives, all based on German patents acquired for $35,000,000 in a deal made in 1929, and subsequently improved in American laboratories.

It may be argued that by exchanging patents and processes, cartels help the worldwide development of scientific and technological knowledge. But clearly they do not always pass on the full benefits of their research to consumers in all the countries where they operate. The general public wants to see inventors rewarded, but after that it wants to see new inventions and new processes used.

II

Very well, then. Why can't we Americans just decide that we will have none of this?

We know that cartels would have rougher going after the war if goods moved as freely among countries as they now move among our 48 States—and that if this were to happen, the world would have more production, more economic opportunity, more employment, higher living standards, and a better environment for political democracy. We know, too, that if all governments encouraged open competition and did away with restrictive trade devices such as export and import quotas, blocked currencies, and exchange manipulation, American business could give a good account of itself in international trade, despite its higher wage levels. Why, then, shouldn't we simply legislate that no American firm shall have anything to do with a cartel, and hope that the rest of the world will follow suit?

The answer is: Because American business even at its strongest is relatively helpless against the competition of well-organized foreign businesses supported by the power of their governments. It's the entry of foreign governments into the picture that makes the difference.

For the truth is that our Government is the only government in the world that is actively opposed to centralized controls over foreign trade.

Take a look at the world scene. Obviously the Russian Government monopolies bear a much closer resemblance to cartel units than to private concerns, and are much more at home in a cartelized world than in a world of free competition. Smaller European countries like Belgium and Holland and Switzerland have permitted cartels in the past and

are forced to use them once the big powers use them. And the cartelized control of industry is an easy, stable way of doing business in a semicloseed economy like Britain's.

Many American businessmen were amazed to read the recent statement of Lord McGowan, chairman of Imperial Chemical Industries, that British manufacturers "have ceased to believe in the superiority of free and extreme competition and have moved a long way in the direction of cooperation in industry and central action by the Government." But it is symbolic of the revolution in British thinking that has occurred during the past few years. Knowing that they must have full employment in Britain after the war, and that their plight will be desperate unless they have greatly increased exports of goods and services, most of the British believe that they cannot rely upon competition to achieve this end, and therefore look without alarm upon the prospect of using cartels under Government guidance.

Other nations, feeling that after the war they will not be able to sell enough of what they produce to protect their foreign exchange positions, will feel forced to limit what their people may import. (New Zealand, for example, has announced that she will continue such a policy, which she has had since 1938.) Even weak nations, if they resort to quotas and blocked currencies, can lick strong American companies operating in their countries on a competitive basis. They can even establish cartels by government decree, in which American exporters have to take part unless they pull out of these nations' markets altogether. Take, for instance, the cartels by government decree that were set up in several Latin-American and European countries in the twenties and thirties to deal with the oil business.

Here's how it's done. The government—of a Latin-American country, let us say—sponsors a company of its own, and then calls in the privately owned foreign companies and tells them that it wishes its company to get a certain percentage of the business at what amounts to a government-approved price. It suggests that all these companies get together, discuss the matter, and come back with an agreement as to the percentage of the business which is to be allocated to each of them. If the American company doesn't join in such an agreement, the American company doesn't do business in that country.

Our State Department is unlikely to bring any real pressure to bear to break up such arrangements. It probably would regard any such move as interference with the other country's internal policy—an invasion of its sovereignty. And no American firm is strong enough to buck such arrangements by itself. Either it must have the support of the State Department in its insistence on doing business competitively, or it must be permitted, with diplomatic backing, to do business on a cartel basis in that country. The only other alternative is to pull out—and our need for foreign markets won't allow that to happen very often.

This trend toward cartelization abroad is likely to be intensified by another fact. The world supply of goods of many sorts is bound to exceed the effective demand as soon as we get beyond the "catch-up" period immediately after the war. New synthetic products and substitute products developed under the stress of war will be competing with natural products as soon as these become available once more. Rubber is an outstanding example—though the rubber situation will not be critical for the first 2 or 3 years after the war. When heavy surpluses reappear, there will be a loud call everywhere for stabilized marketing operations to avoid bankruptcy in producing countries; and the United Nations will be likely to resort to government-sponsored cartels as one of several stabilizing mechanisms. If by that time we have entered a United Nations' organization to keep the peace, there will be large economic areas where we shall want to collaborate with other member nations on world-wide marketing problems. To do otherwise would be to engage in economic warfare against our present allies. So here again the pressure of circumstances will tend to make us accept cartels because other nations accept them.

We shall be much more likely to accept them than we now believe. Our opposition to them is really a half-hearted opposition. We Americans preach free competition but we don't really practice what we preach. We moralize about the competitive way to business men in other nations, and then cling to tariff schedules so high that foreign businessmen can't enter the United States market with their own goods to compete with us.

Now there is a parallel here which it is well to bear in mind. American firms have joined international cartels in the past less to get foreign business than to keep competitive foreign products out of the rich American market. Cartel agreements have frequently fenced in that market more effectively than any tariff. For instance, the Du Pont-I. C. I. agreement has been the equivalent of a prohibitive tariff on a long list of British chemicals in the United States and vice versa. There is little doubt that a sizable part of American business will want to join cartels after the war to protect its domestic market, and it is likely that popular opinion will back such a move exactly as it has backed the imposition of high American tariffs. For as a people we are still under the delusion that the way to be prosperous is to sell as much as we can abroad and to buy as little as we can from abroad.

Already we Americans have gone a lot further toward giving up free competition here at home than most of us realize. Our support of it is stronger in our speeches than in our action. We love to tell each other with a good deal of righteousness that free competition is the American way. But in the marketplace there's a wide gap between our oratory and our actions.

Not only does our tariff shut out foreign goods to prevent price-cutting from abroad in our home markets, but our patent laws underwrite monopoly most effectively in the fields where science has made its greatest progress. Under the Miller-Tydings Act, manufacturers and retailers can now act jointly to control sales prices of items such as food and drugs; this is in effect an abrogation of the Sherman Antitrust Act in a segment of the economy that affects the cost of living for every one of us as a consumer. For several years the Guffey Coal Act has attempted to protect coal operators from the effects of competition by enforcing minimum prices. Oil is now produced in the United States under strict proration to prevent competition in the production end of the business from wasting a vital national resource. And our labor legislation and our agricultural legislation both succeed in protecting millions of individual Americans from the strictest competition.

Several pieces of labor legislation do this by granting certain union activities immunity from the antitrust laws, and by legalizing group action in contrast to individual action by separate workers. I am not concerned here with abuses under such legislation by some union officials any more than I am concerned with abuses by some manufacturers; both of them take place outside the law. I am concerned with the extent to which our Government, in segment after segment of our economy, has passed laws to save people from the loss part of the profit-and-loss system.

Nowhere is the trend any clearer than it is in American agriculture. The same fluid milk sells today in the New York City milkshed at a dozen different prices, all supported by law and all designed to make us pay about twice as much for fluid milk in bottles for our families to drink as processors pay for the same milk to manufacture into cheese or butter or ice cream. It's as neat a domestic cartel for a selected group of farmers as human ingenuity ever devised—and much more subtle than the tax on oleomargarine, pushed through by the dairy industry to protect butter prices.

Indeed it can be said that virtually all American agriculture is now cartelized to save farmers from the agony of open competition when overproduction depresses price levels after the war. The last O. P. A. Act included an extraordinary provision, which won the support of both parties, guaranteeing American farmers 90 percent of "parity price," or more, for most of the crops they will produce for 2 years after the official proclamation of peace. Since the signing of the peace treaty may be delayed for 2 or 3 years after the shooting stops, our farmers may be spared the rigors of competition for 4 or 5 years after the Axis folds—even though this costs the rest of the country several billion dollars a year. No appropriation has yet been made, but the legislative promise is on the books. This little-noticed piece of legislation is certainly a flagrant departure from the principle of free competition.

Nor have we Americans limited such measures to the domestic field. We are also parties to international price-stabilization agreements on such imported agricultural commodities as sugar and coffee. Through the International Sugar Agreement of 1937 we acted with other important producing and consuming nations to lift the world sugar industry out of the depressed state into which it had fallen. We likewise actively promoted the Inter-American Coffee Agreement of 1940 in order to help the Latin-American countries to market one of their main crops at a profit—a crop on which prices had dropped and stocks had piled up alarmingly. (Incidentally, wholesale prices now are nearly double what they were in 1939, before the agreement was put into effect.) And we have already given tentative backing to a similar proposal on wheat moving in international trade after the war.

Furthermore, a strong case has recently been advanced for handling both our international communications business and our international air transport business after the war through "chosen instruments"—companies that would be given a virtual monopoly with diplomatic backing. This would mean abandoning the principle of free competition in these fields, too. And beyond that, it would mean that either company could use our Government as a major source of strength, while our Government could use either company as an adjunct in protecting American interests throughout the world.

I am not trying here either to attack or to support legislation which takes the sharpest teeth out of competition for farmers, for workers, or for businessmen. The point I am making is simply that we have gone a long, long way in the direction of protecting ourselves from the very competition that we laud so highly in our speeches. Too long a way, in all likelihood, to go backward.

This does not mean that the disciples of Thurman Arnold and Eric Johnston should abandon their battle for free enterprise as against international cartelization. It does not mean that it's time to give up the fight on every possible front for a freer economy. But it does mean that it's time to rearrange the line of battle to take account of actual circumstances. It means that we Americans have got to operate in the world as it is today and not in the fairyland of our own oratory. The wider the gap between our preaching and our practice, the sillier we look to other nations. It's time

for us to make our foreign trade policy fit the realities of an era which has already gone a long way toward cartelization.

III

The first job to be done is to break up the German-dominated cartel system which the Nazis have imposed on European industry in the past 4 years and to destroy the power of the huge monopolies in both Germany and Japan. Such economic disarmament is a very large order. Although our own Government is committed to this policy, there is as yet no United Nations agreement on it nor on a program as to how it is to be done. This is the first cartel problem to be tackled, if a scramble for control of the German cartels by separate members of the United Nations is to be avoided. Specific programs, industry by industry, for the decartelization of Nazi and Japanese enterprise remain to be developed.

No one can suggest with finality what our eventual policy toward cartels should be. That policy will be evolving for several years. If the United Nations build an effective organization for keeping the peace, an atmosphere for genuine international cooperation on economic matters will be created. If, on the other hand, the world drifts into great regions which are more or less self-sufficient, there may be little chance for any real collaboration on a world-wide basis. Our own internal political situation will be a key factor in the final decision.

We may, therefore, want our businessmen to work with the businessmen of other nations in certain cartels, or we may be forced to build great combines of our own for foreign-trade purposes as offsets to Russian and British combines. Were this to happen, we might see a great resurgence of activity under a modified Webb-Pomerene Act. Events themselves will have to determine our final course.

In the meantime, however, these preliminary steps and principles seem to make sense:

1. Registration: We need a law which will require the national registration of cartel arrangements. American business firms should register proposed international agreements which fix prices; or which allocate territories, fields of industrial activity, or markets; or which limit production. They should register them with an appropriate agency of our Government, designated by Congress. Since cartel operations are intimately bound up with our foreign policy, the logical agency for this assignment would be our State Department. (Businessmen are apprehensive about any growth in Washington bureaus, but the answer in this case is to find men who are capable of handling these increased responsibilities.)

All registered agreements should be made available to Congress and to the public, unless military security dictates otherwise. Commercial trade secrets should not be divulged in such publicity, however, and care should be taken not to injure the position of American firms with their foreign competitors by disclosing strictly commercial information whose release would serve no public purpose.

Such registration would eliminate the secrecy which has usually surrounded cartel agreements in the past. Exposing them to critical public review would be a first step toward eliminating some of their more restrictive practices. By conducting this operation so far as possible in a goldfish bowl, business would have a chance to tell the public its side of the story. It certainly did an ineffective job in this field before the war.

Legislation along these lines has already been introduced in Congress. In hearings before the O'Mahoney subcommittee of the Senate Judicary Committee in May 1944, Ralph W. Gallagher, chairman of the board of the Standard Oil Co. of New Jersey, expressed approval of the registration idea. A proposal to register cartel agreements with the British Board of Trade has also gained support in England.

2. Review. In addition to registration, the enabling legislation should provide for setting up, within the State Department, a quasi-judicial Board of International Trade. This Board should be empowered to review all cartel registrations which are filed and to approve or disapprove them. After filing, hearings before this Board could be requested by:

(a) The Department of Justice if it fears a violation of the antitrust laws within the United States.

(b) The American corporation which has filed the agreement and which wants a yes or no answer so that it can do its business with dispatch.

(c) Any interested business firm not a party to the cartel agreement but presumably within the same industry, and therefore vitally affected.

The Board, with the Secretary of State acting as Chairman, might have eight other members. These could be the Secretaries of War, Navy, and Commerce, the Attorney General, the chairman of the Senate Foreign Relations Committee, the chairman of the House Foreign Affairs Committee, and two men of high national standing to represent the public. Each Board member should have an alternate, and the Board as a whole should have an executive secretary with a competent staff which could be established within the State Department. The Board of International Trade should count on analysis by the Departments of Agriculture, Interior, and Labor, as well as by other Government agencies whenever this is appropriate in carrying out its assignments.

The enabling legislation establishing this Board should set up broad principles to guide it in its decisions as to approving or disapproving cartel arrangements. These principles should include consideration of:

1. Our military security;
2. Our foreign policy;
3. The effect of any agreement on the volume of our international trade.
4. The effect of any agreement on sales, prices, the volume and costs of production, and the status of labor in the industry making the application; and
5. The effect of the agreement on our domestic economy.

The board would have to reach its decisions quickly. We must never forget that most business firms in other countries will not be subject to these restrictions, and, after the initial examination, the board should have the continuing function of reviewing all agreements which it approves. The full effects on our economy of approved cartel arrangements may not be apparent for 2 or 3 years after they are entered into; therefore, annual reports to the board on the functioning of the cartels by the American members should be required. Such progress reports would make for more continuity and consistency of policy as between government and business in this field. We have had all too little of it in the past.

The board itself should review regularly all approved cartel arrangements for their operating effects on our domestic economy, on our foreign policy, and on our military security. It should submit its own annual report on these matters to Congress.

There will be times when it will be necessary to revoke or modify the previous approval of cartel arrangements after hearings and due notice. This will be inevitable in a changing world. But so long as board approval is in effect any American firms participating in approved cartels should be granted immunity from prosecution under our antitrust laws, provided they operate within the framework of the approval granted them. This should be stated clearly in the enabling legislation, insofar as it applies to our foreign trade.

The British are also considering similar review functions. In the recent White Paper on Employment Policy, it was emphasized that the British Government "will therefore seek the power to inform themselves of the extent and effect of restrictive agreements and of the activities of combines; and to take appropriate action to check practices which may bring advantages to sectional producing interests but work to the detriment of the country as a whole."

Any mechanism for dealing with cartels obviously needs enough flexibility to meet changing conditions. The mechanism that I have just suggested is based on the assumption that if we found it advantageous for American companies to enter certain cartel arrangements after the war, we would want responsible public review and a continuing appraisal of their operations. It also assumes that since cartelization is a privilege and not a right, and since foreign policy is involved, American firms should not be subjected to prosecution by the Department of Justice so long as their cartel operations come within an approval granted by the Board of International Trade. (The antitrust laws were not designed to implement our foreign policy, whereas this proposed legislation is designed to do just that. Our foreign trade necessities in the present world situation require it.) Finally, it assumes that national action along these lines would enable us to take a more responsible part in formulating international cartel policies together with the other United Nations.

3. International commodity agreements: We may want to use, as we have in the past, the device of the international commodity agreement to meet problems of chronic oversupply—in wheat, sugar, and coffee, for example; and we may need to apply it to postwar surpluses in metals, too.

This means, in effect, intergovernmental cartels, and carries the danger that the regulating group may become identified with the group under regulation and forget the general public interest. This is a danger we must recognize and guard against as best we can, not only in the administrative set-up under a particular commodity agreement but in providing for reports by it to the board of international trade. This board should be empowered to pass upon all international commodity agreements.

Marketing programs to achieve world-wide stability in many a specific industry may be entirely justifiable in the post-war years. The alternative may be bankruptcy for business, unemployment for labor, and lower tax revenues for governments. Food-surplus problems do not have to be cured wholly by acreage and marketing restrictions, however; school-lunch programs on an international scale already exist, and their expansion could provide a method of eating the surplus which would raise health standards at the same time. Each situation requires separate treatment on its merits.

We may also want to use international commodity agreements to conserve, on an international scale, the natural resources of important raw materials. The recent Anglo-American oil agreement is a good example. This is now pending before the Senate as a treaty. It provides for international cooperation in the development and marketing of petroleum products, but is not a cartel in the ordinarily accepted usage of that word.

On the other hand, it does not contemplate wide-open competition in the production end of the oil business. It is really an extension, on an international scale, of the principles of the interstate oil compact which we were obliged to adopt here in the United States. No outright price fixing is contemplated, but a regulation of production for export is recognized as necessary both to protect petroleum resources and to promote orderly marketing on an international scale.

Commodity agreements call for international boards or committees for their supervision. Insofar as possible, they should act as umpires rather than as administrative

bodies. Business sacrifices a certain amount of its freedom when it comes under the jurisdiction of such agencies. There is no way to avoid this in large segments of our foreign trade, however. Any business big enough to be cartelized is big enough to have a direct effect upon the public interest. Hence some degree of public review is necessary.

So much for public regulation. But it can do only part of the job. The rest will have to be done by business itself.

If cartels are to survive for the long pull, they must do three things better than noncartelized business, even if this means lower profits. First of all, they must offer consumers better products at lower prices, just as soon as new inventions and technological changes make these possible. In the second place, they must fight positively for an expansion of markets. In a world where every nation wants a bigger slice of the trade pie after the war than before it, the only thing that can relieve the international tensions will be a bigger international pie. And in the third place they must offer labor opportunities for advancement, a chance to participate in savings and insurance plans, and stability of employment at gradually increasing annual wages. The business reasons for not exploiting labor are quite as strong as the humanitarian ones: good wages in the tin mines, for example, will mean broader markets for the gadgets which the industrialized nations will be wanting to export.

IV

The steps which I have just suggested do not add up to a panacea for the cartel problem. There is no single, easy answer. Rather, our problem is to shape the various forms of both competition and monopoly into useful instruments for our national and international policies.

Some kinds of foreign trade are best suited to competitive enterprise—like automobiles, textiles, and manufactured consumers' goods in which there is considerable variation in quality. Others can be handled better by cooperation among countries—raw materials like sugar, coffee, petroleum, certain metals, and probably rubber. Still others will remain in a no-man's land until the ultimate postwar relationships among the United Nations become clearer.

We should prepare for any eventuality, however, and do it promptly in the little time that's left to us. We must act swiftly if we are to remain a first-class power in world affairs. International diplomacy, military security, and economic policy are no longer separate; we must integrate them into a vigorous, cohesive foreign policy if our leadership in the modern world is to be alert and effective.

With our major foreign competitors in world markets already operating as closed economies—or moving rapidly in that direction—we are likely to find free competition in many fields as obsolete after the war as a model T Ford. Where we cannot have free competition, we may be faced with cartels whether we like them or not. Where we cannot eliminate the cartels, we must gradually perfect new ways to make them into instruments which will serve the public interest.

Army Nurse

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks, I would like to insert a short poem authored by Maj. Frederick W. Waite, a most distinguished American soldier who has devoted many years of his life to the service. For quite a period of time Major Waite was stationed at Camp McCain, which is located in the district that I have the honor to represent.

My attention was first directed to the composition by a distinguished Mississippian, Mrs. Sarah C. McCorkle, president of the North Mississippi Department of the American Legion Auxiliary.

I think it most fitting that the poem be inserted in the RECORD at a time when the House has under consideration the so-called nurse draft bill, which I trust will be passed before the day ends.

The poem follows:

ARMY NURSE

He's waiting for a nurse to cleanse him;
The wounded doughboy with body caked in mud,
While his thoughts of the battle go dim,
Where he has spilled life's precious blood;

He's waiting for that loving and healing care,
That only an American Army nurse can give,
For she, alone, understands his bewildered stare,
During those hours of agony he must live;

The wounded doughboy, with body caked in mud,
And that Army nurse, fighting by his side,
In this world, drenched from a hatred flood,
Let her courage and gallantry be our guide.

—*Frederick W. Waite.*

Poem Appearing in Boston Post by Henry Gillen

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following very excellent poem by Henry Gillen, which appeared in the March 5, 1945, issue of the Boston (Mass.) Post:

THE BOSTON MASSACRE 1770–1945

(By Henry Gillen)

Does anyone ask why the flags are hung?
Does anyone wonder the bells have rung?
Have some of our foemen met death, in a gallant victory, a wondrous feat? No, we are marking an ancient day, which the tides of time could not wash away, something the Tories in cap and gown, labored to blacken to please a crown, and the name of the "mobsters" to heroes give, who offered their lives that freedom live.

There are only stones in the Town House square, but the silent cobbles are eloquent there, circle on circle to mark the place, where Negro, Celtic and Saxon race mingled the blood that was brave and proud, in the foremost ranks of the angered crowd, with courage a saber and right a shield, and an unarmed justice that would not yield, though the menacing guns were grim and bright, of the red-backed Fascists there that night.

To be remembered for stout deeds done, not when the day is flecked with sun, but capped with darkness and foes are nigh, and death and the devil ride the sky, is honor that comes to the high estate, in medals and monuments for the great, but rarely rare for the also ran, the humble fellow, the common man, who swings pickaxes and delves with spades, and dies on his own crude barricades.

Yet not forgotten the decades through, now that the battle flames anew, and young men fearlessly fight again, in the Aachen snow and the Leyte rain, in 1,000 streets and 100 squares, the wide world over in tyrants' lairs, the wide world over through blood and tears, the memory gleams from the yesteryears, of Attucks and Caldwell, Gray and Carr, and Maverick bright as the morning star.

Suffer Little Children To Come Unto You

EXTENSION OF REMARKS

OF

HON. EDWARD V. ROBERTSON

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7 (legislative day of Monday, February 26), 1945

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Suffer Little Children to Come Unto You," delivered by George E. Stringfellow, vice president of Thomas A. Edison, Inc., and member of Salaam Temple's crippled children committee, before a group of public spirited citizens in West Orange, N. J., on the afternoon of March 6, 1945, and broadcast over radio station WAAT.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, I wish to speak to you this evening about crippled children. The hardest battles are fought and the most glorious victories are won not in wars between men but in wars of men against hardship and handicap, against disease and death.

For 23 years the members of the Mystic Shrine have fought against the things, hidden and known, which cripple little children, which twist their limbs and bodies out of shape, strike them down in many ways, and hang over them like swords of doom.

This, briefly, is the story of the Shriners' hospitals which mend broken little bodies and transform them into normal boys and girls who become upstanding men and women. The love of little children has turned the members of the Shrine into ministers of healing and happiness. The Red Fez takes its place with the Red Cross and the Red Seals as an emblem of mercy and loving kindness.

This great institution had its beginning 25 years ago when W. Freeland Kendrick, who was then the head of our order, visited a hospital for crippled children in Philadelphia. He took four of these little human wrecks, as he called them, for an auto ride. Their thin, frail bodies, their misshapen limbs made a lasting impression upon him. But being a good citizen he did not express his sympathy in tears. He resolved to find a way to give crippled children whose parents are financially unable to provide necessary surgical care a chance for life.

Kendrick's conscience would not let him rest. He told and retold his story to his fellow Shriners and other public-spirited citizens. "Let there be life," he pleaded, "life for little boys and girls who without help are sentenced to death, or life worse than death, as incurable cripples."

The members of the Mystic Shrine and nonmembers of our order heeded his plea. The first Shriners' Hospital for crippled children was opened in Shreveport, La., in the latter part of 1922 with 50 beds. Today there are 850 beds in 15 different Shrine Hospitals in the United States, Canada, and the Territory of Hawaii, caring for these little patients. Another unit will be dedicated this week in Mexico City, where the need is most urgent.

Requirements for admission are few and simple. The children must be under 14 years of age, without parents or guardians financially able to pay for surgical treatment, and there must be a reasonable hope that with proper surgical treatment, they will become useful citizens and not charges upon the communities in which they live. Only children suffering from some deformity of limbs or spine are admitted. There are no barriers of race, religion or color. These suffering little children are near and dear to our hearts and no expense is too great to liberate them from their misfortunes.

To date, including "out patients," we have restored approximately 100,000 maimed children so they can take their normal place in our society. Forty thousand have been treated in our "out patient" departments. More than a hundred of the crippled children who were treated in our hospitals are now fighting in our armed forces. Raymond Reeves came to our Portland, Oreg., Hospital a cripple. We sent him forth cured and strong. Before he was captured by the Japanese he courageously rendered his Nation noble service. When peace comes he will, we hope, be absorbed by our human family as any other normal citizen.

The work of the Shriners' Hospitals has not been in the headlines of the newspapers, but it is deeply etched in the hearts of every member of the Ancient and Accepted Order of Nobles of the Mystic Shrine, many nonmembers who have supported this work, and the hearts of the thousands of former patients who were rehabilitated and now stand erect and discharge their responsibilities as good citizens.

Here is the record of the Shriners' Hospitals during the past year: 20,888 crippled children were treated at our clinics apart from the bed patients.

These hospitals provided 1,776 braces; made 11,000 X-rays; applied 9,000 casts; gave nearly 25,000 physical therapy treatments; performed 4,800 operations on 2,700 patients; discharged 2,600 little boys and girls who, in a noble sense, were recreated; spent efficiently more than $1,000,000 in healing and rebuilding the unfortunate and underprivileged.

Most people know Shriners by the red fez and colorful costumes. But behind all our fun and frolic is the burning spiritual aim to be of help to our fellowmen, regardless of race, color, or creed. That desire crystallized into this most appealing of all services to mankind when our past imperial potentate, W. Freeland Kendrick, took the four little human wrecks for an automobile ride.

Tonight I plead for funds with which to make certain that our work not only will go on, but will be enlarged. Never has there been a struggle that could be more justly termed "a holy war." The thousands that are in our hospitals and clinics need braces, X-ray, physiotherapy. They need the skill of the finest surgeons. Hundreds are on our waiting lists. The longer they wait, the longer will it take to help them. And there are thousands more. If we had the means, we could reach out to more of them and say, "Come, here is life and hope."

We need more than $1,000,000 in 1945. What is it worth to you to save a crippled child? Put it this way: Suppose one were brought into your home this very minute, carried like a puppet because his limbs were too thin and weak to bear the weight of his body; suppose you were taken to the bedside of one whose parents are financially unable to buy the brace without which he could never walk. What would you give to change that picture of helplessness into one of happiness? Giving is living—to give to others is to make your own life sublime.

Life membership in our Shrine hospitals for Shriners and nonmembers of the order costs only $60. This will underwrite the cost in our hospital for 12 days for some little crippled boy or girl. In a sense, $60 will buy one-fifth of a new lifetime for a crippled child. Can you think of a better investment?

A few weeks ago we received a letter from a former patient in our Philadelphia hospital:

"In 1934, when I was 6 years of age, I spent my first Christmas away from home. That Christmas was spent in the Shriners' Hospital. Tonight, when I heard that Vox Pop program from there, it brought back many memories. I have come to love that hospital because the nurses and doctors made it possible for me to walk, dance, skate, play basketball and do about everything other girls do. They gave me hope and confidence in myself. I will never forget or cease to appreciate what was done for me."

To walk, to dance, to skate, to play basketball, and to do about everything other girls do, to get married, to rear a family—this is the world of tomorrow for which we Americans are fighting. This is the world to which every little boy and girl has a right to look forward.

There is something of the divine in each of us, for we have been made in His image; there is something of the Saviour in each of us, for the sufferings of little children touch us to the quick.

It is not I who speak to you tonight. In larger measure, I am the voice of hundreds of children in our country, in Canada, in Hawaii, in Mexico, and elsewhere who want to walk, to dance, to skate, to play basketball, and do things that other normal boys and girls do. To give as many of them as possible a new lease on life is divine.

In all reverence, I would repeat the words of Holy Writ—"Suffer little children to come unto you," and then rephrase them—"Help us to bring into our hospitals the little children who suffer that we may lead them from the valley of the shadow of despair to the hills of health, of hope, and of happiness."

First American Patrol To Cross the Rhine

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7 (legislative day of Monday, February 26), 1945

Mr. MAYBANK. Mr. President, yesterday I spoke about the reference in section 7 of the committee substitute to paragraph (5), subsection (a) of section 2 of the act of June 28, 1940, known as the Second War Powers Act. I also made brief remarks on the pending amendment, which I heartily favor in the interest of the members of the armed forces.

Today, Mr. President, I shall not take the time of the Senate, on the eve of this vote, to discuss further the pending legislation designed to assist our heroes. However, there appeared in the Charleston, S. C., News and Courier, an article which I request be printed in the Appendix of the RECORD. The article reads in part as follows:

A Charleston man, Capt. George L. Youngblood, led the first American patrol to reach the east bank of the Rhine River, crossing the heavily mined Adolf Hitler Bridge near Uerdingen, press services reported last night.

Two officers and 17 enlisted men who volunteered for the bridge crossing received Silver Star medals in recognition of their heroism.

They were the first men of an invading army to cross the German Rhine since the days of the Napoleonic wars more than 125 years ago.

Mr. President, the people of South Carolina are proud of the excellent record which their sons are making in the armed forces. Time will not permit me to go into a detailed discussion of what the sons of South Carolina have accomplished; but this being such an unusual feat, Mr. President, I ask unanimous consent that the entire article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPTAIN YOUNGBLOOD LEADS FIRST AMERICAN PATROL ACROSS RHINE

A Charleston man, Capt. George L. Youngblood, led the first American patrol to reach the east bank of the Rhine River, crossing the heavily mined Adolf Hitler Bridge near Uerdingen, press services reported last night.

Two officers and 17 enlisted men who volunteered for the bridge crossing received Silver Star medals in recognition of their heroism.

They were the first men of an invading army to cross the German Rhine since the days of the Napoleonic wars more than 125 years ago.

Captain Youngblood's patrol consisting of combat engineers and infantrymen crossed the bridge late Saturday.

Later, a six-man patrol led by Lt. Guy Amspoker, of Macon, made the perilous mission. Just 15 minutes after his patrol came back Nazi engineers pulled the switches that blew up the 1,420-foot long Adolf Hitler Bridge at 7 a. m.

TURNED BACK BY FLAMES

A towering fire at the Nazi-held approach to the bridge turned both American patrols back.

Col. Sidney R. Hinds, of Nashville, commander of a combat force of the Second Armored Division, described Captain Youngblood as the "bravest man in the Army"

Captain Youngblood's wife, the former Miss Margaret Willard, and 2½-year-old son, George, Jr., live at 27 George Street. His parents, Mr. and Mrs. B. M. Youngblood, reside at 16 Bennett Street.

The feat of Captain Youngblood and his men was described in detail last night in news stories moving over the wires of the Associated Press, the International News Service, and United Press. He had been decorated twice before.

Frank Coniff, of the International News Service, said that Captain Youngblood "with his soft, drawling voice" concealed the tenseness of the situation as the first patrol of 10 combat engineers and 3 infantrymen crept silently out on the bridge approaches at 10:30 o'clock Saturday night.

Captain Youngblood, he reported, had known for 3 days that he would lead this historic mission over the Hitler Bridge—one of Germany's greatest engineering edifices which carries the famous "autobahn" (superhighway) across the Rhine to Berlin.

SHELLS TEAR OVERHEAD

A burning, three-story building on the Nazi-held side of the river cast a flickering red reflection as they crawled forward and

Youngblood and his men heard both American and German shells angrily rasping overhead. But not a single volunteer turned back.

"Our job," Youngblood told the news writer, "was to check the bridge for demolitions, find any charges that we could and determine if it was passable for our tanks.

"We climbed on the bridge and started over it as quietly as possible. We checked the bridge's superstructure and its columns. We cut every wire we saw—about a half dozen in all. I detailed three men to cover us by keeping their eyes on the Jerry positions."

These three men were Pvt. Einar Waldal, 34, of Sentinel Butte, N. Dak.; Pvt. George Soules, 24, of Horton, N. Y.; and Sgt. Herbert Steube, 25, of Pass Christian, Miss. They crouched on the bridge with rifles ready while the engineers proceeded.

"The first thing that stopped us about 100 feet out was a 15-foot gap in the pavement," Captain Youngblood continued.

"It would have stopped vehicles. We got past that by climbing along the railing. We could look down and see the Rhine's water less than 75 feet below."

GUN FIRES DOWN BRIDGE

"The thing that really bothered us was a gun which kept firing straight down the bridge's axis from our side of the river at 2-minute intervals. More than once shrapnel spread over us. Man, we were sweating out that gun.

"But we kept going and working as we went. A big fire halted us finally. We just couldn't go any farther. The fire came either from burning tar in the roadway of the bridge or from thermite grenades (chemical flames) left by the Nazis."

The men stopped about 75 feet from the flames. But at this juncture one of them—Pvt. Harold Florando, of the Bronx, N. Y.—crawled farther on alone. He reached a point only 15 feet from the fire.

"It was a blinding fire," he said a little later.

"I couldn't see past it. Besides, the shells from that gun were landing every 2 minutes right in the flames. I had to crawl back."

The group finally retreated, still cutting wires on their way back. The patrol found no explosive charges prepared by the Nazis. Youngblood said he did see one square box which he forgot to carry back with him.

JUST A DAY'S WORK

"It was just an ordinary day's work in some respects," he remarked. "But I guess all of us were mighty excited. That was the Adolf Hitler Bridge and more than once we wished we had had him there with us."

Besides those already mentioned, Youngblood's patrol included Sgt. James Boley, 21, Furman, Ala.; Sgt. Dalton Griffith, 28, Petersburg, Ind.; Pvt. Dewey Herron, 26, Martin, Ga., all combat engineers; and Pvt. Harvey Sheffield, 23, Atlanta, Ga.; Pvt. Arnaldo Galineo, Del Rio, Tex., and Sgt. Jake Williamson, Dallas, Tex.

All are members of the Second Armored Division.

The patrol, led by Lt. Amspoker, crossed the bridge at 5:30 Sunday morning. They spent a solid hour on the span inspecting its condition. Their worst fear was that Nazi burp guns would open up on them.

The men received the Silver Star awards en masse from Brig. Gen. Isaac White, commander of the Ninth Army's Second Armored Division. They were still weary as a result of their experiences.

Hal Boyle, of the Associated Press, said that it was one of the promptest group awards on record.

"It was made for one of the bravest feats of the war—crawling out on the shell-raked suspension bridge in the darkness and trying to find and cut the wires leading to tons of hidden dynamite which might explode at any minute.

"It was a glorious failure. They were driven back by flames from burning tar on the bridge roadway which had been ignited by grenades and which silhouetted them to enemy gunners."

THIRD DECORATION

Boyle said that Captain Youngblood had been decorated previously for heroism after he cleared a minefield under fire.

His family last night said that he recently received a Bronze Star medal, but they did not know for what it had been awarded. Possibly this was the award referred to by Boyle.

He had prior to that received the Silver Star medal for blowing a bridge 3 miles behind the enemy lines in France. This action occurred last August 8. Captain Youngblood worked on the bridge in the very face of the enemy, the citation said.

He told Earl Mazo, army correspondent, in France last September that one of his two ambitions was to build the bridge over the Rhine across which the American troops will pour into Germany. The other is to be present when his son enters The Citadel in 1959.

Captain Youngblood was graduated at The Citadel in 1935. He was prominent in boxing and football at the college.

His most recent letter to his family said that he was in Belgium after the liquidation of the German bulge in the Ardennes. At that time, he reported there was very little action.

Columbia River Authority

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7 (legislative day of Monday, February 26), 1945

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article by Richard L. Neuberger, a distinguished author from the Pacific Northwest, on the proposed Columbia River Authority.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WATER POWER CITADEL

(By Richard L. Neuberger)

A COLUMBIA RIVER AUTHORITY

There is no "brownout" of lights in the Columbia River Basin, for electricity there comes from falling plumes of water. These plumes tumble seaward forever, regardless of wars or rumor or wars. The late J. D. Ross, one of President Roosevelt's early advisers on natural resources, liked to speak of Bonneville Dam as "a coal mine which will never thin out, an oil well which will never run dry." His description is particularly pertinent today, when the W. P. B. order cutting down the use of electricity to save fuels has no application in the water power citadel of the Nation.

The Columbia River, surging through rocky gorges to the Pacific, booms this continent's loudest anthem of hydroelectric energy. Nearly half of the potential water power of the entire land is locked within its drainage area. One dam on the Columbia, the stupendous irrigation project at Grand Coulee, can generate as much juice as all 22 dams in the Tennessee Valley Authority. "This is unbelievable!" exclaimed Waldemar Borquist, chairman of Sweden's Royal Board of Waterfalls, as he inspected the huge Coulee power plant.

The geographic combination of heavy snows and high mountains has made the Columbia unexcelled as a source of power. Drought never slackens its force. On its 1,490-mile course it drops nearly 10,000 feet. Great ranges—the Rockies, the Cascades, the Bitterroots, the Selkirks—pay it tribute in melting glaciers. Figures tell the story. Grand Coulee has a capacity of 1,800,000 kilowatts. This equals the whole T. V. A. It eclipses by three times the vast Dnieperstroy project in Russia. It dwarfs Niagara Falls. In fact, housewives in the Pacific Northwest use 70 percent more electricity than the national average.

Senator HUGH B. MITCHELL, of Washington, youngest Member of the upper House, has decided that a Columbia River Authority is the most efficient way to administer and develop this fabulous supply of hydroelectric energy. Recently he introduced a bill (S. 460) calling for a regional authority in the Pacific Northwest which will include portions of seven big States—Washington, Oregon, Idaho, Montana, Wyoming, Utah, and Nevada.

Bill's provisions

In large measure MITCHELL's bill is patterned after the Tennessee Valley Authority. It provides for an autonomous three-man board of directors such as David E. Lilienthal now heads in T. V. A. However, there is one important distinction. The T. V. A. reports directly to Congress and the President. Under the Mitchell proposal the directors of the Columbia River Authority would report to the Secretary of the Interior, in whose Department are numerous agencies directly concerned with the development of the far West.

MITCHELL believes the method of reporting at Cabinet level is necessary to coordinate the policies and acts of the Columbia River Authority with those of such similar authorities as Congress might establish in other watersheds. The possibility of conflict between authorities is not out of the question. For example, the proposed agencies for the Columbia and Missouri Valleys would touch at the Continental Divide in western Montana. The Secretary of the Interior could resolve any dispute over water rights, power rates, and other questions.

But basically MITCHELL sees his Columbia River Authority as a step to decentralize sovereignty in a vast region. "The various States of the Northwest," he says, "will be able to deal with a more accessible regional agency instead of dealing with the heads of numerous departments and bureaus in the National Capital. This will be a regional organization, functioning within the region affected and responsive to the needs of the region. None of the powers and functions of the States will be abridged."

Vital to conservation

The contemplated Columbia River Authority, in MITCHELL's opinion, is vital to both the conservation and development of the basic resources of the far West. Although the region contains half the country's timber, half the minerals, and half the fish, it has only 11 percent of the total manufacturing capacity. This colonial empire status compels the West to survive economically on the exploitation and reduction of natural resources. "The Columbia Basin States," claims MITCHELL, "must expand their manufacturing capability if they are to receive their proportionate part of the national income."

MITCHELL believes that the proposed Columbia River Authority would bring about a regional economy based on local processing of the West's raw materials, rather than shipment of those materials to other areas for manufacturing. "Seventy-five percent of the country's wartime electrical expansion," he points out, "is concentrated in the far

Western States. The metals of this war and the metals of the future will be electrometals, manufactured where low-cost water power is available."

Yet the production of power is only one phase of the development of the Columbia River. Grand Coulee Dam, greatest single source of electricity on earth, is not primarily a power project at all. Its main purpose is irrigation of 1,250,000 acres of dry land in the center of the State of Washington. This land now is sagebrush. With water it will raise peaches, alfalfa, celery, corn, and 100 other crops. The 25,000 new farms thus created will be available to servicemen returning from battle.

Bonneville Dam, another river barrier supplying huge quantities of power, is also a navigation project. Through the Bonneville lift locks, highest in the world, ships can steam through the Cascade Mountains and into the inland empire. Congress has recently authorized construction of a dam at Umatilla Rapids, Oreg., midway between Bonneville and Grand Coulee. This project would generate power, reclaim land, and make navigation possible all the way to Lewiston, Idaho, at the foot of Hells Canyon on the Snake River, deepest chasm of the North American continent.

Secretary Ickes wants the Umatilla project named McNary Dam after the late Charles Linza McNary, senior Senator from Oregon and Republican minority leader, who was one of the pioneer advocates of the development of the Columbia River. Senator MITCHELL contends that his regional authority would tie together all these diverse undertakings. "It would," he says, "transfer operations to the region without bureaucratic domination. It also would provide a means for the development and maintenance of an over-all unified plan for the development of the water, land, and mineral resources of the Columbia Basin."

National 4–H Clubs' Accomplishments

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mrs. BOLTON. Mr. Speaker, it was my privilege this morning to participate in a national 4–H Club breakfast meeting attended by 4–H Club leaders, the Vice President, the Secretary of Agriculture, Mr. Wickard, and his assistant, Mr. Hill, several Members of the Congress, and representatives of various Government agencies having to do with youth.

4–H Club work is under the supervision of the extension service of the State agricultural colleges and the United States Department of Agriculture cooperating.

4–H boys and girls are practicing democratic procedure with refreshing simplicity and sincerity.

Largest rural youth organization in the world, the 4–H Clubs number 1,700,000 boys and girls between the ages of 10 and 21 years enrolled in 75,000 clubs throughout the United States as well as in Alaska, Hawaii, and Puerto Rico.

The results in character are inestimable. Since Pearl Harbor the wartime accomplishments have been as follows:

Production	
Victory garden products—acres	400,000
Poultry products—birds	33,000,000
Dairy cattle—animals	300,000
Livestock—animals	1,600,000
Peanuts, soybeans, and other legumes—acres	200,000
Conservation	
Members canning, storing, and drying food	1,000,000
Products canned—quarts	47,000,000
Members repairing and remaking clothing	1,500,000
Members caring for farm machinery	900,000
Members removing farm and home accident hazards	1,300,000
Members checking food and health habits	2,300,000
Members having periodic health examinations	550,000
Service

Scrap collected—pounds	300,000,000
War bonds or stamps purchased or sold to others	$140,000,000
Former 4–H members in the armed forces	800,000

I am happy to include in my remarks the little speech made by Ann Lee Tipton, 10 years a member of the 4–H Clubs:

I find it an unusual pleasure to be here this morning to share with you some idea of the 4–H youth organiaztion at present in our war effort and in our post-war plans. I say an unusual pleasure because it is a rare opportunity to speak with Government officials and other leaders regarding 4–H experiences and achievements and their value to youth.

Those of you who have read The Prophet, by Kahlil Gibran, recall the chapter entitled "Work," wherein the prophet told us that—

"Work is love made visible.

"And if you cannot work with love but only with distaste, it is better that you should leave your work and sit at the gate of the temple and take alms of those who work with joy.

"For if you bake bread with indifference, you bake a bitter bread that feeds but half man's hunger.

"And if you grudge the crushing of the grapes, your grudge distills a poison in the wine.

"And if you sing though as angels, and love not the singing, you muffle man's ears to the voices of the day and the voices of the night."

I like that chapter, because to me it indirectly expresses 4–H Club work. This organization has well fulfilled its purpose of serving the rural youth with an incentive to make their best better, creating a genuine love for the job that must be done—not always a pleasant one, but one in which 4–H dignifies the work of the hands and helps youth to find personal joy and pleasure in a task well done.

And just what are some of these tasks well done? When you casually pick up a newspaper and notice such an item as "4–H Boy Feeds a Fighter for One Year," you are reading about a rural youth who has produced enough food for a soldier overseas for 1 year. A task indeed well done. You'll be hearing more of the contribution made by 4–H boys from Don Sullivan. But I would like to spend a few minutes with you to say that 4–H girls are doing their share too. They have learned that if we are to be a strong Nation, to protect our country against aggression from without as well as hunger and despair from within, we must be a strong people. To accomplish such a feat, we must be well fed, adequately clothed, and satisfactorily sheltered. 4–H girls have proven their worthiness in such undertakings.

In my county in nearby Maryland, 4–H girls have canned over 4,500 quarts of food. Think what the State and Nation has on record for 1944. Nearly 1,000 meals have been planned and prepared according to dietary needs. Girls in my county have also busied themselves with making the home a more cheerful place in which to live, creating more pleasant surroundings. And they have eliminated that old question so often asked of Dad, "Can I have a new dress?" by using their sewing skills learned through 4–H training schools and making their own, not only clothing themselves adequately but attractively. I know of 1 girl in Montgomery County who used all 3 skills to a money-making advantage. Through the foods training she had in 4–H she was able to make cup cakes, cookies, fudge, and chocolate-dipped mints and sell them twice weekly at a small food market to which she had access. With the slow but sure income she was able to redecorate her bedroom, purchasing unpainted furniture and refinishing it herself. With her needle she was able to make curtains, slip covers, and linens, not only creating a more individual room, expressing her personality, but one in which the results were accredited to her and to 4–H training. But likewise 4–H girls have been concerned with community activities. Evidence of their desire to be soldiers on the home front is shown by 4–H'ers participation in Red Cross sewing classes and bandage-rolling courses. Bond purchases by Montgomery County 4–H girls total $13,750 alone, while salvage drives this past year produced a figure of 8,000 pounds.

You have seen in figures the contribution of 4–H's in terms of war, but there is another side, perhaps intangible, but a real preparation for our post-war world. It has been the experience of 4–H's to work together in planning for recreational gatherings of the community's young people in healthful and wholesome activities. They are accepting community responsibilities in the school, the church, and the home (the three units that go to make up any community), laying the very foundation for tomorrow's leaders. They are planning for educational night classes and trade schools. They are deeply concerned with the acceptance of the returning soldier. And they are rounding out their wholesome attitude on life by participation in church activities. If we should call this big business, no ifs, it is, and one in which the grand total would be producing good American citizens, honest, progressive, intellectual, and dependable.

4–H work has been recognized by many outside organizations. For this recognition, we as 4–H members are most grateful. This recognition has presented itself in many ways, but one of the most recent and thrilling rewards has been that given us by the United States Maritime Commission in its selection of 4–H Clubs to sponsor Liberty ships. There have been 42 such cargo vessels christened by 4–H members and named by them in honor of outstanding leaders in the field of agriculture. I can assure you that those who witnessed the christening of the Liberty ship, the *S. M. Shoemaker*, by Maryland 4–H's in Baltimore last August, share with me the thrill that came when that great hulk of massive silver-gray steel, so majestic and beautiful, and yet so strong and straight, slipped without sound down the way. As she turned in the clear, sparkling water, the sun shining brightly on her silver coat, each of us thought of this ship, built in only 28 days, a master product of time and man, as one ship nearer to victory. One ship that might battle its way in the South Pacific, the Aleutians, or on its journeys to Europe, but on whatever far-flung battle front, one ship that would prove to the

world the unconquerable spirit of the American people to preserve the rights of democracy, a democracy of which the 4-H was proud to be a part.

Contrast such a picture with one in Germany, comprised of Hitler youth, hatred, hysteria, and hunger, and you can readily see why we are so strongly determined to accept our responsibilities for tomorrow, by planning and building today for an everlasting peace in a world in which an army of youth are expressing themselves as the generation of that tomorrow when they say—

"I pledge my head to clearer thinking, my heart to greater loyalty, my hands to larger service, and my health to better living for my club, my community, and my country."

The Star and the Peace

EXTENSION OF REMARKS
OF
HON. FRANK P. BRIGGS
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7 (legislative day of Monday, February 26), 1945

Mr. BRIGGS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very excellent editorial, entitled "The Star and the Peace," from the Kansas City Star of Monday, March 5, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE STAR AND THE PEACE

The character of some of the congressional comments on the President's report of the Yalta conference is disturbing. The President makes as full a report as is possible at this time of one of the momentous events of world history. He tells of remarkable progress made by the three great powers in laying plans for enduring peace. The hope of countless American fathers and mothers for saving their children from another horrible world war rests in these plans.

Yet the contemptuous comment of one Senator is that there was "nothing new" in what the President said, and another that the President was "trying to sell the country a bill of goods."

Frankly such remarks seem to the Star to reveal an incredible levity toward problems involving the destiny of civilization itself. So far as can now be judged the Yalta conference was inspired by high purposes in line with the aspirations of everyday men and women to abolish mass violence from mankind. The future of the world rests on developing and confirming the decisions there made.

Those who sneer at the results and impugn the motives of the negotiators are doing what they can to sacrifice the future on the altar of petty political advantage.

As its readers well know The Star has been no partisan of the Roosevelt administration. It has criticized many of the administration's domestic policies. But in foreign affairs, as the aggressor nations began to show their hand, this newspaper believed that President Roosevelt was speaking in the authentic voice of the American people who saw their way of life endangered.

No peace-loving nation will go into war unless its vital interests are threatened. When the storm broke over Europe in 1939, the Star believed the President was justified in thinking that Great Britain and France could handle the situation without the United States, if it should become the arsenal of democracy and supply them munitions. When this hope vanished with the collapse of France, the Star actively supported the various measures undertaken by the administration to help the gravely menaced British while this Nation prepared for the inevitable war.

The progress of events, the ruthless mass brutalities of Germans and Japanese, taught the American people what the triumph of the Axis Powers would mean. With Pearl Harbor and the declarations of war by Japan, Germany, and Italy, public sentiment solidified. As the Star saw the situation at the time and as it sees it now, the people were and are united in two overriding aims—the complete defeat of their enemies and the determination to make a lasting peace.

In the last election they gave Mr. Roosevelt a mandate to continue to direct the war effort and to represent the United States in the peace negotiations. The Star, which did not support the President for a fourth term, insisted even then there was no place for partisan politics in fighting the war and framing the peace. So long as the President continues to give evidence of his desire and ability to work in harmony with our great allies to bring the sort of peace for which the Nation longs, this newspaper expects to support his efforts. It believes the people expect a similar attitude on the part of their elected Representatives at Washington, and in this expectation they are immensely in earnest.

The decisions made at Yalta and those to be made at San Francisco are too momentous to be regarded from a standpoint of partisan advantage. They should be open to honest discussion and honest criticism. But it would be intolerable to approach them in a picayunish, faultfinding spirit. Senators and Representatives who fail to meet the problems of the peace in a broad way will find they have totally misjudged the spirit of America.

United States Opposition to Private Cartels

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7 (legislative day of Monday, February 26), 1945

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Opposes Private Cartels, Clayton Explains to Latins," written by Mr. Herbert B. Elliston, associate editor of the Washington Post, and published in the Washington Post of March 7, 1945. The article deals with Secretary Clayton's exposition of cartels at Mexico City, pointing out that in his judgment there are good cartels and bad cartels. I believe that the discussion is most timely.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES OPPOSES PRIVATE CARTELS, CLAYTON EXPLAINS TO LATINS

(By Herbert B. Elliston)

MEXICO CITY, March 6.—William L. Clayton, Assistant Secretary of State, gave to the Inter-American Conference today the first definite and detailed statement of United States policy on cartels.

On this subject the economic charter accepted here pledges the signatories not to countenance cartels or other private business arrangements which obstruct international trade, stifle competition, and interfere with the maximum efficiency of production and truly competitive prices to consumers.

Asked to explain what was meant by cartels, Clayton said that the United States delegation meant business arrangements with the emphasis on private ones. Thus by implication he indorsed cartels under government supervision.

Later he amplified his definition as follows: "Distinction can be drawn between private cartel arrangements which have to do with the fixing of prices, the allocation of markets and the control of production for private profit, particularly when such agreements are made by such industries with a limited number of products, as the chemical industry and an international agreement under government auspices which relates to commodities which have developed unmarketable supplies and which concern raw materials in the production of which millions of producers are involved. We can defend the latter while we condemn the former."

LATINS SEE NO EVIL

The Latins attach importance to this distinction since they do not necessarily see, as many Americans do, any particular evil in cartels. Indeed they wish to develop cartels with the United States on certain items of commerce which have a common concern for the Americas. But the Latins in this and other items have had to be content with promises rather than pacts.

Under a pledge that there will be orderly adjustment of war contracts for their primary products, the Latins have been assured of a cushion during the transition period between war and peace and the pledge if acted upon in the spirit in which it has been given will prevent the dislocations in Latin-American economies which occurred after the last war. In some respects the pledge is predicated on legislative action as for instance in connection with stock piling.

As part of the transition program the Latins may maintain exchange control of import quotas under the Bretton Woods agreement. This is very important to the Latin Americas. In war they have built up sizable balances in America which they could not turn into American goods because of our inability to supply those goods. They will make a draft on America's machinery as soon as America's mills are reconverted to peace.

DON'T WANT LUXURIES

The Latins will keep exchange-control because they don't want to see their American balances spent in luxuries. They want to control their imports so as to give American machinery priority.

The Latins asked at this conference for aid on the American side in giving their machinery requirements priority in our postwar foreign trade. This the United States delegation could not promise. But the suggestion was made that encouragement would be given to trade bodies in America to make special arrangements for the accommodation of Latin-American requirements. This might mean anything or nothing but the Latins seem satisfied.

The main reliance which the Latins have been asked to accept is that the administration is committed to the maximization of industrial production in peace as in war. Such a policy, it is felt, will help to shore up the primary producers in the Latin Americas as in other areas. This is the United States reply to Chile, disturbed over prospective falling off of copper buying, and Brazil, as the major coffee producer. As one United States delegate put it, everybody would like to have his income guaranteed for 50 years. All we can do is to try to maintain our economic situation at home

in such a way as to provide the conditions enabling other countries to keep up employment and economic health.

The clause in the economic charter calling for a general "reduction of trade barriers" has been amended so as not to inhibit Latin Americans from protecting their infant industries. It has been recognized that in the original wording there was a conflict between encouragement of industrialization below the Rio Grande and insistence on demobilization of tariff barriers.

Throughout the parley, America's cotton subsidy program has drawn persistent fire from Brazil, Peru, and Mexico, and a resolution was drawn up by way of condemnation. This has been withdrawn, but not in private, and the United States delegation has promised to renew the fight at home against such subsidies which, of course, are a violation of the economic charter of the Americas. The United States farm representatives attached to the United States delegation have been told pretty plainly what Latin Americans think of the difference between our precept and performance. However, all in all, the economic charter and the transition pledges are taken at face value with hopes kindled that they will bear fruit by Clayton's sober exposition of United States limitations and his ready willingness to hear and consider prospective Latin-American troubles.

Drafting of Nurses

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. AUGUST H. ANDRESEN. Mr. Speaker, I fully recognize that we must rely upon the statements made by our military authorities as to the need for trained nurses to take care of the disabled men wounded in combat. If the passage of this bill, to draft nurses, depended upon my vote, I would vote for it. The bill will no doubt pass by a large majority. My vote against the bill is a vote of protest against the attitude expressed by some that the nurses of this country are not willing to patriotically do their duty without being drafted. More than 44,000 female nurses have volunteered for military service. They are doing a heroic job in taking care of wounded and sick men in all branches of the service, and I sincerely believe that the additional nurses needed can be secured by voluntary methods if the proper methods are used by the War Department.

Those who cast reflection upon the patriotism of the nursing profession, and on the splendid women who have dedicated their lives to relieve human suffering, cannot be fully aware of the sacrifices being made by these white angels of mercy. They are patriotically serving humanity on both the battle and civilian fronts. I am satisfied a sufficient number will volunteer for service in the Army, if given the opportunity to do so. Why, I understand that more than 12,000 registered nurses have volunteered since the first of the year, but the Army has taken less than 3,000. It is very difficult to understand the reason why the Army does not take the nurses who are ready and willing to serve. For some unknown reason certain leaders in the Army demand the draft system, instead of fully using the volunteer method.

It is my hope that the Senate will amend the bill, so that the War Department will be required to use the volunteer method for securing the necessary nurses for at least 30 days before the draft system is put into operation. Further, both male and female nurses should be used, and there should be no discrimination on account of color or creed. Our wounded and sick men in all branches of the military service are entitled to the best of care, and I know that the trained nurses of this country will respond to the call for such duty, and will gladly serve without being forced to do so by this or any other law.

Training for Battle

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. GAMBLE. Mr. Speaker, under leave granted me on February 23 to insert several newspaper articles and editorials in the CONGRESSIONAL RECORD, I submit an editorial from the New York Sun titled "Training for Battle":

TRAINING FOR BATTLE

Because he had received evidence of more than one instance of boys of 18 and 19 being sent into combat only 4 or 5 months after induction, Senator TAFT recently raised the question of whether or not the War Department was acting in good faith in this matter. When Congress lowered the draft age to 18, the Senate amended the bill to allow those of 18 or 19 to be sent overseas for combat duty only after a year's training. That amendment was eliminated in conference, largely because of General Marshall's representation that it would impose an almost impossible administrative burden on the War Department.

Certainly nobody who reads the letter which General Marshall wrote on this subject on October 23, 1942, can accuse the Chief of Staff of bad faith. He made a clear distinction between the time required to train an individual and that required to train a division. He went on to say that a mechanic in a ground crew could be properly trained in from 18 to 36 weeks, a radio operator in from 3 to 5 months, and a rifleman in 13 weeks. A rifleman, wrote General Marshall, at the end of his basic training is ready to take his place in an experienced squad without handicap to the squad or to himself. Certainly there was nothing in General Marshall's letter to encourage the belief that if Congress would agree to drop the amendment, the War Department would follow a rigid rule in keeping with the amendment.

From other sources, however, Congress certainly could have gained the impression of such an implicit bargain. Secretary of War Stimson, at the hearings on the 1942 bill, said that the intention of the department was to give all 18- and 19-year-olds a year's training "as far as possible and as far as unexpected emergencies may allow." Senator GURNEY, arguing against retention of the Senate amendment, said he had received the assurance of Army officers that inducted men would receive every bit of training necessary and that most of those intended for combat units would get 12 months' training. Subsequently the basic training period was extended from 13 to 17 weeks and only recently reduced to 15 weeks.

Even as recently as December 7, 1944, Under Secretary of War Patterson said: "In general, a minimum of approximately 8 months elapses between an individual's induction and his assignment * * * to an active sector of the front." This statement, of course, was made before the German counter-offensive, which may have created the battle emergencies of which Secretary Stimson spoke in Friday's statement as the compelling reason for changes in the War Department's training policy.

What does not seem to be in dispute is that some Members of Congress did understand that there was an implicit bargain. If Messrs. Stimson and Patterson and some unidentified Army officers had let the Marshall letter stand alone, honest and unambiguous, no Member of Congress would have reason to feel disillusioned and deceived.

Draft of Farm Labor

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MARCH 2, 1945.

Col. C. W. GOBLE,
State Director, Selective Service
Headquarters, Columbus, Ohio.

DEAR COLONEL GOBLE: The board read with interest the articles in the Blade of February 28, relative to the affidavits made by the Agriculture War Board, which was read into the CONGRESSIONAL RECORD on February 27, 1945.

This article alleges that local board No. 22 violated the Tydings amendment and that local board No. 22 was dictated to in the matter of classification by a representative of Selective Service Headquarters.

The board has not violated the Tydings amendment inasmuch as every man between the ages of 18 and 26 years who was removed from II-C and placed in I-A and ordered up for preinduction physical examination to determine his physical status was given ample opportunity to affirmatively prove that he was entitled to a II-C classification.

Registrants were advised that they could file any new information regarding their status, and the Agriculture War Board was also advised that they, too, could file with the board any information which, in their opinion, had a bearing on the registrant's request for deferment. These cases were carefully reviewed by the board and in every case an appeal was taken.

At the present time all of these cases are before the appeal board. Board No. 22 has not issued a notice of induction to any of these registrants. When these cases are returned from the appeal board, they will again be reviewed to determine if the thinking of the appeal board coincides with the thinking of this board. Board No. 22 interprets the Tydings amendment to mean that every II-C classification given under this amendment is subject to review by the appeal board.

The newspaper article further states that Lieutenant Dwyer had issued an order to reclassify every II-C registrant between the ages of 18 and 26 years to I-A. This he did not do, and we would not have done so even

though ordered by headquarters if, in our opinion, the registrant was entitled to a II–C classification.

This board deeply resents such a statement, inasmuch as classification is a prerogative of the local board and, therefore, a local board cannot be ordered to classify any particular registrant or group of registrants.

Very truly yours,

D. D. HATCHER,
Chairman, Local Board No. 22.

Copies to Lewis B. Hershey, Homer Ramey, Toledo Blade.

Off to a Good Start

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of March 7, 1945:

OFF TO A GOOD START

The outlook for comprehensive reorganization of Congress appears brighter today than at any time since a handful of determined legislators and political scientists began working on the problem several years ago. For a time it appeared that the tragic death of Senator MALONEY, head of the Senate-House Committee on Congress, might disrupt the plans for a penetrating survey of our National Legislature. Now, however, the committee has made a remarkable come-back. It has named Senator ROBERT M. LA FOLLETTE, Jr., as its new chairman, reappointed Representative MIKE MONRONEY vice chairman, and chosen Dr. George B. Galloway to head its research staff.

Senator LA FOLLETTE is as closely identified with the move to strengthen Congress as Senator MALONEY was. His elevation to the chairmanship not only assures the committee of vigorous leadership but also emphasizes its nonpartisan character. The Wisconsin Progressive was obviously given this assignment solely because of his long experience in the Senate and his interest in the subject. Indeed, he has already made studies of his own and on the basis of those studies has sought to improve the workings of the Senate. A year and a half ago he proposed that the rules of the Senate be modified to reduce the number of standing committees from 33 to 13. He has persistently sought to relieve Members of Congress of trivial chores and center their attention on major issues of national policy.

Like many other thoughtful legislators, Senator LA FOLLETTE also knows that Congress has little chance of maintaining its role as the chief policy-making agency of a great Nation if its Members are able to devote an average of only about 10 percent of their time to legislation. "No person familiar with the situation in the Senate today," he said in discussing his resolution, "can deny that there is a pressing need for committee reorganization and for the streamlining of the legislative branch of the Government if it is to survive in the struggle for power which is bound to continue."

Further guarantee that the study now actually launched will be no superficial cloak for the granting of new congressional privileges may be found in the appointment of Dr. Galloway. As head of the American Political Science Association's Committee on Congress, Dr. Galloway has made the most thorough exploration of this subject that we know of. Nor has he peered into it from an ivory tower. He has worked actively with Members of Congress, understands their viewpoints, and has their confidence. Like Senator LA FOLLETTE, he sees the problem not as the inauguration of a series of pin-point reforms but as a major task of adjusting our legislative machinery to the exacting demands of this complicated and turbulent age.

At bottom it is a question of preserving democracy. In this country Congress is the body that speaks for the people in the shaping of domestic policy and in approving much of our foreign policy. It must be equal to its enlarged responsibilities or we shall have to resign ourselves to some form of executive control. The reorganization of congressional committees, the granting of adequate staffs, the establishment of a pensions system, the centralization of leadership and improvement of relations with the Executive are only means to the end of strengthening our representative system. This major objective appears to be the point of take-off for the special committee's study, as it was for Dr. Galloway's report to the A. P. S. A. If Congress follows through in this important undertaking, it may well prove to be a landmark in the history of self-government in the United States.

Physical Fitness Program

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of March 6, 1945:

PHYSICAL FITNESS PROGRAM

As ranking minority member of the House Subcommittee on District Appropriations, Representative KARL STEFAN of Nebraska took a leading part in enlarging the physical fitness program in the Washington public schools. He recently inserted in the CONGRESSIONAL RECORD a special report from Superintendent of Schools Robert L. Haycock which shows that in spite of shortages of instructor personnel the program has been highly successful and after the war will continue to receive emphasis as an important part of school training.

Since Pearl Harbor the program has been directed, in the case of boys, toward preparing them for induction and the physical conditioning that follows. But it now includes all high school boys and girls, and over 27,000 of them have had the advantages of the training since our entry into the war. Positive results are being recorded, to show the physical improvement in children directly attributable to supervised exercise. Tests have been designed to indicate a youth's performance in relation to normal standards, what he is expected to be able to do at a given age and the extent to which he benefits from training.

Whether or not the Nation adopts a system of compulsory military training after the war, there is little doubt that physical education will receive more attention in the preparatory schools than ever before. One explanation offered for the large percentage of rejections of young women for the military services is the lack, generally speaking, of physical training. The Committee on Physical Fitness of the Federal Security Agency, for example, finds that fewer than half the girls in 900 school systems receive any physical training the last 2 years of high school. A survey by the American Youth Council indicated that 62 percent of young women between the ages of 16 and 24 had no form of physical recreation.

An essential purpose of the physical fitness courses in the Washington public schools has been to bring to children who do not take part in formal athletics or military drill a systematic course in physical training which has the double purpose of helping to reveal remedial defects and to improve physical condition. The appropriations committees of Congress should take real satisfaction in the results indicated by Dr. Haycock's report to Mr. STEFAN—results which indicate the even greater progress to be anticipated after the war.

Days of Decision and Peacemakers

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Francisco Monitor of January 26, 1945:

DAYS OF DECISION AND PEACEMAKERS—FEIGHAN, LAFOLLETTE, AND WEISS

(By the Reverend E. A. Conway, S. J., social action department, National Catholic Welfare Conference)

Strange signs and portents appeared in the House of Representatives the other day. Strange words were uttered there—words like morality, justice, altruism, unselfishness, religious spirit, human brotherhood, God, the moral law, the common good, moral necessity, and international morality.

Portentous was the fact that they were uttered by a Catholic, a Protestant, and a Jew, all speaking to the same point, and all aroused by what they considered a defection from the high principles which should guide our country in these days of critical decisions.

These phenomena appeared, I suspect, because Senator VANDENBERG made a little slip a week ago in his otherwise unexceptionable address on foreign policy. The senior Michigan Senator had said: "Now, I am not so impractical as to expect my country to act on any final motive other than self-interest. I know of no reason why it should. That is what nations are for."

In the House rose hard-hitting Congressman MICHAEL A. FEIGHAN, of Cleveland, Ohio, supported by Congressman LAFOLLETTE, of Indiana, and SAMUEL WEISS, of Pennsylvania, to declare that he viewed with real concern "the assertion made recently that our country cannot be expected to act on any final motive other than self-interest." After remarking that "the most enlightened selfishness will not get us very far in the titanic tasks that lie before us," the Cleveland Catholic then declared, "The truth is, Mr. Speaker, that more and more people are becoming convinced that the peace which we are about to set up can only be secure under the moral law that comes from God."

MORE PROFOUND THAN THE ATLANTIC CHARTER

Mr. FEIGHAN, after more of the same strong medicine, then presented a resolution calling upon Congress to affirm its adherence to the seven principles of the trifaith "Pattern for Peace" "as the basis for the establishment of peace and a just world order."

In a prepared address Congressman LAFOLLETTE supported his colleague "impelled by the crucial importance of impending decisions," and by the conviction that "something new must be added to our statecraft—a deeper sense of the demands which are made upon us by that basic morality which governs Protestants, Catholics, Jews, and pagans alike."

"There is at the present time," declared the Indiana Congressman, "a widespread popular demand for the clarification of our war and our peace aims. I can think of no better way to satisfy that legitimate expression of the public will than the immediate affirmation of these principles as the basis of our national policy. They are as a fact, as even a cursory glance will show, far more complete and far more profound than the Atlantic Charter itself.

"There is a deeper reason," he continued, "for our making this affirmation at the present juncture. The Axis has not attacked only the United Nations. It has attacked the basic principles of human conduct which, for centuries, have united the nations. It has not only violated the law of nations, it has proclaimed a new law, a new order, governed by rules of its own making. As we victoriously repel this attempt to subvert civilization's traditional morality, it is timely, I suggest, to reaffirm the postulates of that moral order to which the President referred in his address of January 6, 1941."

THE SIXTY-FOUR DOLLAR QUESTION

Congressman WEISS spoke eloquently to the same point, and he congratulated Congressman FEIGHAN for having arranged for the joint presentation of this unprecedented resolution. Space does not permit quotation of some of his attacks upon low-level diplomacy. You should read all three speeches and the resolution in their entirety. You can, if you will write any of the three Congressmen for a reprint of them.

NOTE.—Congressman LAFOLLETTE observed that "Christians are becoming more and more vigilant and persistent in concerted action to bring the moral and spiritual resources of their faith to bear continuously upon the problem of world order." Perhaps we are. We could prove it by concerted action in support of the resolution introduced by FEIGHAN, LAFOLLETTE and WEISS. This is what is known as a concurrent resolution. It must first pass the House, and then be reintroduced in the Senate. It won't pass the House unless its sponsors receive concerted public support. Will they get it? That is the $64 question.

NOTE 2.—Said Congressman LAFOLLETTE: "I, for one, would not wish to brave their (the people's) righteous indignation if these basic principles which, as the Protestant leaders said, 'must find expression in national policies,' were either minimized or contravened." Far better an ounce of concerted effort now than a pound of righteous indignation later.

Construction of a Veterans' Hospital, Broome County, N. Y.

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. EDWIN ARTHUR HALL. Mr. Speaker, even before the present war, the need for a veterans' hospital in the Triple Cities area was evident. Since the war began, the facility at Bath and the Rhoads General Hospital in Utica are becoming more and more overcrowded as the casualty lists continue to grow.

The Southern Tier has given her sons freely to the armed forces. There is not a section in the country where the torch of patriotism lights the way more brightly.

Therefore, thousands of men will come back to our valleys faced with the problem of obtaining medical treatment. Much of this treatment may be temporary and the veteran will find himself able to take his place in a normal job. But later he may need further medical attention. This should be available to him in his own home section.

However, a vast number of veterans will be in great need of permanent medical care. They will need this care often and it will have to be available on the spot. They will need this care the rest of their lives.

It is not fair to expect veterans from Binghamton, Johnson City, Endicott, and vicinity to travel long distances in order to go to a veterans' hospital. The only fair way is to bring the hospital to the veterans of our section.

My bill provides for the immediate construction of this important project. It will take care of any unemployment among building tradesmen and skilled construction workers for a long time back home.

In order to live up to the provisions of the G. I. bill of rights which Congress passed last year, we should start right away on a program of hospital construction and the Triple Cities area should be first on the must list.

The O. P. A. Program—The Merchant's Point of View

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. PLUMLEY. Mr. Speaker, once in a while it is good business policy to take account of stock. It is always worth while to find out what the other fellow thinks. A man cannot always be right, though some are hard to dissuade of the notion that they can do no wrong.

The consumer, John Q. Public, has had much to say about the iniquities and discriminations, the arbitrary rulings involving regimentation and alleged breaches of faith which have come out of O. P. A. headquarters.

I am convinced that the people are for price control. They shun the specter of inflation. No agency in the land is more misguidedly, if unintentionally, yet deliberately leading the way to that possible ultimatum, than is the O. P. A., and the people are not fooled. Prices are not controlled.

They will not respond to appeals for support of a program which any man who reads intelligently must know will not accomplish, what even its sponsors may hope. I give them credit for being well-intentioned.

So just for once why not take a look at what the merchants of the country, long-suffering "serfs," as they have been, in an attempt to cooperate to keep prices down, have to say.

Here is an article from the New York Times of Sunday last which deserves to be read by those who are genuinely interested, nonpartisanly, in avoiding inflation, or better, may I say, controlling it, since despite all the efforts of O. P. A. it is here, and that is the answer to the O. P. A. program. It has not been successful. It should be changed. It can only be altered by amendments to the law, under which it was created.

Under unanimous consent heretofore granted, I include this article as an extension of my remarks:

THE MERCHANT'S POINT OF VIEW

(By C. F. Hughes)

In section 2 (A) of the Emergency Price Control Act of 1942, the following provisions appear:

"Before issuing any regulation or order under the foregoing provisions of this subsection, the Administrator shall, so far as practicable, advise and consult with representative members of the industry which will be affected by such regulation or order. In the case of any commodity for which a maximum price has been established, the Administrator shall, at the request of any substantial portion of the industry subject to such maximum price regulation or order of the Administrator, appoint an industry advisory committee or committees, either national or regional or both, consisting of such number of representatives of the industry as may be necessary in order to constitute a committee truly representative of the industry or of the industry in such region, as the case may be. The committee shall select a chairman from among its members and shall meet at the call of the chairman. The Administrator shall from time to time, at the request of the committee, advise and consult with the committee with respect to the regulation or order, and with respect to the form thereof, and classifications, differentiations, and adjustments therein. The committee may make such recommendation to the Administrator as it deems advisable. Whenever in the judgment of the Administrator such action is necessary or proper in order to effectuate the purposes of this act, he may, without regard to the foregoing provisions of this subsection, issue temporary regulations or orders establishing as a maximum price or maximum prices, the price or prices prevailing with respect to any commodity or commodities within 5 days prior to the date of issuance of such temporary regulations or orders; but any such temporary regulation or order shall be effective for not more than 60 days, and may be replaced by a regulation or order issued under the foregoing provisions of this subsection."

Last summer when Congress went into O. P. A. affairs quite thoroughly, the issue of industry consultation received considerable emphasis from business interests. Price Administrator Chester Bowles offered assurances that more trade consultation would be invited and he saw to it that a number of additional advisory committees were set up.

O. P. A. officials have appeared before the Senate Banking Committee, which is considering extension of the price act, and so far

the matter of consultation has not become a major subject. Before the Smith committee of the House tomorrow, however, a series of hearings begin at which strong protest will be raised against the new M-388 order and the coming maximum average price order on this very score. The Smith committee was set up to investigate the abuse of executive power by Government agencies.

M-388 is the regulation already announced through which it is hoped to channel textile materials and apparel into lower-price channels. It is a War Production Board order designed to overcome the errors made by O. P. A. in permitting apparel manufacturers to profit by certain loopholes in the General Maximum Price Regulation by moving into higher price lines.

What happened in apparel was similar to what happened with hamburgers when a piece of onion or tomato was thrown in to get an extra 10 cents. Minor changes were made and something new had been added, particularly to the price because quotations could be adjusted to the closest competitor or on a comparable basis.

After almost 3 years of this kind of price control, the O. P. A. finds it necessary to channel goods into the vacuum which has appeared in low-end supply and mainly because new and huge military requirements have also shown up after 3 years of war. Whether these military needs are warranted is still an unanswered question which gives all signs of going unanswered for some time to come regardless of the paramount interests involved.

Whether the War Production Board is governed in a case which is essentially a price case by the provisions of the Emergency Price Control Act is a nice point on M-388. The orders are described as joint action by W. P. B. and O. P. A. The board orders the channeling through priorities for material and also requires reports on apparel production by price lines which is usually a function of O. P. A. The purpose of the regulation is a price rollback, so it is assumed that the price act provisions apply.

Since this is the assumption, the history of the regulations recounts a first meeting on January 23 when various trade interests were called to Washington to see the new order and "like it." According to reliable trade sources, the advisory committees never got a chance at the regulation. They heard that such an order was "in the works" but some members did not have even this knowledge. When the new program was unveiled late in January it was described as a skeleton. Base periods, quotas, and cut-off prices were all unrevealed and therefore intelligent consideration was denied as a prominent woolen manufacturer commented, adding in paraphrase of Churchill, "never was so little known by so many about so much."

It was at a subsequent hearing that the threat was made which has finally resulted in the sessions of the Smith committee that start tomorrow in Washington. Besides charging outright violation of the Price Control Act in this and other instances, the contention of trade interests will be that the effect of the new orders will defeat the very purposes for which they were drawn. Reduced instead of expanded low-cost production is the trade foretrade forecost, and unemployment as well.

In the fabric markets, authoritative opinion holds that supply has been well maintained, considering severe manpower difficulties, traced to cloth finishing premiums allowed by O. P. A. and to the upping of prices throughout the apparel industries due to lack of prompt and firm enforcement. A case is cited where yardage in the grey at 30 cents has been sold for $1.35 after finishing against a normal price of 75 cents. The dress made of it was priced at $69.50.

Such examples make what appears to be a prima facie argument for squeezing the extra profits out of cloth processing, apparel manufacturing and retailing of the product and yet, as indicated, the disruption of a drastic changeover now is not only apt to reduce production but also to cut off supplies from better grade stores and fill others up with goods that may prove all but unsalable.

In conclusion it may be pointed out that textile, as well as clothing and apparent manufacturers, in 1944 did not make the exceptional gains in profits which were imagined. The National City Bank report for the year on net income after taxes for these groups showed these reductions under 1943: For 33 cotton-goods manufacturers, 15.2 percent; for 39 other textile producers, 0.8 percent; and for 17 clothing and apparel manufacturers, 0.6 percent. For 715 companies in the tabulation of 1944 net earnings, the average gain was 3.5 percent. The percentage of return to net worth was a little above the average of 8.8 percent for 2 of these groups. Thus, cotton goods was 7.4 percent; other textile products, 9.1 percent; and clothing and apparel, 7.6 percent.

"OPEN CAPACITY" REPORTS

Additional evidence that "hog wild" procurement by the armed services is disrupting the orderly flow of materials and components which is essential for speedy and efficient war production was observed in the week, although certain critical programs were officially reported as improved. Decision of the War Production Board to issue reports on available manufacturing capacity twice a month was regarded in some quarters as a bid for regaining some control of the situation before it becomes too badly snarled.

Under this program the W. P. B. has obtained agreement of the military services, it was asserted, to check the list of "open capacity" plants before placing direct war contracts so that production schedules may be speeded up. The list will include all plants with 100 or more workers or 50,000 square feet or more of plant space that are being released for new production. Meantime, plants with subcontracts to offer may apply at the local W. P. B. offices for information on "open capacity." These lists ought to clear up some of the fog about urgent needs that find no production facilities or manpower available.

In trade during the week the recent steady pace was maintained and shortages were more pronounced as a result. Department-store sales for the period ended February 24 were 20 percent above a year ago as against a gain of 24 percent in the preceding week.

Address by Hon. Thomas J. Lane, of Massachusetts, at Jackson Day Victory Dinner, February 24, 1945

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include my remarks as follows at the Jackson Day victory dinner in Boston, Mass., February 24, 1945:

When Andrew Jackson was elected to the Presidency for the second time, one of his enemies, and he had plenty of them, said: "He can be President for life if he chooses." [Pause.]

I mention this in passing because I believe we find a parallel in the Democratic Party and its leaders of today. For Andrew Jackson was a human being before all else • • • he was close to the people in the true American way and they honored him with their trust and support.

When Old Hickory, as President, made his triumphal tour of the Eastern States, he must have called upon all his soldierly courage as he approached Massachusetts. True, he was coming by express invitation of the State legislature, but Massachusetts was not quite as democratic as it is now. The general court, which in 1815 had thanked the Almighty for the victory at New Orleans without mentioning General Jackson's name, felt it no longer necessary to ignore the man whose stand against nullification had won approval from the great Massachusetts statesman, Daniel Webster. A military review was scheduled to take place on Boston Common. Jackson galloped easily along the line of troops, the cabinet officers, and other notables trotting along as best they could.

"Where is the Vice President?" exclaimed Old Hickory as he drew up his horse to take the soldiers' salute.

One of his aides answered: "About as nearly on the fence as a gentleman of his positive political convictions can get." For the Vice President's nervous horse had shied against a fence and refused to budge. General Jackson looked and laughed. "And you've matched him with a horse even more noncommital than his rider!"

Beacon Street then, as now, did not warm to a Democrat, even though he was President. When the parade passed through this sacred territory, there was the silence of a graveyard—until a window suddenly flew up and a little girl appeared, waving a handkerchief. It seems that a certain Republican merchant was standing well back from the window, where he could see without being seen. In spite of the east wind, the warmth of Jackson's personality penetrated even to that chill parlor on Beacon Street. The merchant thawed. "Do someone come here," he shouted to the behind-the-scene Republicans in the room, "and salute the old man!" And a little, unspoiled child came to the window to greet the President, generously doing what her father could not bring himself to do. If that same merchant were living in 1944, on November 4, 1944, he might have found himself in Fenway Park, unashamedly cheering another great President of the United States, one Franklin D. Roosevelt. For even some of our Republican brethren can thaw in the presence of inspiring leadership.

However, it took Andrew Jackson to start the ball a-rolling. The President of Harvard College was a man of action as well as a scholar. Calling the overseers of the college together, he obtained approval of a resolution to confer a degree of doctor of laws on Jackson. John Quincy Adams nearly had a stroke when he heard it passed. Was there no way, he asked, to prevent this outrage? "None," replied the educator. "As the people of the United States have twice decided that this man knows law enough to be their President, it is not for Harvard College to maintain that they are mistaken."

Harvard showed its wisdom for it saw the handwriting of the future. The tide of a new "people's party" was coming in. In membership and doctrines it stemmed from the left wing of the revolutionary movement that had won independence for America. It found its spokesman in a son of the soil, a pioneer, with all the courage and love of humanity which he inherited from his Irish forebears—rough and ready Andrew Jackson.

He had never publicly proclaimed himself a Democrat. But the people adopted him as their champion, in contrast to the aloof and high-toned Republican leadership of the time. And so the cleavage became marked, with the name Democrat standing for "the people" and the label Republican representing special and exclusive economic interests.

For the first time, the men and women of America saw the issues clearly drawn. On the wave of this popular feeling, Jackson was reelected to the Presidency. With but two exceptions, the party which his personality and policies created, carried every election from 1828 to 1856.

In 1836 Jackson, by his appointment of Roger Taney as Chief Justice, did much to alter the controlling social philosophy of the United States Supreme Court. This event marked the beginning of an era that was to see the Court interpret the liberal spirit which had as its goal the greater well-being of common men. That same humane tradition was to find its highest expression in our time, spelled out in the social wisdom inspired by Democratic leadership.

Jackson was a pioneer, an experimenter, and so are we today. Our purpose is to broaden the base of democracy, not limit it. We do not turn our backs on change, as the opposition party does. As mature and realistic men and women we know that certain changes are inevitable. And so we go forward to meet and solve the challenging problems of today, giving to the people a practical government, in step with life itself. We do not hoard ability. We put it to work for the greater good of all. That is the political creed we inherit from Jackson, which we share with Roosevelt, and to which we rededicate ourselves tonight.

Jackson and Roosevelt, in many ways they are alike. Wealth and power opposed them, but the people loyally supported them. Both men understood the people of the United States with an instinctive sympathy that won genuine devotion. The gifts which Jackson brought to the Presidency were not alone successful in the management of domestic policy. His conduct of foreign affairs raised the prestige of the young American Nation to a high level. Genuine respect abroad for American rights began with Jackson. It is finding fulfillment in world leadership with Roosevelt.

When Jackson finally laid down his burden he did not realize the impression he had made on his time. Posterity gave to him an honor not previously given to any other man, that of marking out a period in our national history and calling it by his name. Today that is being duplicated. The achievements of our President, both at home and abroad, will most certainly give to our age the name of the Roosevelt era.

The opposition party speaks for narrow interests, but the Democrats represent the mass of the people. In the Jacksonian tradition, we develop our leaders from the rank and file of American life and train them never to lose the common touch. God grant that it may ever be so.

On the domestic scene our party has added economic democracy to the charter of American liberties. On the world scene we are working toward an extension of democracy which will lead to a peace among all men. We realize that the eventual elimination of war itself will be the greatest achievement of mankind.

There are those who seek to stop us by calling us visionaries. In doing so, they grudgingly admit our leadership. For the Democratic Party has always dared, as Jackson and Roosevelt dared, to tackle problems, not avoid them; to experiment with possible solutions until we invent one that works. We are pioneering in government and bringing to it the energy and enterprise that is typically American.

We approach the great tasks ahead of us with faith and with courage. The problems are great, but our will to overcome them is equal to the challenge. We do not propose to let America wither on the vine. We have our ears to the people and we know that the ferment of a century is at work. Our fighting men and women, our laborers in the field and factory, are looking forward to a better America, and they intend to get it.

The stand-patters will be brushed aside. Only those who keep pace with, or anticipate the energy, the intelligence, and the conscience that vitalize our people, will be worthy to represent them.

America is young in spirit and so is the Democratic Party. Across a century of time we see Andrew Jackson, as fresh, human, and creative as the frontier itself. For a moment we think of him as a leader of today.

There is but one difference. We stand on the threshhold of new and unexplored frontiers. As members of the Democratic Party we face forward to the unknown and with human effort—under divine guidance—we shall help our people through the wilderness of social and economic problems that lie ahead.

This is not only Jacksonian democracy, and the democracy of Franklin Roosevelt. It is the people's democracy—in control of its own destiny.

Go to It, Mr. President

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. LUDLOW. Mr. Speaker, perhaps the most striking editorial printed anywhere in the United States on the President's report of the Yalta Conference appeared in the Indianapolis Star on Friday, March 2. This editorial is attracting a great deal of attention and comment throughout the country. The editorial is all the more striking because of the background of that able newspaper's history.

The Indianapolis Star has roundly condemned many of the policies of the New Deal, regarding them as economically unsound and fallacious. But while the Star believes in the principles of the Republican Party its high character and unquestioned integrity have given it a reputation of dealing fairly and justly with opposing personalities and forces, so that even Democrats in Indiana are accustomed to say "If you see it in the Star it is so." This rare faculty of objectivity, of being able to appraise with fairness and fidelity the work of either political friend or political opponent, shines through the Star's editorial on the President's message, which is an all-out endorsement of the President in respect to foreign affairs as revealed in the message. The editorial, entitled "Go to It, Mr. President" is as follows:

GO TO IT, MR. PRESIDENT

That was a great report to the American people, Mr. President. You spoke to all the people as the representative of all the people. Your report and your comments were frank and presented in simple language which all can understand and which the American people appreciate.

There was not one word of incrimination in anything you said. You frankly declared your understanding of, your support of, and your allegiance to the Constitution. You told the world that the peace will not be your peace, not a Democratic Party peace, not a Republican Party peace, but a people's peace based on what the American people know and applaud as plain, common sense.

In your report you were a leader in every sense of the word, Mr. President. You told us what we wanted to know You promised to keep us advised. You gave assurances of thoroughgoing bipartisan representation in international conferences planning for world organization and international cooperation. You brilliantly avoided the mistake of your illustrious predecessor, Woodrow Wilson.

We have opposed you bitterly in the past on many issues, mainly on your multiple-term ambitions, but on the basis of your report yesterday and on your assurances of adherence to common sense and constitutional processes we pledge you our wholehearted support in your determination to create a world organization based on international good will and understanding.

Go to it, Mr. President. The American people are for you and with you. But for the sake of America and the world, stay on the beam.

The Bretton Woods Issue

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. REED of New York. Mr. Speaker, there are enemies within our gates. An assault by foreign agents aided and abetted by domestic quislings is now being organized to gain control of the resources of this Republic. It is a stealthy and insidious conspiracy to bleed our taxpayers for the benefit of defaulting nations. A horde of foreign propagandists are doing the spadework for the greatest financial raid ever attempted against the resources of a nation by other nations in the history of mankind. Every type of agency by which reason can be dethroned will be wheeled into action. The press, radio, the movies, telephone, paid speakers, the magazines are day by day being regimented and supplied with material, not with the idea of presenting facts, but to whip the public mind into a spell of emotionalism that will cause the mass mind to accept the theory that the United States should ignore the plight of its own people and devote all of its resources to its defaulting and impecunious neighbors. Under leave to extend, as a part of my speech, I include an editorial from the Herald Tribune of March 4, 1945:

THE BRETTON WOODS ISSUE

There is a disturbing accumulation of evidence that the administration is determined to employ the most ruthless strong-arm tactics to drive through Congress without alteration the so-called Bretton Woods program, on which hearings are scheduled to begin this week before the House Ways and Means Committee.

For some time past there have been reports that sponsors of this legislation have boasted that they had "greased the wheels" to slide the measure through. Events have shown that such reports were not without foundation. When the House was being reorganized in January membership of the Banking and Currency Committee, according to George B. Bryant, Jr., Washington correspondent of the Wall Street Journal, in a recent dispatch to that newspaper, was selected with unusual care. The five Democratic vacancies on this committee—which

will have much to say about continuing New Deal financial and economic controls, in addition to its international financial plans—were filled with Democrats of the New Deal school, and it was then expanded to include two more. This new committee, which the administration refers to as "streamlined," and Republicans as "stacked," had its trial test a month ago on the George bill, and for the first time in recent years the Democratic Members voted as a unit in opposition to a Republican-spansored measure. Next, when the Wagner-Spence bill, designed to give legislative effect to the Bretton Woods program, was introduced it was revealed that it proposed to finance the initial needs of the monetary fund from the so-called gold profits in the present stabilization fund. Critics of this procedure interpret it as a device for bypassing the Appropriations Committee.

But a more insidious weapon than any of these is the studied effort on the part of the administration to tie the issue of all-or-none accepance of the Treasury program with the issue of isolation. The theme is constantly reiterated that, as Dean Acheson, of the State Department, put it before representatives of 104 national organizations invited to Washington for a pep talk by the Treasury on Wednesday, other nations "would be chilled toward Dumbarton Oaks" if the Bretton Woods "proposals for international cooperation in the financial field" are rejected.

It would be a grave error of Republican leadership to permit itself to be maneuvered into a false position before the public on this measure, for the issue of isolationism here is a synthetic one, created for purely political purposes. The $18,000,000,000 financial set-up which is conveniently referred to as the Bretton Woods program did not emanate with that Conference nor was it drawn up under any authorization from Congress. It was developed out of plans produced by Lord Keynes and associates on behalf of the British Treasury and Dr. Harry White and others acting for our Treasury, and as presented at Bretton Woods represented a tentative agreement among unnamed technical experts of 30 nations. Discussions at Bretton Woods were confined rigidly to this joint statement of principles, and no attempt was made to explore other proposals. Largely because of this limitation on discussion, the delegates were not authorized to bind their respective governments. Lord Keynes himself made this unequivocally clear when he declared:

"We [the British delegation], in common with other delegations, reserve the opinion of our government on the document as a whole and on every part of it. * * * We do not even recommend our governments to adopt the result. We merely submit it for what it is worth to the attention of the legislators concerned."

In other words, the so-called Bretton Woods program was never intended as anything but a starting point for legislative action to achieve the objective it seeks. It is a complete distortion of the facts to imply that any modification of that agreement could be construed as in any sense a repudiation of the achievements of Dumbarton Oaks.

Nurse Draft Bill

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on the nurse draft bill made over the Columbia network in the Congress Speaks series, from the studies of WTOP in Washington, on Tuesday, March 6, 1945:

For a number of months it has been known that the need for more nurses in the armed services was becoming increasingly acute. This situation was brought into the open on January 6, 1945, when the President of the United States sent his state of the Union message to Congress. In the course of his message he said:

"One of the most urgent immediate requirements of the armed forces is more nurses. Last April the Army requirement for nurses was set at 50,000. Actual strength of nurses was then 40,000. Since that time the Army has tried to raise the additional 10,000. Active recruiting has been carried on, but the net gain in 8 months has been only 2,000. There are now 42,000 nurses in the Army.

"Recent estimates have increased the number needed to 60,000. That means that 18,000 additional nurses must be obtained for the Army alone, and the Navy requires 2,000 additional nurses."

This plea for more nurses for the armed services was publicized throughout the entire Nation, and at that time there was available as a reservoir from which these needs could be drawn of some 280,000 registered nurses, and some additional qualified but unregistered nurses. Every paper in the country picked up the cry for more nurses, and some 13,000 inquiries were received by the services within a few weeks after the President's address. Many of the so-called applications indicated that the nurses would not be available for many months and many showed on their face that the nurses were not eligible because of lack of sufficient training or because of physical defects. Out of this great reservoir to date, only 2,000 additional nurses have been obtained, leaving the present needs of the Army at 16,000 nurses and the present needs of the Navy at 2,000 additional.

To maintain the proper standard for nursing, one nurse should have control over not more than 12 patients, but under present conditions, in the continental United States, nurses are required to take charge of more than 24 patients. The great difficulty is, of course, that the number of patients is constantly increasing. As long as this war continues, one of the tragic realities is that our men are going to be wounded and they are going to get sick. Figures from World War No. 1, as taken from the files of the Veterans Administration, indicate that the total number of hospital patients will not be reduced by the cessation of fighting. These figures show, on the contrary, that while the slightly injured soldiers get well and leave the hospitals, unfortunately thousands upon thousands of sick and injured servicemen must be additionally hospitalized as time goes on. Certainly, as long as this war lasts, we must expect additional wounded and sick men to enter our hospitals and require medical attention. The problem is not, then, one which we can hope to see relieved at any time within the near future, even though the war in Europe is successfully ended.

To illustrate what I mean, I want to remind you that we presently have in our service hospitals approximately 500,000 sick and wounded. Of this number some 280,000 are in hospitals overseas and 210,000 are in hospitals in this country. Our hospitalized men are being returned from overseas at the rate of more than 1,000 per day to fill up our hospitals over here; and as a result of this, recently 11 hospital units were sent overseas without any nurses with them. The War Department reports that 3,200 nurses are needed overseas at this very hour to fill up the tables of organization requirements to the full number of nurses needed. If we are to give rest to those heroic nurses who have been working month after month overseas, some for as long as 3 years—and bring some of these gallant young women back to the United States under the rotation policy of the War and Navy Departments, an additional 5,000 nurses will be needed. In other words, at this very hour, in the crisis of battle which is wounding our men and placing them in hospitals both on the Atlantic and Pacific fronts, we need 8,300 more nurses immediately.

My friends, H. R. 2277, commonly known as the nurse draft bill, is due to pass the House of Representatives by a heavy vote tomorrow afternoon. This bill will, in my judgment, cure our troubles and give to us the nurses which our soldiers and sailors on hospital beds need very badly at this moment. This bill provides for the registration, selection and induction of qualified nurses for the land and naval forces. It provides that every qualified unmarried female nurse between the ages of 20 and 45 shall be eligible for selection into the armed services as a nurse. The policy of the War Department is to offer these young women commissions as second lieutenants and of the Navy commissions as ensigns. Salaries and allowances as such will make the pay $2,590 per year.

One of the features of this bill, which must not be overlooked, is the method by which selection shall be made. The Committee on Military Affairs, of which I am a member, realized that while the needs of the armed services are paramount, it is certainly not desirable to disturb greatly the civilian requirements for nurses. With this in mind, the committee wrote into this bill a provision that no nurse shall be available for induction into service if the Procurement and Assignment Service, functioning through its local, State and National Committee, shall have certified that this person is engaged in essential nursing service. These committees are to be civilian committees, composed largely of representatives from the nursing and hospital organizations throughout the United States, and these committees will be located in communities throughout the country. These committees, under the terms of this bill, will decide on what nurses are engaged in essential nursing service, and when this decision is certified to the local draft board, it will have the effect of preventing induction. Persons complaining of the action of one of the committees shall have the right of appeal to the local draft board as provided by the Selective Service Act.

As a result of this arrangement, the necessary requirements in the civilian economy will be fully cared for. No community, because of its patriotism and its desire to serve in this great humanitarian work, will be completely stripped of its hospital and institutional needs. No city or State should suffer a breakdown in operations because of local shortages. Only those nurses who are not essential will be taken from their civilian jobs and be eligible for induction into the armed services.

My friends, we realize further that the Veterans' Administration must not be stripped completely of its personnel. Our wounded and sick come from the Army and the Navy into the veterans' facilities and we have therefore placed this great agency of the Government as second only to the Army and the Navy. Under the terms of this bill, no person shall be inducted from the Veterans' Administration without the written approval of the Director of this Administration who, as you know, is Gen. Frank T. Hines.

The problem of obtaining sufficient nurses for the needs of our armed services is a difficult one; but it is one which must be solved. It is estimated that 27,000 registered nurses may be spared for this purpose without much disturbing the home front. To permit the shortage to continue when our men on 56 fighting fronts of the world are being killed and wounded by the hundreds of thousands is intolerable. Red-blooded,

patriotic Americans will not permit this situation to continue.

I have recently returned, my friends, from an inspection trip to the battlefields of Europe. On this trip, as a member of the Military Affairs Committee of the House of Representatives, I was given an opportunity of seeing the Army hospital facilities of England, France and Italy. Accompanied by other members of the committee, I visited these hospitals, inspected their equipment, discussed their problems with the doctors and the nurses, and talked with the wounded and the sick. I saw the front line first-aid stations, the evacuation hospitals located at convenient distances from the front, the great base hospitals in the rear and even the specialized services hospitals. I saw many types of cases and many types of wounds; and I obtained the viewpoint of those sick and wounded men able to talk and to tell me of their troubles.

At every turn I was told of the shortage of nurses. I was told that if a wounded man reaches the hospital and receives competent medical and nursing care within 2 to 4 hours after being wounded, his chances of recovery are 90 percent. On the other hand, if he does not reach the hospital until 24 to 48 hours after being wounded and does not receive competent medical and nursing attention until this time has passed, his chances of recovery are reduced to 10 percent. Each day that you arise from your slumber in comfortable homes, thousands of miles from the battle fronts, you may know that 1,600 of our men will be wounded in battle and will be rushed to these hospitals. Each day that goes by will see, according to our present figures, 6,500 go to the hospitals from sickness and nonbattle injuries, a total, my friends, to be daily received by our service hospitals of 8,100 cases. It is unthinkable that these should not receive prompt and adequate hospitalization treatment. A failure on our part and a failure on the part of the nursing staff will mean that many men will die each day needlessly as a sacrifice to our failure to provide adequate hospital facilities for them.

My friends, these young women are patriotic. I saw these young women in the hospitals ministering with tender care to the sick and the wounded. I saw them in the operating rooms, the sick wards, and with the perambulator cases. In their white aprons, they moved noiselessly from bed to bed, performing their duties and ministering to the needs of those who called. Long hours and grueling toil over many months are evidenced on tired faces and weary limbs. Ever with sincerity and with earnestness, they enter into the daily cares of the hospital and render a service to their patients, the value of which cannot be estimated in financial worth. Their work is priceless—the result in achievement is little short of miraculous. Americans should be deeply grateful to these young women.

This legislation was approved by every organization of nurses which came before the Military Affairs Committee. It bears the approval of the War Manpower Commission, Selective Service, and it is "must legislation" on the calendar of the War and Navy Departments.

American Tanks

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter written to me by Corp. Rufus E. Webb, somewhere in Germany, and an article appearing in the Stars and Stripes, February 23, 1945, edition:

SOMEWHERE IN GERMANY,
February 22, 1945.

Hon. A. S. J. CARNAHAN,
Member of Congress, Washington, D. C.

DEAR SIR: I am not in the habit of writing to my Congressman, but what I'm writing about means a lot to me. In fact it may mean either life or death.

The reason, or I should say another reason, I'm writing is the fact I read a report one of the Congressmen made that toured the European theaters of operations. The report stated that one of our high-ranking generals said that our American tanks were an equal match for any German tank. As a "tanker" that has seen and been in quite a few battles I know that isn't true.

I am enclosing an article from the Stars and Stripes that tells the story very well. Several of my buddies have commented on it and think it tells all.

My fellow soldiers and I would appreciate it if you could inform your honorable colleagues about how we, the men who fight in the tanks, feel about it.

I am not from the division that is mentioned in the article I am enclosing. I am in the Seventh Armored Division.

I will close now. Thanking you for your valuable time which I have taken.

Sincerely,

Corp. RUFUS E. WEBB.

P. S.—My home is in Flat River. I have a wife and one child at home.

SHELLS BOUNCE OFF TIGERS, VETERAN UNITED STATES TANKMEN SAY

(By Ernest Leiser)

WITH SECOND ARMORED DIVISION, February 22.—They were working on the Shermans, or fixing up the mud-clogged roads, and batting the breeze as they worked. Staff Sgt. Ernest Holland, of Milan, Mo., who's been with the Second Armored for more than 3 years, was saying, "We're just out-tanked and outgunned, that's all. We don't mind the lack of armor on our tanks as much as the lack of firepower. But it's mighty aggravating to let fly with everything you've got and just have the shells bounce off the front of the Jerry tanks.

"We can knock them out with flank shots, but it's tough to do a thing with that snout pointed toward us."

Sgt. John Gorzalski, of Milwaukee, who has had six tanks knocked out from under him, added, "You can't go against a Tiger with a peashooter."

"Don't misunderstand us," said T/5 Francis Griffin, of Philadelphia, bow gunner of Holland's tank. "All we want is a better gun, and we'll be ready to tackle any of them."

Staff Sgt. Raymond E. Kasner, of Rosebud, Tex., who has been a tanker since October 1942, and who was recently made a platoon sergeant as well as tank commander, indicated his boys tackle them anyhow.

MORE GUTS

"We've got more men with more guts than the Jerries," he said, "and no matter what they still get in there and fight."

Kasner figures he's lucky. He's the only tank commander around here who hasn't had at least one tank shot from beneath him.

"Our tank guns just won't penetrate the King Tiger or the Panther from the front," he said, adding, however, that at short range Shermans could stop the Mark IV's even from the front, "provided you get the first shot." He thought that the new 76 millimeter gun was a "step in the right direction."

Corp. Frederick Pape, of Quanah, Tex., agreed that it was rough going up against bigger tanks and better guns—but, he said, "we do it, anyway."

Farther down the road, Capt. James Burt, of South Lee, Mass., commanding officer of H Company of the Sixty-sixth Armored Regiment, was going around taking a look at the tanks and their equipment.

"You know," he said, "our morale would be a lot better if there weren't so many cock-and-bull stories in the papers about how our tanks are world beaters.

"You see, when the layman reads that we've knocked out twice as many Jerry tanks as they have of ours, he doesn't realize that it's not our tanks alone that did the job. It's tanks, plus artillery, plus planes, plus guts."

One tanker ventured the opinion that planes accounted for most of the enemy tanks.

BROAD AND LOW

Burt continued: "We lose four or five tanks, and then the boys on the busted-up tanks have the guts to go out and do it again."

His remedies, like those of his men, were "better guns and thicker front plates." He said, "They tell us we're more mobile than the German tanks, but they can turn on a dime." He added that the Shermans were too high, and that "we need 'em broad and low."

Kasner, one of Burt's platoon sergeants, said it was lucky we have "so many" tanks. "That's the only way we can outmaneuver and flank them. If they'd give me a Mark V, I'd take on any of the bastards."

Finally they got around to talking about the infantryman.

"I'm willing to let the doughs have all the credit for this war, despite our gripes," Holland said. And Staff Sgt. Edward Kunkel, of La Mesa, Tex., summed up the way they all felt: "Even if our tanks aren't up to the Jerries', I'd rather be in one of them than in the Infantry."

The Flag on Mount Suribachi

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, one of the finest pictures coming out of this war is the picture of the United States marines planting the American flag on top of Mount Suribachi on Iwo Jima. It typifies more clearly than words can express the esprit d' corps of the marines and furnishes for all of us a thrilling example of how the Corps always accomplishes its objectives. As Lt. Gen. Holland Smith has well said, "The fight for Iwo Jima is the toughest in the 168-year history of the Marine Corps," but we know and the marines will furnish final proof of that knowledge that Iwo Jima will be taken and one more stepping stone on the road to Japan will be ours.

I should like to see the Treasury Department use this picture as the symbol of the Seventh War Loan drive coming up shortly. If we as a people will show the same determination as these marines we can do our part in keeping the flag flying high at home as they have done

in keeping it flying on foreign battlefields.

One of the five boys shown in this remarkable picture of Mount Suribachi is Louis C. Charlo, grandson of the great Chief Charlo of Nez Perce war fame and son of Mr. and Mrs. Antoine Charlo, of Evaro, Mont. This Indian boy, this real American, is to be congratulated on the part he played in this epic action and we of Montana and the Nation at large pay homage to him for his devotion to duty, his courage and his determination. He is a real marine and as such he has exemplified in action the attributes which have made the Marine Corps the real fighting organization it always has been through all the years of its magnificent history.

Mr. Speaker, under unanimous consent, I am including in the RECORD a short statement concerning Louis Charlo taken from the Daily Missoulian, Friday, March 2, 1945:

ERROR DISGUISES FAMOUS NAME'S PART IN EXPLOIT

An error in one syllable of a name proved an effective if unintentional disguise in an Associated Press dispatch from Iwo Jima last Saturday, and thereby deprived a certain young Evaro marine of immediate recognition of the fact that he had not only distinguished himself, but also shed further glory on a name already illustrious in Montana history. The 18-year-old private, first class, who was headlined as one of the four marines who made up the first group to scale the hard-won peak of volcanic Mount Suribachi, was not somebody named Charles, but none other than Louis C. Charlo, grandson of the great Chief Charlo of Nez Perce war fame, and son of Mr. and Mrs. Antoine Charlo of Evaro.

Private Charlo enlisted in the Marine Corps in Missoula in November 1943 at the age of 17 years, left for boot training in San Diego December 13 of the same year, and has been overseas 7 months.

The Late Senator William M. Calder

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial on the death of the Honorable William M. Calder which appeared in the Brooklyn Eagle on March 5, 1945:

WILLIAM M. CALDER

Former Senator William M. Calder's death leaves a wide gap in the ranks of true Brooklynites of whom it must be said they devote their entire energies to the welfare of the borough. Senator Calder was one of these in the fullest sense. Churchman, public servant, civic worker, and builder, his performance will be long remembered.

In Congress, where he started in 1905, he looked out for the welfare of his district to such an extent that he soon became known as the Errand Boy Congressman. After a long career as Representative he was elected to the Senate in 1915, serving until 1923.

Now, when we know the full meaning of the necessity of having the world's most powerful Navy, it is interesting to recall that early in his political career he advocated just that, saying: "Not for the purpose of national aggrandizement, but for the maintenance of naval stations and naval bases to compel the respect for the flag which has not always been accorded it."

Carbon Black Shortage

EXTENSION OF REMARKS

OF

HON. WALTER B. HUBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Akron (Ohio) Beacon Journal of March 4, 1945:

CARBON BLACK SHORTAGES PERIL WHOLE WAR EFFORT—TIRE CUT-BACKS VIEWED CERTAIN

(By Charles C. Miller)

WASHINGTON.—The Nation's critical carbon black program is so badly scrambled that it seriously threatens United States military operations all over the world.

Other grave consequences of W. P. B.'s failure to gear carbon black production to rapidly expanding military tire production were disclosed by highest Government sources here Saturday night.

They include:

Shortening the workweek in the overloaded tire industry to allow carbon black output to catch up.

Extremely heavy cutbacks in already meager civilian tire production.

Further curtailment in bus and truck tires with serious consequences to the creaking, over-the-road transportation system.

The shortage has been coming on since August. It has been bad since November.

It reached a crisis here last week and boiled over in a series of day and night sessions between representatives of W. P. B., the War Department, War Mobilizer Byrnes' office and everybody else in any way connected with the program.

Some heads may fall. There are plenty of blunt statements in both the War Department and W. P. B.'s Rubber Bureau to the effect that: "They ought to * * *."

Meantime, big question in the industry is, "Who is to blame?"

The answer appears to be the chemicals division of the War Production Board.

W. P. B. Operations Chief Hiland G. Batcheller inferentially put the finger on that division in a statement clearing industry, the War Department, and the W. P. B. Rubber Bureau headed by James F. Clark.

Industry has been calling for carbon black ever since shortages began to build up last summer. W. P. B. pointed out that the War Department's tire needs have rocketed almost week by week since November, but that it is in the clear on stating requirements.

At the same time it was noted that the Rubber Bureau has been on record with requests for expanding carbon black production with each new jump in tire demands.

"Crux of it," Batcheller's office told the Beacon Journal, "is that the chemicals division didn't believe industry, labor, and the Rubber Bureau when they promised to meet every new goal.

"Industry and labor have performed an incredible production miracle. They have completely outstripped supply. It was a question of the rubber team running away from the chemicals team."

As a result of the chemical division's failure to step up production, some of the big Akron companies are already 35 percent short of minimum carbon black requirements for March.

Best opinion here is that the carbon black shortages and Sunday layoffs will cost the Army tens of thousands of top-urgency combat tires.

To offset as much military loss as possible, industry will have to dip heavily into carbon black now going into passenger tires and into tires for farm implements, trucks, and busses.

Some officials think no more than 12,000,000 passenger tires can be built this year. That is 33 percent under 1944's comparative "dribble" of 18,000,000 casings. It might even run to 50 percent.

No production increases in those lines can possibly be scheduled until June or July, when new carbon black plants now being rushed through construction on highest priorities come into production.

Batcheller said that the carbon black shortage "may" force the tire industry back to a 6-day week.

It can be reported here that it "will."

A War Department spokesman expressed outright alarm. He said:

"There's no point in kidding anyone. This hurts and its hurts bad. We need every tire we can get now—even a tire. This is going to cost us tens of thousands of tires. It gives our plans and operations in both the Pacific and European theaters a serious setback."

Army officials are hopeful that Sunday work may have to be discontinued no more than for 3 or 4 weeks. Rubber bureau officials observed, "We'll be lucky if we can go back on 7 days by June."

The Bretton Woods Agreements

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I insert the statement of Hon. Henry Morgenthau, Jr., Secretary of the Treasury, before the Banking and Currency Committee today on the Bretton Woods proposals:

The legislation which you have been good enough to ask me to discuss with you today is perhaps the most important measure for post-war international cooperation yet to come before Congress.

Right at the outset, therefore, I would like you to know that I have examined it just as carefully as I know how, and I am convinced of one fundamental fact. The Bretton Woods agreements are good for every American citizen.

I have been in close contact with every step of their development. I have watched the many months of arduous preliminary work. I have taken part in the deliberations of the conference at Bretton Woods, N. H. I have studied the discussion that has taken place in the 7 months since then. And I can assure you that the program we are advocating is definitely good busines for the United States.

The Bretton Woods agreements, it is true, deal with the rather technical questions of national currencies and international credits. But they present a very simple issue—stability and order instead of insecurity and chaos.

Furthermore, these agreements can be translated into the basic necessities of life

for the American people. They involve jobs and profits. They help determine the fate of both new and old enterprises. They govern the amount of food on the family table, the money for a new radio, school books for the children. Our country has as much to gain, perhaps more than any other, from passage of the legislation now before you.

The Bretton Woods agreements are a firm step toward the solution of two problems which concern the American people more than anything except only the progress of our fighting men overseas. These problems are the organization of world security and the development of the world's resources for the benefit of all its people. Of course, the two objectives are as interdependent as the blades of a pair of scissors. One will not work very well without the other.

Legislation to carry out the Bretton Woods program is the first practical test of our willingness to cooperate in the work of world reconstruction and stabilization. It is also one very important step toward the orderly, expanding foreign trade upon which the future prosperity of our agriculture and our industry depends.

At Bretton Woods, the representatives of 44 United Nations agreed upon the creation of an international monetary fund and an international bank for reconstruction and development. The Members of Congress who were part of our delegation and contributed much to the success of the conference know that there was no trace of partisan politics in our deliberations. Nor has partisanship intruded itself into the issue since then.

We were seeking a solution to one of the world's knottiest problems. Only the good will, good sense, and sincerity of all the 44 nations could have found it. And I am confident that we did find it.

The monetary fund provides machinery for preventing or if need be repairng the dislocation of international exchange rates. Stability in these rates means that all the nations can enter into world commerce without resorting to cutthroat competition. In world trade, such throat-cutting in the 1930's took the form of currency depreciation, blocked funds, import quotas, multiple currencies, and trade preferences. Desperate nations tried to save themselves at the expense of their neighbors. The result was injury to both. The trade of the United States suffered heavily from discriminatory practices of this kind. Our foreign commerce, which had fallen off sharply during the depression, made substantial gains where trade was free, but failed to recover and even lost ground in trade with those countries which had set up monetary barriers against us.

One of the chief contributions to peace that the Bretton Woods program offers is that it will free the small and even the middle-sized nations from the danger of economic aggression by more powerful neighbors. The lesser nation will no longer be obliged to look to a single powerful country for monetary support or capital for development, and have to make dangerous political and economic concessions in the process. Political independence in the past has often proved to be a sham when economic independence did not go with it.

Under the Bretton Woods agreements, both will be strengthened. The smaller countries can come to the international fund for monetary aid and to the world bank for reconstruction and development funds. Loans will be made without political strings and without forcing the borrower into unnatural or undesirable trade relationships.

Therefore, in considering the legislation to carry out the Bretton Woods program, the choice before us is the fundamental one of economic isolationism versus United States cooperation in the rebuilding of a peaceful world. We know that economic security in the midst of political chaos is impossible. But political security in the midst of economic chaos is equally impossible. The Bretton Woods agreements are a part of the over-all program to achieve both political and economic security.

Power politics, in the sense of the bullying of small nations by big ones and of weak nations by powerful ones, has become a term of reproach in the world. The United Nations hope to abolish it from the earth. But power economics may be just as dangerous, for if it is not the root of all evil in international affairs it is at the very least a frequent cause of conflict. The legislation before this committee offers what I am convinced is our best hope of banishing that, too.

Of course, no program that the wisdom of men could devise can possibly prevent a repetition of the tragedies of the thirties unless there is a will to carry it out. Obviously, governments first of all must want to achieve monetary stability. The fact that 44 delegations approved the monetary fund was the substantial evidence of their desire for stabilization. The legislation before your committee is simply the machinery through which that will can be expressed.

The International Bank for Reconstruction and Development is designed to stimulate the reconstruction of war-torn countries and the necessary development in all countries. It is strictly confined to loans for thoroughly productive purposes. It is hedged about with safeguards to insure sound practices. Its functions have been formulated so that private finance will be rather helped than hindered by its operation.

The practical benefits of the program are so great and so obvious that I should like to summarize them briefly. But it must be understood that the success of the Bretton Woods agreements, and the success of any other international agreements or national policies, depend upon other progressive and intelligent measures to insure the economic health of the world.

As an important part of the machinery for establishing peace and promoting a profitable and useful commerce after the war, the Bretton Woods agreements will do or contribute to the doing of these things:

They will offer a medium for stabilizing exchange rates through which the foreign business of American firms can be carried out in an orderly manner and on an expanding scale. Anyone who had to grope his business way through the maze of fluctuating currencies between the two World Wars will appreciate the value of this.

The agreements will be an equal benefit to American companies with branches abroad. In all too many cases in the past, the profits of those branches were frozen. The Bretton Woods program will facilitate the payment of the legitimate profits of American branches abroad by any member nation.

Because it offers a method for stabilizing currencies, the monetary fund is a long step toward eliminating some of the most dangerous restrictions on foreign trade. It removes the excuse for the tangle of import quotas, discriminatory tariffs and other desperate measures which added so many difficulties to the friendly economic relations between nations in the thirties.

The operation of the bank will offer the best protection the American investor has ever enjoyed in the field of foreign finance. The facilities of the bank are to be such that the private American purchaser of foreign bonds will know that impartial experts have considered the purpose of the loan sound. If the bank's own money goes into floating the issue, the loan will also be guaranteed by the borrowing country and by all the resources of the bank as derived from 44 member nations. People who bought certain foreign bonds during the twenties will realize how great a boon this can be.

In effect, the bank discourages the borrowing country from seeking money that it cannot use productively and repay in full. It protects the lender from putting his money into investments that are not sound either because the borrower is over-extended or because the purpose of the loan is not genuinely useful.

In the post-war world there will be many demands for reconstruction and new development which will not offer an attractive return to private finance. Or perhaps they will seem too risky to the private financier. These loans the bank would be prepared to make itself at low rates of interest or to guarantee for the private financing group. The obvious result will be speedier rebuilding of the nations which are America's customers and the development of new resources and new sources of wealth in countries which will be better customers than before.

In short, the whole program becomes the foundation for protection of investors, a program which will encourage productive investments abroad. It becomes the basis for stabilizing foreign trade, which is essential to full production and full employment in the United States.

Of course, that foundation must be built upon. The walls and roof are quite as important. But let us do first things first. The walls will totter and the roof fall in on us unless we have the firm foundation. That is provided in the Bretton Woods agreements and in the legislation for putting them into effect.

I should like to enter a plea here to avoid delay in building our foundation. Time is the most valuable commodity we have. I do not urge haste in the deliberations of this committee or the Congress. I am sure that the more you study the facts the more you will approve of the Bretton Woods proposals. As I have tried to indicate, these are essentially the establishment of stable exchange arrangements for the world's commerce. In my own experience as an advocate of Bretton Woods in these last few months, I have found that an open mind and understanding of the principles of the agreements is followed by approval.

The delay I would wish to avoid is not the delay of full and frank discussion. It is the delay that would be caused by attempting to convene another conference if these agreements should be rejected. At Bretton Woods we had our chance to begin building post-war monetary stability. We made the most of it. But it is unlikely that this opportunity will come again to our generaton.

There is another point even more important, if that is possible. The fate of more than the Bretton Woods agreements hangs upon the action of Congress at this time. Favorable action on the bills before you will provide the most heartening evidence you can give that we in the United States are thoroughly sincere in our devotion to the principles of international cooperation. You will have added deeds to the words of hope which linked the United Nations in a great alliance for peace.

The world security organization which was outlined at Dumbarton Oaks and will be completed, we all hope, at San Francisco needs the Bretton Woods agreements.

We cannot say that we will join the other nations in an organization to maintain peace, but will not help to remove one of the most dangerous causes of war—economic dislocations. We cannot say we believe in cooperation to beat fascism, but will not cooperate in the removal of one of fascism's chief weapons—economic aggression. We cannot say we want equality of all nations and leave some of them at the financial mercy of others.

We are committed by all that we have said and done in these last 4 years to a community of power in the world, not to the irresponsible, unilateral wielding of power. The Bretton Woods agreements offer us the machinery for bringing the strength of 44 nations to the task of stabilizing the media by which peoples exchange their goods, conduct business with each other, and provide for a mutual rise in standards of living.

The men who will follow me in putting this case before you will amplify these arguments. They will give you the whole record, and for my part I am eager that the record speak for us. The facts, all the facts and nothing but the facts are what this committee and both Houses of the Congress will want. Perhaps the most important fact of all is that we are facing one of those critical moments in history to which future generations will look back and say:

"There the world was at a turning point."

The stupendous task for us—for you in the Congress and us in the executive departments of Government—is to act now so that those future generations also will say:

"Thank God, they took the right turning."

The Crimean Conference

EXTENSION OF REMARKS

OF

HON. JOSEPH F. RYTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. RYTER. Mr. Speaker, sufficient time has now elapsed since the announcement of February 12, 1945, of the results of the Crimean Conference to allow for a sober reflection of the results achieved and their implication. With some of the basic results of the conference held at Yalta from February 4 to February 11, there is little serious disagreement. Germany must be fully and completely defeated. Her military power must be destroyed. The creation of a new league of nations whereby peaceful solution of war-producing issues can be settled gives added and new encouragement for a peaceful era. Some assistance in the speedy and victorious conclusion of the Pacific war on the part of Russia is hopefully anticipated. We have reversed our policy of delaying the settlement of political questions until after the war and have agreed to participate in the settlement of political issues as they arise.

The last of these basic results has caused considerable apprehension which is not entirely without merit. We had not only agreed to participate but proceeded to immediately participate in the attempted solution of some of the most vexing problems whose happy solution would have immeasurably contributed to the peace of the world. In this regard a marked departure from the principles of the Atlantic Charter was noted. We have veered sharply from our course Mr. Churchill characterized as the aim of the Atlantic Charter when he said, "The goal toward which the British Commonwealth and the United States mean to make their way."

This goal was urged upon and accepted by all the freedom loving peoples of the world and ourselves as the great objective of the new world order for the successful achievement of which the United States entered into this war. That the Atlantic Charter portrayed our desires was evidenced by the wide and unanimous acceptance given to it by the United States not as a mere aspiration but as an assurance of things yet to come. We continued in our desires and remained steadfast in our convictions that the successful achievement of a permanent peace must rest upon a foundation made solid and secure by the combination of two vital and necessary ingredients, each as equally important as the other, and without the one, the other in and of itself is incapable of securing a permanent peace to the entire world. These two ingredients were a just peace and the establishment of an international agency for the maintenance of a just peace.

Our concept of what was a just peace had been embodied in the principles of the Atlantic Charter which became the battle cry of all the United Nations. In it was embodied the bill of rights of the entire world; in it was the salvation of the entire world. This peace was to be secured by the establishment of an international organization implemented with the necessary force and empowered to take the necessary speedy action to prevent any future disruption of the peace of the world. Toward both of these two essentials we had made notable progress. The first, by the Atlantic Charter and the second by Dumbarton Oaks.

Prior to the advent of Dumbarton Oaks, the entire foundation of the United Nations rested upon the Atlantic Charter. All of the members comprising the United Nations signed a pledge not to negotiate a separate armistice or treaty and this pledge was preceded by a formal adoption and reaffirmation of the Atlantic Charter by all the signatories to the pledge. Since the signing of this pledge and the military successes on the various battle fronts, differences have arisen between the members of the United Nations and these differences became greater and greater until a vast chasm was precipitated by the recent Greek and Polish situations. These differences were so greatly reflected in the Dumbarton Oaks Conference that they presented an insurmountable obstacle to a full and adequate understanding. Such events have greatly disturbed the American people to such an extent that they began to despair whether a permanent peace is attainable.

We have witnessed a gradual and disastrous drifting from our original aims, with the result that our determination for a strong international organization for the maintenance of permanent peace is constantly being weakened. There must be a return to the fundamentals, and the Atlantic Charter and the Dumbarton Oaks must supplement each other.

Gratification has been expressed by an Acting Secretary of State with the Crimean Conference for "its reaffirmation in our faith in the principles of the Atlantic Charter" or, as the communique itself says under the heading "Declaration of liberated Europe," "this is a principle of the Atlantic Charter—the right of all the peoples to choose the form of government under which they will live, the restoration of sovereign rights and self-government to the peoples who have been forcibly deprived of them by the aggressor nations."

Ominous is the silence as to Finland, Lithuania, Latvia, and Esthonia, and most disquieting is the fate of Poland. The unity achieved at Yalta was achieved at a price, and that price was not negligible. The solution of the Polish problem by no stretch of the imagination can be said to accord with the Atlantic Charter. Some may claim minor concessions on the part of Russia to American and British difference. There are to be digressions of 3 to 5 miles in Poland's favor in some regions east of the so-called Curzon line. Hope had been expressed this would be of sufficient latitude to include the thoroughly Polish city of Lwow, but the recent report of Mr. Churchill to the Commons apparently denies any foundation for such hope.

As a further alleged concession the base of the Soviet-sponsored government is to be broadened by the inclusion of democratic leaders from Poland itself and from Poles from abroad. But who are to be these democratic leaders and whose lexicon will be consulted to determine whether they are "democratic" leaders. A gratifying and encouraging aspect is the provision that after the creation of the Polish Provisional Government of National Unity has been formed, there is secured the pledge of "holding free unfettered elections as soon as possible on the basis of universal suffrage and secret ballot." This is indeed at least a recognition of the fundamental right of a free people and one is forced to wonder why similar provision was not made to determine the wishes of the inhabitants of the territory east of the Curzon line and in the Galician area, which was not embraced within the Curzon line and was never under Russian rule prior to the Ribbentrop-Molotov pact. But even here the test is yet to come and future events have yet to determine the final results of this provision.

The disappointments of the conference are bitter and can be offset only by the guaranty that the new Poland will be a great nation and that in the future the United States as well as Great Britain and Russia will join in defending the new borders. For more than 5 years this great nation has expended all its treasure and manhood in resisting the Nazi hordes. It was the first nation to have called a halt to Hitler's demands and to stand its ground and give battle to a vastly superior enemy. For this the freedom-loving nations must be eternally grateful. Once more this great nation has been called upon to make an equally great sacrifice in order to contribute of herself to the peace of the world. We must not fail her again for if we do the future peace of the world, now already precariously in the balance, will be a mocking failure.

Lend-Lease a Tool for Planners

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following article by Edna Lonigan from Barron's National Business and Financial Weekly of March 20, 1945:

LEND-LEASE A TOOL FOR PLANNERS—HELPS WAR EFFORT ABROAD BUT PERMITS NEW CONTROLS AT HOME

(By Edna Lonigan)

Lend-lease voted by Congress to apply direct aid to the war effort of the United Nations has developed into an influence on the internal economy of the United States which goes far beyond the original intent of the law.

Lend-lease is a means of sharing our productive capacity with our allies as we did in the First World War. At home, however, lend-lease is a Government purchasing program with something like $70,000,000,000 to spend.

In 1917-18 foreign Governments received funds outright and bought their own supplies. Under lend-lease foreign governments receive a "book credit" and the American Government buys what they need. This change makes the Federal Executive the dominant influence in markets for nearly all goods and services. And because of the almost complete absence of information about the home aspects of lend-lease, it's almost impossible for Congress or the public to gage the effect on our economic life.

President Roosevelt has said we have abolished the dollar sign in loans to our allies. But we cannot abolish it in purchases on our farms and factories, nor in the value of capital goods acquired by the Federal Government. The true import of the President's statement was that we had abolished all familiar forms of accounting. Instead of following the effects of Federal financing by simple arithmetic, it now is necessary to follow a whole network of legal, economic, and administrative relationships.

ORIGINAL APPROPRIATIONS $69,000,000,000

Lend-lease does not publish the total funds it has to work with. Congress appropriated $24,700,000,000 directly to the President for lend-lease purposes, but that's only a fraction of its working capital. In addition, Congress has authorized transfer from War, Navy, and Maritime Commission funds to the lend-lease account of over $44,500,000,000. Original appropriations thus are somewhere above $69,000,000,000, but allowance also must be made for the fact that lend-lease is a revolving fund. Contrary to congressional rule that all income of Government agencies shall revert to the general funds, to be spent only if Congress approves a new appropriation, lend-lease repayments go back to the appropriation from which they came, so there is no visible ceiling on lend-lease funds.

The lend-lease authority does not report how much of this larger total is spent or obligated. Published reports refer to goods transferred, where title passes to foreign countries. That item now is over $18,000,000,000. But, obviously, lend-lease must have large holdings in partly finished form, and in stock piles. Lend-lease also has many operations that never end in transfers of title. It owns or rents in this country, warehouses, factories, ships, and planes. It transfers supplies across Asia and Africa, and has provided railroads, airports, storage, repair, and assembly plants in many parts of the world. There is a margin of $50,000,000,000 that may be thus accounted for. Congress so far has not been able to get a complete report on these activities.

There is no question in Congress about the full and accurate accounting for such expenditures. Federal accounting procedures are precise and thorough. There is no doubt in Congress that these programs are being administered with brilliant skill and dynamic energy. But they are making great structural changes in the American economy and government, greater than anything required for military purposes. Simple accounting reports of goods transferred give no adequate information by which either Congress or the public can judge such changes.

The difficulties are legal and administrative. The law has been so drawn, and the administrative system so devised, that the lend-lease authority has virtually unlimited powers, and the work of tracing their effects lies completely outside the area of traditional accounting. By simple changes in law and procedure, devices built up over centuries to insure that legislatures shall have full information on executive spending have been sunk without a trace. Creation of new procedures to measure subtle economic and governmental changes is being carried on by Congress under almost incredible handicaps.

HOW LEND-LEASE IS SET UP

The Administration has given a lively account of the work of the Lend-Lease Administration, but that is only a minor part of the lend-lease authority. The Office of Lend-Lease, or O. L. L. A., takes control of goods when they are ready for transfer to other countries. That's merely the final stage of the purchasing system. The real power is in the network of purchasing agencies that buys for it, and the overhead agency that coordinates all the parts.

Lend-lease operations were first organized by Harry Hopkins. Then the Office of Lend-Lease Administration was created, under E. R. Stettinius, and Mr. Hopkins became chairman of the Munitions Assignment Board. This signaled the divorce of the general policy-making powers from the transfer functions of the act. The various procurement agencies became the buying arms of the lend-lease authority, the Munitions Assignment Board became the coordinating agency, and O. L. L. A. became its agent for that part of the program which the public and Congress gave complete assent.

The provision in the law that articles might be bought by the War and other departments and later transferred to lend-lease account is the device which makes the confused network possible. Its effect is to increase Federal purchasing of agricultural and industrial goods above that needed for the armed forces, and to make it difficult to follow what the lend-lease authority is doing.

Administratively then, the lend-lease authority is not a single agency but a congeries of agencies or a kind of governmental "holding company," including the Munitions Assignment Board, the other combined boards, O. L. L. A., the Army Service Forces, the Maritime Commission, the Commodity Credit Corporation and many other Federal agencies using lend-lease funds or powers. The Navy's connection seems to be limited to purchase of petroleum as agent for lend-lease. The recent transfer of O. L. L. A. to the Foreign Economic Administration makes no difference in this network.

The Munitions Assignment Board provides the coordinating function. It directs the flow of munitions, between the armed forces of the Allies and of the United States, and between one theater of war or another. All members of the Munitions Assignment Board are active in the armed forces, except the chairman. On him falls the whole responsibility for the civilian economy. By definition in the Lend-Lease Act, munitions include almost all agricultural and industrial goods. Since the Munitions Assignment Board is an international body it is questionable whether Congress has any authority over it, or whether it can call upon its chairman for information about the large area of lend-lease operations outside the range of Mr. Stettinius and O. L. L. A.

Lend-lease is, to quote Mr. Stettinius, "a claim against a fungible and fluid stream of lend-lease procurement." That is, lend-lease is not an agency, but a process for redirecting a share of all agricultural and industrial goods in the market toward the Federal Government. Meanwhile, Congress can't find out what has been bought, on what terms, or what is being done with it. It cannot get a clear picture of the effect of this purchasing on the free economy, or on the finances of government.

The lend-lease "holding company" buys meat, butter, eggs, tanks, airplanes, machine tools, professional services, and entire industrial plants. Statements that lend-lease transfers only 5 percent of all meat, or 23 percent of all cheese supplies, ignore the fact that only a small fraction of any market is necessary for control. Schacht in Germany and Lenin in Russia realized that control of the comparatively small fraction of the market entering into foreign trade was enough to give the Government control of the whole economy.

SYSTEM RESTRICTS FREE COMMERCE

This new system has serious effects on the freedom of markets. Not only is lend-lease piling its purchases upon those for the military, but the remaining free market thus is much smaller, and less able to bear the wider swings. This administrative purchasing is subject to no price control. It can outbid other buyers. It can pick and choose its firms. Orders are bracketed under "military and lend-lease," so that textiles for African natives receive the preferential treatment designed for blankets for our soldiers in Italy. Lend-lease orders have priorities assigned by the Army for goods which they themselves may be going to use, since allocation takes place only at the final stage.

By its price and purchasing policies, the lend-lease authority can raise or lower the income of sections or industries anywhere in the country.

Lend-lease also has made substantial contributions to the capital and organization of American industry. It has invested money in plant and equipment of Ford, General Motors, Sperry Gyroscope, and many other firms, and in construction of war plants and storage depots in 32 of the 48 States. It is paying for new industrial designs and financing technical and experimental work. "Lend-lease," says O. L. L. A., "played a part in the development of the air ferry route to the Middle East and Russia. • • • helped finance development of docks, warehouses, supply depots, assembly and repair shops throughout the Red Sea-Persian Gulf area; building of pipe lines to carry oil to naval and air bases; the shipment of road-building equipment • • • and rails, freight cars, and locomotives to expand the capacity of primitive railroads."

Some of these capital expenditures are reported by O. L. L. A., but are all of them? Obviously, all are not transferred to foreign ownership. What is the legal nature of the ownership of facilities that remain in Federal hands? If capital facilities are built by the Army under the lend-lease powers, does that give the administration more freedom in disposing of them than if they had been built by the Army for itself? Who owns the new facilities of the Trans-Iranian Railroad? Could American rights in this newly reconstructed road be exchanged for Persian oil wells? If so, who would own the oil wells? And where would the income from these wells go?

No answers to these questions are to be found in Mr. Stettinius' book. But the answers are not military secrets to be kept from the American people because they might be of advantage to the enemy. There is no visible reason why the administration should have gone to such lengths to render obscure what it was doing.

PRESIDENT'S POWERS ALMOST UNLIMITED

Part of the answer is to be found in the powers conveyed to the Executive by the act. Under it the President is authorized to manufacture or otherwise procure any article that he defines as a defense article,

which gives him power to manufacture anything at all, except a few minor luxuries. The original appropriation was for $1,300,000,000, and so the general wording may not have seemed important to Congress, but now, when the appropriations near $70,000,000,000, the importance of the unlimited powers is great. The President also is empowered to lease-lend "or otherwise dispose of" such articles. And the last phrase would cover setting up railroads, air lines, and oil wells in foreign countries without transferring them to foreign governments. Repayment may be in "any direct or indirect benefit" the President approves. The administration, having given tanks to Russia, can take payment in gold, newsprint, shipping services, or articles to be exchanged with Latin America. Thus the Executive was given control not only of all manufacturing but also of post-war foreign trade. When these powers expire, the President still has 3 years to complete contracts entered into before the expiration of the law. The act significally omits any statement about disposal of property left on hand when the law expires which apparently would be subject solely to the control of the President in office.

The President has made no secret of the importance of lend-lease for post-war trade and foreign reconstruction, saying: "The program under lend-lease and reciprocal lend-lease * * * is designed * * * to help lay the foundatons for post-war settlements and international prosperity."

The United Nations Relief and Rehabilitation Administration agreements provide that all purchasing for U. N. R. R. A. is to be done by the combined boards. U. N. R. R. A., like O. L. L. A., will be part of the land-lease "corporation." U. N. R. R. A., like O. L. L. A., will be a distributing agency only. The purchasing function, which affects every farmer, manufacturers, merchant, and investor in the United States, which can make or break any industry or section, will be retained by the lend-lease authority. U. N. R. R. A. is specifically barred from reconstruction activities. After demonstrating a good relief program for a year or so it will give way to the lend-lease mechanism, which now possessses all the powers necessary for long-term industrialization of agricultural nations or reconstruction of backward areas.

The machinery is equally ready for post-war foreign trade. Donald Nelson has described the opportunity for the United States to supply capital goods for Russia, but seemed to think Government supervision would be necessary because American industry would not be willing to trade with Russia, or Russia with private industry. Mr. Stettinius also referred to difficulty in getting industrialists to take war orders for Russia. Both forgot that American industrialists were supplying Russia with capital goods, designs, managers, and engineers through the years of the 5-year plans and that the Soviet Government has been unstinting in its expressions of gratitude. The lend-lease authority has drawn all agriculture and industry into its folds, and many good reasons will be found why the coils should not be unwound.

OPENS ROAD TO POST-WAR CONTROL

There is an inevitable progression in planning, from civil public works to industrial public works, from payments and orders to local civil governments to hire men, to orders and payments to private industry for the same purpose. Only one step must be taken. Civil public works require no market, whereas industrial public works must have market outlets. The Government now is prepared to market products either in post-war foreign trade, in reconstruction, or in domestic programs like food stamps or sewing rooms, with which the relief and agricultural agencies have been experimenting for 12 years.

Briefly, we now have in the larger lend-lease program all the powers and controls necessary for a shift from free markets to governmentally administered economy, and none of it was necessary to aid our allies. Canada has given $1,000,000,000 (equal to $12,000,000,000 for us) to the allies, but Canada made lend-lease an outright gift. Foreign nations knew how much money they would have; they had every incentive to use it economically; there could be no post-war dispute over what had been given and what had been lent; and no difficulties from capital holdings the Canadian Government might accumulate. Whether or not Canada's solution is best, our solution raises questions on which it is imperative to have more light.

F. H. A. Program

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NATIONAL HOUSING AGENCY,
FEDERAL HOUSING ADMINISTRATION,
Washington, D. C., March 6, 1945.

Hon. WILLIAM H. STEVENSON,
United States House of Representatives,
Washington, D. C.

DEAR MR. STEVENSON: Although for obvious reasons during the war emergency the F. H. A. has not made its customary periodical reports to Congressmen and Senators on F. H. A. operations in their States, I feel this practice should now be resumed.

The F. H. A., as you know, operates entirely through the private capital of local financial institutions. It insures the loans these institutions make for property repair and mortgages for the purchase of homes and the construction of new homes.

At the end of June 1944, a total of $31,685,083 lent by these institutions has enabled 83,326 Wisconsin families to maintain or improve their properties, while over 11,846 families have been able to buy or build homes through mortgage loans in the original face amount of $57,358,094.

In addition, 2,495 families of war workers, newly arrived in war congested areas in Wisconsin, have been provided with homes through mortgage loans amounting to over $12,172,250.

These same figures for any specific county or counties are available and I shall be glad to send them to you if you so desire.

The F. H. A. has for over 5 years been paying all operating expenses and losses of its mortgage insurance programs, at the same time adding substantially to its insurance reserves, which now total more than $97,000,000. Losses have been only a fraction of one percent. Likewise, the property repair program is currently paying its own way from revenues derived from insurance premiums and for nearly a year collections on defaulted loans have shown a substantial margin over claims paid.

I am particularly happy to advise you that within 60 to 90 days the F. H. A. will start distribution of mortgage prepayment dividends to 13,000 home buyers who paid off their mortgages in full during the calendar year 1944. These mortgages were in group accounts which had developed credit balances by January 1, 1944. These dividends will range from a few dollars to nearly $200 each.

I am sure you will agree this is a gratifying record.

Sincerely yours,

ABNER H. FERGUSON,
Commissioner.

Filipino Guerrillas Commended

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. STEFAN. Mr. Speaker, under leave granted, I include in my remarks an overseas broadcast made for myself on March 5, 1945:

The steady progress of the campaign for the liberation of the Philippines is due in great measure to the ability of Filipinos and Americans to fight side by side in war as they have worked side by side in peace.

Americans—civilians and members of the armed forces alike—know and appreciate the important contribution to our common cause of the Filipino guerrilla forces. In these groups American-Filipino cooperation has attained its highest degree of efficiency. American fighting men have survived 3 years of Japanese occupation through the sacrifices of Filipinos. In return, the military and technical training of the Americans were put to use by the Filipino guerrillas to build a groundwork for the eventual liberation.

In the preliberation period the Japanese garrisons were kept continually off balance by the swift attacks of guerrilla bolo brigades. Outstanding Japanese offenders were executed. Food and munitions were seized. Prisoners were rescued. Strategically important Japanese documents mysteriously disappeared, only to reappear in allied hands. Key points in the Japanese defense system were destroyed. Concerted attempts at long-term Japanese planning were disrupted.

When triphibious operations were undertaken by Americans against Leyte, Samar, Mindoro, and Luzon, the Filipino guerrillas climaxed their 3 years of uninterrupted conflict with the Japanese aggressor by increasing their usefulness to their American allies. Isolated Japanese garrisons fell before the guerrilla onslaught. There was no security anywhere for Japanese lines of communication by land. The value of the guerrilla knowledge of difficult terrain was matched by their knowledge of Japanese psychology gained through months of bitter experience.

The cumulative combat skill of the Filipino guerrillas, acquired by constant contact with the enemy, is only beginning to pay off in results. Here in the United States, we are cheered by news of such vital guerilla achievements as those in the coastal province of Ilocos Norte where, through successful guerrilla action, thousands of Japanese soldiers have been killed in what the Japanese themselves once considered impregnable mountain fortresses.

Although much has been accomplished toward the complete liberation of the Philippines, much still remains to be done. I have every confidence in the courage, the tenacity, and the fighting ability of the Filipino guerrillas. It is these qualities which will keep them on the alert until, through our common effort, the last Japanese is driven from the soil of the Philippines.

President's Speech Before Joint Session of Congress Well Received

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article entitled "Pin All Hopes on Roosevelt," by Robert L. Norton, which appeared in the Boston Sunday Post, March 4, 1945:

PIN ALL HOPES ON ROOSEVELT—AMERICAN PEOPLE CONCERNED OVER HIS HEALTH—CONGRESS LIKELY TO BACK MAJOR PEACE PLANS

(By Robert L. Norton)

WASHINGTON, March 3.—The joint session of Congress which met to receive the report of the President, was as much concerned with how Mr. Roosevelt looked as with what he said. In fact, when Members were asked to comment on the President's address, invariably, they evidenced the keenest interest in his physical appearance.

It was apparent that the President was conscious of their close inspection. Since he referred to his shedding of 10 pounds of steel braces and took occasion to mention widespread rumors as to the condition of his health, asserting with a smile that he had not been ill and that he was feeling fit, refreshed and inspired. It is not to be denied, however, that the consensus of opinion among the Members was that the President looked thin and tired and that the old-time ring in his voice was missing. For the first time, in any public speech, the President referred to his physical condition.

The general tenor of the remarks confirmed our own observation. But it is not to be wondered at that this is the case, considering the tremendous burden of the responsibility which he is carrying and the physical hardships imposed by a 14,000-mile trip.

HAS BOUNDLESS COURAGE

The matter of the President's health is of vital concern to the American people and to millions of other peoples throughout the world, whose hopes of ultimate peace and some measure of security in their lives rest upon his potent leadership. Rather than have hundreds of false rumors bandied about the country, it should be understood and emphasized that on the assurance of Vice Admiral McIntire the President is in "tip-top" physical condition. This is the answer which has been made to the solicitous inquiries of the President's closest friends and the leaders of his party in Congress, and it has been confirmed by Mr. Roosevelt himself.

There is a unanimous tribute on all sides to the magnificent physical courage of the President, which is well justified. He radiates cheerfulness and a buoyancy of spirit over the accomplishments of the Crimea Conference.

REPORT WELL RECEIVED

On the whole, the President's report was well received by Congress. There was, of course, the usual criticism, some sour and some sincere. Not a few Members thought the report lacked in detail, by comparison with the report of Mr. Churchill to the British Parliament. Others were disappointed over the lack of information about the voting powers of the Big Three in the preliminary agreements at the Dumbarton Oaks Conference.

But it was promised by Mr. Roosevelt that the procedure of voting in the security council would be announced within a short time and that this agreement, founded in justice, will go far to assure international cooperation in the maintenance of peace. It was largely a matter of legislative procedure, the President said.

VOTING FACT VASTLY VITAL

It is likely that whatever may be the announced terms of the voting agreement, it will be seized upon by the noninterventionists in Congress as a controversial point. And also, whatever the agreement, it will be highly important in determining the future course of the United States when peace is threatened by an aggressor, more particularly if, sometime in the future, that aggressor should happen to be one of the more powerful nations. Upon this voting agreement depends the action to be taken by this Government in the use of our armed forces in Europe, or elsewhere to preserve the peace. Virtually what is involved is a declaration of war.

The terms of this voting agreement will also play a large part in the decision of Congress as to whether in case of aggression our armed forces may be ordered to the field of action by the President without reference to Congress or whether the constitutional provision that only Congress shall declare a state of war will be observed.

ONE GREAT ADVANTAGE

It is bound to be a bone of contention in Congress as was article 10 at the Versailles peace conference. President Wilson was never able to convince the opponents of the League throughout the country and in Congress that the United States could not be outvoted in the council of the League by Great Britain and her dominions. The battle in the Senate turned on this issue finally and it resulted as much as did anything else in the rejection of the treaty.

As the President points out, however, this time there is the great advantage of attempting an agreement upon the terms of the peace structure in advance of the defeat of Germany.

World War No. 1 came to an end without a clear-cut commitment from our Allies. And thereafter there was a series of compromises which whittled away at the original objectives of the league.

HOW WILSON LOST PRESTIGE

In his book The Time for Decision, former Under Secretary of State Sumner Wells recalls: "One of the chief reasons for the compromises which President Wilson felt obliged to accept at Paris was the fact that the United States had made no effort to reach any prior understanding with its allies on political and territorial problems."

And it is a matter of recorded history that on September 3, 1918, Colonel House, as Mr. Wilson's personal representative at the peace conference, wrote the President: "As the Allies succeed, your influence will diminish. This is inevitable. By the time of the peace conference you will be nearing the end of your second term (regarded as automatic retirement in those ancient days) and this too will be something of a challenge to those, both at home and abroad, who have the will to oppose you. Therefore, I believe that you should commit the Allies now to as much of your program as is possible."

CONCILIATORY ATTITUDE

Mr. Roosevelt told Congress that "this time we shall not make the mistake of waiting until the end of the war to set up the machinery of peace. This time, as we fight together to get the war over quickly, we work together to keep it from happening again."

The attitude of the President toward Congress was plainly conciliatory. He reminded the Senate that he was well aware of the fact that the charter of the peace to be agreed upon at San Francisco must be approved by a two-thirds vote and said that he spent a lot of time explaining this constitutional limitation to both the Russians and the English.

Seeking the approval of the Senate the President stressed the fact that both parties were equally represented at the San Francisco conference. He remarked that Republicans as well as Democrats wanted peace and that world peace is not a party question, any more than a military victory.

COMPARISON OF REPORTS

It is interesting to compare the reports of Mr. Churchill and Mr. Roosevelt. There was biting comment in Congress that Mr. Roosevelt's report smacked somewhat of a travelogue and was far less informative on a number of political questions than that made by the British Prime Minister. But a close reading of the main points of both speeches shows that there was entire agreement and a remarkable unanimity of viewpoint on all of the important issues which have been raised thus far.

The Polish settlement, more than any other action taken by the Big Three, has aroused criticism in Congress and expression of the opinion that the agreement was violative of the spirit as well as the letter of the Atlantic Charter.

SALIENT PARAGRAPHS COMPARED

Let's contrast, or rather compare, salient paragraphs from the two leaders affecting the agreement. Thus both agreed that it was a compromise. Said Mr. Roosevelt:

"The decision with respect to the boundaries of Poland was a compromise, under which, however, the Poles will receive compensation in territory in the north and west in change. Our objective was to help create a strong, independent, and prosperous nation with a government ultimately to be selected by the Polish people themselves. To achieve this objective, it was necessary to provide for the formation of a new government more representative than had been possible when Poland was enslaved. Accordingly, steps were taken at Yalta to reorganize the existing provisional government in Poland on a broader democratic basis, so as to include democratic leaders now in Poland and those abroad. This new, reorganized government will be recognized by all of us as the temporary government of Poland. However, the new Polish government will be pledged to a free election as soon as possible on the basis of universal suffrage and a secret ballot. I am convinced that the agreement on Poland, under the circumstances, is the most hopeful agreement possible for a free, independent, and prosperous Polish state."

CHURCHILL FAR MORE MILITANT

Mr. Churchill was far more militant in defending the attitude of Russia toward Poland, however, than was Mr. Roosevelt. Thus the British Prime Minister pointed out that "but for the prodigious exertions and sacrifices of Russia, Poland was doomed to utter destruction at the hands of the Germans. Not only Poland as a nation and a state, but the Poles as a race were doomed by Hitler to be destroyed or reduced to a servile state."

Mr. Roosevelt conceded a compromise on the Polish settlement. Mr. Churchill denied "a questionable compromise," stating: "In supporting the Russian claim for the Curzon line I repudiate and repulse any suggestion that we are making a questionable compromise or yielding to force or fear, and I assert with the utmost conviction the broad justice of the policy upon which for the first time, all the three great Allies have now taken their stand.

FERVENT TRIBUTE TO RUSSIA

"Three and a half million Polish Jews are said to have been actually slaughtered. It is certain that enormous numbers have perished in one of the most horrifying acts of

cruelty which have ever darkened the passage of man. When the Germans clearly avowed their intention of making the Poles a subject and lower-grade race under the Herrenvolk, suddenly, by a superb effort of military force and skill, Russian armies in little more than 3 weeks have advanced from the Vistula to the Oder, driving the Germans in ruins before them and freeing the whole of Poland from the foul cruelty and oppression under which the Poles were writhing. But for the prodigious exertions and sacrifices of Russia, Poland was doomed to utter destruction at the hands of the Germans. Not only Poland as a state and nation, but the Poles as a race were doomed by Hitler to be destroyed or reduced to a servile state."

CHURCHILL FRANK ABOUT ISSUE

Mr. Roosevelt was silent over the objections of the provisional Polish Government in London while Mr. Churchill took it to task in no uncertain terms. "There would have been no Lublin provisional government or Lublin committee if the Polish Government in London had accepted our faithful counsel of a year ago. They would have entered into Poland as its actual Government. They would have entered with the liberating armies of Russia. But these opportunities were cast aside and meanwhile complete expulsion of Germans from Poland had taken place.

"I decline absolutely to embark upon a discussion about Russian good faith. It is quite evident that these matters touch the whole future of the world. Terrible, indeed, would be the fortunes of mankind if some awful schism arose between the Western democracies and the Russian people, if all future world organizations were rent asunder and a new cataclysm of inconceivable violence destroyed what is left of the treasures and liberties of mankind."

QUESTION OF RUSSIA AND JAPAN

Mr. Roosevelt's report was the more concise. It contained all the essential facts of the agreement at the Yalta conference but left out other discussions, as for instance the entrance of Turkey into the war, and its significance. As usual Mr. Churchill was superbly eloquent. He touched on the Italian situation which Mr. Roosevelt hardly mentioned.

One got the impression from Mr. Roosevelt's speech that he was only intent upon hitting the high spots. Both men insisted that France had been fully recognized in the future conduct of Europe, even although De Gaulle had not been invited to the conference.

Of course, the great question in the minds of Congress and the American people is whether Russia will join in the war against Japan. There was nothing in the statements of either Mr. Roosevelt or Mr. Churchill to indicate if this had been a subject of discussion with Stalin.

There was, however, little complaint on this score here since the general feeling of Congress is that any action by Russia must of necessity wait upon the defeat of Germany.

Little question is left but that today, in its present temper, Congress is disposed to back up the President on the great objectives of the San Francisco conference. But plenty of obstacles remain to be overcome before the world organization is formed.

It was thought by some members that the President would take up the matter of manpower in his address since he is known to be dissatisfied with the confusing report of the Senate committee and inclined to the May bill, as passed by the House. Pending the holding of the peace conference at San Francisco, which the President plans to attend personally, numerous domestic issues will engage his attention, as for instance, the program for taking care of post-war unemployment and the whole matter of rationing, prices, and war production, affected by a score of pending bills.

Following his plan to cooperate with Congress the President plans a conference of leaders of both parties, likely to be held Wednesday of this week.

Government Waste of Paper

EXTENSION OF REMARKS
OF
HON. SHERMAN ADAMS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. ADAMS. Mr. Speaker, the production of paper appears on the most recent list of critical occupations compiled pursuant to Executive order by War Manpower Commission. For some time the production of logs and lumber has been considered one of the most critically important occupations in the country. To the list of occupations in wood consuming industries has now been added the production of paper.

We have been spending publicly and privately huge sums to stimulate the production of wood, from which most paper is made. Yet, in spite of dwindling pulp-wood piles, drastic shortages of pulp and the resulting critical paper supply situation, the colossal waste of paper in this country goes on. The responsibility for a great share of this waste is right here in Washington. I received yesterday a 32-page bulletin of the Department of Agriculture, No. 882, dated January 1945, entitled "South American Leaf Blight of Hevea Rubber Trees." It is printed on an excellent grade of coated paper, and is profusely illustrated. The bulletin was sent to me not by the Department of Agriculture, but by a constituent in New Hampshire who received it unsolicited. I have no doubt that the contents of this publication are of great value to those concerned with the growing of rubber. However, the sending of such material, unsolicited, into States where the subject matter is of little, if any, concern is inexcusable in these times.

Illustrative of the harm which such waste does to our productive effort, I include a letter from Mr. Andrew Felker, commissioner of agriculture of my State. No one in New Hampshire has labored more industriously to maintain high-production levels of commodities essential to the conduct of the war. This letter is an able commentary upon the waste of vitally needed commodities by agencies of Federal Government:

STATE OF NEW HAMPSHIRE,
DEPARTMENT OF AGRICULTURE,
Concord, N. H., February 28, 1945.

Hon. SHERMAN ADAMS,
House Office Building,
Washington, D. C.

DEAR MR. ADAMS: I am sending to you under separate cover a copy of the Southside Virginia News, special number bringing forth the idea that we are so short of paper this entire issue is published for the purpose of promoting the cutting of lumber, pulp especially. You know what the tremendous effort is in New Hampshire, and New England followed suit. We are turning heaven and earth in response to the appeal to get out pulp. You know even better than I.

With this paper I am sending you a copy of a United States Department of Agriculture bulletin. In the first place do not slip on it. You are liable to slip and even break a leg or your neck, and none of us up here in New Hampshire want that to happen. That emphasizes the quality of the paper. Second, look at the title. The information may be worth a lot in South America or in some sections of the United States or Mexico where Hevea rubber trees may be planted and grown, but Henry Ford and some of the others have not succeeded yet in growing in this country large commercial orchards of rubber trees. I am assuming that copies of this bulletin have been made available in large quantities throughout the United States. If this was the only bulletin of similar nature that was coming to my desk and the desks of others up here, we would not think so much about it, but every morning the mail brings to my desk many of these bulletins. I wonder a bit about what some of the other men think, who are trying to get our farmers to cut trees from which paper may be made to meet the great emergency, whether the United States needs to waste it faster than we can produce it. These bulletins and hundreds of others are not worth the paper it is printed on for the use of such men as myself interested in doing all we can to win the war by saving paper and lots of other things. I do not suppose there is any way to cut out this huge waste, but I am telling you how I feel about it. The paper just goes to show how all of us everywhere are struggling to meet the demands to produce for the war.

Yours truly,

ANDREW L. FELKER,
Commissioner.

Portion of Article To Appear in Encyclopedia Americana on Cartels

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. VOORHIS of California. Mr. Speaker, special permission has been given by the Encyclopedia Americana to the author of the article on cartels which is shortly to be printed in Encyclopedia Americana for its inclusion in the CONGRESSIONAL RECORD. The author, Mr. Howard W. Ambruster of Westfield, N. J., has suggested to me that it be placed in the CONGRESSIONAL RECORD and since there is so much discussion of the problem of cartels and so much need for a clear understanding of just what that word means, I am asking consent to include with my remarks on three occasions portions of Mr. Ambruster's article.

It is understood that this material cannot be reproduced except by special permission from the Encyclopedia Americana.

There follows the second portion of the article:

SINCE THE 1870'S

The beginning of the era of the modern Kartell in Germany appears to have occurred during the years of economic depression in the 1870's. The development of large-scale corporate production in industry was then taking place, and in the United States the counterpart of this German form of integration of industry took the form of mergers, combinations, and trusts. In each case the purpose was to restrain competition. German coal, iron, potash, paper, and other basic industries were among the first to be cartelized. In the half century which followed there was hardly a crude material or manufactured article, the producers of which did not participate in national or international cartels, or in trade associations, syndicates, or private treaties which were based upon the theory of the cartel. It is not possible to determine the exact number of either the domestic cartels in any one nation or of the international cartels which have been in existence at any time since their origin. In Germany various authorities have estimated the numbers of industrial cartels to have been as follows: Four in 1865; 70 in 1887; 143 in 1895; 300 in 1900; 600 in 1911; 1,500 in 1924; 2,100 in 1930. A German Government estimate in 1925 gave the total number of cartels in that country as 3,000, of which 2,500 were industrial; 400 wholesale and 150 retail.

PRODUCTS CONTROLLED BY INTERNATIONAL CARTELS

Among the natural products and fabricated substances of articles which have been cartelized by some type of international agreement are such basic materials as coal, coke, rubber, borax, tobacco, leather, glue, oils, fats, diamonds; all of the essential industrial metals and their alloys; numerous fabricated metal products and machinery; many important chemicals and manufactured chemical products, both organic and inorganic, including explosives, dyestuffs, pharmaceuticals, and agricultural chemicals; glass products and ceramics; wood pulp and paper; textile fibers and fabrics; foodstuffs such as sugar and wheat; manufactured industrial products including railroad cars and household appliances. Also such services as ocean shipping rates, marine insurance, cable and radio transmission, distribution of motion-picture films.

INCREASE OF INTERNATIONAL CARTELS SINCE THE FIRST WORLD WAR

Prior to the First World War some 114 international cartels were known to exist but in the era of cartel expansion which followed this war these international associations increased in such endless variety that it is impossible to estimate their number.

As compared with the trust or combine the international cartel is a protean, almost shapeless structure which at times may not be recognized as such. Nor can it be comprehended through presentation of a diagrammatic chart or formula except one which could depict a myriad of devices by which world supply and distribution of any single commodity, or of a tremendous number of materials, supposedly produced by independent enterprises, are secretly controlled by a single directive privately administered. Such cartels usually originate with a relatively simple alliance of a few competing firms, operating in only a limited territory. But the purpose and the scope invariably reach out, the cartel grows and grows, and if the accomplishment of its greater purpose may so require, the penetration proceeds beyond the industry itself into an effort to influence the social, financial, and governmental structures of each country in which it operates.

For example, such international cartels as those which dominated the world's supply of crude rubber, quinine, and tin prior to the Second World War are frequently cited as collective private monopolies of vital necessities affecting transportation, health, housing, and food conservation. The United States had no domestic supply of these commodities, whereas the private owners had the open or tacit assistance of their own governments in exacting at times exorbitant prices which unduly restricted the quantities of these products available during peacetime for the United States and other countries.

In the case of rubber, excess cultivation was regulated so rigidly in producing countries that exportation was forbidden of any leaves, flowers, seeds, buds, twigs, branches, roots, or any living portion of a rubber plant that might be used to propagate rubber. Restrictions on the cultivation of cinchona bark, for quinine production, were also severe, and the world consumers of tin were dependent upon arbitrary releases from an international pool at fixed prices.

Of a very different character, the international aluminum cartel, founded originally on the basis of a patented process and regrouped later without the participation of the United States, was held together by close cooperation of its members in the control and allotment of the raw materials and power required for production of the metal and a rigid division of markets.

In finished manufactured products an example frequently cited is the international incandescent lamp cartel which associated 42 companies located in various countries of North and South America, Europe, Asia, and Australia, all operating under cross licenses of patents through leadership of the International General Electric Co. of New York.

GERMAN DYE TRUST, THE SUPER CARTEL

Unquestionably, the best illustration of the gradual emergence of the super world cartel with all of its manifestations is the Interessengemeinschaft Farbenindustrie Aktien-Gesellschaft (which literally translated means "community of interests in the dye-manufacturing companies"), commonly known as I. G. Farben, or the German Dye Trust. This combination was organized in 1925 and 1926 under the direction of 2 leading German chemists, Dr. Carl Duisberg and Dr. Carl Bosch, as a merger of 13 key firms making dyes and chemicals, most of which had been tied together previously, in 1919, as I. G. Dyes, Inc.; in 1916 as a single cartel and in 1904 in 2 smaller cartels. Those 2 original cartels were composed of 6 of Germany's oldest coal-tar-dye companies which dated back almost to the middle of the nineteenth century. The I. G. Farben merger with assets which totaled over 2,000,000,000 reichsmarks (about $500,000,000) within 3 years of its formation, brought under 1 control large productions or the essentials of monopoly in Germany of coal-tar dyes and intermediates; atmospheric nitrogen, war explosives, and commercial powders; heavy chemicals, acids and electrochemical products, fertilizers, and insecticides, pharmaceuticals, cosmetics, rayon, and synthetic plastics, photographic supplies and films; synthetic petroleum gasoline, rubber substitutes, copper, magnesium, aluminum, and several of the precious metals with their alloys; coal, lignite, and fuel briquets; along with a vast number of other products, the total of which constituted a large segment of the necessities of national welfare in peace and for munitions of war. The predecessors of I G. Farben had long exerted a great power in Germany both before and during World War No. 1. When formed, this giant trust became overnight the largest corporate structure in Germany. In addition to 100-percent ownership or stock control of some 50 different concerns, I. G. Farben acquired large blocs of stock which amounted to management control of another half hundred established companies. This trust was also a domestic factor in no less than 70 cartels, each of which included independent makers of 1 or more of its products.

I. G. Farben was also tied in with the second largest combination in Germany, the Vereinigte Stahlwerke, or United Steel Works; by ownership of a large block of the latter's securities, having representation on its board; and sharing ownership of the soft coal and steel combine known as Rheinische Stahlwerke. The United Steel Works was put together in 1926 by Fritz Thyssen with an original capital of 800,000,000 marks, as merger of his own iron and steel interests with those of Hugo Stinnes and several others which were in financial difficulties. It included coal, coke, iron ore, pig iron, steel and fabricated products such as machinery, bridges, and ships, etc., and controlled from 40 to 50 percent of the German output of these products, thus becoming the leader of the country's heavy industries over the Krupp interests.

The various iron and steel industries in Germany had been among the earliest to be cartelized and most of the producers of heavy steel products had been brought into one cartel, Stahlwerksverband, in 1904; this lapsed during the First World War and was reorganized after the war ended. In 1924 the steel ingot cartel, Rohstahlgemeinschaft, was formed to include about 94 percent of the German steel ingot output. Each branch of the industry had its separate cartel and Thyssen's new trust along with the other larger producers belonged to practically all of these associations.

In 1926, I. G. Farben, through existing arrangements of firms taken into it, was already a member of numerous international associations and agreements including the aluminum cartel; and then began an expansion of its foreign activities in Europe, North and South America, and Asia. No single great international chemical cartel was formed as such, but rather I. G. Farben, as the world's largest single entity in the chemical industries, became the dominant party in countless production and marketing agreements, patent licensing and trade-mark tie-ups, and other cartel alliances arranged by Dr. Duisberg and Dr. Bosch with individual companies, small groups, or domestic cartels in other countries. Concealed and open ownership of foreign subsidiaries formed an important phase of this super-cartelization of the world's chemical and allied industries.

At the same time I. G. Farben's associate in the steel trust, Fritz Thyssen, was organizing the International Steel Entente which was signed up in September 1926 by German, French, and Luxembourg producers, replacing former international understandings and eventually taking in all of the principal iron and steel interests of continental Europe outside of Russia.

There is thus presented in brief outline the picture of how a great number of legally independent German enterprises, some of them organized during the first half of the nineteenth century, were repeatedly tied together, some in small cartels, some in small mergers, then in larger cartels and larger mergers, until at the beginning of the decade prior to the Second World War they had become integrated in two gigantic mergers—chemical, heavy industries, and munitions—which were tied together themselves and, variously, were also tied into countless other domestic and foreign companies through national and international cartels and subsidiaries, and extended into almost every nation of the world. In industry, finance, and political power, the leaders of the I. G. Farben group dominated Germany and also wielded tremendous influence in other countries, including their opponents in the First World War—the United States, Great Britain, and France.

Many authorities agree that in the exercise of illegitimate power through cartel affiliations these German industrial leaders played an all-important part in the downfall of the Weimar Republic, the accession of Hitler and the Nazi Party to active control of the Ger-

man state; and the rearming of Germany before and during the Second World War. Several of these leaders, including Duisberg and Bosch, had occupied important official positions in the Kaiser's war set-up during the First World War and had continued their political activities from the earliest war period. Dr. Bosch became a member of the Reichstag and, until he died in 1940, occupied a high place in the Hitler government. Dr. Hermann Schmidt, another chairman of the Farben board, was also a member of the Reichstag. Thyssen, until he publicly broke with Hitler, was highly influential in the affairs of the state.

As an example of how this influence was exerted, another member of the board of I. G. Farben, Dr. Clemens Lammers, had become a member of the Reichstag during the early days of the German Republic and, as such, played an important part in the World Economic Conference held by the League of Nations at Geneva in 1927 when he represented Germany and was delegated to advise the conference on the status of cartel legislation in different countries. Dr. Lammers presented to the conference a set of guiding principles concerning cartels in which among other dicta he alleged that the foremost purpose of cartels was in lowering costs and improving products; that legal cartel control existed in only a few countries; that the international cartel, as an expression of cooperation among nations, should be voluntary; and that efforts to interfere with the operations of cartels by means of an international court were unwise. Dr. Lammers also advocated the education of public opinion that cartels were indispensable for the general welfare of the masses and urged that America should shape its measures pertaining to international cartels accordingly.

Demand had been made that the League of Nations, through this World Economic Conference, should provide a solution for the problem of privately directed international cartel activities, but the delegates appeared to accept Dr. Lammers' advice by rejecting establishment of international control as having no prospects, also by reporting that cartels were a phenomenon arising from economic necessity which might benefit both workers and consumers.

As an aftermath of the far-reaching penetration of the super-cartel group into German economy and government, the integration of the dye and steel trust activities with the Hitler regime in the guise of government control progressed rapidly during the years immediately preceding the Second World War. The Thyssen interests were more or less absorbed by the Hermann Goering Iron Works combination and, after the conquest by Hitler of other European countries, another manifestation of the progress of international cartelization occurred when I. G. Farben and the Reichswerke Hermann Goering began merging in their own corporate structures the independent companies of other countries which during the pre-war period had voluntarily become members of the cartels dominated by the Germans.

AMERICAN PARTICIPATION REVEALED

Meanwhile in the United States in 1936, the Senate Committee on Investigation of the Munitions Industry listed over 400 international agreements in the chemical field, most of which were tied indirectly or directly with I. G. Farben. This Senate committee, describing some of these agreements as cartel arrangements, stated that they were a threat to the military safety of the United States because of information relative to munitions which thus became available to foreign governments, and because of the effect of such economic relations upon the policy of governments.

With the beginning of the Second World War the United States Department of Justice began a series of investigations into the activities of I. G. Farben and other international cartels in this country which resulted in numerous indictments, informations, civil complaints, and consent decrees, charging conspiracies in restraint of trade, to violate the Sherman Act of 1890; the antitrust amendments of the Wilson Tariff Act of 1894, and the Clayton Act of 1914. In over 25 of these prosecutions I. G. Farben, its American subsidiaries, and certain of their executives were named as defendants or coconspirators, or as involved in some activity complained of. More than 50 of the leading American producers of chemicals, oil, and allied materials, with numerous individual executives, were also accused, along with an even greater number of foreign companies located in North and South America, Europe, and Asia. The actions variously complained of included the usual types of cartel regulations such as division of world markets, restriction of imports and exports to and from the United States, limitation on American production, price fixing, use of exclusive selling agencies, pooling of profits and of patents and processes. Concealment by I. G. Farben of ownership of some of its subsidiaries was also charged.

The products included in these agreements in which I. G. Farben was thus involved with American companies included substantially all kinds of chemicals, dyestuffs, nitrogen fertilizers and explosives, oil products, magnesium, synthetic rubber, pharmaceuticals, plastic airplane glass, titanium, and a long list of other products made from chemical bases. Some of these court actions were concluded during the progress of the war with fines totaling over $250,000 and consent decrees signed by American defendants; others were postponed for the duration of the war.

A criminal prosecution resulting from an antitrust investigation was brought against the head of Chemnyco, Inc., one of I. G. Farben's American subsidiaries, for destroying records of the company which had been subpenaed by a grand jury. This resulted in a plea of guilty and a fine of $1,000, the defendant, Rudolf Ilgner, being a brother of the head of I. G. Farben's secret information bureau in Germany. Numerous other relatives of I. G. Farben executives were involved in these antitrust cases as officers of American companies.

Investigations by several other United States Senate committees while the war was in progress revealed voluminous data relative to the activities of I. G. Farben and other international cartels in the United States, and charges were publicly made that such arrangements had resulted in control and shortages of essential war materials; also that vital military information had been thus sent abroad, and espionage and sabotage facilitated. The Alien Property Custodian in 1942 seized several subsidiary companies and thousands of patents as properties of I. G. Farben. All of these incidents involving this supercartel prior to or during the Second World War were similar in many respects to incidents of the First World War which involved activities in the United States of the predecessors of I. G. Farben, then known as the German dye cartel.

America's Foreign Policy

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, March 8 (legislative day of Monday, February 26), 1945

Mr. BUTLER. Mr. President I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject of America's foreign policy, delivered by me over radio station WRC, Washington, D. C., on March 2, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, ladies and gentlemen of the radio audience. First, I want to thank the National Broadcasting Co. for making its facilities available so that we might think together tonight on a subject of vital importance to all of us—the subject of America's foreign policy.

The subject of foreign policy is a big one. It is bigger than any man, any group, any State. It is a subject that should have the earnest consideration of persons in our Nation, or any nation. It reaches into the White House. It reaches into the miner's cabin. It reaches out to every farm, to every factory, to every field.

Every citizen has to contribute to the total war effort. In a very real sense, the action of every American determines how the war will go. Likewise, in just as real a sense, every one of us has a responsibility in determining the peace. Every one of us has a stake in the peace just as every one of us has a stake in the war. The outcome of what we—you and I and every American—think and do in the coming days will determine the very future of our own families.

Foreign policy, I reiterate, is not a subject to be shunted off on a few experts in the Department of State in Washington to worry about. It is not something that we can shove onto the shoulders of the President of the United States, whoever he may be or however strong his shoulders. It is not something that can be made to read pleasantly simply by letting a so-called authority reach into a file case and bring forth a mimeographed answer that is correct to the last word.

No, my fellow citizens, our foreign policy today and tomorrow is a problem for you as well as for your elected officials, regardless of party. We must wage peace, as we are waging war, through the participation of every man in this Nation.

If we are going to wage peace successfully, we must be sure that we develop in advance the best possible machinery for that purpose. When America set out to arm for this global conflict, every facility needed was available in full measure. American labor, American management, and American materials put into the field the greatest quantities of war material ever imagined possible. We could do that because we had a good system, which was and is working pretty good despite a lot of tinkering.

Now what can we—you and I and every American—do to make a system that will bring us a just and lasting peace? I do not come to this microphone tonight with any idea in mind that I know all the answers to all the pressing national and international problems that face us.

I regret that I do not have a specific program that I can unveil to you and claim that it is the perfect program. No man could come to you with such a program tonight. There simply is no such program in existence.

There is no man on the national scene—no; not one—who can claim that through the years he has been both omniscient and prescient in foreign affairs.

I repeat, I have no particular program, but I do have some ideas and I have some ideals concerning the type of peace we should make and the kind of thinking we must do, as a people.

First, I believe history has proved that the American people—in the long run—do not like secrecy in foreign affairs. I realize, as well as anyone, that the State Department cannot afford to issue a news release every

time some new industry in a foreign country wants to get an export or import license. I realize that certain exploratory talks might be made in confidence, until some definite proposals or agreements are under discussion. But I believe that on the important things, such as the determination of our long-term agreements with other nations, the American people have a right to know exactly what is under consideration. They have a right to know details.

The American people can take good news and bad. Experience has shown that they can be calm in the face of the greatest of dangers. So I condemn, for the people and in their name, the secrecy that pervades so much of our foreign policy today. Let the people know. The people are fighting this war and they have a right to consider and determine a people's peace.

Secondly, I believe that the people must be more wary of their Government's proposals and more demanding of their elected officials, particularly on foreign policy, no matter what political administration happens to be in power. We must not now or ever fail to challenge proposals that are put to us if we think they should be challenged. We must not now or ever submit to undue secrecy of action on the part of our highest or of our lowest officials.

As others have pointed out many times before, the present administration appears to persist in working in deep secrecy on plan after plan, then suddenly springing the completed plan on the public and fighting back if there is the slightest objection to any part of the plan.

Just the other day, we learned that the Americans and the British, apparently after some months of having planned to do it, had sold the Polish people down the river. By the fifth partition of Poland, the three principal participants at Yalta revealed an ugly strain of power politics mixed up with expediency. The agreement made by the so-called Big Three at Yalta calls for a division of Poland in order to establish a buffer state for the largest and strongest power on the Continent.

Just how would we in America feel if, at some future date, the same authorities decided that the United States should be given a portion of Canada or a portion of Mexico as a buffer against possible aggression? Wouldn't it be far better to follow the old adage of doing unto others as we would have them do unto us?

Those of us who have criticized that portion of the Yalta Agreement relating to Poland already have been labeled as Fascists by the official Russian publications and have been labeled everything from die-hards to obstructionists by certain newspapers in this country.

I will not comment on this further than to remind you that when Great Britain, with the warm approval of the entire free world, entered this war against Germany, it was for the declared purpose of adhering to a pledge to protect the territorial integrity of Poland. It is a pathetic fact which I must remind you of, that the Polish Nation is not our enemy but our ally.

Thirdly, I feel very keenly that any plans into which we enter, any program we adopt, any agreements we make, must be based on the best interests of America. There are those who say that there is little reason to believe that the best interests of America are being sacrificed to foreign governments, but I do not agree with them.

When you learn that the President of the United States took with him to Teheran a man who formerly wrote for the Communist Daily Worker and never made any secret of his friendship for known Communists, you begin to wonder whether or not our best interests are being guarded. And when you contemplate the huge amounts of money and materials that are being poured into foreign nations under various excuses, if you are a thoughtful man the knowledge will give you pause.

We are being presented with many plans that deserve the deepest of study. Here in Washington last summer there was held the Dumbarton Oaks Conference, which ended with a program that was hailed by most participating nations. The Department of State, since Dumbarton Oaks, has blossomed out with a regular propaganda campaign, designed it would appear, to make any opposition seem to be thoughtless obstructionism. Through the most widely read journals of opinion, through daily news releases, and in other ways, the Department of State is doing its best to make you and me swallow the Dumbarton Oaks proposals without changing the dotting of an "i" or the crossing of a "t."

I am not rejecting Dumbarton Oaks. Yet, I say it is not perfect and I reserve the right—as you should reserve the right—to criticize that program, or any other program presented. We might well ask, in the face of all the propaganda, if there is any need for Americans to think about foreign policy? It would seem, from the campaign that has been developed, that the last word has been said concerning future peace and that we have only to cross our arms, go into a benign sleep and let the Department of State handle everything.

In several weeks, April 25, there will be convened at San Francisco another conference of representatives of the United Nations. Together with all Americans of both parties I am hoping that this conference, working open and above board, will bring forth proposals that will be acceptable generally to all of us. But here again, I insert a note of caution—let's study all that is said and done with an open mind, thinking always of what our Nation can reasonably do to play a vital part in the plans for a lasting peace.

So while I have not come tonight with any definite, concrete proposals by which you and I could be assured that we and our children and our children's children could live without the threat of war all the days of our lives and of their lives, I do come with a concrete fact; that fact is that you and I and every American must—not should or ought to—but must examine carefully, study unceasingly, every foreign policy proposal that is put forth by any group.

As we read and hear of our unprecedented victories on the battlefields, you and I have a great pride in our American youths who have gone out to win this war. Only the other day, many were mere youths, riding bicycles home from school, driving their tin lizzies, or getting a sundae at the corner drug store. Today they are doing a man's job on the battlefields of the world. From the approaches to Tokyo our sons are proving that Americans are unbeaten and unbeatable.

We have never been beaten in war. We must not now be beaten in peace.

Open covenants openly arrived at may this time bring us the peace for which we are paying such a great price. This is my prayer and I believe the prayer of America.

Letter Concerning Our Foreign Policy at Conclusion of the War

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following letter sent me by Mr. Frank E. Lawrence, 381 Main Street, Groveland, Mass., giving me the prevailing opinion of the people with whom he spoke on his extensive travels through the Eastern States. You will note the subject matter is concerning our foreign policy at the conclusion of the war:

GROVELAND, MASS., *February 15, 1945.*

Hon. THOMAS J. LANE,
Member of Congress from Massachusetts, House of Representatives, Washington, D. C.

HONORED SIR: In my occupation as an industrial engineer my work takes me to all parts of the State and to many cities throughout the Eastern States, both North and South.

The great majority of thinking people with whom I come in contact have very decided opinions on what should be the basic foreign policy of this country as it concerns the future safety of the country and the maintenance of a lasting peace following the conclusion of this war.

I take this opportunity of acquainting you with the prevailing opinion, as I understand it, and for what it may be worth to you.

First. Germany and Japan should be made to pay, and pay in full, for the damage they have done not alone to property but to humanity as well. They should be split up and those who have suffered at their hands should take over and impose retribution. If Russia demands German labor battalions, that is all right with us, and Russia will not ask us anyhow, thank goodness. Germany and Japan should never again be more than fourth-rate powers

Second. The present potential powerful influence of this country (powerful if our administration makes it so), by reason of our preeminence in military, industrial, and financial means, should be used economically and politically, to bring about a functioning United Nations organization to outlaw war. The only powers which can impose peace are Britain, Russia, and the United States of America.

Third. This country should no longer be the goat; to pay for everything; for rehabilitation of all countries all over the world, whether or not they were victims of the aggressors. We should not again step aside and claim nothing in return. Most of the countries which will be helped to their feet can pay in resources, natural or other, and in bases or other facilities needed in the future growth of this country.

Britain is even now securing its position in the Mediterranean and elsewhere and will undoubtedly do so in Asia, so that whether or not the concert of nations functions in the future, its interests will be preserved. This is as it should be, as far as we are concerned, because the British Commonwealth of Nations and the United States must inevitably be drawn together, whether they desire it or not. What affects the destiny of one affects the other as well.

Russia is taking over what she wants in Europe as she conquers it, and will do so in Asia at the appropriate time. She is doing this regardless of what this country, or the rest of the world thinks. She will enter the conferences of the United Nations with a fait accompli as regards all of the countries of eastern Europe which she desires as satellites in her orbit. We have had to sell out Poland and forget the Atlantic Charter just to have Russia go along in what is hoped will be a united effort to prevent future wars.

Russia is on the road to becoming the strongest power in the world and will be the principal opposite to this country for many years to come; it is to be hoped that we will be friendly opposites. Russia's form of government is its own affair so long as it does not attempt to impose it on us or on those countries which are, and will be, in our

sphere of influence. We would like to see it evolve into more of a free, democratic form, but we will not try to influence it. Likewise we want no influence the other way. It is recommended that every member of the Congress of the United States read The Real Soviet Russia by David I. Dallin, published by the Yale University Press. It contains a fund of useful information.

The cost to this country is too high in lives, resources and wealth to have to step aside once again, taking nothing in return for what we have contributed. We must maintain supremacy in the air and at sea. Our air and ocean fleets are by far the most powerful in the world and must be maintained so, certainly until they are no longer needed to protect ourselves, and that will be quite a long time, even after a United Nations has started to function.

We should secure those bases around the world which will be essential in the operation of the air and water fleets; in the Atlantic; Greenland, Iceland, the Azores and Canaries, Dakar, Natal (or other Brazil base), the West Indies, Bermuda, and so forth; likewise in the Pacific we shall need bases and islands throughout that ocean from Galapagos to the Bonins and from the Aleutians to the Indian Ocean. This country should not take "no" to requests for them.

De Gaulle says France will now create a great naval and air base at Dakar (presumably with American money and materials). France should be refused any help whatsoever, except what applies while our armies are occupied with the German war, until she hands over the bases this country needs in the Atlantic and Pacific and elsewhere; or at the least, they should be controlled by the International set-up of the United Nations, with full use guaranteed to this country for military and commercial purposes.

We favor no help, once the German war is won, to any country, ally or other, unless and until we receive in return what we need from them to balance the score. It is all right to maintain an altruistic attitude, but no longer at the sole expense of the American taxpayer.

That taxpayer now resents the fact that supplies, such as meat and butter, to mention only two, are being lend-leased generally. If these go to people who have been starved, they are welcome to all of it, but we suspect that much of it is going where it is not more needed than at home, and these taxpayers would like to have a small share at least.

The taxpayer is also not in favor of buying its favored political set-up in liberated—or other—countries. If they want to try out ideological formulas which are foreign to us, and which they may eventually regret, that should be their business. They should learn their lesson in their own way.

I am addressing the above to you and to each Senator and Representative in Congress from Massachusetts and South Carolina, because I wish to acquaint you—in both of my States—with what many of your constituents are thinking and talking.

Yours very respectfully,

FRANK E. LAWRENCE.

Hon. Fred M. Vinson

REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. MAY. Mr. Speaker, I grew up a close neighbor to the Honorable Fred M. Vinson. I have known him from his boyhood days and have practiced law with him. Frequently we were antagonists as far only as the lawsuit was concerned.

The Nashville Tennesseean has editorially stated its views with respect to him so much better than I am able to that I ask unanimous consent, Mr. Speaker, to extend my remarks and include that editorial with reference to the appointment of Mr. Vinson as Director of the Reconstruction Finance Corporation.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

The editorial referred to is as follows:

VINSON OVER THE BILLIONS

Since it has been clear that the President had decided to not appoint Mr. Jesse Jones at the head of the great Federal lending agency that had been built up under his direction, the question of a successor has engaged all the guessers.

The President's choice, announced yesterday, apparently enjoys the rare success of making everybody happy.

Judge Fred M. Vinson is a sound and able man, sage in the expression of political views, and trusted alike by liberals and conservatives in Congress Formerly, as Congressman from Kentucky, a Member of the lawmaking body, the new Federal Loan Administrator has the benefit of close personal acquaintance with many of the Senators who have to pass on his nomination. His record as justice of the United States Circuit Court for the District of Columbia speaks convincingly for his fairness, and his acts as Stabilization Director as well as those throughout his brilliant career have shown firmness and courage and understanding of national business and economic affairs.

What new policies, if any, Mr. Vinson will bring to the Loan Administration, time must show. It is significant, however, that his appointment is hailed with equal warmth by Jesse Jones and Henry Wallace, by Senator TAFT and Senator PEPPER. Business and labor, if spokesmen of these groups reflect the general view, welcome the appointment—and the common people throughout the land who do not have frequent contact with the finance agencies grouped under the Loan Administrator but who do have a healthy appreciation of the public stake in the billions of Federal credit will place their confidence in Judge Vinson upon his record and reputation.

The President is to be congratulated for so felicitous a selection, and Mr. Vinson for the cordial acclaim his appointment has received.

Henry Hughes Crompton

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a poem written by Bill Taylor and dedicated to his friend and our friend, the well-liked Henry H. Crompton, 170 Lowell Street, Methuen, Mass., who on last Sunday, March 4, 1945, completed 50 years of valuable service as the organist of St. George's Ebenezer Primitive Methodist Church.

The occasion was satisfactorily observed by the Reverend Pastor Stanley Mott Sprague, and the parishoners of that church with a golden jubilee celebration on that day in St. Georges Church. The program contained the following statement of appreciation:

The first Sunday in March, 50 years ago, Henry Hughes Crompton became organist of the old Ebenezer Church. During the intervening years he has played to the glory of God and for the enrichment of the spiritual and esthetic life of the many who have worshiped both in the old and in the new church. One thing has been characteristic of his playing during all those years; namely, he has never tried to display his own ability or the power and range of the instrument upon which he played, at the expense of the primary purpose of his position. He has truly led us in worship. His music and anthems have been selected with this in mind. In thus placing himself in the background, he has made his position a vehicle of expression of the quiet faith in God which he possesses, and thus God has been glorified.

St. George's Church is proud today to pay honor to this one who has been an outstanding leader in the church and community, and who has lived an exemplary life before us. We feel, however, that the best way we can honor him is to dedicate this service to the honor and praise of God. To the church he has given and continues to give his unstinting service, and the members and friends of St. George's Church feel desirous of expressing their congratulations and gratitude and best wishes through this medium.

It is our hope that this service, and the reception to follow, dedicated as a sacrifice of praise to our Heavenly Father, will also become to Mr. Crompton an expression of love and esteem. May this day remain as a bright jewel in the crown of sacred memories, to the one whom we honor and for whom we pray the continued benediction of the presence of God.

I wish to join with all the friends, relatives, and acquaintances of Henry Hughes Crompton and especially the townspeople of the town of Methuen in extending to Henry H. Crompton our best wishes and wholehearted congratulations. For many years he has served the people of the town of Methuen with high honor, deepest respect and with the greatest admiration as a member of the board of assessors, and we all sincerely hope and pray that he will continue to render the same valuable service to the parishioners of St. George's Church as organist and to the people of the town of Methuen as their assessor and their public servant.

TO MY FRIEND, HENRY H. COMPTON

Music in the soul—the gift of God to man;
It rings in the rich man's castle, and enters
the poor man's plan.
It resounds in hymns of gladness in the bells
at eventide,
But in the soul of the organ, the spirit of
God resides.

It appeals to man at Christmas and again
at Eastertide,
To the man on his ship in the darkness,
roaming the ocean wide.
Its beauty is everlasting, to everlasting it
shall ring,
But when it comes from the organ, the very
angels sing.

Its magic is all-inspiring, to sinner and to saint,
It tears at the heart-strings sometimes, when it utters its sad plaint;
When the joy of life seems to vanish at the loss of some dear friend,
Then it lifts our hearts in gladness, and we know this is not the end.

It brings us new hopes in the darkness, when the load is hard to bear,
And it reminds us to remember that "God is ev'rywhere."
To take heart in the midst of life's sorrow, and bids us be of good cheer,
That the sun will shine again tomorrow, and our rough road will be clear.

Thus the music of the organ spreads its message far and wide,
And the music at evening lingers o'er God's own countryside.
But few men have had God's blessing, through joy and sorrow and tears,
To preside at one church's organ for over 50 years.

May God in His infinite wisdom grant you more blessings rare,
And when we meet over Jordan, find you the organist there.

—*Bill Taylor.*

Economic Cooperation

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I herewith insert an editorial that appeared in the Washington Post this morning:

ECONOMIC COOPERATION

Commencement of hearings on the Bretton Woods agreements means that Congress is now getting down to cases with respect to international cooperation. Up to now we have dealt largely in generalities and resolutions or, as in the case of U. N. R. R. A., with temporary devices designed to meet a specific emergency. The International Monetary Fund and Bank agreed upon at the Bretton Woods Conference are long-term propositions aimed at the establishment of enduring order in the economic sphere, just as the Dumbarton Oaks proposals are aimed at the establishment of permanent political machinery to curb aggression. They represent, therefor, the first concrete test of congressional willingness to endorse the practical measures for international cooperation agreed upon by representatives of the United Nations.

Secretary Morgenthau presented the argument for endorsement of the Bretton Woods measures with admirable clarity, dignity, and restraint. In his testimony yesterday before the House Banking and Currency Committee he by no means sought to dodge an evaluation of the fund and the bank on their merits. But he emphasized very properly, in our judgment that favorable action by Congress will be taken as a sign that "we in the United States are thoroughly sincere in our devotion to the principles of international cooperation." If there are imperfections in the machinery proposed, they can be corrected once the machinery is set in motion. It can be set in motion, however, only if we, along with other nations, are ready to waive superficial differences for the sake of basic agreement.

"We cannot say," declared the Secretary, "that we will join the other nations in an organization to maintain peace, but will not help to remove one of the most dangerous causes of war—economic dislocations. We cannot say we believe in cooperation to beat fascism but will not cooperate in the removal of one of fascism's chief weapons—economic aggression. We cannot say we want equality of all nations and leave some of them at the financial mercy of others." Here is the real importance of the Bretton Woods agreements—they strike at the root cause of international disunity.

Respecting the Bank for International Reconstruction and Development, there seems to be little disagreement. It would supplement private finance in making loans for productive purposes to war-ravaged and industrially underdeveloped countries. The monetary fund, however, is the subject of considerable controversy; it has been vehemently assailed by the American Bankers Association. The purpose of the fund would be to achieve and maintain stability in the rates of international exchange. Such stability, it seems plain to us, is indispensable to any sound international lending policy and to the revival of trade on which repayment of loans must depend.

That the American Bankers Association does not reflect the views of all American bankers was made plain the other day by a report to Congress on the Bretton Woods agreements by the Independent Bankers Association, which has a membership of over 2,000 country banks. "While we can hardly claim to speak for Wall Street," the secretary of this group pointedly observed in a letter to the chairmen of the Senate and House Committees on Banking and Currency, "we do believe we can speak for Main Street." Main Street bankers may do very little international financing, but they know that the welfare of their communities depends in no small measure upon the development of an orderly and expanding world economy. They go directly to the heart of the matter, we think, when they say that the Bretton Woods agreements "present a very simple issue—stability and order instead of insecurity and chaos."

Smoke Ordinances of Midwestern Cities

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

WASHINGTON, D. C., *February 24, 1945.*
Hon. CHARLES W. VURSELL,
Member of Congress, Washington, D. C.

MY DEAR CONGRESSMAN: Knowing of your interest in the welfare of the Illinois mining industry, I am enclosing, for your perusal, a copy of a letter I forwarded to Hon. James F. Byrnes, Director of War Mobilization, which deals with the St. Louis smoke ordinance.

You will note in the letter that I have pointed out where more than 25,000,000 car miles are wasted annually, and an unnecessary burden placed on rail transportation through the maintenance of smoke ordinances in midwestern cities.

I am hopeful that Mr. Byrnes will prevail upon the city officials of St. Louis to voluntarily set aside their ordinance for the duration so that Illinois mines will maintain full employment throughout the year. If this is done, eastern coal will remain in the East, which is its natural market, and Illinois coal will again supply its rightful market.

Thanking you for any assistance you may render in this matter, and commending you for your militant action on all matters of public interest, I am

Sincerely,

CAL. D. JOHNSON.

WASHINGTON, D. C., *February 23, 1945.*
Hon. JAMES F. BYRNES,
Director, Office of War Mobilization, Washington, D. C.

DEAR SIR: Noting the intensive drive initiated by your office to conserve both manpower and facilities, may I call to your attention the smoke ordinances of mid-western cities.

May I cite, as an example, the city of St. Louis, Mo., which for more than a century obtained her fuel supply from Illinois coal fields lying within a radius of 20 to 50 miles. In 1939, a rigid smoke ordinance was enacted which forces the importation of more than 1,500,000 tons each year from West Virginia and Arkansas coal fields which are 400 to 600 miles distant from St. Louis, thus wasting approximately 25,000,000 car-miles annually.

The importation of this coal not only caused idleness among miners but also forced dozens of Illinois mines to be closed and junked, that formerly produced coal for the St. Louis market. Illinois coal is permitted in St. Louis today for use in mechanically fired equipment, but approximately a 2,000,000-ton market has been lost to Illinois mines through the restrictions which force the small home owner and renter to purchase high grade fuels for all hand-fired equipment.

I am enclosing a clipping from the Granite City Press Record which states that coal production in Madison County, Ill., declined in 1944 from 1943, and that where some years ago 4,000,000 tons of coal were produced annually, only 2,114,632 tons were produced in 1944. It further states that 10 mines are now idle and that those operating worked only an average of 232 days in 1944. A similar situation exists in adjoining St. Clair County where dozens of mines have been closed and junked in recent years. These 2 counties lie directly across the Mississippi River from St. Louis, Mo.

Geologists estimate that Illinois fuel beds contain approximately 200,000,000,000 tons of bituminous coal, and although it has been mined commercially since 1828, only 6 percent of the total has been removed. Illinois mines experience difficulty in disposing of lump coal during the summer months, and as a result, miners do not have full-time employment during that period. This coal could be stored in dealers' yards and used to meet fuel emergencies, if existing smoke ordinances were eliminated and Illinois coal accepted for use in hand-fired equipment. Illinois coal sells in St. Louis for approximately $5 per ton, compared to $9 per ton for eastern bituminous and Arkansas semianthracite coal.

I am informed that owners of the Radium Coal Mine, located at Belleville, Ill., 14 miles from St. Louis, are contemplating junking that property because of their inability to reopen and operate at a profit. This mine is known as one of the best in southern Illinois, but has not been operated in recent years because of the inability to find a market. This condition is due largely to the St. Louis smoke ordinance.

Trusting you will investigate this matter thoroughly, and that this ordinance can be

set aside during the emergency, thus utilizing to the fullest, the existing manpower and facilities of the Illinois coal fields, I am

Sincerely,

CALVIN D. JOHNSON,
Former Congressman from the Twenty-second District of Illinois.

Arkansas River Development

EXTENSION OF REMARKS
OF
HON. FADJO CRAVENS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. CRAVENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a brief article by Mr. C. F. Byrns appearing in the Fort Smith Times-Record of Fort Smith, Ark., on March 5, 1945, as follows:

THE LEGISLATURE TAKES A STAND ON THE METHOD OF ARKANSAS RIVER DEVELOPMENT

(By C. F. Byrns)

The Arkansas Legislature has adopted a resolution declaring its full support of the Corps of Engineers, United States Army, in its program for full development of the Arkansas River, and its opposition to the creation of an Arkansas Valley Authority.

A concurrent resolution expressing that position was passed, first in the senate and then in the house, late in the week. It will be used as part of the testimony in the hearing on May 7 at Little Rock before the Board of Review of the Corps of Engineers, to show the sentiment of the people of Arkansas on this program.

There was no controversy about it. There is no evidence that I know about of any substantial support in this State for creation of an authority to develop the Arkansas River. Our people who are familiar with the program and the prospects for immediate post-war work on the river-control system recognize that the Corps of Engineers is the agency which logically should carry to completion the plans the engineers have developed in recent years of intensive study.

In eastern Oklahoma, especially around Muskogee, there has recently been considerable agitation for creation of an Arkansas Valley Authority to take over the development of the river. Some of its supporters, doubtless, sincerely believe that power should be the chief objective of a river control program and rightly believe that an authority approach means first emphasis on power and secondary interest in flood control, navigation and other uses of the waters of the Arkansas drainage system. Some of the supporters, perhaps, are not fully advised of all that is involved in a choice between the Corps of Engineers and the proposed authority to do the job.

As readers of this column know, I have much admiration for the work the Tennessee Valley Authority has done in its own area. But I do not believe that it is sound for us in the Arkansas Valley to advocate an authority for our river. There are many reasons, which seem to me quite sound.

I prefer the democratic approach of the Corps of Engineers to the centralized control of the authority. Work done by the Corps of Engineers is under control of Congress at every step and its actual construction is usually dependent upon local support. The people finally decide whether it is good policy. The engineers do it only when their nonpolitical professional judgment tells them it is economically feasible and productive of more benefit than it costs. The authority, in the Tennessee Valley and in any other place an authority may be created, has autocratic powers, which it can exercise autocratically or democratically as it sees fit. At all events, it is beyond control of the people most affected.

The Corps of Engineers already has planned and has had approved by Congress 20 flood-control reservoirs in the Arkansas Basin, of which 5 have been built (1 of them by the Grand River Dam Authority in Oklahoma), 4 are in various stages of construction, and 11 are approved but await congressional appropriations after the war. In addition the engineers have congressional approval for $12,150,000 worth of levees between Tulsa and Pine Bluff. These projects will substantially control floods on the Arkansas.

In addition the Corps of Engineers has planned a comprehensive program of navigation, irrigation, power, additional flood control, and silt control for the entire drainage area from Tulsa to the mouth. That program is up for approval now by the Board of Review of the Corps of Engineers. Its approval and its early construction are fundamental to our economic development in this valley.

If the people of the Arkansas Valley now go chasing off after authority rainbows, it is certain the Corps of Engineers program would be delayed for an indefinite time. It is likewise certain that the Corps of Engineers will not be nearly so interested in early completion of our authorized flood works if it becomes apparent that the whole project which they have planned is to be taken away from the Engineers and handed to an authority.

I want to see the river controlled. I want to see the work done as quickly as possible. We need to get this comprehensive plan approved and built in the first 5 years after the war. I think it is short-sighted to turn aside from a program so nearly assured and follow a will-o'-the-wisp which might easily turn out to be disappointing illusion.

The Senator From Kansas Pays Tribute

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. REES of Kansas. Mr. Speaker, under unanimous consent given me by the House, I have the honor of including in the RECORD a very interesting and timely statement of the senior Senator from my own State of Kansas, being a tribute of our distinguished Senator to our native State.

This tribute was made by Senator CAPPER on the fiftieth anniversary of the fellowship breakfast of the International Reform Federation held in the Senate dining room of the Capitol on January 19, 1945, and reprinted in the February 1945 issue of the Progress magazine edited by Dr. Clinton N. Howard.

I feel sure the Members of Congress as well as others who have access to the CONGRESSIONAL RECORD will enjoy reading it:

THE SENATOR FROM KANSAS PAYS TRIBUTE

My good friend Clinton Howard, whom we recognize and honor as one of the most useful men of the Nation, has suggested to me that I say something about Kansas and some Kansans who may have done some good in the world, or at least stirred up some commotions. I am happy to comply. Next to a Californian's ambition to talk about his climate is a Kansan's zeal to talk about Kansas and Kansans.

Occasionally Kansas is referred to as a "state of mind," a place from which come crusaders, freaks, droughts, blizzards, cyclones, dust bowls, wheat, and Republican majorities. Now some of these claims for—or charges against—Kansas are like the premature report of Mark Twain's death—slightly exaggerated.

I hope you notice the motif in these election returns: Twice for the Democrats and three times for the Republicans, in regular sequence over a half century. It might be said that we two-step with the donkey but waltz with the elephant.

I don't know whether the Senate of the United States realizes what it owes to Kansas. My native State of Kansas today has six Senators—not just two but six. And they cover a wide range of territory, geographically and politically. They are CLYDE M. REED and myself, elected from Kansas. There also are these Kansas products in the Senate: JOHN THOMAS, of Idaho; ED JOHNSON, of Colorado; CARL HATCH, of New Mexico; and LEE O'DANIEL, of Texas. The late Senator Borah was a student of the University of Kansas and started the practice of law in Lyons, Kans. Vice President Charles Curtis and Gov. Alf Landon, Republican candidate for President, were both Kansans.

I tell you, we Kansans ride high, wide, and handsome—and sometimes in strange company, I must admit.

I claim that Kansans are natural crusaders and pioneers. We started out, nationally speaking, with John Brown, of Osawatomie—a fanatic, yes; but a fanatic crusading for a worthy ideal, and with the courage to die in the cause he espoused. Kansas is proud of John Brown. The late William Allen White, of Emporia, was Kansas' first citizen for many years, a really great editor. There was John P. St. John, 4 years Governor of Kansas, a national prohibition leader, and candidate for President in his day; a great champion of a sober America. Dr. Charles M. Sheldon, of Topeka, who wrote, In His Steps. There was Mrs. Henry W. Peabody, reformer, editor, missionary, who raised a million dollars for the medical college for women in Vellure, India, on her return to the United States. Martin and Osa Johnson, who showed us Africa and wildlife all over the world, came from Chanute, Kans.

Amelia Earhart, first woman to fly the ocean, was an Atchison, Kans., girl. A fearless fighter for a good cause, Carrie Nation, whose hatchet became as famous in America as David's sling among the Philistines—she was another Kansan who dared to do.

Gen. Dwight Eisenhower comes of a famous Kansas family—has four brothers born in Kansas and still living there. In World War No. 1 Gen. James G. Harbord was one of the outstanding generals; another Kansas product.

The late Gen. Hugh "Iron Pants" Johnson, another fighter for what he believed in, came from Fort Scott, Kans.

Raymond Clapper, perhaps the Nation's No. 1 reporter-columnist at the time of his death, was a Kansan.

Walter Johnson, a graduate of the Kansas University, one of the best loved ball players in the history of the national game, got his start in Coffeyville, Kans. Kansas had a world champion in the fistic ring at one time—Jess Willard, of Lawrence, Kans. Glenn Cunningham, a dry, champion long-distance runner for years and years, is a Kansan, and I could name another score of nationally known Kansans in professional, business, agricultural, and theological life, most of whom were at least attempting to furnish moral leadership in

their own fields. Many were crusaders and pioneers. Kansas pioneered in the fight to abolish slavery; was one of the first States to adopt State-wide woman suffrage; led and is still leading in the attempt to prohibit the manufacture and sale of intoxicating liquor; and still is, we believe, the driest State in the Union.

At the close of the Senator's address he was given an ovation. Mr. Howard upbraided the Senator for omitting the most distinguished Kansan of them all, Senator ARTHUR CAPPER who is the dean of the delegation from his State and who has been elected five times as United States Senator. Attention was also called to the fact that Senator CAPPER'S newspapers and magazines with more than 4,000,000 circulation will not carry a liquor advertisement and whose radio stations covering the entire State do not advertise any alcoholic beverages. He is the moral mentor of the Senate and the champion of every good cause.

Maj. Gen. Robert M. Littlejohn

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article that has been brought to my attention, prepared by Lt. Col. J. K. Stacy of the Army Quartermaster Corps, relating to the splendid work being accomplished by Maj. Gen. Robert M. Littlejohn, who is now serving as quartermaster for the European theater of operations.

The writer of this article, Lt. Col. J. K. Stacy, had the honor of serving for a period of 3 years under the command of Major General Littlejohn and is now on active duty in Washington, D. C., after 26 months' duty in the European theater of operations.

Personally, I feel that Maj. Gen. Robert M. Littlejohn has rendered most valuable and exceptionally well-qualified service on his particular job outside of the continental United States. He is one of our high-ranking officials in the War Department who has given unselfishly and unstintingly of his work, his time, and his effort in providing the men of our armed forces with the necessities of life so that they may be successful in carrying on the war to a successful climax.

The article follows:

IT WILL BE DONE

When and where a man is born makes little difference in his life. It is the things that he does between birth and death that really count. However, Maj. Gen. Robert M. Littlejohn was born in South Carolina in 1890 and at the present time is very much alive—acting "in the living presence, heart within and God o'erhead."

General Littlejohn is chief quartermaster in the European theater of operations. That means the feeding, clothing, sleeping, and to some degree housing of the troops in the European theater of operations. General Littlejohn came to England realizing that he had a big job to do. The superiors that sent him here also knew he had difficult work and sent him with every trust that he would carry the message to Garcia, and in no way have they been disappointed. He saw his task and he did it, in fact he has exceeded the expectations of everyone.

Let us deal with the characteristics that have made him a leader of men and that account for his achieving so much. General Littlejohn is in the broadest sense of that word a man—innately a gentleman, leaning to the rough and ready type. He figures from the small to the great. To illustrate, I heard him give the following instructions: "Find out how long 10 cans of tomatoes will be used in feeding 10 men, multiply that by the given number of men for 12 months. * * * Following this procedure, arrangements will then be made to have these (food) items shipped here as they are needed. This plan is quite simple, but to carry it out will require perseverance, planning, and hard work." He is a man of vision and his greatest desire is that soldiers are always properly fed and properly clothed. To that end, his eternal vigilance and bulldog tenacity have been directed and the reward for his efforts has been that no soldier in the United Kingdom has gone hungry or cold.

General Littlejohn is a man who makes every experience in his life count. He learned at the United States Military Academy that one of the cardinal points of winning a battle was simple and direct methods. Putting into practice that lesson has enabled him to use and develop many mediocre men into excellent personnel. Developing and making men work as a harmonious whole has enabled him to carry out his schedule on time, getting the maximum results out of the minimum time, effort, and money expended. In completing a lecture at one time his conclusion was, "You now know the plan of the game. I am passing the ball to you. Are you going to carry it? If so, we will make a touchdown. If you fail, it will prolong the war. Play ball. Let's win the game." Every man within the sound of his voice left the room with a determination to be a better officer and to support General Littlejohn's plan to the limit of his ability.

General Littlejohn's past training has particularly fitted him for his work as chief quartermaster for one of the most important theaters of operations. He graduated from the academy in 1912, and, after serving in many places in the United States, his last assignment before going to Washington and later to England was in the Philippine Islands. Importing many supplies into the Philippines was most excellent training in shipping and "the battle of ship-tons" is the cardinal point in supplying the troops in Europe. Ship-tons per cubic foot per man was figured out by General Littlejohn, and he knew exactly the tons and supplies that would be required to supply his army in the United Kingdom. Charts were made showing this, and he could refer to these charts at any time and tell exactly what was needed for the time, what was coming, and what the future requirements would be. His planning for future needs by charts that were easily understood and making his plans so thoroughly (I have heard him say, "This must be planned from soup to nuts") made it possible for him to get the greatest good from the people who were working with him. His conferences and directions are always simple and direct. Once a rather long and complicated system of filing was presented to him, and when it was completed his only remark was, "When this plan is followed, what I want to know is can you find a paper?"

For his work here he was awarded the D. S. M. The citation is as follows:

"Brig. Gen. Robert M. Littlejohn, chief quartermaster, Services of Supply, European theater of operations, awarded Distinguished Service Medal, with the following citation:

"'Brig. Gen. Robert M. Littlejohn, United States Army, for exceptionally meritorious and distinguished service in a position of great responsibility as chief quartermaster during the initial organization of the Services of Supply, European theater of operations, and later as deputy commanding general, Services of Supply, European theater of operations, from June 1942 to November 8, 1942. General Littlejohn demonstrated marked aggressiveness, exceptional organizing ability, and a superior quality of leadership in rapidly establishing a quartermaster service throughout the theater which met and solved the many unexpected and seemingly insurmountable problems of supply. By his broad experience, foresight, and splendid ability he created an organization which was largely instrumental under his leadership in solving many complex problems in the organization and supply of the African task force. His untiring efforts and devotion to duty in this connection contributed markedly to the successful landing of this force in north Africa on November 8, 1942.'"

The part General Littlejohn played in supplying the troops and in the mounting of the African campaign was an accomplishment of which anyone would be justly proud. The language in the citation says so much in so few words of the part he played in the enterprise that drove the Axis from Africa.

The ability to seek out a problem, discover its possible solutions, and carry them to a successful conclusion is one of General Littlejohn's keynotes. This is aptly demonstrated by the way he attacked the problem of packaging Army supplies which truly became a staff officer's headache when big volume movement of overseas supplies began. A package was needed which gave better strength for rough handling, water resistance for beach-head operations, and would be lighter in weight and consume less shipping space than the existing wooden box. An additional specification called for the box to be made of a material which would be useful salvage in the United Kingdom.

General Littlejohn jumped wholeheartedly in to this job and after lengthy periods of practical experimentation, came out with a triple-threat solution—three type boxes, known as V-1, V-2, and V-3. V-1 was an all-kraft, waterproof, solid fiber box which met all requirements, and could be increased in strength by double thickness when necessary. I was the perfect box for beach-head landing of supplies. V-2, a solid, fiber box, made with a percentage of waste paper, was approved for lend-lease shipments where transshipment and outdoor storage are not involved. V-3 is a corrugated, all-kraft box also approved for lend-lease shipments. Being of 100-percent kraft, it fulfilled the salvage requirement since the United Kingdom is in great need of kraft pulp.

To fill the Army's shopping basket by local purchase was one of the problems which confronted General Littlejohn as chief quartermaster of the E. T. O. The problem staring him right in the eye was this: For every 0.8 ounces of supplies he could procure in the United Kingdom, one more .30-caliber rifle bullet could be shipped over from the United States. The figures give his answer. In an 18-month period from July 1942 through December 1943, he procured 1,388,585 ship tons of supplies in the British Isles. This compares favorably with the 2-year period of June 1917 through May 1919 when 1,918,594 ship tons of quartermaster supplies were procured. All this General Littlejohn did in face of the fact that the British were hard put to supply themselves in almost everything as compared with the World War No. 1 when Denmark, Norway, and other neutrals furnished them with food and other goods. Thus another battle in the war of "ship tons" was won.

General Littlejohn enjoys the respect of all who work with him. Everyone connected with him feels his interest in them. He truly

has a heart of gold and I think his friends undoubtedly like him but their admiration for his ability and sterling qualities far exceeds any mere quality of admiration. His untiring work and his desire to do everything he does well, and that indescribable quality of character that enables him to command, makes him an unquestionable leader. His spirit of fairness is never influenced by rank or person. Everything with the General must be right and though he may condemn the part of the work that does not come up to his standard of excellence, the person concerned feels that, even though his labor has not been 100 percent perfect and while the General has found fault, no one else would be allowed to criticize. He never covers a lack of knowledge with criticism of "spit and polish," or finding a little dust back of a post some place, but he looks at the situation in a big, manly, just way. In supplies he expects to see that there is a sufficient stock level to last the men who are to be cared for. If he ever errs it is always on the side of humanity. An enlisted man said the following words in regard to him: "He puts socks on our feet, hats on our heads, food in our bellies, and tents overhead."

He is married to Mary Lambert, of Connecticut, who has traveled in matrimony harmoniously with him since 1918.

General Littlejohn has continued to grow in military strength and stature since he was admitted as a student to the Military Academy and, while he has accomplished almost wonders in the past, those who know him feel that his greatest work is yet before him. This war has really given him an opportunity to show the truly big man that he is.

He has a big job. He is "carrying the ball" in the game of life as he carried it successfully on the academy team. The excellent way he is supplying the troops needs no praise, it speaks for itself. Gen. Robert M. Littlejohn is of measureless value to the Army of the United States.

The Flood in the Ohio Valley

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. JENKINS. Mr. Speaker, this afternoon I made a short speech on the above subject and at that time I got leave to extend my remarks in the RECORD.

I have already stated that the word "Ohio" means beautiful river, and I have already stated that while the flood conditions in the Ohio Valley are very bad and have brought great sorrow and discomfort to many of the fine people living in that valley, I am glad to report that the flood will not reach the proportions of the 1937 flood, for which we are all very thankful.

From experience the people in the Ohio Valley have learned that there is nothing they can do to stay the murky tide as it quietly encroaches upon them and upon their homes. They wait developments with great interest and great caution. They have learned how to take care of themselves and their property, but in spite of all they can do and all anybody can do for them they are forced to leave their homes and to seek safety somewhere else. When these people return to their homes they will find destruction the like of which nobody can appreciate except a person who has had experience. They will need relief in many ways.

I am glad that the great Red Cross is already at work. I remember that it was in the 1913 flood that I first became familiar with the activities of this great institution. It is truly the great mother of the world. I have had several conversations with Red Cross authorities here in Washington with reference to the situation in the various cities and communities of my district. I am sure from the reports that they bring me that their men and women are doing their part. I have communicated with practically every community in my district and have offered to do whatever I can to relieve the situation.

While the great flood of 1937 was raging I am proud of the fact that my colleague the gentleman from Mississippi [Mr. WHITTINGTON] and myself and others were able to secure the passage through Congress of an act setting up the Disaster Loan Corporation. In the 1937 flood that Corporation functioned efficiently up and down the Ohio River. I was glad to have accompanied those in charge of this great work into the various communities in my district where very substantial relief was extended.

About the same time we were able to pass legislation that gave the municipalities an opportunity to cooperate with the Government in plans for the construction of flood walls. My home city of Ironton was the first city in the Nation to meet all of the requirements of the legislation prescribed by Congress and that community was the first community in the country to complete a flood wall that protects the community completely and adequately. This was accomplished by the city of Ironton putting up approximately $750,000 with which rights of way were purchased. The Government then came forward with a sufficient amount of money to construct the flood wall and the earthworks connected therewith. This work has been so satisfactory that I daresay that the flood wall has paid for itself twice over in the amount of savings that it has effected for the people of that city.

To show how much the flood control system is appreciated in my city, I am setting forth a telegram which I have this day received from Mr. Ralph F. Mittendorf, who is the city manager for the city of Ironton:

Flood control system working perfectly. Had erected 7 floodgates and have all 10 pumping stations in operation. Ironton citizens appreciate this protection work and ask that you express our gratitude and appreciation to proper Washington authorities. We anticipate stage of approximately 62 feet which can be handled without difficulty.

I am sorry that every community along the Ohio River has not been able to avail itself of the law providing for the construction of flood walls. Many communities are too small and the tax duplicate is not sufficient to justify their coming forward with the contribution required under the law. I hope that the time may come when these requirements may be lowered and when all the communities may receive flood protection.

The Army engineers and many others interested in the floods in the Ohio Valley have been giving consideration to plans that would impound great quantities of water at the headwaters of the rivers and creeks. If this could be done, much of the ravages of the floods could be prevented.

Of course, these projects could not have been taken up and pressed to conclusion during wartimes. When the war is over, I hope that these plans may be carried out, which will be greatly to the benefit of all the residents in the Ohio Valley.

American Foreign Policy

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, March 8 (legislative day of Monday, February 26), 1945

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject of American foreign policy delivered by me on March 2, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

During the past century Americans have been preoccupied with the development of our vast country that has now become the productive marvel and envy of all the earth. Concern with foreign affairs, however, was not a matter to which the average American needed to give attention of any kind.

As a result, Americans in general are more nearly illiterate concerning international problems than almost any other civilized people on the earth since in most other countries the problems of survival, in the face of the enemies on every hand, have compelled their people to have daily in mind the imperative necessity of a carefully formulated foreign policy.

American foreign policy has been a very vague term to the average American. Senator CONNALLY, in refuting the suggestion that we have no foreign policy, made the following statement: "I challenge those who say the United States has no foreign policy. Of course we have no foreign policy in the sense of grabbing territories all over the earth and seeking preferential trade advantages. However, American hopes for international peace, for self-determination of peoples, for the rights of small nations, for the sanctity of treaties and international obligations are well known."

With all deference to Senator CONNALLY, for whom I have the highest regard, it would not seem that the items which he enunciates would properly come under the heading of foreign policy, but rather under the heading of the high moral code to which millions of Americans subscribe and which we hope to see become the guiding principle of the new world order that we so fervently seek.

Foreign policy, on the other hand, is concerned primarily with the preservation of the national interests of our country. This predicates not the arrival of the millennium but a world in which other countries are concerned primarily with their national interests and perhaps even with the advance-

ment of their national interest by acquisition of trade or territory.

Really it would seem more accurate to say that the only foreign policy which America has practiced for a century has been the Monroe Doctrine which has been consistently supported by all administrations, declaring the determination of the United States that it could not view without concern the extension of any foreign systems to this hemisphere. The correlative portion of the Monroe Doctrine declared that the United States similarly would not interfere with the affairs of Europe. This is frequently forgotten.

Here was a clear unilateral declaration of a sphere of influence which has been recognized with very few challenges from abroad throughout the past century.

France, with some aid from England, came into Mexico with Emperor Maximilian during the Civil War but shortly after withdrew, with English support withdrawn. President Cleveland was obliged to use strong language in the Venezuela episode during his second administration. In large measure, however, the proper concern of America for the security and independence of the western hemisphere has been recognized by foreign government.

During our lifetime without provocation upon our part, we have twice been plunged into world-wide wars. Theodore Roosevelt, in 1916, described us as "drifting stern foremost into war." Certainly America has not been the moving spirit in these foreign entanglements, but has been reluctantly drawn into the fray.

These two experiences have brought home to us with appalling force and at tremendous sacrifice the realization that we can no longer ignore developments overseas.

In determining our course during the next few months and years in justice to our sons who have sacrificed so much and in seeking the solution of the problem of world-wide peace, we must move away from any silly sentimentality into a realistic recognition of the forces which are loose throughout this world and come to realize that the millennium may not be depended upon to dawn, whatever may be the arrangements that are made at the conclusion of this strife.

History is strewn with the records and the wrecks of the agreements that have been made looking to a more stable world order, and yet have failed to preserve peace beyond a generation.

We must be careful also not to be influenced unduly by illusive hopes. There are certain ideas that have very wide acceptation which do not find particular warrant in the history of modern times.

I speak as one who, 25 years ago, fresh from the last war, helped organize in Maine the League to Enforce Peace, and one who has continued to support every measure looking to a more stable world order.

For instance, there is the idea—now rather generally accepted in America—that a league of nations or association of nations is the sine qua non of peace and at the same time the guaranty of peace.

Let us look over this idea in the light of our own knowledge of history, first, as to whether or not an association of nations is a guaranty of peace. We here on this continent carried out a great experiment a century and a half ago with an association of 13 sovereign States designed to form a more perfect Union. There was surely much to promise success in this great venture with a homogeneous population distributed along the Atlantic seaboard and with all the ties of sentiment born of the Revolutionary struggle to bind us into a more sacred union. Yet at the end of 75 years we fought one of the bloodiest civil wars in all history to determine whether any union so conceived and so dedicated could permanently endure.

As one flies around the world and sees the seething ferment of hundreds of millions of people of varying races and creeds and ideologies scattered throughout the Middle East and the Orient (Anglo-Saxon civilization represents only 10 percent), one realizes the tremendous challenge to achieve any sort of amalgamation that shall guarantee enduring reconciliation of their ideals. Problems of territory and trade and ideas of government have terrific impacts in all the seething continents of Europe, Asia, and Africa, and this must all be taken into account in the great problem with which we, of this generation, are now faced.

This will indicate to us that an association of nations is not necessarily a guaranty that our troubles are at an end, and must lead us to realize that something else is also required.

Meanwhile we need only consult the observations of our own lifetime to realize that we, ourselves, were born in a century that knew no world-wide strife. From 1815 with the fall of Napoleon at Waterloo, to 1914 when Germany challenged British sea power, there was no global war.

In our own country we had the Mexican War, the Spanish War, and our own Civil War, or the War between the States as we now learn to call it in Washington.

In Europe there were the Franco-Prussian War and the Crimean War and the wars of Central Europe and the Balkans. In Africa there was the Boer War and the Egyptian War. In Asia there were the Sino-Japanese and the Russo-Japanese Wars. All of these conflicts were isolated, however, within their continents, and this was due in no small measure to the prudent exercise of British sea power which gave us the Pax Brittanica of the century now past.

Some ask whether this period of comparative peace was not due to difficulties of world-wide communications. A glance back to the eighteenth century demolished this explanation. In our country we are familiar with the almost constant French and Indian Wars of the 1700's which were simply an offshoot of wars originating in Madrid, Paris, and London as the declining Spanish Empire and France and England struggled for supremacy throughout the world.

In Ceylon last year I stayed in a British Government house built by the Dutch in 1780 and taken from them by the British not long thereafter. All around the world there are these monuments to the strife that raged throughout the eighteenth century until British sea power finally became dominant with the downfall of Napoleon and the disappearance of the Spanish Empire overseas.

History then would teach us that an association of nations is not an absolute essential to the avoidance of world-wide strife and, on the other hand, an association of sovereign states is not necessarily a guarantee of peace.

Something much other is required, and that is a nation that is prepared and informed as to its national interests and resources and devotes itself to the accumulation of that power that will promote both world peace and its own protection in a more and more chaotic world.

Let us approach this problem individually as the "devil's advocate" in order to make sure we are not deceiving ourselves or others as to what we may expect. As intelligent citizens of the world we must realize the problems which are faced particularly by our great allies overseas, Britain and Russia.

As we properly explore the history of the foreign policy of our allies in order to determine so far as practicable what may be expected, it is also essential that we should examine our own record with some care in order to avoid any sentimental hypocrisy that may interpose difficulties in our dealing with our allies.

The Monroe Doctrine was a purely self-serving unilateral declaration of a sphere of influence. Certainly no one will contend that it was designed primarily to extend to our neighbors the blessings of democracy since many of these countries in the century past have had decidedly dictatorial regimes and others under the forms of democracies have had Presidents who remained in office for as much as 16 years defying every definition of democracy as conceived by Thomas Jefferson.

Abraham Lincoln denounced in unmeasured terms our participation in the Mexican War and our acquisition of both Texas and California.

The Russian Government of today occasionally intimates that the action of the Czar in selling their Alaskan gold mine to us for $7,000,000 was ultra vires and that Alaska is still a part of the sacred soil of Russia.

Meanwhile in Panama not even Theodore Roosevelt ever contended that it was merely an interesting coincidence that the Marines landed the next morning after the revolution began and in Hawaii stories are still told of the back-garden gate through which an American Minister was wont to communicate with certain irregular elements in the population designed to advance the American position in the Pacific.

America unquestionably has a far better record than any other great nation insofar as international idealism is concerned but our record is not without spot.

If Americans wish to understand the complex ramifications of the present international crisis, they would do well to read William B. Ziff's recently issued book, The Gentlemen Talk of Peace. This monumental work on the nature of war and peace with its brilliant analysis of the situation today gives a remarkably clear picture of the world in which we live. It might well be required reading for all Americans. A study of this profound and scholarly work does not lead us to envision the immediate arrival of the millennium.

While we keep our eyes upon the stars we must still keep our feet upon the ground. This is the lesson taught us by the events of today, as well as the historic course of human relationships which are so ably analyzed in Mr. Ziff's most timely work.

Winston Churchill declared proudly, "I did not become the King's first minister to preside over the liquidation of the British Empire," and he added later as a warning to us, "Let us not talk too much about a brave new world." These are grim reminders that we live in a world in which individual and national ambitions and interests still have away and that we must not plan our future on the basis of all other nations necessarily being motivated by as high principles as our own.

Stalin has had the bitter experience of guarding his nation from the recurring invasions that have threatened its existence now for many years. Seeking a friendly government in states bordering on his own, Stalin proceeds to assure himself that if a world order does not emerge in which he may find security that he shall not have fought this war in vain. That is the answer to his determined move in the Baltic States, in Poland, in the Soviet Government now formed in Hungary, and explains the major interest he is now showing in the affairs of the Balkans.

Surely America will ponder long and carefully before entering into commitments to guarantee any particular solution of the problems of Central Europe with all the racial entanglements and economic difficulties with which these countries have been so long plagued.

The Vandenberg proposal to guarantee the continuing disarmament of Germany and Japan is a far more practical approach. Rarely has the man, the moment, and the message manifested a more happy harmony.

America must be careful to guard against the tendency in modern time to defer to the views of one or another individuality whether it be our favorite columnist or commentator. Here is the very essence of totalitarianism following indiscriminately the one

upon whom we depend for the answer to all problems outside our daily experience.

If democracies are to function and survive, they must develop a public opinion dedicated to the support of a foreign policy that considers our own national interests.

Lord Halifax has said that Britain, in the future, must be a junior partner of the United States. If we are to be a senior partner, we must be far more adult in our behavior than we have shown ourselves hitherto.

The conflicting factions that have hitherto prevailed in our State Department made it impossible for any foreign government at any time to know upon what they could depend so far as America was concerned. Without undertaking to fix the responsibility during the regime of the much-beloved and much-respected Secretary, Cordell Hull, there was never a time when he had the full and unqualified support and backing of the President of the United States.

Nor was Sumner Welles entirely responsible for the division which prevailed during his period as Under Secretary of State, since it was impossible for him to refuse to deal with the President or with Mr. Harry Hopkins, who frequently represented the President, or even with Mrs. Roosevelt. As a result of the long and intimate family relations that had prevailed, and the occasional absences of Secretary Hull, the situation grew more and more acute and the confusion was confounded by another point of view expressed by Adolf Berle, Assistant Secretary of State, and by another faction within the Department, so that foreign diplomats were naturally bewildered as to the direction of American foreign policy.

Even the most acute observers in Washington are puzzled as to what may be expected in coming months in the development of American policy—domestic and foreign.

It would be difficult to conceive of a more radical reorientation of policy than was represented in the appointments in the State Department following the retirement of Secretary Hull.

The most encouraging aspect of the situation is the obvious emphasis upon coordination and integration of activities under competent leadership.

Mr. Hull was an extremely able man and possessed the confidence of the Congress to an unprecedented degree. Secretary Hull, however, never enjoyed the full confidence of the President and many things were done in foreign affairs of which Secretary Hull was not immediately apprised.

In addition, Secretary Hull was not primarily an executive and without the full backing of the President was never able to enforce the discipline within his organization which was essential to have it function as a successful team.

Secretary Stettinius has both ability and character and a background of executive experience with the benefit of observing for a year the confusion and chaos that had long prevailed within the State Department. It is generally assumed that the revolutionary reorganization which he has carried out represents his considered conclusion as to how American foreign policy may be made, in the language of Walt Whitman, to "cohere into an orb."

Napoleon declared that "One bad general is better than two good generals." Decision and continuity and consistency in the State Department as represented by this reorganization may lay a firm foundation for American education and progress in international affairs.

The rest of the world has been abundantly justified in criticizing the incoherence and inconsistency of American foreign policy.

No human being can always get the right answer all the time but others are entitled at least to expect that one shall make up his mind and stick to it for an appropriate period.

How far Secretary Stettinius may be successful in bringing some sense of discipline into the functioning of the President in foreign affairs remains the great question mark.

Hull was unfortunately left home from Teheran. Many of our later troubles may have stemmed from that simple fact. Fortunately, Stettinius—possibly at the eleventh hour—was taken to Yalta. Unfortunately, Harry Hopkins still seemed to be the No. 2 man in Europe, so far as the press preliminaries of the conference were concerned.

In their great task Stettinius and his associates are entitled to the complete cooperation, certainly for a trial period, of every American, including the President of the United States.

American foreign policy cannot be developed nor handled by wisecracks at press conferences nor by back-stairs irresponsible gossip nor by unofficial agents holding no responsible office under the Government of the United States comparable with the powers which some have presumed to exercise.

Churchill pays careful heed to the British Foreign Office. Let us never forget that Britain has gone a considerable distance in the last century under the guidance of the British Foreign Office, irrespective of the successive Prime Ministers who have flitted across the stage. Britain loses battles but wins wars—and that is true of its diplomats as well as its generals.

Surveying the sorry scene in Europe, one is more and more impressed with the primary concern of Britain and Russia for the solution of their problems, whether it be in the future security of Russia against aggressive attack from its European neighbors or the preservation by Britain of the life line of the British Empire, running through the Mediterranean and concern with the future attitude of Italy and Greece and the other countries bordering on the Mediterranean.

Looking back a century to the profound success of the Monroe Doctrine (a purely unilateral declaration of a sphere of influence) in preserving the American hemisphere from outside aggression one may look forward a century to the possibility of preserving peace in the Pacific and possibly preventing another era of global strife through the medium of a stronger China.

Here would seem to be a justified risk in the development of this great country which has been a bulwark of peace for centuries without end. Here is a country that has preserved its agricultural economy by offering the world an example of a soil that is 60 percent more fertile than the world average in the production of rice, 40 percent in barley, and 26 percent in cotton, in contrast with the utter exhaustion of the soil of India, as the dung of their cattle has been used for fuel instead of the replenishment of the earth.

Eight great dynasties have ruled in China in forty centuries and have been models of administration in their place in history. In our own time we have seen China in a disintegrating period in the decline of the Manchu dynasty but there are many indications of a new spirit of unity and progress that offers hope for peace in the Pacific and perhaps throughout the world.

To be sure, one must take risks, and there will not be lacking those who are concerned with the dangers of the growth of a great power in the Orient.

One must only comment that this power is altogether likely to develop under Soviet tutelage, if it does not come with American assistance. Surely one cannot view with equanimity the evolution of a Soviet system reaching from the Baltic in the north to the Pacific in the east and the Persian Gulf in the south. In such a system that would embrace territories and resources such as no nation has ever known, and more than 600,000,000 people, one might well find the totalitarian heaven of which some may dream, but a heaven that might well spell a totalitarian hell for many minorities within and without who might need to be liquidated in order to achieve the dream of peace.

With Britain and Russia somewhat preoccupied in reconstruction for the next quarter of a century, and with the immediate and pressing problem of Europe on their doorsteps, it might well be America would be permitted to contribute to the development of a China which might offer a bulwark for peace, not only in Asia but in the great area of the earth washed by the waters of the Pacific.

Such, at any rate, is a possibility in American foreign policy that may well be seriously considered.

Meanwhile, America, with or without an association of nations—and I am one of those who has dedicated my efforts throughout the past two decades to a better understanding of this problem and to the development of some form of association calculated to discourage war—must yet recognize the absolute necessity of an America that shall be informed and prepared and alert.

To this end America needs a State Department that shall reflect the vigor and vitality represented by the recent reorganization.

America also needs and must have an all-American communication system extending around the world, to tell the story of America to the other peoples of the earth, undiluted and uncensored, and to enable America to receive undiluted and uncensored the story of other peoples of the earth. All too long American communications have been depending upon the collaboration of other powers.

America also needs and must have an all-American air system to use the air bases which we have developed throughout the world at an expense of $500,000,000. As Americans are able in this next century to visit the other sections of the earth, through the marvels of air transportation, that may take us in 2 days to any portion of the earth at an expense that will be within the means of middle class Americans, we shall have an opportunity to see the glories and ruins of other civilizations and also the sink-holes and cesspools in which these wars are bred.

In this way America will come to know the world and the world will come to know America as it comes in contact with middle-class Americans, rather than the rich playboys who have all too long misrepresented America to the world.

America also needs and must have an all-American merchant marine to use the 40,000,000 tons of merchant shipping, with which we shall end this war, built by the American taxpayers at an expense of nearly $20,000,000,000 and carrying one-third to one-half of the American foreign trade.

Here is the challenge to America as America takes its place at the council tables of the nations, ready to have its proper voice in the decisions of the future as to the peace of the world.

Never again must America be plunged into strife without volition upon its part by the gradual encroachment of struggles born far from our shores but leading America eventually to war, whether it be the death of an archduke in Austria or the problem of the Polish boundary.

America must be heard first, rather than last. Never again must America be drawn in to determine at tremendous sacrifice the final issue of these struggles, but rather, have its voice heard in preliminary discussions and determine the course which may be calculated to preserve the peace.

In order to achieve this goal there must not be sole dependence upon a Congress or a President, but rather upon the informed and alert intelligence of the great mass of citi-

zens of the United States if we are to be true to our democratic traditions and direct the course of our own destiny.

This is the challenge to Americans everywhere as we prepare the way for the return of our 11,000,000 sons who are now in service, and seek to give to them a guarantee that their sons shall not be compelled in their day to make a similar sacrifice.

Portion of Article To Appear in Encyclopedia Americana on Cartels

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. VOORHIS of California. Mr. Speaker, special permission has been given by the Encyclopedia Americana to the author of the article on cartels which is shortly to be printed in Encyclopedia Americana for its inclusion in the CONGRESSIONAL RECORD. The author, Mr. Howard W. Ambruster, of Westfield, N. J., has suggested to me that it be placed in the CONGRESSIONAL RECORD, and since there is so much discussion of the problem of cartels and so much need for a clear understanding of just what that word means, I am asking consent to include with my remarks on three occasions portions of Mr. Ambruster's article.

It is understood that this material cannot be reproduced except by special permission from the Encyclopedia Americana.

There follows the third portion of the article:

Statutory control: In the United States restrictive trade agreements have by no means been limited to associates of the German supercartel and ever since the various antitrust laws, including the Federal Trade Commission Act of 1914, were passed, many of the prosecutions brought under them have been based upon understandings between legally independent enterprises which come within the definition of cartel agreements. A typical case was one in which the defense was that the agreement complained of was made necessary by vicious price cutting. This appears to be the most potent argument for the cartel theory which its advocates have ever advanced; but in this case (*United States v. Addyston Pipe & Steel Co.* (85 Fed. 271, 1898)) Chief Justice William Howard Taft, then Federal circuit judge, declared that contracts made with a view to check ruinous competition were illegal, being in restraint of trade. As a later example may be cited prosecution and fines of nine cheese companies in 1944 for a cartel-like, price-fixing conspiracy.

Although the American antitrust laws forbid all understandings between separate enterprises which may restrain trade and the courts have invariably upheld these statutes as applicable to cartel associations, several statutes have been enacted which appeared to legalize restraints upon competition more or less privately arranged. The most important of these was the National Industrial Recovery Act of 1933, which approved codes of fair competition and under which, until it was declared invalid in 1935, a total of 874 codes were approved by the National Recovery Administration (N. R. A.). These codes contained almost countless provisions to govern independent enterprises which directly or indirectly controlled selling prices and in some instances restricted production or allocated markets, all of which arrangements met the cartel definition.

Other legislation which appeared to legalize certain cartel practices included the Federal bituminous coal statutes of 1935 and 1937 relating to production and prices; the so-called hot-oil State and Federal laws of the 1930's restricting production and marketing; State and Federal laws governing trucking rates; the Capper-Volstead Act of 1922 authorizing cooperative agricultural marketing; and numerous State fair-trade laws, followed in 1937 by amendment to the antitrust laws known as the Miller-Tydings Act which legalized resale price maintenance where State laws so permitted.

Export associations, or cartels for foreign sales, were definitely legalized in the United States by the Webb-Pomerene Act of 1918, and the Federal Trade Commission has reported that 118 such associations were formed under this statute with an annual average of 50 in operation. This law provided that domestic producers could form associations of the cartel type for the export of their products, but it also specifically forbade restraint of trade within the United States.

Regardless of these exceptions it has been said that, as compared with the attitude of other countries, the policy of the United States Government has been against cartels; that of England has been tolerance; and that of Germany, official encouragement.

In Great Britain the common law, legal tradition, and national individualism have long opposed contracts restraining trade but court decisions have varied and it has been found not illegal to form cartel associations. Also, in certain industries, notably coal, the essentials of cartelization have been required by statute. The Board of Trade, since 1920, has been authorized to inquire into the operation of cartels but has made little use of this power.

Of British Empire countries, Canada has had a special cartel law by which the lowering of tariff duties might be utilized in order to check excessive prices thus brought about. New Zealand has also made use of tariff reductions as reprisal for cartel increase in prices on commodities. And Russia, prior to the revolution, did likewise. German law originally forbade any arrangements which were against public policy or should injure others, but the law against restraint of trade was ambiguous, and in the early days of modern cartel development the Bavarian supreme court held that businessmen in an industry suffering from a depression could legally agree among themselves to limit production and raise prices.

In the period following the First World War protests at the activities of domestic cartels resulted in the German cartel court law of 1923 providing for the regulation of such agreements in the public interest. No drastic action came from this court and, following the economic crisis of 1930 and 1933, final power over cartels was given to the minister of economics. From then on, in Germany cartels gradually lost their natural or economic functions and became directly an important phase of the Government structure.

Earlier protests against cartel abuses had resulted in 1926 in an official investigational body the "enqueteausschuss" to inquire into causes of economic distress. This agency made extensive studies of cartel policy and laws relating thereto, finally reporting that it had no fixed ideas as to what should be done about the cartels inside Germany and that it would be impracticable to attempt to establish international control of world cartels. Other countries where national or international cartels have operated usually have had special statutes against restraints of trade, most of which were enacted long before the era of the modern cartel, and have been enforced against these associations only to a limited extent.

The French cartels, called comptoirs or syndicates, existed from the last quarter of the nineteenth century in defiance of the French Penal Code; then in 1926 were legalized with a restriction to what were defined as normal profits. In Denmark, Holland, and Sweden, after the First World War, official investigations were held on the subject of cartel control, with the result only that Sweden in 1925, began the appointment of experts to supervise such associations. In Norway laws were passed in 1920 and 1926 compelling cartels (and trusts) to supply information, and for their regulation by administrative bodies. It would appear that the maximum of statutory control of cartels which existed outside of the United States during their period of development in the early part of the twentieth century consisted mainly of oldtime restrictions against unfair competition, monopoly and profiteering, along with a few newly adopted provisions for some kind of administrative supervisions for some kind of administrative supervision of cartels.

Effects of tariff barriers: The relationship of tariff protection to the formation of both national and international cartels has been frequently discussed in the literature but there appears to be no unanimity of opinion as to whether the erection or the lowering of tariff barriers has any definite effect upon the efforts of producers to cartelize an industry. It has also been pointed out that the international cartel can by its own private devices defeat the governmental tariff policy of any nation, either by dumping its product below cost through the duties of a high tariff in order to destroy a protected industry; or by arbitrarily fixing a higher price for shipments into an area in which the duty on an article which must be imported has been removed in order to lower the domestic price.

From time to time, suggestions have been made for unifying cartel law in the countries where the problem has arisen. Some authorities have been of the opinion that the difficulties of doing this are too considerable. Other students appear to believe that the real problem has been the difficulty in enforcing existing laws of many countries which forbid the principle on which the cartel is organized. It might be summed up that in every country cartels have been forbidden in theory but accepted (to some degree) in practice.

Advocates of the cartel as an economic necessity or a device which is beneficial to the public welfare usually ignore its monopolistic aspects and argue that it is an aid to economic stability or equilibrium in the industry which is cartelized. After the First World War in the era of cartel expansion its advocates began to use the word "rationalization" as a comprehensive description of the purpose and scope of these industrial agreements. The accepted definitions of this word indicate its customary application to mental processes, usually in a relative sense; so it appears necessary to examine the application of the word to the cartel in terms which relate to such organizations. As representative of the viewpoint of advocates of the cartel, the report of the Economic Conference of the League of Nations in 1927, already mentioned, stated its understanding of rationalization to be "the methods of technique and of organization designed to secure the minimum of waste of either effort or material. It includes the scientific organization of labors, standardization of both material and of products, simplification of processes, improvements in the system of transport and marketing."

The report went on to say that the benefits of rationalism and scientific management were unanimously recognized by the conference and asserted the need of greater efforts in this field. The conference report finally expressed the conclusion that the judicious and constant application of rationalization was calculated to secure greater security and a higher standard in the conditions of life to the community; lower prices and better goods to the consumer; and higher and steadier remuneration to the producers.

The implication in this discussion of rationalization—that the coordination of effort inherent to the application of scientific management in an industrial plant is the ultimate aim of the cartel and that higher standards of living and lower prices are among its contemplated results—appears confusing when compared with the accepted definitions of the cartel available in the literature on this subject. Confusion is also apparent when considering the accepted definition of rationalization in this application, in the fact that although the purpose of the cartel, to influence competition, is usually rational from the viewpoint of its members, and may be rational from that of its employees, its aims may be, and usually are, irrational from the viewpoint of the cartel's competitors and its customers; and can hardly be considered as rational from the viewpoint of those workers who may be deprived of employment by cartel restrictions of production.

A somewhat different approach to this concept of cartel was expressed in 1928 by William T. Daugherty, United States Trade Commissioner at Berlin, who reported "rationalization begun after the inflation period in Germany, was being sought internationally in the interests of lowering costs by combating overproduction by allocating markets" and that such arrangements involved price fixing.

One of the most elaborate summaries of the benefits sought from the formation of cartels was presented to the T. N. E. C. in 1940, by Dr. Theodore J. Kreps, its economic adviser, and professor of business economics at Stanford University, as follows:

"(1) Lower costs of production because (a) methods of production are standardized through mutual agreement; (b) rate of production is kept at a more uniform level; (c) competitive overexpansion is reduced; (d) risk premium is less, and less stock is necessary to meet unexpected demands; (e) cartel research institutes are established, patents and processes pooled; (f) problems of management are solved in mutual conference.

"(2) Lower marketing costs because (a) advertising is done by cartel (syndicate) rather than individual enterprise; (b) terms of trade are made uniform, preventing unfair competition; (c) transportation expenses to uneconomical markets are eliminated through allocation of markets; (d) exploitation of seller or purchaser of cartel products is avoided through conclusion of intercartel agreements.

"(3) Smoothing out cyclical ups and and downs: (a) Greater equilibrium is obtained between productive capacity, production and consumption; (b) rate of employment is less subject to severe fluctuations; (c) prices are kept at a more stable level."

The comment has been made that many of the benefits indicated by this list are not germane to cartels and can be readily obtained without the intervention of such arrangements; also that these benefits are not by any means assured through the cartelization of an industry. It has been frequently argued that cartel operations do not necessarily mean high prices because efficient production and growing markets may both be stimulated by low prices; also that cartels are considered a stabilizing force because they possess the power to purge business of excesses of competition. Sir Felix J. C. Pole, as chairman of the Associated Electrical Industries, Ltd., a British concern, has advanced the argument that the cartel is designed to prevent extreme or unfair competition and to include the interchange of scientific knowledge, patent rights, and standardization of products.

One of the most forthright expressions of American approval of the theory upon which cartelization is justified was issued by the Chamber of Commerce of the United States in 1939 when it recommended "such modification of the antitrust laws as would make clear the legality of agreements increasing the possibilities of keeping production in proper relation to consumption, with protection of the public interest at all times through Government supervision of such agreements."

Lord Harry Duncan McGowan, head of Imperial Chemical Industries, Ltd., of Great Britain, which had world-wide cartel agreements with I. G. Farben and others from its earliest days, replied to criticism in the House of Lords in July 1944 with the emphatic statement that many British manufacturers had "censed to believe in the inherent superiority of free or extreme competition" and that the purpose of the international cartel was to "regulate but not to abolish competition."

A somewhat unique argument in favor of cartels was advanced, during the era preceding the Second World War, by Baron Alfred M. Melchett, organizer of Imperial Chemical Industries, Ltd., who called the international cartel "one of the greatest factors toward international peace."

The cartel and state socialism: As opposed to the corporate owners of cartelized industry, Earl Browder, then general secretary of the Communist Party in the United States, was publicly quoted in 1944 as appearing to approve such devices when he stated that "monopolies and cartels are the natural form of capitalistic economy in its higher stage of development" and that "it is impossible for America to go back to the premonopoly stage." From a somewhat similar approach David H. Macgregor, English writer on the subject, has pointed out the evolutionary significance of the cartel as a step towards socialism, citing the creation of compulsory cartels in England and Germany. It has appeared in a number of instances that a cartelized industry has moved almost automatically into state socialism, as was the case when the German potash law of 1919 placed the management of this industry in the hands of a government council or Reichskalirat. So it would appear that among those who may approve the cartel as a useful phenomenon of economic progress are the followers of Karl Marx who hold that the accumulation of wealth and resulting concentration of economic power must ultimately result in the socialism of industry.

Political power: Some observers have also pointed out that cartelization and its attendant self rule by big business, in Germany, and to a lesser degree in Italy, played an all-important part in the development of totalitarianism and the corporate state in these countries. It might be said that one of the most forceful arguments which has been advanced against the cartel is the aspect of political power which is sought, and at times exercised, by its leaders, especially those of the great international cartels.

Dr. Callmann in his T. N. E. C. testimony expressed the opinion that the cartel movement and self-government of industry are identical and quoted American and German authorities in order to point out the dangers implicit in the tendency of the cartel to acquire influence over such governmental agencies as might interfere with the management and control of cartel activities. John T. Flynn, American economist, has traced the rise of fascism in Germany through the self-rule of industrialists and financiers to the government control of all business, and the armament program to relieve unemployment. Guentner Reiman, German-American economist, in his book The Vampire Economy also refers to the political power sought by cartel leaders in order to safeguard their positions against both social revolutionary forces and business competitors.

Dr. Callmann summed up his conclusion on this aspect of the subject by saying that cartels are a great danger to democracy and that in pre-war Germany eventually, no one knew who had whom on the leash—the industry the government or the government the industry. It has been said to be a moot point as to whether Hitler used the cartels for his purpose or the cartels used Hitler for their purpose. That the I. G. Farben-Steel cartel group helped to finance Hitler's rise to power, and to weaken Germany's intended victims, is indisputable.

Another argument relating to the political influence created by the concentration of industry in the cartels is the fact that labor, therefore, finds it necessary to organize in larger groups and fights for greater political power; so that these two struggling groups grow to powerful states within the state to an extent which may render representatives of the public interest helpless.

Meyer's Lexikon in 1927 stated that among the monopolistic disadvantages of the kartel were the lack of incentive for its members to improve manufacturing processes or the quality of their products; also that firms competing with kartel members were destroyed. Those who criticize the price-fixing proclivities of the cartel have pointed out that all excess profits thus secured by restraint of competition become in effect a private tax levied upon the public without specific warrant of law. This point was raised in 1930 by the editor of the Prager Tagblatt, Walter Wannemacher, who stated that the German people were paying annually to the cartels in excess prices 1,000,-700,000 marks. This sum, equal to $400,000,-000, was equivalent to about one-sixth of the total German Government revenue in that year.

In addition to other criticisms of all types of monopoly which have been mentioned, objection has been made to the defensive purpose of the cartel in discouraging others from engaging in production of like commodities; the charge being that this characteristic becomes a privately operated regimentation of human effort which must result in killing initiative and promoting servility among those who otherwise would respond to the incentive of free enterprise. The problem of the cartel appears to be: Shall it be tolerated, controlled, or abolished?

The German Character

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Thursday, March 8 (legislative day of Monday, February 26), 1945

Mr. BREWSTER. Mr. President, I ask permission to have printed in the RECORD an article from the Miami Daily News entitled "Our Knottiest Problem: The German Character," by Col. S. G. Shartle, United States Army, retired, who served for many years' in the American Embassy in Berlin as our military attaché, who was American military observer with the German Armies, 1914 and 1915; who was chief of staff, American section, Allied Armistice Commission; and who is the author of a very illuminating book, Spa, Versailles, Munich. I think his contribution is most helpful at this time.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR KNOTTIEST PROBLEM: THE GERMAN CHARACTER

(By Col. S. G. Shartle)

I knew Germany and the Germans before they had slain Siegfried, that stalwart hero of the northern sagas, whose enchanted sword defended the spirit of freedom, killed dragons of evil, and sustained in men a hope for the better things of life. Yes; before the First World War there were good Germans, people decent by our standards, earnest souls with high ideals and patient industry, learned men, scientists, artists—a progressive civilization that had developed mostly from the south, for there the first contacts with our Greek and Roman worlds were made.

The Bavarians, the Swabians, the Franconians, and the Low Saxons, ancient tribes of south and western Germany, had been subject to the influence of Roman civilization and later Italian and French, for centuries before the Prussians were touched. Mostly from these older provinces came the world-famous scholars, poets, and musicians of Germany.

I found in this modern progressive state an orderly society, comfortable living conditions, an intriguing romanticism lightening dullness and rigidity of form, activities of great professional interest to me and to my country.

As to German traits of character, I shall let a German scholar speak, Eugene Diesel, in Germany and the Germans (1929): "Great richness and variety of character, from splendid Siegfried to brooding Hagen; unusual violence and quarrelsomeness; loyalty to principle and leader, but treachery where there is no binding principle. The love of wandering, readiness for war and the chase; long, solemn drinking bouts; passion for nature; sudden enthusiasms; but quickness to take offense, quickness in retaliation, jealousy and vindictiveness. Tragic emotion, the ever-present threat of impending disaster, an atmosphere of stifling gloom, the lack of any firm stability and cohesion."

Complicating the Christian inheritance from the south was a leaven of materialism, cynical philosophy, and a moody strenuousness and harshness of life that we may identify with Prussianism. Symbolizing the brighter side of Germany by the spirit of Siegfried, we as naturally turn to Wotan and his fellow gods to represent the Prussians in our allegory. And the relation is not so fanciful, when we remember that they came under the influence of Christianity, and then only by force, a thousand years after the Germans of the Rhineland.

The affinity, too, is striking, when we consider the characteristics of the Prussians and their pagan gods. Wotan maintained discipline and had a code of honor for his own caste, but for lesser creatures and the "common man" these superbeings had no constraining qualms in the use of expediency, treachery, murderous punishment, or annihilation to gain an end. We need only to read Wagner's Ring of the Nibelungen to understand the amorality of these gods, as he has portrayed them. There is another resemblance between today's nazi-ism, the quintessence of Prussianism, and this paganism, namely, a fatalistic acceptance of what the leaders ordain.

Of course, geographical Prussia of today contains probably a small proportion of the ancient Borussi, a mixture of Slavs and various German tribes. But to the spirit of their Junkers, we can ascribe much of Germany's history for the last 300 years, from the time of the Great Elector (1640–88), through Frederick the Great (1740–86) and Bismarck (prime minister 1862–90), to the Nazi regime, none of them lovers of constitutional liberty. Since the formation of the empire in 1870, Prussian militarism has been supreme. We have to deal now with a Prussianized Germany, that is, a Germany in which this ancient ferment has been brought to a head by a group of fantics, who boast of the dubious virtues of their pagan gods.

Hitler in Mein Kampf, so far as we can extract any philosophic thought from this literary hodge podge, draws largely (without giving credit) from Houston Stewart Chamberlain, certainly in the development of his superrace theory and its corrollaries. Chamberlain was the son-in-law of Wagner, of whose life and works he made a psychological study.

Wagner fitted the Norse myths into an operatic exposition of the philosophy of the moody Schopenhauer, and thus established a cult that has had a great influence on German thought. We need but mention Wagner's shrine at Bayreuth and the annual musical festivals there. Thus these old gods are playing their part in Germany's present-day tragedy.

It is this superrace dream of the leaders of a nation grown powerful at the expense of its neighbors, through Prussian instigation, that has aroused the world. And now the tragedy is ending with the Goetterdaemmerung. The Twilight of the Gods, the last of the Ring. But this time it must be more than their twilight. They and their mythical influence on German thought must be destroyed. For only by the stamping out of Prussianism can the German people be brought into honorable cooperation with their fellow humans.

I have emphasized what seems to me a malign influence in the development of a people otherwise fitted by talent and worthy characteristics to take a promising part in shaping the world. Of course, it would be an error to seek to explain historical events by assigning one or even a multitude of causes, a point made laboriously by Tolstoi in his War and Peace.

When trying to analyze history even with a greater perspective than we now have of this century's events we are confronted with a number of human imponderables that reduces us often to mere reporting. Yet now in order to bring back into the family of nations one that has gone berserk, as did the warriors in the Norse legends, it is necessary to understand, not only the symptoms but the underlying causes that have made this madness possible.

One of the objectives our three great leaders set down at Yalta is to stamp out nazi-ism. What are the conditions that will confront us after crushing German military power? I have said that there were in Germany many decent, high-minded people. Perhaps some of them, beyond the emigrees, have survived. But they are the old and powerless. We know, indisputably, that the greater part of the youth are trained fanatics. These will have to be curbed by force. And no plan that envisages less than the ruthless destruction of Prussianism, as defined, and the supervision of the training of youth for two generations or more, will insure the final goal—a nation that can be trusted and honored as a cooperative member of the family of nations.

This tutelage need not be harsh and onerous, but it must be effective. We have a nation to make over, or at least the eradication of some deeply rooted mores of pagan descent, but there is a nucleus within of well-disposed humans. On these and the implementation of the ideals of the Atlantic Charter we must depend.

If I were choosing a slogan for the supervising council, I should go to Emerson and set down his words: "To gain a friend, be a friend." A friend, however, is not a wobbly weakling, who warms himself by indiscriminate indulgence of those he would influence. There will be many Germans who will try to take advantage of kindness. But there will also be sober Germans who will respond to a combination of fair dealing and firmness. Obedience to authority is ingrained and that will help.

Recalling some of the wheedling, whining, protesting, tearful memorials, and argumentative demands of the German representatives on the Armistice Commission at Spa (1918–19), I have some appreciation of the greater task ahead for a post-war governing authority in this land of chaos. I fear that only supersolons and saints, combined, can succeed. Immediacy must be tempered by the long view. Actions stimulated by vengeance and vindictiveness, commercial advantages, and political power, whether detrimental to allies or the prostrate enemy should be avoided. I saw too much of this at the end of the last war on the part of some of our associates, brave in war but not wise in peace. The traders were busy with their order books in Germany before the peace treaty was signed, and Shylock was out for his pound of flesh.

Now, this is not to argue that the war criminals shall not be punished and nazi-ism rooted out tooth and nail. Their elimination, however, should be considered a means to an end, not the main objective. The solution of the German problem will require a major operation, but let us keep in mind the cure sought—the reform of Deutschtum and with it the establishment of a long peace.

International Security

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Thursday, March 8 (legislative day of Monday, February 26), 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by the junior Senator from Oregon [Mr. MORSE] at a dinner

given by the independent citizens' committee of the Arts, Sciences, and Professions in New York City on February 18, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Basic in any plan for maintaining international security is the necessity for juridical machinery empowered to adjudicate controversies over the international economic claims and policies of the world's family of nations. International security and international economic exploitation are not marriageable. Our first objective toward the goal of international security and permanent peace must be to eliminate as much as good faith alliances can eliminate the danger of military aggression by outlaw nations. I believe that the principles and objectives of the Dumbarton Oaks and Yalta Conferences offer the only immediate hope for freedom from another world war within another 25 years.

However, time has a tendency to erode social institutions as well as our physical environment. Even if we could satisfy the demands of the perfectionists in the peace plans which will eventually be adopted at the close of this war, nevertheless the ravages of time would crumble them unless they are built on the dynamic laws of social growth and change rather than the statics of fixity and inevitable deterioration.

A great step forward will have been taken when we adopt a code of international law and order backed up by adequate police power to maintain international security from military aggression. If our generation can make that contribution to the advancement of man's humanity to man, it will have kept faith with all that has gone before and much which can come hereafter.

Hence our immediate objective in the development of a world order of international security must be the demilitarization of Germany and Japan and the empowering of a council of the family of nations to oppose with force if necessary any military aggression by any nation.

However, let us not lose sight of the fact that the principles of the Atlantic Charter are not compatible with any world organization designed to prevent war, even though the dominant nations in that organization are the United States, England, Russia, France, and China, unless the organization also provides machinery for preventing economic as well as military exploitation.

Granted that the first need for international security is machinery for controlling military aggression, we must not lose sight of the fact that economic warfare has been the forerunner of most military wars and the chief causitive factor producing many wars. International economic security for many nations, if not for all, is probably decades away. Economic exploitation, like all sin, springs from the nature of man and his inherent selfishness. Sentiment and probably idealism have little place in a discussion of international economics except on the part of those of us who believe that even practical realism isn't very practical or real unless it recognizes the superiority of human values over material things, even when material tests are applied to international economic values.

Equality of economic opportunity so glibly spoken of by many professed idealists is neither very desirable or possible if its accomplishment is to be sought overnight. Those who emote about it, but fail to recognize its social relationship to the social, educational, and economic maturity of a people, overlook, I fear, the cruelty that would accompany an attempt to bring about equality of economic opportunity the world around in a decade or in two or longer in some parts of the world. International security cannot be accomplished on the economic front by those who seem to think that progress is synonomous with social avalanche or economic revolution.

To strike a balance of conscionable compromise in our approaches to the many facets of the great task of building and steadily improving a world order of international security, is the trust and opportunity of the statesmen of the world—not only political statesmen, but statesmen of industry, agriculture, labor, business, and the professions as well.

Only by conscionable compromises on the many fronts of human controversies which affect our international relations, can we help to build a world order of international security.

Thus, those American bankers who seem to be so unalterably opposed to the principles of Bretton Woods, must give greater evidence that they appreciate the fact that international security, militarily or economically, cannot be maintained unless the stability of foreign exchange is maintained. Granted that instability of foreign exchange may be the source of great revenue for some world bankers, it is also one of the causes of great international insecurity. This is just one specific instance in which I think an economic group should be willing to accept a conscionable compromise in the interest of greater international economic security and cooperation among nations on the economic front.

I am one who believes that the United States can best protect both its sovereignty as a nation and its economic self interest so essential to maintaining our political democracy and our American economic way of life by active participation in an international organization which seeks by way of conscionable compromises to so adjust the relations between nations in accordance with rules of reason and common sense as to maintain and perpetuate international security.

Knights of Columbus Educational Trust Fund

EXTENSION OF REMARKS
OF
HON. DAVID I. WALSH
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Thursday, March 8 (legislative day of Monday, February 26), 1945

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me with respect to the Knights of Columbus educational trust fund for the benefit of orphaned sons and daughters of members of the Knights of Columbus who may lose their lives in World War No. 2, or who may become totally disabled from military causes.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I want to call attention to the excellent post-war educational plan recently inaugurated by Knights of Columbus. It is known as the educational trust fund by the Knights of Columbus.

It is a fund of $1,000,000 that is being raised by the members of this organization to provide a college education for the orphan sons and daughters of the members of the society who may lose their lives in World War No. 2, or who may become totally disabled from military causes.

It is stated that more than 90,000 Knights of Columbus have entered the armed forces of the United States and the Allied Nations and that up to the present date more than 1,000 members have lost their lives or are missing in action.

Statistics are being collected as to name, present age, status, and school age of the children of members of the armed forces so that the benefits may accrue as soon as possible.

This program was submitted to the Veterans' Administration and met with the approval of General Hines and his staff. No legislation up to the present time provides any plan for the college education of the children of veterans who have lost their lives in combat, so the Knights of Columbus plan is original and will be especially helpful to children of the group of veterans for whom it seeks to provide educational opportunities. Certainly such a humanitarian undertaking by this fraternal society will receive the approval and gratitude of all Americans, and I venture to hope that it may lead to similar action on the part of other Nation-wide fraternal organizations.

Operations of the F. H. A. in Utah

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Thursday, March 8 (legislative day of Monday, February 26), 1945

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter addressed to me by Abner H. Ferguson, Commissioner of the Federal Housing Administration, relative to the operations of that Administration in Utah.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL HOUSING AGENCY,
FEDERAL HOUSING ADMINISTRATION,
Washington, D. C., March 6, 1945.

Hon. ELBERT D. THOMAS,
United States Senate,
Washington, D. C.

Dear Senator THOMAS: Although for obvious reasons during the war emergency the F. H. A. has not made its customary periodical reports to Senators and Congressmen on F. H. A. operations in their States, I feel this practice should now be resumed.

The F. H. A., as you know, operates entirely through the private capital of local financial institutions. It insures the loans these institutions make for property repair and mortgages for the purchase of homes and the construction of new homes.

At the end of June 1944, a total of $9,860,685 lent by these institutions has enabled 30,122 Utah families to maintain or improve their properties, while over 8,920 families have been able to buy or build homes through mortgage loans amounting to over $34,896,815.

In addition, 5,971 families of war workers, newly arrived in war congested areas in Utah, have been provided with homes through mortgage loans amounting to over $28,008,400.

The F. H. A. has for over 5 years been paying all operating expenses and losses of its mortgage insurance programs, at the same time adding substantially to its insurance reserves, which now total more than $97,000,000. Losses have been only a fraction of 1 percent. Likewise, the property repair pro-

gram is currently paying its own way from revenues derived from insurance premiums and for nearly a year collections on defaulted loans have shown a substantial margin over claims paid.

I am particularly happy to advise you that within 60 to 90 days the F. H. A. will start distribution of mortgage prepayment dividends to 13,000 home buyers who paid off their mortgages in full during the calendar year 1944. These mortgages were in group accounts which had developed credit balances by January 1, 1944. These dividends will range from a few dollars to nearly $200 each.

I am sure you will agree this is a gratifying record.

Sincerely yours,

ABNER H. FERGUSON,
Commissioner.

United Nations Conference at San Francisco

EXTENSION OF REMARKS
OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, March 8 (legislative day of Monday, February 26), 1945

Mr. BARKLEY. Mr. President, on the 6th of March 1945 the Secretary of State issued two statements announcing the issuance of invitations to the United Nations Conference to be held at San Francisco on April 25, 1945, and giving an explanation of the provisions of the text on voting procedure in the security council of the general international organization proposed at the Dumbarton Oaks Conference. I ask unanimous consent that the statements be printed in the Appendix of the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

TEXT OF STATEMENT MADE BY THE HONORABLE EDWARD R. STETTINIUS, JR., SECRETARY OF STATE, AT MEXICO CITY, AT THE CHAPULTEPEC CASTLE ON MARCH 5, 1945

I am happy to be able to make a most significant announcement, here in Mexico City, concerning the future world organization for peace and security.

As I arise to speak the Government of the United States, acting on behalf of the sponsoring Governments—the United States, Great Britain, the Soviet Union, and China—is transmitting invitations to the United Nations Conference to be held at San Francisco on April 25.

I regret exceedingly that the Provisional Government of France has not accepted our invitation to become one of the sponsoring countries for the San Francisco Conference.

Issuance of the formal invitation to meet only 7 weeks from now in San Francisco is another step toward a goal which is in the minds and in the hearts of all of us—establishment of an enduring peace after victory in this war.

In October 1943 the signatories of the Moscow Declaration pledged themselves to cooperate with each other and with the other nations devoted to peace in creating a general international organization for the maintenance of peace and security.

The Dumbarton Oaks Conference was the next step necessary in the carrying out of this vast program. From that conference there emerged the proposals which we are studying here in Mexico City.

The conversations at Dumbarton Oaks left open the question of voting procedure in the Security Council. A proposal on this subject has now been agreed upon in the manner stated in the text of the invitation to the San Francisco Conference, which I shall read to you in a moment. This was one of the great accomplishments under President Roosevelt's leadership at the Crimea Conference.

In Mexico City the 20 countries here represented are taking another important step toward the establishment of a world organization. Our task here has been to exchange views, and to clarify our thoughts, on the essential features of the world organization of the future and on the relationship to it of our own inter-American system, and thus to prepare curselves more fully for the work to be undertaken at San Francisco.

It is my great pleasure now to read to you the text of the invitation to the Conference, which includes the proposed provisions for voting in the Security Council.

"The Government of the United States of America, on behalf of itself and of the Governments of the United Kingdom of Great Britain and Northern Ireland, the Union of Soviet Socialist Republics, and the Republic of China, invites your Government to send representatives to a Conference of the United Nations to be held on April 25, 1945, at San Francisco in the United States of America to prepare a charter for a general international organization for the maintenance of international peace and security.

"The above-named Governments suggest that the Conference consider as affording a basis for such a charter the Proposals for the Establishment of a General International Organization, which were made public last October as a result of the Dumbarton Oaks Conference and which have now been supplemented by the following provisions for section C of chapter VI:

"'C. Voting:

"'1. Each member of the Security Council should have one vote.

"'2. Decisions of the Security Council on procedural matters should be made by an affirmative vote of seven members.

"'3. Decisions of the Security Council on all other matters should be made by an affirmative vote of seven members, including the concurring vote of permanent members, provided that, in decisions under chapter VIII, section A, and under the second sentence of paragraph 1 of chapter VIII, section C, a party to a dispute should abstain from voting.'

"Further information as to arrangements will be transmitted subsequently. In the event that your Government desires in advance of the Conference to present views or comments concerning the proposals, the Government of the United States of America will be pleased to transmit such views and comments to the other participating governments."

The proposed provisions for voting in the Security Council are those which were presented by the President of the United States at the Crimea Conference; they were there agreed to by Great Britain and by the Soviet Union and have since been approved by China.

I wish at this time to comment to you briefly on the significance of the proposal on voting procedure. This procedure means that whenever any member of the Council—including any permanent member—is a party to a dispute, that member cannot vote in any decision of the Council involving peaceful settlement of that dispute. Consequently, the Council can examine the dispute thoroughly and the remaining members can make recommendations to all the parties to the dispute as to methods and procedures for settling it. They can refer the legal aspects of the dispute to the international court for advice. They can refer the dispute to the general assembly if they wish; and they can take any other appropriate steps short of enforcement measures to obtain a settlement of that dispute without the vote of the member of the Security Council involved in the dispute.

This means that all members of the Security Council when they are parties to a dispute will be on the same footing before this Council. It means that no nation in the world will be denied the right to have a fair hearing of its case in the Security Council, and that the equal, democratic rights of all nations will be respected.

If the dispute is not settled by such means, the major question before the Council is whether force needs to be employed. In that event, it is necessary that the vote of the permanent members of the Council be unanimous. They are the nations which possess in sufficient degree the industrial and military strength to prevent aggression. However, the decision of the Council can be reached in such a case only by a majority of seven members, which means that the permanent members cannot alone decide to take action. It also means that the nonpermanent members can prevent action.

I am happy to say that I have here to hand to each of you a more detailed memorandum on the voting procedure which I am sure you will wish to study.

The invitation to the San Francisco Conference suggests that the Dumbarton Oaks proposals be considered as affording a basis for the charter of the world organization. It is the wish of the United States, as it is, I am confident, of the other sponsoring nations, that there should also be the fullest opportunity at that conference for consideration of the views and suggestions of all the participating governments. I know that the contributions of the distinguished statesmen of the American republics will be most valuable in the writing of the charter.

The responsibility for the establishment and maintenance of a peaceful world order is the common responsibility of all the United Nations. It is on them that the duty has now fallen to write a charter for the international organization so firmly rooted in the realities of the world as it is and so clearly expressing the free and democratic ideals for which the United Nations stand, that it will truly represent both the will of the peoples of the world for lasting peace and their capacity actually to build and to maintain such a peace together.

We have the opportunity. We have the will. May God grant us the vision and the strength to sustain us. It is my faith that together we will build this world of freedom and security—a world at peace at last.

STATEMENT BY SECRETARY OF STATE EDWARD R. STETTINIUS, JR.

Today, with the issuance of the invitations to the San Francisco Conference, there have been made public the provisions of the text on voting procedure in the Security Council of the general international organization proposed at Dumbarton Oaks.

The practical effect of these provisions, taken together, is that a difference is made, so far as voting is concerned, between the quasi-judicial function of the Security Council in promoting the pacific settlement of disputes and the political function of the Council in taking action for the maintenance of peace and security.

Where the Council is engaged in performing its quasi-judicial function of promoting pacific settlement of disputes, no nation, large or small, should be above the law. This means that no nation, large or small, if a party to a dispute, would participate in the decisions of the Security Council on questions like the following:

(a) Whether a matter should be investigated;

(b) Whether the dispute or situation is of such a nature that its continuation is likely to threaten the peace;

(c) Whether the Council should call on the parties to settle a dispute by means of their own choice;

(d) Whether, if the dispute is referred to the Council, a recommendation should be made as to methods and procedures of settlement;

(e) Whether the Council should make such recommendations before the dispute is referred to it;

(f) What should be the nature of this recommendation;

(g) Whether the legal aspect of the dispute should be referred to the court for advice;

(h) Whether a regional agency should be asked to concern itself with the dispute; and

(i) Whether the dispute should be referred to the general assembly.

Where the Council is engaged in performing its political functions of action for maintenance of peace and security, a difference is made between the permanent members of the Council and other nations for the practical reason that the permanent members of the Council must, as a matter of necessity, bear the principal responsibility for action. Unanimous agreement among the permanent members of the Council is therefore requisite. In such matters, therefore, the concurrence of all the permanent members would be required. Examples are:

(a) Determination of the existence of a threat or breach of the peace;

(b) Use of force or other enforcement measures;

(c) Approval of agreements for supply of armed forces;

(d) Matters relating to the regulation of armaments; and

(e) Matters concerning the suspension and expulsion of members, and the admission of new members.

At the Crimea Conference the Government of the United States of America was authorized, on behalf of the three Governments there represented, to consult the Government of the Republic of China and the Provisional Government of the French Republic in order to invite them to sponsor invitations jointly with the Governments of the United States of America, the United Kingdom of Great Britain, and Northern Ireland, and the Union of Soviet Socialist Republics to a conference of United Nations called to meet at San Francisco on April 25, 1945.

Those consultations have now been held. The Government of the Republic of China has agreed to join in sponsoring invitations to the San Francisco Conference. The Provisional Government of the French Republic has agreed to participate in the Conference but, after consultation with the sponsoring Governments, the Provisional Government—which did not participate in the Dumbarton Oaks conversations—is not joining in sponsoring the invitations.

Today, at noon Washington time, representatives of the Government of the United States of America stationed at various capitals throughout the world are presenting to to the Government of 39 different United Nations the following invitation:

"The Government of the United States of America, on behalf of itself and of the Governments of the United Kingdom of Great Britain and Northern Ireland, the Union of Soviet Socialistic Republics, and the Republic of China, invites the Government of (name of government invited was inserted here) to send representatives to a conference of the United Nations to be held on April 25, 1945, at San Francisco in the United States of America to prepare a charter for a general international organization for the maintenance of international peace and security."

The above-named governments suggest that the conference consider as affording a basis for such a charter the proposals for the establishment of a general international organization, which were made public last October as a result of the Dumbarton Oaks Conference, and which have now been supplemented by the following provisions for section C of chapter VI:

"C. Voting:

"1. Each member of the Security Council should have one vote.

"2. Decisions of the Security Council on procedural matters should be made by an affirmative vote of seven members.

"3. Decisions of the Security Council on all other matters should be made by an affirmative vote of seven members including the concurring votes of the permanent members; provided that, in decisions under chapter VIII, section A, and under the second sentence of paragraph 1 of chapter VIII, section C, a party to a dispute should abstain from voting."

Further information as to arrangements will be transmitted subsequently. In the event that the Government of (name of government invited was inserted here) desires in advance of the Conference to present views or comments concerning the proposals, the Government of the United States of America will be pleased to transmit such views and comments to the other participating governments.

The invitation has been presented to the Governments of the following United Nations: Commonwealth of Australia, Kingdom of Belgium, Republic of Bolivia, United States of Brazil, Canada, Republic of Chile, Republic of Colombia, Republic of Costa Rica, Republic of Cuba, Czechoslovak Republic, Dominican Republic, Republic of Ecuador, Kingdom of Egypt, Empire of Ethiopia, Kingdom of Greece, Republic of Guatemala, Republic of Haiti, Republic of Honduras, India, Empire of Iran, Kingdom of Iraq, the Republic of Liberia, the Grand Duchy of Luxembourg, United Mexican States, the Kingdom of the Netherlands, Dominion of New Zealand, Republic of Nicaragua, Kingdom of Norway, Republic of Panama, Republic of Paraguay, Republic of Peru, Commonwealth of the Philippines, Republic of El Salvador, Kingdom of Saudi Arabia, the Republic of Turkey, Union of South Africa, Oriental Republic of Uruguay, United States of Venezuela, Kingdom of Yugoslavia.

Threats From National Socialism

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, March 8 (legislative day of Monday, February 26), 1945

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Threats From National Socialism," published in the Charlotte Observer of February 13, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THREATS FROM NATIONAL SOCIALISM

Henry A. Wallace is a symbol of a philosophy of government for this Nation which accounts for the raging and furious controversy in Congress as to whether he should be confirmed as Secretary of Commerce.

He is the embodiment of an issue that is fairly in the face of the people of this country for future finality of decision.

Stripped of all of its external camouflage that issue is simply this:

Is America to continue to be the America that it has been or is it to be something else?

More concretely, is this Nation to preserve its democratic traditions and principles or is it to be converted to national socialism?

National socialism has been an odorous phrase with the American people. Indeed, more than odorous; abominable and repulsive.

National socialism is what they have had in Germany. It is Hitler's baby. It is called nazi-ism. And the countries of our western world are spending oceans of blood to destroy it in the war for defense of civilized virtues.

National socialism is also a child of Mussolini. He called it fascism, but, essentially and fundamentally it worked upon the same principle as that upon which national socialism must always operate.

National socialism is likewise the creation of Russia. Stalin doesn't call it that. He calls it communism. But communism, like fascism, is twin-born with national socialism.

So, after all, what America faces is but another name for what Berlin has, and what Rome had before our soldiers and those of England, the great western democracies drove Mussolini from his throne seat.

So, also, what we face in America is, by another name, what Moscow still has and which Stalin seems to be determined to spread as far as possible across all the peoples and governments of Europe; perhaps, he hopes even the whole world.

These are hard sayings. They link the United States with what we have always in this country conceived to be at opposite ends with our democracy.

National socialism is struggling to become the dominant social, political, and economic philosophy of this country.

And Henry A. Wallace, good, earnest, capable, honest, and personally upright man that he is, is its major prophet.

What is national socialism? Well, whatever else it may be, it is founded upon the principle that the state is the supreme authority over all individual affairs of its people.

This is what it has been in Rome, and is now in Berlin and Moscow.

The fear is that what Mr. Wallace advocates is, in principle, too close to these apostacies to suit a free America.

They may deny and resent the imputation, but the trends and facts of their political preachments will not be brushed aside by the pious and even honest dreams of the utopianists.

National socialism represents the accumulation of all legislative control over all the people of America. If allowed to come to its full ripening it would mean that the end has come not only to private enterprise but to democracy in America.

National socialism would destroy the foundations upon which America's economic life has been created.

That means, for one thing, that the American tradition disappears, that the American way of life as we have always known it is scuttled. It would mean in the end that our Government would become a government not founded upon the law and the Constitution but upon the whims and caprices of bureaucrats.

Or call them by an even sterner name, dictators.

This is not what they would like to be called, but this is what they would inevitably become if the philosophy of Mr. Wallace and his supporters should prevail.

They might be benevolent dictators, at least at first, but they would rule, nevertheless, with a hand of iron and steel over all the existing freedoms guaranteed by our Constitution. The principles they propose would give them no other option or alternative.

Do you wish to know what has always been the print of the feet of national socialism coming into power, the historical and plain print of its feet?

First, the people are made to feel that they are incapable and incompetent to overcome their own handicaps and master their own difficulties.

Again, every vestage of local selflessness there is held up before them the lovely and benign face and form of an all-powerful government upon which they may lean for succor, to which they may look for guidance, and from which they may derive every cure for their ills from its magic apothecary.

Once in this state of mind of help—government must be subordinated if not entirely eliminated. When a central government becomes totalitarian nothing is left in the way of authority for the state and lesser units of government to do except as they are told they must do.

A third step is to discredit and to ridicule whatever form of popular government may exist. This would mean, in America's case, our constitutional principles.

A fourth way by which democracy is destroyed is that of the intimidation and defeat of men of independent minds in high places of public authority.

They are rebuked by special interests, they are threatened by separate blocs of voters, they are coerced and threatened by selfish and power-crazy organized minorities.

Another step in the direction of national socialism is the destruction of individual incentive to be thrifty, industrious, and self-reliant.

The weapon that is used to achieve this end is very old and familiar. It is that of taxation.

What incentive is left today to any young American to go into business for himself, to make a success of it, to accumulate his earnings in order to expand his business activities, to establish an enterprise of his own, when the Government comes right along behind him to take its toll of almost all that he has accumulated, thereby rendering it impossible for him to grow and expand?

A further process by which national socialism is established is that of controlling the free activities of the citizens.

Instead of having a government undergirded by law, a government comes into being by which the people are governed by the dictates of a directive.

Of course, that is merely another way of saying that a government of men would succeed a government of laws. And when any people come to that sorry and tragic pass they have come to the end of the rope in a democracy.

These are merely some of the signs of the approaches of national socialism. We submit that all of these signs and more are already written in large letters against the sky of America.

Let us go back to the beginning. National socialism in its simplest and clearest form produces the all powerful central government with supreme authority over the people, arrogating to itself the right to destroy the rights which a free people are guaranteed under the Constitution.

Mr. Wallace veers too far to the left of this philosophy. Many of his economic views are sound. America of the future must have more creative jobs and higher wages, but these should come from private enterprise and not Federal bounties if national socialism is to be kept out of our economic system.

All the leaners, shirkers, slackers, and those who never hope to go far on the momentum of their own dreaming and planning, are satisfied to have a national government that will keep them up and standing on public crutches.

But that is not the process by which a people wax strong or a nation grows great.

It is one of the major and most menacing delusions of modern times that the need is for strong government instead of wise government which is invested with the virtues of insight, dignity, moderation, justice, tolerance, and a sharp sense of social values.

Strong governments force men into artificial loyalty to their slogans. But wise governments draw men into authentic loyalty to their good purposes.

Dictatorship, which is another name for centralized authority and which, in turn, is another name for national socialism, offers the surest way to strong government.

But democracy offers us the surest possibility of wise and constructive government.

The epic struggle between these two basic conceptions and philosophies of government, if we interpret correctly the present trend, is well on the way toward a decision in this country. While we are in the midst of a revolutionary war spawned by tyrants abroad who created strong governments, we are also in the midst of a revolution here at home which threatens the foundation of our democracy which Hitler and Hirohito and Mussolini hate.

What a Young Naval Hero Wrote His Mom and Dad

EXTENSION OF REMARKS
OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. JOHNSON of Oklahoma. Mr. Speaker, as we scan the long list of mounting casualties from the several war fronts of the world, we are daily reminded of the grim realities of war.

Under the leave granted me, I am including as a part of my remarks for the CONGRESSIONAL RECORD, excerpts from several letters written home to his parents by a gallant young naval officer, Ensign Roland F. Johnson, who recently joined the growing caravan of American sons who have paid the supreme sacrifice.

Roland Johnson was the only son of Mr. and Mrs. W. C. Johnson, of Houston, Tex., where he also resided prior to this war and where he was engaged in the practice of law. He had gained a State-wide reputation as a brilliant and unusually successful attorney before the courts of that State.

The young flight officer, who had completed many dangerous missions in the southwest Pacific, had received several decorations and commendations for his outstanding feats in combat, including a personal letter of commendation from Admiral Nimitz, but like other American heroes, was so modest that he much preferred no publicity concerning his many combat victories. He was one of my several beloved nephews who entered the armed services and the second nephew who has lost his life during this tragic war. His bombing plane, VP-13, carrying a crew of 12 other fine young men, crashed and burned over a tiny unnamed island in the Pacific, causing the total destruction of all the crew. For that reason, no funeral could be held. However, beautiful and impressive memorial services were held in his memory, consisting entirely of excerpts from letters written to his parents, in which he poured out his devotion to them, to his God, and to his country. I attended the services.

Not only because of my admiration and deep affection for him, but for the reason that I am hopeful that quotations from several of his thought-provoking letters will be of interest and inspiration to other men and officers in the armed forces, as well as consolation to other grief-stricken parents who also have sacrificed their sons, I am submitting for the CONGRESSIONAL RECORD portions of some of Ensign Johnson's letters to his devoted parents, as follows:

HIS FIRST LETTER HOME

DEAR MOM AND DAD: I am convinced that the fighting forces and the Governments of Germany and Japan must be broken before there can be any lasting peace. I believe these two nations will overrun our country, and conquer it unless our military forces prevent it. These beliefs of mine are fundamentally reasoned, undisputed truths. They are not schoolboy fancies. Time was when I was not convinced of some of them, but events of recent months have proven them to me. There are still some who insist that Germany and Japan have no designs on our country. To those I can only say, they are already here. They are here now. We can't send a ship from a Gulf port without the realization of the possibilities. Hundreds of American ships have been sunk within sight of our coast. The war has already been brought to us. You have to see only one seaman, his eyes blinded and his body burned, spitting oil from his seared lungs to realize this.

I want Germany and Japan stopped before their armies get to our country, not after. I don't want the United States to be the scene of a single battle. I have talked with too many boys who have seen those battlefields.

My conviction then is that we must defeat the armies of Japan and Germany now. I believe their defeat to be more important than I am. I believe it must be done for you and the Nation, and I believe I ought to be a part of it, and I want to be a part of it.

It is easy to fall into the thinking that my part will be so insignificant as to be of no material consequence. This is uneasy reasoning. No one man is important alone, but as a part of the whole he becomes so. I just want to be a part of the whole and some way do my part.

EXPRESSES FAITH IN GOD

I realize that your chief concern is of my being hurt. These chances are little greater in the Air Service than in other branches. Apparently, the odds have little to do with it anyway. Babies die before they have even begun to breathe. People step off a curb into it. Others pick up the wrong bottle from the medicine cabinet. Some put their hand on a live wire. An unloaded gun goes off. A tire blows out. All of this with no plan or design, without any reason that is apparent to us. But I believe there is a plan. I believe God Almighty let's us each go as He has willed it. I believe God makes a decision in each case.

FROM PREFLIGHT SCHOOL

ATHENS, GA., *October 1, 1942.*

The courses here last about 3 months—then another school for 3 months of basic training—another 3 months secondary, then advance, and after that additional specialized training. In spite of their pressing need of pilots, the Navy is lengthening rather than shortening the courses, on the growing realization that one good pilot is worth ten mediocre ones.

* * * * *

We have been moving so fast that this is literally the first opportunity that I have had to sit down. We get up at 6 o'clock and turn in about 10 p. m. and, believe me, this bunk with no innerspring mattress really feels good. You wouldn't recognize me—no hair at all and I have gained about 4 pounds. They surely pour the groceries to us. No liberty except Saturday and Sunday afternoons. Everyone must go to chapel Sunday morning. All in all, I know I am going to like it here. Never felt better.

PRAISES ARMY CHAPLAIN

Chapel services today seemed to be a fine combination of Methodist, Presbyterian, Baptist, and Episcopalian all rolled into one. After a couple of good old Baptist hymns, the chaplain preached a good sermon on Missing Things in Life. During the course of it, he made the point that the Old Testament emphasized godliness based on fear of punishment. That the New Testament, in the story of Jesus, directing us to pattern our lives after His, placed fear in the background and based His program on love. This is a sounder foundation for our Christian faith. Not a hope of reward or a fear of retribution so much as a love for doing the right thing from the sheer joy of doing it, because it is the happier, fuller thing to do. This doctrine appeals to me; I don't know whether it is good Baptist theology or not.

A GOOD NAME VERSUS GREAT RICHES

I have been reading Proverbs 22. There is something in the opening lines that I have been thinking about today, "A good name is rather to be chosen than great riches, and loving favor rather than silver and gold." This is to be both an inspiration and a reminder. I recall how many times I have met people and told them that I was your son and proudly observed their respect and approval of you. One only gains that good name by living a Christian life. It is my determination to be similarly regarded in the community where I live.

Also, I notice in the last verse of the same chapter an admonition to those ill-thinking persons who might misinterpret the scripture as an approbation (in disregard for riches) of slothful living, where it is said, "Seest thou a man diligent in his business, he shall stand before Kings—He shall not stand before mean men." As I see it then, riches must not be our goal in life, but neither can we be a good Christian if we fail to pursue our business diligently.

REFRESHING MY FAITH

Took Sunday afternoon off to go to a church social for cadets at the Presbyterian Church. I am rooming with a Presbyterian minister's son. These Presbyterians here are on their toes. Had punch, cookies, sandwiches and lots of pretty girls to serve them. It was my first visit out of the barracks—sure enjoyed it.

Sunday I was read Matthew 10–28 and found this verse where Jesus said, "And fear not them which kill the body, but are not able to kill the soul; but rather fear him which is able to destroy both soul and body in hell." I have never read this verse before and have received a lot from refreshing my faith with the truth of it.

THANKSGIVING AND CHRISTMAS

Thanksgiving was just another work day but the football game yesterday was a good game. Naturally, I was very pleased to learn about A. & M. As a result of the game a chap across the hall must make up my bunk for the next 7 days.

* * * * *

This doesn't seem like Christmas day. We have just returned from church services which were beautiful. I am sure that in most of the world today that people's hearts are as full of hope as yours and mine that the next Christmas will find us home again with the world at peace. Although circumstances prevented my being able to manifest my love for, and appreciation of you in the proper material way this Christmas, please remember that they are ever with you.

* * * * *

The chaplain ended his prayer this morning with a New Year's wish. I thought it excellent and repeat it for you, "May we all be of utility during the coming year to our God and our country."

WANTS GAYEST TIE YOU CAN FIND

Dad, since I seldom write you separately from my joint letters to you and Mom, I'm going to take time out from my studies to let you know a little of what goes on in my mind. Yesterday I was thumbing through a magazine and came to a full-page advertisement of the most beautiful necktie illustrations I have ever seen. It was all highly colored silk foulard, and in the background a guy in bathing trunks was lolling on a beach with a good-looking girl. Somehow that ad symbolized for me the old light-hearted days. It was the epitome of being able personally to do what I wanted to do. It was home—the ranch—the office—college—the country club on Saturday afternoon. Everything all rolled into one, and I thought with all my heart, "I hope I can put on a tie like that again some day." So just to experiment I showed the ad to some of the corpsmen and cadets here and found that they are all thinking pretty much the same as I am. The substance of it all is that these fellows all feel about like I do: We don't like this war—it isn't pleasant—it isn't nice. It's dirty and foul and miserable, but most of them are like myself, impatient to be about the job of it—it's sort of like cleaning a commode that has to be cleaned.

Well, Dad, that's about the story, but I am really serious about this tie business. When this thing is over and I come in on that train, I want you to meet me at the station with the loudest, gayest tie you can find.

SAYS "DON'T WORRY ABOUT ME"

Don't worry about me. Accidents here are so rare as to be of no consideration. Am awfully sorry that I can't finish in time to be home Easter. I'll think of you both and offer a prayer that this war will be over soon and that we will be all right and that we may draw ourselves closer to God.

* * * * *

I ran across the best book I've read in a long time, most interesting, and a real inspiration, "The Return to Religion," by Henry C. Link. I know you would enjoy it. I believe every person between 15 and 18 should read it, particularly if attending college.

* * * * *

I got the assignment to patrol bomber for final squadron that I wanted. We will train in a PBY—a flying boat.

FROM A FATHER'S DAY LETTER

Tomorrow is Father's Day, I'll call if I can and if I can't get through I will wire. One way or other you must know Dad how very much I love you and wish to be with you. The finest heritage a boy can have is the respect others have for him when, like myself, they say "He is Wylie's and Esta's boy." So I hope I can live up to what people expect of me. At any rate, you have breathed into me a set of rules, a philosophy, a religion that will sustain me. If there is a failure it will be my moral fiber, not yours.

Every young man has, I suppose, some man he wants to pattern his life after—mine are Dad and Judge Kennerly.

The war is here. There is absolutely nothing we can do about it except let it run its course. But there is something we can do about ourselves—live the best, most Christian-like lives we know how. I think Grandmother Johnson left Dad something like that. She might have become discouraged, but she never gave up. And you have passed it on to me. It's worth more than all the houses and cars in the world, and it is not rationed. So for tomorrow, I want to thank my mother and dad. Tonight I am within one flight of being through here. Only a final check left. If all goes well, tomorrow night I'll be waiting recommissioning next Tuesday. And since this first round is almost over, pardon a second's reminiscence—this has been the best thing that ever happened to me, regardless of what might follow. I want you to know and realize this; things too easy had left a pretty soft foundation under your son. He was getting a bit arrogant, intolerant, egocentric. This has made me quite tolerant of the people around me, and I hope, more understanding. These boys are young, refreshingly so, and grand when the going gets tough.

FROM THE CENTRAL PACIFIC

I join wholeheartedly in wishing for an early termination of this war. For an opportunity to again live a normal, comfortable life, but I'm also aware that that isn't an end—am ready to play whatever part the Lord wants for me—my only prayer is that I may fulfill whatever He expects of me and do it well.

Don't worry about me—I'm going to be all right—I know you shall be very worried so I can only remind you again, that I'll try at all times to do what I sincerely believe God wants of me, and if He has some use for me that I can know about I'll try my best to carry it through.

Of course, it is foolish to ignore the possibility of bodily destruction, which isn't very important if I can be of some service. Christ said He was giving us an eleventh commandment, "To love one another, and that no greater love can any man show than to give his life for another." So, if something should happen to me just have faith in the Lord. If He wants me to come back I'll be home in about 18 months, a much better man than when you saw me last.

* * * * *

There isn't a thing I want for Christmas. I wouldn't have room to take care of it, and it couldn't reach me by Christmas anyway, but I do wish that you would take the money that you would have spent on me and buy Christmas presents for the children of my young friends in Houston.

A card is about all you can get from me for Christmas, but you know you are always in my heart and I'll be praying that day and every day for the continued use of your lives in a Christian manner and for your good health and happiness.

* * * * *

Here it is New Year's Day with quite a distance separating us. It seems plain we cannot hope to be home during this year, although I do believe I'll get to see you.

DISCUSSES GENUINE HAPPINESS

I am beginning to believe that happiness is an inner thing with little connection to the comforts of the body or fine plumage. When we get down to it, if this life only means the house we live in, the clothes we wear, or a full stomach, it is not even worth the effort of living. It's either spiritual and moral, or it's not worth having at all.

I have just read the eighth chapter of Romans, from it I have received strength for my faith. I can't help but wonder from time to time about the never-ending fight within myself. The frequent falls and

doubts. The unsatisfactory thoughts that pop, unwanted, into my head. Of course a literal interpretation of Romans vii: 25 would be comforting, but unfortunately, it does not appear to me the mind and flesh can be so nicely separated, but rather that the latter tends to extend its influence, producing a rather prevalent kind of procrastination. This seems to be what he is talking about in Romans viii: 5. The tussle goes on though, for me anyway. It isn't a matter that can be settled and comfortably or even possibly followed. I have to be constantly forgiven. So I fear my foundation is lacking in something.

I have just completed reading the New Testament and received more from the writings of Paul than any other part, I think. There is so much that is obscure to me I am beginning at Genesis again, perhaps it will become clearer.

CONFLICTS BETWEEN FLESHLY AND SPIRITUAL DESIRES

I love your letter, appreciate your remarks about my religious foundation, but am afraid that they are a bit tempered by your love. As early as Exodus xvii: 16 I find reference to the conflict. Paul discusses it in Romans xvii: 18 and we get a promise in Romans viii: 11 that under the new covenant God will help us by implanting in the right-thinking man the spirit, which implies that to the right-thinking man there should be no conflict, the old fleshly desires under the law being removed by the spirit. The only conclusion I can reach is that I've got a long way to go in purging myself, making myself properly receptive, to permit myself to be governed by spiritual desires. But I'll get there.

THE MAN NOBODY KNOWS

I've recently finished a book, I believe you have it at home, The Man Nobody Knows, by Bruce Barton. He being in the advertising business, writes of the life of Jesus, and concludes with "Christ was the greatest advertiser of all time." He attributes the spread of Christianity to its good advertising principles: Have something to say, a message; have something to sell that is a bargain; say it briefly, simply, and sincerely No one who reads that book could fail, any more than anyone who reads one chapter in the New Testament could fail, to believe in Christ.

CLEARS STUMPS, COCONUT TREES

We are at a recently acquired place, which was leveled by us when taken. It is little more than stumps of coconut trees, bomb holes and rubble. The sea is wonderful swimming, so clear that you can see the shells at 40 feet on the bottom, which is of fine coral sand. There are plenty of fish, but my technique at catching them isn't so hot. We are very fortunate on personal conveniences, fresh-water showers, good food served in proper Navy style. We are living closer together than before, and everyone in the squadron has become more companionable, and it is a pleasant sort of life. Time doesn't weigh too heavily.

There is enough to do, and we fly with regularity, going rather far into enemy waters. We see enemy planes most every flight but find that they give us plenty of room. We are better equipped than anything the enemy has, as is evidenced by the fact that our squadron has two Jap bombers and a submarine to its credit and we have not had a hole put in one of our aircraft to date. Our operations are conducted with care and skill, with much consideration for our safety, and with no unnecessary chances taken. We have been doing a good job with every expectation of continuing to have the same results. Now, if your knowing this causes any undue anxiety I will regret having written it, but I believe you will be happier knowing this much about what I am doing.

GETS FIRST AIR MEDAL

Mom writes of her anxiety over her letters becoming dull by the sameness of them—states that there is little to write. How often I hear that same complaint here, and I sit down to write with the same feeling. It's relative I imagine—what you are familiar with you presume others are—believe me, nothing you do in the day, however, inconsequential it may appear to you, could be dull here. A simple thing like going to the drug store would be news here, for there isn't one within several thousand miles of us.

The high point in my Navy career to date was my navigation of a three-plane section 2,200-mile night bombing raid on Wake Island. With nothing but water under us, we made the trip three times without being off course, straight to the target and back with no planes lost. I understand that even the lowly ensigns are to get the air medal.

WHEN SEA GIVES UP DEAD

I recently had access to a Time magazine of April 24 and particularly commend to your reading a letter titled "When the sea shall give up her dead." If I could add a postscript to it I'd quote Luke ii: 4. Those words at Christ's birth show its terms and keynote His ministry. The good tidings He was to bring were for all mankind a rebirth of God's relationship with man, not merely Israel. He was to add love as a commandment, and God was promising, under Christ, the end of blood baths.

As expressed, peace on earth is inseparable from good will among and toward men. If God had formulated that plan this year rather than 2,000 years ago, He could not have more pointedly directed the way. There are only 2 planks in the platform—2 not 14, in his instructions.

First. Keep God first.

Second. Good will for, and toward all men.

And any so-called plan for peace that isn't premised on God, and the companion principle of brotherly love, will fail. Peace isn't to be based on killing men, organized pressure groups or formidable arms. Perhaps truces, yes, but there is only one road to permanent peace. As a war, this one in which we are engaged is a humdinger—but as a means of permanent peace, it is a grisly, horrible joke. Our own country has wandered so far from its Godly inception; votes rather than God directs its leadership. God receives blasphemy far oftener than prayer. We must put our own spiritual house in order before we can have peace. Two lines of poetry from that letter will stay with me.

"Life to be sure, is nothing much to love,
But young men think it is, and we are young."

FIGHTER SQUADRON GETS THIRD AND FOURTH BOMBERS

Our squadron got its third Jap bomber the other day. Nip A. A. fire continues to be erratic and highly inaccurate when properly approached. We have been within 1,400 miles of Tokyo with no ill effects. Feel great. Sunday is Mother's Day and I'll say a prayer of appreciation for you, Mom.

I am fine but will be ready for leave any time they decide to give it. The squadron got its fourth Jap bomber the other day and our commander is calling us fighter patrol squadron 13 now.

Enclosed is a photograph of me getting a very small decoration. Probably about the millionth like it since the war began, but I am sending it to you, thinking you would like to see how my mustache is coming along. You will note that I am about the same weight but a little more stoop-shouldered.

WOULD AID NEEDY BOYS AFTER WAR

Some time ago Mom wrote that she was going to practically have a girls' camp at the ranch this summer. I've got a wonderful idea for after the war, for me. I'm going to find some acreage on a river close to town, and for two weeks every summer give a hundred or so boys, who have never known such environment, a free vacation. The Navy is full of boys who would be a lot different today if, when they were growing up, they could have gone to such a place. It's too late when they grow up. I know that I can find a lot of people who feel like I do, who would be glad to give their vacation time helping me run it. There won't be a paid person in it except, perhaps the cooks. It would pay big dividends, not only to the boys but to the fellows who helped me run it. For a while, a few years, I might have to hit up a few of my friends to help stand the expenses, but when I get to making some money I could stand the expense myself. I believe the Boy Scouts have something like this down on the bay, but it can't possibly take care of the need. There are entirely too many boys who need this sort of thing. And the kind of boys I have in mind couldn't afford to belong to the Scouts in the first place.

Lots of love, and more love.

ROLAND.

P. S.—Whatever happens, keep your chin up—both of you.

The Next Step in World Peace Organization

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks I include the following editorial from the Detroit Free Press, one of the great newspapers of Michigan:

THE NEXT STEP

The invitations are out for the United Nations Conference at San Francisco on April 25.

As the date for the momentous gathering approaches the emotional appeal in this country to get behind Dumbarton Oaks will increase in fervor and insistence. That is as it should be.

Yet it might be well to pause for a moment to consider what the San Francisco Conference is and is not.

The first thing to remember is that it is not a peace conference in the ordinary sense of the term. The United States, Great Britain, and Russia will determine the nature of the peace to be imposed on Germany. The United States, Great Britain, and China—with Russia, if it comes into the Pacific war—will decide the kind of peace Japan will have to accept.

The sole function of the United Nations conference next month will be to create, if possible, a world-wide security organization to replace the League of Nations, as an instrument for preserving peace after it has been won.

As a basis for discussion, the plan evolved by the United States, Great Britain, Russia, and China at Dumbarton Oaks last year will top the agenda.

Yet there is no assurance that this plan will be adopted, as a whole and without amendment.

Various proposals for changes have been suggested by Canada and other "middle countries," as well as by smaller countries, which seek a larger voice in the vital decisions to be entrusted to the Security Council.

The French provisional government declined to act as a sponsor for the United Nations conference because it was not a party to either the Dumbarton Oaks or the Yalta Conference, where decisions were taken that affect it in important respects. Among the most delicate problems at San Francisco will be to fit the Dumbarton Oaks and the French plans together so that the rivets won't stick out and tear any flesh.

The points upon which the Big Four agreed at Dumbarton Oaks were declared at the time to be only "tentative and exploratory."

The extent to which amendments are permitted before the final draft is made will determine whether the new world organization is to rest on the will of four or five great powers or on a broader base in public opinion in little countries, as well as big ones.

A good deal of unnecessary excitement was worked up over Stalin's insistence that in the Security Council no force should be applied to any permanent member, accused of aggression, without its having first the right of veto.

At Yalta Stalin got what he wanted—a realistic recognition that you can't coerce great powers except by war.

Assume, for instance, that in the course of time China or Russia, or the United States, should determine on a course of aggression, which threatened international peace.

Would it be stopped by sanctions voted against it by the other members of the Security Council?

What it probably would do, if force were attempted, would be to withdraw from the organization, as Japan, Germany, and Italy did from the League of Nations.

We Americans should be able to get the point.

Although we have a more binding Constitution than any likely to be drawn up at San Francisco, we had to fight a long and bloody war to keep the Southern States in the Union.

The only way by which any member of the proposed world organization could be kept in it, if it wished to withdraw, would be by war.

A weakness? Yes. An imperfect world is not yet ready for a perfect security organization.

We must build brick by brick for a posterity to which Churchill, Stalin, and Roosevelt will be merely names. We cannot foresee all the political changes that will take place in the next century or even half-century.

Yet if we begin to speculate on that subject we risk losing sight of the vital task immediately ahead of us—which is to form a security organization that will bring peace in our time and insure it for as long as the Big Five can hold together.

We have to move forward step by step. The first was taken at Dumbarton Oaks. The next will be taken at San Francisco.

Extension of Lend-Lease

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following minority views on H. R. 2013, the Bloom bill, extending lend-lease until 1949:

We should continue mutual military aid among our allies until we have defeated our enemies. One of the means of carrying out that policy is the so-called Lend-Lease Act. We believe it should be continued in force for another year, from June 30, 1945, for this purpose and from year to year so long as the war continues.

The majority of the Foreign Affairs Committee, however, has recommended a bill, H. R. 2013, extending lend-lease until June 30, 1949 with no limitations on the use of lend-lease as a post-war mechanism. This period is too long and this post-war power is too broad.

I. WHAT THE LEND-LEASE LAW NOW PROVIDES

The majority report says "the original Lend-Lease Act had a life of 2 years." This is not correct. The original act had a life of 5 years, providing 2 years for the making of contracts and agreements, and an additional 3 years for carrying them out. This 3-year addition, which is often overlooked, is becoming increasingly important. The law has been extended twice. Each time both of the termination dates, the 2-year period and the 3-year period, have been extended a year. Thus, lend-lease powers may now be exercised not merely until July 1, 1945, but to July 1, 1948. This 3-year period is not a clean-up period but section 3c specifically provides that "until July 1, 1948 any of such powers may be exercised to the extent necessary to carry out a contract or agreement with such a foreign government made before July 1, 1945."

II. WHAT THE ADMINISTRATION SAYS ABOUT LEND-LEASE

President Roosevelt in his letter transmitting the seventeenth lend-lease report, November 1944, said "lend-lease and reverse lend-lease are a system of combined war supply. It should end with the war."

Mr. Leo T. Crowley, Lend-Lease Administrator, said to our committee "the Lend-Lease Act is a war supply measure * * * the post-war reconstruction problem abroad, is a separate subject for the consideration of Congress * * * lend-lease will not be used for the purpose of post-war rehabilitation and reconstruction."

Secretary of War Stimson said at our hearings "Lend-lease should not be carried further after the war is over without the full consent of Congress to every step. It has been defended by me and by the others, who have argued here, for what it was worth for a military defense. But now, anything further inthe way of civilian action in peacetime or in the post-war time, must, of course, have the consent of Congress and not be carried out without that consent."

These positive and unequivocal views of the officials charged with administration of lend-lease, from the President down, show what they think should be the limitations on lend-lease. We thoroughly agree and believe limitations of lend-lease to war purposes should be expressed in the law.

III. WHAT THE COMMITTEE BILL PROVIDES

The committee bill extends the power to make agreements to July 1, 1946, and to carry out agreements to July 1, 1949. The bill also extends the revolving fund under section 6b to July 1, 1949. Under section 6b, money received for lend-lease articles is again available for expenditure for lend-lease without further appropriation by Congress. This fund now exceeds $489,000,000 and the proceeds from existing or future agreements will be added to it.

We supported in committee the 1-year extension period for making lend-lease agreements and contracts, but attempted to eliminate the extension of the period for carrying out such agreements and contracts until July 30, 1949. We also attempted without success to provide specifically that no agreements for post-war relief, rehabilitation, or reconstruction should be made. We were willing that agreements should be made for the post-war purchase by foreign governments of war materials furnished or agreed to be furnished by our country for use in the prosecution of the present war, but this compromise was defeated. Thus the bill comes to the floor with an unlimited extension of lend-lease to June 30, 1949.

IV. THE NEED FOR LIMITATIONS

Two arguments were used against our proposal: First, that the law already contained such limitations, and, second, that such limitations should not be placed upon the Executive. The utter inconsistency of these two arguments is obvious. We wish to comment on each of them.

First, as to the argument that the Lend-Lease Act is solely a war-supply measure:

This act was passed in March 1941, not as a war measure, but in peacetime as a peace measure. Its title is "To promote the defense of the United States." There is not a word about war in it. On the contrary, section 3 d and e purported to preserve our neutrality. The majority report from the House Foreign Affairs Committee, January 30, 1941, said: "It is the considered view of your committee, insofar as human minds can evaluate the situation, that the probable effect of the bill will be to keep us out of war rather than to get us into it." On the other hand, the minority report stated of lend-lease: "The oldest and last constitutional democracy surrenders its freedom under the pretext of avoiding war, with the probable result that the newest dictatorship will soon go to war." At that time the majority said lend-lease was a peace measure, the minority said it was a war measure. Within less than a year lend-lease became a war measure, as the minority had predicted. Now the majority of the same committee are claiming that this lend-lease extension is solely a war measure, and the minority are insisting that it shall be limited as a war measure, and not turned into a post-war measure. Under the circumstances, there can be no valid objection to writing specifically in the lend-lease extension the meaning the majority claim for it, when they are unable to point out any language of the act to support their interpretation.

Last year in extending lend-lease the Wadsworth amendment was adopted which provided that the President should not incur any obligations with respect to post-war economy or military policy "except in accordance with established Constitutional procedure." Under the French agreement our country incurs obligations with respect to post-war rehabilitation and reconstruction. This agreement was entered into under the Lend-Lease Act which was passed in accordance with established constitutional procedure. Therefore, the power exists to make post-war commitments under the Lend-Lease Act and the administration has already used that power. Mr. Oscar Cox, who drafted the Lend-Lease Act and who is now Deputy Administrator of Lend-Lease, said in the hearings that lend-lease could be used after the war to supply the combined occupation forces, or food for the German civilians (see hearings, pp. 52–53). Thus, the real author of lend-lease agrees with the minority, that the present lend-lease powers, unless limited by Congress, may be used after the war.

Second, as to the argument that Congress should not limit the powers of the Executive:

This argument, of course, completely contradicts the proposition that the Executive has no such power. Since the Chief Executive has said that lend-lease should end with the war and the officials administering the law have made similar statements, we cannot see how the writing of the policy into the law could embarrass the Executive. We have been urged to extend lend-lease to 1949, into another presidential administration, so as to avoid tying the hands of the President in advance. A more fundamental factor is involved. We have a duty to avoid tying

the hands of Congress so far in advance. Congress will still be in session and will enact any laws that are necessary when they become necessary.

V. POST-WAR LEND-LEASE

The French agreement, released February 28, 1945, is by its very terms a post-war agreement. It provides that the two Governments "desire to insure the continuing provisions of such articles, services, facilities, or information without interruption owing to any uncertainty as to the date when the military resistance of the common enemy may cease; and desire to insure further that such articles * * * shall be disposed of and transferred following a determination by the President that such aid is no longer necessary to the prosecution of the war." The agreement provides for our furnishing $1,675,000,000 of raw material, food, petroleum supplies, and freight charges, and $900,000,000 of locomotives, watercraft, metal working machinery, and industrial equipment. Payment is to be made over a period of 30 years with interest at 2⅜ percent. It was explained to the committee that all of these were war supplies, which would be necessary for the prosecution of the war if it lasts long enough; that these supplies also had post-war values, and that due to the uncertainty of the war's end, provision was made for payment instead of the usual lend-lease arrangement. We were told that some of these supplies would take many months to prepare, some of them 8 to 12 months. Obviously, they will be of no value in the war effort if they are not completed before the war ends. We do not make any predictions as to the end of the war, but we believe our agreement with the French certainly is liberal as to what are war necessities. The amendments we offered, however, would permit carrying out the French agreement, and would even permit the making of other similar war supply agreements, but would forbid agreements that were clearly for post-war relief, rehabilitation, and reconstruction. Since these amendments were defeated there is a possibility of further war supply agreements under the Lend-Lease Act which will affect our post-war economy for years to come and involve billions of dollars.

The press has carried references to negotiations with Russia involving $6,000,000,000 for post-war purposes. The press has also referred to arrangements for $6,000,000,000 of lend-lease to the British after the conclusion of the war in Europe up until the end of the war with Japan, including 2½ billion dollars of civilian lend-lease to be sent to England. We now have lend-lease agreements with 47 countries and identical master lend-lease agreements with 13 countries including Britain, Russia, and China. The terms of these agreements are very broad. Article VIII of each agreement provides "it shall continue in force until a date agreed upon by the two governments." The whole Dumbarton Oaks idea of collective security means that the defense of each country against agression is vital to the defense of every other country. The lend-lease law authorizes the President to furnish anything to "any country whose defense the President deems vital to the defense of the United States." The broad definition of defense articles gives the President power to carry out the collective security formula by supporting the post-war economy of any country whose defense he deems vital to our defense.

VI. WHO BENEFITS BY LEND-LEASE EXTENSION TO 1949?

Not a single example will be found in the hearings nor in the committee report of a transaction or transfer that needs to be postponed until 1949. Not a single example is given of a transfer in 1949 which would benefit the United States. On the other hand, the French agreement may establish a post-war precedent of 30-year loans short-circuiting the Johnson Act which will be of questionable benefit to us. If we carry lend-lease forward a year at a time and instances arise where extension for particular countries or particular items would be for our benefit, Congress can then make provision for such extensions. If we make a blanket 4-year extension at this time it may turn out to be, not a clean-up period as the majority suggest, but a cleaned-up or cluttered-up period for our country.

VII. THE RESPONSIBILITY OF CONGRESS

Any long-time post-war lend-lease agreements would be subject to future action by Congress in appropriating money to carry them out. Congress has exactly the same future control and responsibility in appropriating to carry out a treaty. We believe, however, that there should be congressional approval of our post-war plans and policies before they become binding agreements. Such plans and policies should not be submitted to Congress merely for appropriations to carry them out, with the threat that failure to do so would mean a default upon an agreement legally entered into by our country. Once our country determines upon a policy, Congress can be relied upon to implement that policy by appropriations. On the other hand, if an attempt should be made to circumvent Congress in determining our post-war policies, we might have a domestic issue raised which would be disastrous at home and abroad. We believe the majority of the American people who favor our assuming increased international obligations are at the same time determined that we shall not use our international commitments as a means of changing our form of government here at home. We believe that our country should participate in the creation of appropriate international machinery with power adequate to establish and maintain a just and lasting peace, as provided in the Fulbright resolution. Congress has aided in the creation of U. N. R. R. A., to take care of post-war relief and rehabilitation. The Bretton Woods proposal of an international reconstruction bank will shortly be before Congress. We supported an American bank of reconstruction last year when this was before our committee. We believe that post-war machinery for securing peace should be submitted to Congress. The war-making power should have something to say about whether peace-making machinery is appropriate and adequate.

The undersigned are all Republicans. We wish to do our part in determining a foreign policy which is not a Democratic policy or a Republican policy, but an American peace policy. As President Roosevelt said on March 1, using almost the very words of Governor Dewey "The structure of world peace cannot be the work of one man, or one party, or one nation." Limitations on lend-lease which we are proposing are the very limitations which the President and his officials have approved. To omit these limitations is to grant post-war powers to the President which he has not asked for. To write in the limitations which we suggest is merely to have Congress take a coordinate place in stating the foreign policy of our country.

The issue on extension of lend-lease is, therefore, not whether we are for or against mutual military aid during the war, for we are for it and are ready to vote for another year's extension of such aid. The issue is not whether we are for participating in establishing and maintaining peace. If the machinery proposed for this purpose is appropriate and adequate, we are for it. The issue is simply whether or not Congress wishes to extend the lend-lease power, administration and practice into the post-war period. We believe we should not. Lend-lease failed as a measure to keep us out of war. If it is projected into the post-war period it may again fail to keep us out of war. For unity, we should confine its extension to the field in which we are all united on lend-lease, as a mutual war-aid measure. Post-war relief, rehabilitation and reconstruction policies should be separately and specifically authorized by Congress.

We shall submit amendments on the floor to carry out the views herein expressed.

German "Slave Labor" Seen Opposed in United States

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Washington Star of March 5, 1945:

GERMAN "SLAVE LABOR" SEEN OPPOSED IN UNITED STATES—PEOPLE WOULDN'T BACK ROOSEVELT IN SUCH ACTION, WRITER BELIEVES

(By David Lawrence)

Although President Roosevelt told a press conference last week that he thought it would not be a bad idea for German ex-soldiers to repair the devastation in Russia after the war, it is doubtful whether Mr. Roosevelt eventually will have the support of the American people when the implications of his latest statement are fully explained to them.

If any German soldiers or their leaders, or both, have individually been guilty of atrocities or cruelties, then hard labor in Russia or elsewhere is too good for them. They should be punished severely and every trace of nazi-ism rooted out of Germany.

But the American people are at heart neither brutish nor vengeful. The young men or old men who have been drafted at the point of a gun into the German Army are entitled to the same treatment as other German civilians after the war is over. President Roosevelt has publicly proclaimed that the Allies have no intention of enslaving the German people. Yet his subsequent comment about the use of German ex-soldiers as forced labor in Russia after the war would seem to indicate the opposite.

TRAGIC MISTAKE

If the President's remark was studied comment and he really has made a compromise with the Stalin view about using forced labor from Germany, then indeed there must be grave concern over the influence which the totalitarian Stalin and the chauvinistic Churchill have begun to exert upon the once liberal-minded Mr. Roosevelt. If a few days of intimate association at Yalta can make such a profound change in the President's outlook on the psychological factors that may prevent an enduring peace from being realized, then there must be added to the already tragic mistakes of the Yalta Conference new revelations of the abandonment of moral principle, and the turn to a might-makes-right doctrine.

What must the German Army think of the recent calls to surrender going over the loudspeakers from our troops urging them to give

up and promising humane treatment when Goebbels and his publicity machine now broadcast the news that every American newspaper carried last week quoting Mr. Roosevelt as saying he doesn't think it's a bad idea for German ex-soldiers, after long years in the trenches, to go to Russia to become labor slaves under Stalin?

How much more resistance will be stirred up by that argument which Mr. Roosevelt has handed to the Nazis? How many more American boys will have to pay with their lives in a prolonged war because of Mr. Roosevelt's carelessness of utterance or regrettable misrepresentation of the spirit of fair play which actuates the American people?

Isn't the forced-labor policy calculated to stimulate the German underground after the war? Can there really be peace when relatives of these German ex-soldiers know that their kin will not be coming home to them because they will be held in bondage even after the war is at an end? Was this one of the great compromises of Yalta and are there any other surrenders to brutishness that have not yet become public?

NO PEACE BY THE SWORD

Maybe the whole forced-labor scheme will come to naught when the passions of war cool off. One brief visit to a devastated area in Russia and President Roosevelt seems to have lost his long-range perspective. Maybe he will recover it some day when he sees photographs of the devastation wrought on German cities by our own bombs. What he must ultimately learn is that peace by the sword has never conquered a virile and resourceful people who become the victims of an inhumane or unjust peace.

Once upon a time there was an American President who said something about a peace with malice toward none and charity toward all, and once upon a time Jesus said a great many things about human brotherhood. But apparently in this "practical" age of brutality, all this is brushed aside as impertinent "perfectionism."

It will be very difficult in years to come to give this antiperfectionist line of thought as the explanation for the killing of thousands upon thousands of American boys by snipers and underground guerrillas, as we keep up huge standing armies by means of compulsory military service in so-called peacetime so as to police 80,000,000 embittered persons in Germany—all this because we lack in the leadership of the Allied Governments today men of vision or understanding of what really is involved in the simple word "peace."

O. P. A. Rulings

EXTENSION OF REMARKS

OF

HON. HAROLD H. EARTHMAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. EARTHMAN. Mr. Speaker, it seems that not only does agriculture have cause to be aggrieved because of the unfair tactics of O. P. A., but many others have had similar experiences, including the lumber industry of America. I here insert an editorial from the Southern Lumberman, issued March 1, 1945, which is self-explanatory.

I learned from this editorial that conditions have been made so critical because of O. P. A. rulings that the lumber industry finds itself in desperation to such an extent that they are calling a meeting in Washington of the Southern Pine War Committee to take some action in the way of insisting upon the establishment of a new state of mind within O. P. A. The lumber industry of the Nation insists, and feels that they have the right to demand that they be treated with consideration, respect, and understanding by O. P. A.

This is just another one of the many cases of unjustifiable abuse of a group who are made to be either afraid lest they be forced to endure more hardships or hopelessly disgusted. More and more as I receive communications from all over the United States, from all realms of business, I am convinced that Congress and all of its committees, dealing with such subjects, should take immediate and drastic steps to rid O. P. A., which could be a beneficial agency if properly administered, of such individuals who would destroy it, as well as the business of America.

The editorial follows:

NEED FOR RELIEF

There is a crying need in the lumber industry for the establishment of a more understanding and cooperative spirit on the part of the Office of Price Administration toward the industry. It is the function of the O. P. A. to limit prices for the purpose of preventing inflation, and this has been accepted as a proper exercise of the wartime powers of the Government. At the same time, it should be possible to conduct the affairs of the office in such a manner as not to hamper the processes of the industry to such an extent as to create confusion, stifle incentive, and retard production. It was the avowed and generally understood intent of the original price-control legislation not to interfere with the established customs of industry, but in the application of the O. P. A. regulations to the lumber industry this principle seems to have been forgotten or overlooked.

An excellent example of the vacillation, indecision, and muddled thinking back of too many of the O. P. A. rulings was afforded by its gyrations in connection with the matter of invoicing random lengths. There were interpretations, rulings, amendments, conferences, understandings, and misunderstandings in endless and confusing sequence which finally drove the Southern Pine War Committee to the desperate expedient of appealing to the War Production Board for relief from a condition described as chaotic. All of this might easily have been avoided in the first place by an investigation into the prevailing customs of the trade, or remedied subsequently by a prompt and clearly expressed amendment. It was apparent to everybody that the course being pursued by the O. P. A. was interfering with the production and procurement of lumber for the war effort; but this seemed to make no difference to the O. P. A.

In this instance it was the Southern pine industry which was the sufferer, but this was just one of many straws showing the direction in which the O. P. A. wind is blowing so far as the lumber industry is concerned. There is hardly a lumberman who has not some tale to tell of the O. P. A.'s lack of understanding or indifference or whatever it is that causes the trouble.

There will be meetings in Washington next week of the Southern Pine War Committee and the Southern Pine Industry Advisory Committee. At these meetings these committees, speaking for the entire Southern pine industry and particularly speaking on the basis of that industry's struggle to supply the lumber needed for the war effort, might well take some action in the way of insisting upon the establishment of a new state of mind within the O. P. A. The lumbermen want to supply the lumber needed by the Government; they are willing to have the Government fix the price it will pay for the lumber; but they have a right to insist that they be treated with consideration, respect, and understanding by all the agencies of the Government entrusted with the administration of the wartime regulations.

Points of Interest

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper editorial from the Grade A News of February 1945, which is not only timely but vital to the people of Wisconsin:

POINTS OF INTEREST

The demand for butter is falling off at an alarming rate.

Lines of consumers waiting their turn to buy a quarter pound of butter, are, like nylon stockings, a thing of the past.

Stores throughout the Middle West report ample supplies to meet the demand. Some are unable to dispose of what butter they have.

No one need look very far to find the cause of this.

The new red point program assigning higher point values to a wide range of cheaper cuts of beef and pork is rapidly putting the finishing touches to butter.

Ever since January first when a long line of meat items formerly point free was put back on the ration list, the handwriting has been on the wall.

Much has been said about the reluctance of consumers to pay 24 red points for a pound of butter.

But with the new red point meat requirements, housewives just don't have 24 red points to spend for a pound of butter, willing or not.

Nor 20, nor 10, nor even 5.

Even if the supply of butter were materially higher, the public would be unable to buy it.

With the present limited supply of meat available for civilian needs and no relief in sight before next fall, lowerng red points for butter would be a useless gesture.

Is all this part of a plan to carry out Dr. Mordecai Ezekial's proposal to eliminate butter entirely from the American table?

Just why should the purchase of butter require red points anyhow?

Why not an issue of points for butter—let's have them "yellow"—separate and apart from red points for meat?

Just because meat is scarce is that any reason why a housewife should be unable to buy butter when it is available?

More butter should be manufactured. More butter would be manufactured if the proper pricing arrangements were made.

The dairy industry cannot hope for postwar prosperity without broad consumption of butter.

But lowering red point requirements on butter is not the answer now. Consumers must be permitted to buy whatever is available. And quickly.

Act of Chapultepec

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of March 7, 1945:

ACT OF CHAPULTEPEC

The Act of Chapultepec drawn up at the Inter-American Conference in Mexico City marks the beginning of a historic new phase in the growth of the "good neighbor" policy among the nations of the Western Hemisphere.

More than a century ago, by unilaterally proclaiming the Monroe Doctrine, the United States took it upon itself to protect the whole hemisphere from Old World aggressors. Then, through the course of years, particularly through the past two decades, there evolved a common hemispheric front against any attempt by any non-American state to violate the political independence or territorial integrity of any of the Americas.

The special significance of the Act of Chapultepec is that the common front now undertakes to move in unison not merely against non-American aggressor states but against American aggressor states as well. Under the procedure agreed upon, the signatories, whenever aggression occurs or seems to be in the making, would consult among themselves to decide upon peace-preserving measures. Depending on the gravity of the situation, these measures would range from relatively mild diplomatic action to the joint use of armed force against the offending power.

Already approved in committee—which assures its adoption by the conference as a whole—the act is meant to take immediate effect and be operative for the duration of the war—a fact which must seem especially meaningful to Argentina, the maverick of the hemisphere and the only nonsignatory among the Americas. As for the postwar period, the act is designed to be perpetuated in treaty form as a regional arrangement for maintaining hemispheric peace within the over-all framework of the general world security organization to be worked out at the forthcoming United Nations Conference in San Francisco.

Is This the Time To Call for Conscription?

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. COCHRAN. Mr. Speaker, under the permission granted me, I include as part of my remarks an editorial recently published in the St. Louis Star-Times:

IS THIS THE TIME TO CALL FOR CONSCRIPTION?

The Army and the Navy want to put every physically fit young man into uniform for a year of peace-time service so that, in the future, the United States may quickly mobilize a large fighting force. They want the Congress to authorize a permanent system of peacetime military conscription.

A great many people apparently are in favor of the proposal, yet it represents such a drastic departure from the accepted American way of life that conscription in any form should not be adopted without the most solemn deliberation.

Let it be said at once that such universal training is not undemocratic. Quite the contrary, it is the very essence of democracy that every citizen without exception should be compelled to contribute to the defense of the Nation according to his fitness and his means.

Such service would be an abridgement of personal freedom—perhaps unavoidable—among a people who value freedom above everything. One of the chief inducements to the immigration which built up this country was the desire to escape service in the conscript armies of Europe. So far, we Americans, although we have found it necessary to accept wider and wider extensions of governmental power, still like to believe that the happiest of men is the one with whose life government has the least to do.

Many of the unofficial advocates of military training today favor it for nonmilitary reasons. Thus there are those who are appalled at the fact that wartime conscription demonstrated our people to be less literate than the Japanese. They see in compulsory service an opportunity to correct this. They want to make the armed forces, in effect, a part of our educational system, a sort of supplement to the public schools. As President Hutchins of the University of Chicago argues, these people are on the wrong track.

The Army is one of the last agencies which should be called on to correct this situation. John J. McCloy, Assistant Secretary of War, is one of the first to admit this. Indeed, the Army has minimal educational standards for admission to its ranks which would keep out those most in need of schooling.

A similar argument will answer those who believe that Army training would raise the physical standards of our young men—standards which the draft proved to be woefully low. Of course, such a program could improve the health of those fit for it. But, again, those in greatest need would not be benefited because they would be excluded by the Army's minimum physical requirements.

Others support conscription on the grounds it would reduce labor surpluses. However, such a half-solution of the unemployment problem would be almost as bad as an outright confession of failure. Our economy will be in a bad way, indeed, if it needs such desperate help.

There is only one reason which can justify conscription—military necessity.

That is the basis on which the War Department is making its request. It believes that universal service is "the only practical democratic and economic method of achieving national security" in an era in which the V-2 may be the puniest of weapons and in which we will not be able to count on the oceans or other countries to protect us against sudden and devastating attack.

If there is another war, the devil, indeed, will catch the hindmost. If we are to prepare for it, we shall need even more than a growing pool of trained reserves. We shall need to have continuing research on new weapons, and we shall have to keep a considerable part of our industrial plant on a war footing. That might mean many Federal controls and high taxes in peacetime, but men alone will not be enough.

But are we moving into such a threatening era? Can we not organize the world for peace? Is it not possible to get rid of universal military service elsewhere, instead of adding the United States to the list of nations maintaining themselves as armed camps?

Should we not wait until we learn the details of the proposed collective security system before we decide to supplement with conscription the already huge post-war army and navy on which our military leaders are planning? How can we know now how large a fighting force we will really need to be safe? If we decide on conscription in advance of this knowledge, will not every other nation virtually be forced to follow our example? Will not the peace-makers come to the peace table knowing that every country is arming itself against every other country, no matter what the statesmen may do? How could that enhance the chances for peace in the world or hold forth any hope for reducing the vast debts with which all nations are burdened?

We do not want to see the one-sided disarmament which followed the last war. We want no more of the ostrich statesmanship which permitted Germany to rearm. We do not again want to see the British or the Russians holding the fort while we get ready to fight. If it is to be a fighting world, we want to be ready from the start.

Yet we hope that the world's statesmen will succeed this time in organizing a real and lasting peace. They should have their chance before we decide for peace-time conscription.

We may have to come to it—and in the near future. We may even have to worry whether a constantly changing army of civilians can be a safeguard against the professional war machines on which other nations are likely to rely. The democratic way may not even be the safest way. But an America in which every young man is compelled to be a soldier will be very different from the America we have so far known and loved.

Certainly we should not rush into such a new order unless it really is found to be a military necessity. In that event we will have no choice but to adopt compulsory peacetime training and like it.

The Rogers Bill—H. R. 327

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. MICHENER. Mr. Speaker, pursuant to permission given me, I am including herein a letter endorsing the Rogers bill, H. R. 327, which letter states in a concise way reasons why this bill should be enacted into law. It is as follows:

ADRIAN, MICH., *March 6, 1945.*

Representative EARL C. MICHENER,

House Office Building, Washington, D. C.

DEAR MR. MICHENER: The Lenawee registered nurses and members of the Lenawee District Nurses Association of the Michigan State Nurses Association sincerely request you to vote "Yes" on the H. R. 327 bill, because—

1. It would place Veterans' Administration nurses who are eligible for the Corps on a par with those of the Army, Navy, and United States Public Health Service.

2. It would create a sound opportunity for a career in Veterans' Administration nursing.

3. It would provide the nurse protection, stabilize benefits, and establish high standards for Veterans' Administration nurses.

4. It would give Veterans' Administration nurses needed prestige within the profession.

Under the present civil-service status there is no safeguard for Veterans' Administration nurses, since Civil Service cannot protect standards and qualifications.

There is no inducement now for a nurse to continue in the service of the Veterans' Administration—since the President's appeal for nurses to care for the men in Army and Navy hospitals, the increase in resignations has been alarming. Is it reasonable to suppose that a man's life is of greater concern to the nursing profession when he is actively engaged in the service of his country than, when as a result of that service, he becomes the responsibility of the Veterans' Administration?

The establishment of a Nurse Corps for the Veterans' Administration will not adversely effect any nurse now in the employ of the Veterans' Administration; those nurses who do not qualify for the Corps will retain their civil-service benefits.

Those nurses who do qualify will, in addition to the benefits stated above, be eligible for the benefits under the G. I. bill—which benefits are now provided for the nurses in the Army and Navy Corps.

Yours very truly,

Mrs. MARY B. KINGSBURY,
Registered Nurse, Chairman of Lenawee District Nurses Association Legislative Committee.

Night Visit to the Barn

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. CARLSON. Mr. Speaker, the editorial headed "Night Visit to the Barn" which appeared in last Sunday's issue of the Washington Star was so true to farm life and a deserved tribute to the watchful care a good farmer gives his livestock that I am including it in my remarks.

This editorial must pull at the very heartstrings of everyone who has loved and cared for livestock. Nothing on the farm is more conducive to a good night's rest on a cold, stormy winter night than the satisfaction that livestock is properly bedded, gates closed, windmill shut off, and poultry houses locked. Under the watchful eye of a good Collie, who sleeps in a kennel, where he can survey the entire barnyard, everything is secure till day breaks the next morning.

NIGHT VISIT TO BARN

There is something about a good farmer and his feeling for his livestock that is difficult to express in words. It has been said that the eye of the true husbandman is an important yardstick when it comes to keeping the cattle in good bloom. Perhaps that is why many men follow a traditional ritual of a night visit to the barn.

The average country man likes to go to bed early. The winter evenings follow a more or less standard pattern. The family gathers around the table and stove in the kitchen or else pulls the chairs in a half circle around the base burner in the living room. While the young folks do their homework, read magazines, or look through the mail-order catalogs, father goes through the daily papers, reads the farm journals, or during the late winter evenings, goes through the seed catalogs. Maybe there is popcorn, and likely father wants a dish of cold, juicy, crunchy Northern Spies. But when it gets around 9 o'clock, he puts on his overshoes, cap, sheep-lined jacket, lights kerosene lantern, and goes out for his night visit to the barn.

To a man who likes livestock, there is nothing else in the day's routine to compare to this last look around before going to bed. The work of the day is done. A man knows that the chances are 99 to 1 that everything is safe and secure, but he could not go to bed easy in his mind unless he had this last inspection. It is good to see the milkers in the tie-up. Most of them are lying down, chewing their cuds. They are well bedded in crisp straw or fresh, tangy sawdust. The horses, crunching on good clover and timothy, turn their heads to look at their master as he glances in the stalls to see that halters are not twisted. The calves and young stock crowd to the gates of their pens for the caressing rub behind ears they have come to expect.

All is calm and safe. As the farmer closes the barn door and goes across the snowy yard, the kerosene lantern throws long shadows on the dim whiteness. As he goes through the woodshed, the light picks glances at the ordered tiers of oak, maple, beech, and ash. Back in the cozy kitchen, he blows out the lantern and sets it on the shelf above the sink. The night visit to the barn is over. Now the farmstead can settle to rest.

Yalta Agreements Concerning Poland

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. GORDON. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a resolution adopted by the United Polish Press of America, Chicago, Ill., appealing to the Government of the United States, the Congress and to the public opinion of the American Nation and the whole world, that the unjust decisions of the Yalta Conference, concerning Poland, be revised in a spirit of equity and good conscience:

Upon report of the unjust Yalta decision relative to Poland, we, the editors and journalists, representing 41 Polish newspapers in the United States with a total weekly circulation of 1,200,000, gathered at a conference in Chicago, Ill., on February 18, 1945, declare as follows:

Our conference is being held on the eve of our national holiday—the birthday of George Washington, at whose side Polish soldiers and Polish generals fought for freedom and independence of America, and who bequeathed to us the love of liberty and justice.

Mindful of the fact that in defending Poland's cause we are defending at the same time the moral principles for which the United States is now waging war;

Realizing that the partition of Poland will result in tragic consequences to America and the whole world, foreboding disaster to a peace based upon principles of injustice;

We resolve that:

The decisions of the Yalta Conference concerning Poland are incompatible with the spirit of Christian civilization, because they violate its moral foundations;

They are incompatible with the principles of free nations, because they violate the rights of such nations;

They are incompatible with international law, because they were made without the participation of Poland and are to be imposed on her by force;

They are incompatible with the traditions of the United States which has always stood in defense of wronged nations;

They are incompatible with the principles of the Atlantic Charter, because all the United Nations have accepted these principles as a symbol in their fight against the use of force;

They are incompatible with the commitments of the United Nations, who officially recognize the Polish Government in London.

Poland, during 5½ years of fighting, gave proof of unexampled sacrifices, heroism, and faithful loyalty toward her allies, and she has a right to rely upon the unalterable loyalty on their part.

The Yalta decisions deprive Poland of a part of her ancient lands which integrally belong to her and are essential to the welfare of the Polish Nation.

The Yalta decisions cancel not only the voluntary treaty of Riga, but also all commitments subscribed to by the Allies with Poland.

The Yalta decisions nullify the agreement of General Sikorski with Russia entered into with the approval of England.

The Yalta decisions are in reality a fifth partition of Poland.

Poland was deprived of the power and right to self determination.

The Polish lands in the west, as Opeln Silesia, Pomerania, which includes East Prussia, rightfully belong to Poland and cannot be considered as compensation for lands seized in the east and the establishment of her eastern borders should be made dependent on the establishment of her western borders.

As a tragic evidence of what Poland will be met with, are the mass arrests, exile and execution of former members of the home army in disregard of their fullest sacrifices and heroism in their fight against the Germans. We fear that the same fate awaits all Polish soldiers, who have fought and are fighting on all battle fronts of the world for democracy's victory.

As Americans dedicated to the freedom of nations, we feel duty bound, in the name of justice, to take a stand in defense of the full rights of our ally—Poland.

In the belief, that the Yalta decisions are not final, we appeal to the Government of the United States the Congress and to the public opinion of the free and great American Nation and to the whole world, that the unjust decisions of the Yalta Conference, concerning Poland, be revised in a spirit of equity and good conscience.

ZYGMUNT STEFANOWICZ,
PETER YOLLES,
ADOLF CEPURA,
ADAM OLSZEWSKI,
JADWIGA KARLOWICZOWA,
Resolution Committee.

The resolution committee also recommends and the Conference adopts the following motions:

We, the representatives of the Polish newspapers and newspapermen's associations, gathered in conference, express our vote of fullest confidence to the executive board of the Polish American Congress, and we here state that we espouse the activity of the Congress and that we resolve to cooperate with it as the only legal and real representative body of Americans of Polish origin.

We appeal strongly to all Americans of Polish descent to continue purchasing of war bonds to help hasten the complete victory over our enemies—Germany and Japan.

Farm Machinery Shortages

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. REED of New York. Mr. Speaker, I find that a highly reputable hardware firm has felt it necessary to explain through a paid advertisement why it cannot furnish the farmers with essential farm machinery and household necessities. The stock pile of farm machinery and parts which our farmers need are to be piled "hither and yon" throughout Europe and Africa, where they will be unused by the natives and destined to rust out:

In our mail last Monday morning we received five letters.

Their contents were so typical of the inconsistent way of doing business we thought our customers would like to know their messages:

No. 1. "We are sorry but we can ship no more barn equipment until further notice."

No. 2. "Sorry to inform you that we have been compelled to discontinue building farm-type fanning mills."

No. 3. "On our records we do not find that you bought any pump jacks from us in 1941, hence you have not quota with us."

No. 4. "Sorry we are unable to make shipment now of your order of September 1944 for wallpaper. Your order will come in small lots from time to time as it becomes available."

No. 5. "Now is the time for baseball uniforms. We have available now for the manufacture of the finest types of lettering and emblems on bowling shirts—sportswear, etc. We can give 10 days delivery. We guarantee our work for color and fastness. Samples and prices on request."

You see how it is, shortages of farm machinery, delays for the materials to redecorate your home, but no shortages or delays in this line of sporting goods.

If we cannot supply your everyday needs it is not because we have not tried.

Many of the most critical needs of the farmer are not available.

You probably wonder, as we do, what kind of businessmen control these regulations.

The letters referred to above are on file in our office and may be inspected any time by anyone.

I wonder whether the following items under the united relief—U. N. R. R. A.—farm machinery program will produce more food here than they are likely to do when shipped abroad as now planned:

Here is where the farm machinery is allotted: 30,000 tractors to be sent to all parts of Europe; 30,000 plows to be scattered all over Europe, paid for with American dollars; 30,000 separators, 50,000 mowers, 17,000 reapers, 22,000 horse-drawn hay rakes, 40,000 harrows, 12,000 binders, 30,000 pieces of farm machinery to The Netherlands, 15,000 pieces of equipment to Belgium and Luxemburg, 14,000 to Czechoslovakia, 21,000 to Denmark, 212,000 to France, 8,900 to Greece, 12,000 to Norway, 115,000 to Poland, 36,000 to Yugoslavia, 30,000 to the Baltic states, 10,000 to Italy, 13,000 of spare parts which are not available to our own farmers.

Is Communism a Threat?

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Daily Tribune of Royal Oak, Mich., on the subject Is Communism a Threat? It is a threat to the freedom of America. It is a philosophy repugnant to every concept of freedom and every American principle. It denies God. It denies that man has a spiritual side. It is infiltrating into the minds of unthinking Americans. It is being sold to unthinking people. Its whole totalitarian concept is to keep the common man common. This is a timely editorial and should be read by every American.

PERSONALLY SPEAKING

(By Floyd J. Miller)

IS COMMUNISM A THREAT?

Are you worrying yourself sick for fear that communism is going to take over the United States? That's ridiculous.

Are you blithely ignoring communism? That's not only ridiculous. It's highly dangerous.

Sounds like double talk, eh? Well, it isn't. It is merely my way of saying that we have to use our common sense in considering the threat of communism in this country. We need reason, not emotion.

Recently I received a long letter from a friend in uniform. He has been away from this country for many months. He gets only partial reports of what is going on here. He fears that the Communists are moving right into Washington and gradually taking over. He's pretty worried about the whole situation.

Are half the countries of Europe to be communistic after the war? Is it to spread to South America? Will it wreck the United States? These are some of the questions that are vexing him.

My friend writes a lot about Democracy. He believes in it; so thoroughly that he has been in two wars to defend it and has spent many years in public service in peacetime. Yet I am afraid that when you come right down to the rock-bottom fact, he lacks confidence in the ability of the American people to practice it.

LITTLE FAITH IN DEMOCRACY

Many others, especially business and professional men, are similarly afflicted by such a wild fear of communism that they have lost their belief in the American people—and in the strength of democracy itself.

They lie awake nights seeing communistic pink elephants. They sweat and struggle during the daytime to (as they see it) fight against communism. They are so taken up with this idea that they have little time or strength left to fight for democracy.

They forget that America was founded and made great by men who had ideas and who were willing to risk everything in striving for these. They have lost sight of the fact that positive ideas, not negative ones, are always, in the end, the winners.

If we could today, in an instant, wipe out every person and every nation that supports communism, we would not get rid of it. For communism is not a thing. It is an idea.

If it is a good idea it will prevail. Wiping out half the population of the world would not prevent its springing up again.

Personally, I do not believe that communism is the idea the world is going to follow. It is not half as good an idea as democracy.

But we must realize that a lot of the stuff that has been paraded as democracy has been pretty sad. It has had the outward appearance, but not the inner substance of democracy. That is why clever men who either just mistaken or just vicious, or both, have developed another idea which they have claimed is better than democracy.

It seems to me the business men who make the most noise about communism often miss the point completely. They should welcome the appearance of this newer doctrine because it offers what they are always shouting for—competition. That is the very backbone of free enterprise.

SHOULD GREET COMPETITION

The businessman who has the best article of merchandise should welcome competition from anyone who has an inferior product. It really gives him a chance to show his stuff. It presents an opportunity for comparsion by the customer; a chance to really sell him for keeps.

Exactly the same is true of an idea. The presence of one that has much of the appearance of democracy, but not its genuine value or wearing qualities, gives democracy a chance to profit by the comparison.

Communism can never win the world, because it is based in the assertion that man is entirely social and materialistic. That is false.

Communism denies the spiritual side of man's nature. It declares that he has no rights as an individual; that he is merely part of society, or the state.

Of course it can make a great showing—temporarily—if it gives individuals a greater material prosperity than they have ever before experienced. That has been the case in Russia.

But greater material prosperity for the Russians means greater education. And education makes men ask questions. It makes them conscious of their existence as individuals. It enables them, in spite of all repressions, to realize that they have a spiritual side; that there is a God as well as physical possessions and intellectual diverions.

Are we in the United States, then, just to sit around and wait for Russia or other communistic countries to realize their mistakes? That's not my idea. For that will be a long process; short, in reality, as a period of history, but long in comparison with the lives of us, the individuals thinking about this matter.

No, our answer to communism is to make democracy work better. It is to realize that every criticism of business and industry is not a sly communistic plot; that there are always failures and that we must correct them.

We need to spend more time out sweating in the fields, and less staying in a gloomy room and looking under the bed.

Armed Forces in India Want Their Beer

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. COCHRAN. Mr. Speaker, the CONGRESSIONAL RECORD is read by our armed forces even in far-off India.

This morning I received a letter from Second Lt. Jim J. Conlon, Four Hundred

and Ninety-seventh Service Squadron, Forty-fourth Service Group, A. P. O. 487, Postmaster, New York, N. Y., in which he states he read my extension of remarks entitled "Armed Forces Have a Priority on Beer."

The letter shows the feeling of the men in our armed forces and the enjoyment they have in a glass of beer. It confirms the statement I made in the interest of the morale of those serving in the Army and Navy, when I said the Congress would make a grave mistake if it deprived them of a bottle of beer.

Under the permission granted me, I include Lieutenant Conlon's letter as part of my remarks. It follows:

FOUR HUNDRED AND NINETY-SEVENTH SERVICE SQUADRON,
FORTY-FOURTH SERVICE GROUP,
A. P. O. No. 487,
c/o Postmaster, New York City,
February 21, 1945.

Hon. JOHN J. COCHRAN,
House Office Building,
Washington, D. C.

DEAR SIR: I have just concluded reading your extension of remarks which appeared on page A481 in the Appendix of the CONGRESSIONAL RECORD under date of February 6, 1945, entitled "Armed Forces Have a Priority on Beer."

Your article stated that some people feel that the armed forces should be deprived of beer during the period of the war. I believe that I could stand as one for all the soldiers in India in negation to this thoughtlessness.

Here in India we are rationed to one case (24 bottles) of beer (sometimes less) per month. It gets mighty hot over here, Mr. COCHRAN, so hot that sometimes you can't touch a 'plane that your hand doesn't blister. Ice is at a premium so that most of the times we drink our beer warm. There is plenty of work for us to do and we work hard. But when night time rolls around we like to sit in a tent and talk about the good times we have had, and the good times we are going to have when we get back—over a bottle of beer. The people that feel that we should be deprived of a bottle of beer should come over here for just a few days.

Thank you, sir, for defending our right to a little enjoyment.

Sincerely,

JIM J. CONLON,
Second Lieutenant, A. U. S.

The Act of Chapultepec: "Essayons"

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1945

Mr. PLUMLEY. Mr. Speaker, Vermonters are particularly interested in the conference in Mexico, for two reasons: the first is that its distinguished senior Senator is the leading representative of the legislative branch of the Government in attendance; second, that this act of Chapultepec is the second in the drama in which Vermont has played a conspicuous part.

You may recall that Gen. Truman B. Ransom, a Vermonter, who resigned as president of Norwich University to enter his country's service, led the attack, and gave his life to compel the surrender of that well-nigh impregnable fortress at Chapultepec, almost 100 years ago, September 13, 1847, to be exact.

History records that when the commanding general issued the order to the effect that the fortress should be captured and reduced, General Ransom said: "Essayons," or being translated "I will try," which is the motto of all Norwich men since that day.

History repeats itself. We are now undertaking to establish an enduring peace.. The senior Senator from Vermont, from that historic fortress at Chapultepec, again, may well adopt the motto of Norwich in his efforts to produce an enduring peace among all nations—"Essayons."

In that connection, under leave granted to extend my remarks, I am including an editorial from the New York Herald Tribune of March 4, entitled "The Act of Chapultepec":

THE ACT OF CHAPULTEPEC

The Act of Chapultepec, already accepted by the Commission on Inter-American Affairs and virtually certain of formal indorsement by the Mexico City Conference, may well stand in history as the most significant single step in the development of international policy in the Western Hemisphere since the enunciation of the Monroe Doctrine more than a century ago. Yet it is equally important as the climax of a slow process of trial and error, of gradually crystallizing sentiment.

In hemispheric affairs the contribution of the Monroe Doctrine has been a vital one. The doctrine, and the consciousness of the people of the United States that the principles of the doctrine represented matters essential to the security of their country and their system of government, formed the shield behind which the concept of hemispheric unity was able to grow. It was an act of power, an act, in the eyes of many European statesmen of the old school, such as Bismarck, of impudence. Yet it succeeded in its main objective—that of preventing the New Yorld from becoming such open cockpits of contending alien interests as Asia and Africa. It did not function perfectly; it was sometimes abused by its sponsors and often feared by those whom it was intended to protect. But that it served its great end was demonstrated most effectively by the recital of accepted rules of international conduct embodied in the Act of Chapultepec.

From the unilateral concept of the Monroe Doctrine, American policy broadened into multilateral collaboration in peace and war. It was a collaboration that was not highly formalized and certainy not rigid. For the most part it dealt with situations as they arose. But the large degree of unity attained by the Americas in the face of German and Japanese aggression demonstrated that collaboration on that level could be effective and could, in time, be transformed into a formal security organization by nations already practiced in cooperative effort. This transformaton is now taking place at Mexico City.

The Act of Chapultepec will not be the last word. In part it is a measure directed at maintaining American security during the current war, and it may well be modified when peace comes. It must be adapted to the broader framework of the world organization which is in the process of being constructed. But it can also provide valuable lessons for those who struggle with the problems of world peace.

Necessary Railroad Legislation

EXTENSION OF REMARKS
OF
HON. ALFRED L. BULWINKLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1945

Mr. BULWINKLE. Mr. Speaker, there is a very important question which confronts the American people and that is "What legislation is most vital at this time to insure the continuation of the kind of railroad transportation which this country needs and must have?" At the height of the war effort, and in the post-war period, we must see to it that our railroad transportation facilities are kept in a high degree of efficiency. Every man and woman in the United States knows of the job which confronted the railroads and the wonderful way they have done that job. Everyone knows they have transported war materials and members of the armed forces in this country with a very high degree of efficiency.

Even as these transportation facilities are indispensable in time of war, they are likewise indispensable in the peace which will follow this war. To my mind the Congress should take whatever action is necessary to maintain the efficiency of the railroads in the peace to come and also as an adjunct of the national defense of the future.

Today I introduced a bill, H. R. 2536, which has for its purpose the removal of a great part of the uncertainty and confusion which has hampered, and which will hamper, the railroads to a great extent if this or some similar bill is not passed.

For 50 years or more the Interstate Commerce Commission, one Government agency which has enjoyed the confidence of the people of the country, has been regulating the railroads so as to insure reasonable and nondiscriminatory rates and fair practices.

The Interstate Commerce Commission was set up as, and is, the arm of the Congress for the purpose of insuring reasonable and nondiscriminatory rates and fair practices, as I have said before, and the Congress has relied upon the Interstate Commerce Commission for these many years.

In recent years, and especially at the present time, there is uncertainty and confusion concerning the application of the antitrust laws to railroads and other surface carriers. This situation has brought about a condition which requires and demands an immediate, commonsense remedy.

It is a matter of general knowledge that the carriers cannot serve two masters; therefore, it becomes the duty of the Congress to say which Government agency, or department, shall have control of the regulation of the railroads and other carriers.

The bill that has been introduced today seeks to remove the uncertainty and confusion and places the regulation under

the agency of Congress, the Interstate Commerce Commission, and makes it entirely clear that the antitrust laws are to be applied to common carriers in a way which will not prevent or obstruct the carrying out of the will of Congress, as contained in the Transportation Act of 1940.

Care has been taken in drafting the bill to guard the public interest in accordance with the provisions of the national transportation policy.

The treatment which this bill gives to surface carriers is similar to that now given to air carriers under the Civil Aeronautics Act.

The bill contains the following provision:

Be it enacted, etc., That the Interstate Commerce Act, as amended, is amended by adding after section 5 thereof a new section as follows:

"SEC. 5a. (1) As used in this section, the term 'carrier' means any common carrier subject to part I, II, or III, or any freight forwarder subject to part IV, of this act, and the term 'antitrust laws' has the meaning assigned to such term in section 1 of the act entitled 'An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes,' approved October 15, 1914.

"(2) Any carrier, party to an agreement (other than for a pooling, division, consolidation, merger, purchase, lease, acquisition, or other transaction to which section 5 is applicable) between or among any two or more carriers may, under such rules and regulations as the Commission may prescribe, apply to the Commission for approval of the agreement, and the Commission shall by order approve any such agreement if it finds that, by reason of furtherance of the national transportation policy declared in this act, the relief provided in paragraph (3) should apply with respect to the making and carrying out of such agreement; otherwise the application shall be denied. The approval of the Commission shall be granted subject to such terms and conditions as the Commission may prescribe as necessary to enable it to grant its approval in accordance with the standard above set forth. The Commission shall by order terminate its approval of any such agreement, previously approved by it, or modify any terms and conditions upon which such approval was granted, if it finds such action necessary in order that the standard above set forth may be complied with. No order shall be entered under this section except after notice and opportunity for hearing and the effective date of any order of termination shall be postponed for such period as the Commission determines to be reasonably necessary to avoid undue hardship. The Commission shall not approve any agreement which establishes a procedure for the determination of any matter through joint consideration unless under the agreement reasonable opportunity, in the light of the matter involved, to act contrary to the determination arrived at through such procedure is afforded to each party to the agreement which did not concur in such determination.

"(3) Parties to any agreement approved by the Commission under paragraph (2), and other persons, are hereby relieved from the operation of the antitrust laws with respect to the making of such agreement, and with respect to the carrying out of such agreement in conformity with its provisions and in conformity with such terms and conditions as may have been prescribed by the Commission.

"(4) Any action of the Commission under this section in approving an agreement, or in denying an application for such approval, or in terminating its approval of an agreement, or in prescribing the terms and conditions upon which its approval is to be granted, or in modifying such terms and conditions, shall be construed as having effect solely with reference to the applicability of the relief provisions of paragraph (3)."

The Seabees

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Shirley Povich, from the Washington Post of March 7, 1945:

EVEN MARINES LIKE SEABEES, ROUGH, TOUGH MIRACLE MEN

(By Shirley Povich)

ADVANCE PACIFIC HEADQUARTERS, GUAM, February 25 (Delayed).—The Seabees are the characters of this Pacific war, I've learned. Even the marines, who don't like anybody except the marines, like the Seabees—even admire 'em. That's the test.

It's all simple enough to understand. Everybody on this island and every other island in the Pacific is indebted to the Seabees for something, at some time. You can't ever get mad at the guys who do things for you.

They'll fix your broken belt buckle, or they'll sling together a nice movie theater—in about the same time, which is quick. They'll repair the intricate plumbing in your cigarette lighter, or maybe you'd like a 40-room Quonset hut for tomorrow. It's just a breeze for the Seabees. They are the collective Mr. Fixit, umpteen thousand strong.

They're the Navy's construction battalions, and they're as liable to be hitting the beaches with the assault troops as they are to be primping a nice little rock garden for battalion headquarters. They're everywhere.

They're bluff and hearty citizens—constructioneers who admit to nothing they can't do. As the saying goes, the difficult tasks are a pipe for the Seabees—the impossible just takes a little longer.

Seabee bosses, most of them, are fresh out of the contracting business in civil life since Pearl Harbor. Most of the Seabee officers are solid, middle-aged citizens you'd find bossing any construction job back home before the war. They know the score when, for example, the admiral would like a 100-office headquarters erected with sewerage, showers and, oh, yes, a nice highway from the beach. The Seabees just whip out the tools and go to work.

Navy regulations don't always mean a whole lot to the Seabees. The shore patrols have almost given up trying to make the rootin', tootin' Seabees conform to form. They ignore uniform regulations and saunter about in the oddest get-ups, dungarees, old caps, unbuttoned shirts, everything that is calculated to make the formal Navy man swoon at such individuality.

They work hard, and they play hard. Seabee officers take the reasonable view that the former forgives the latter. The Seabees can raise plenty of hell when it's fun they're looking for. Not much is said about it.

LOOKING DOWN ON C. I. N. C. P. A. C.

The miracles they perform for other outfits they match with little jobs they do for themselves. C. I. N. C. P. A. C.—that's the admiral—picked out what appeared to be the choice spot for his headquarters here.

The Seabees let him have everything he wanted, and built him a small town.

Then they went to work for themselves. They constructed Seabee headquarters on a peak. Now, two Seabee battalions literally look down on C. I. N. C. P. A. C.

At Pearl Harbor, I saw a Seabee job. They built a 15,000-seat stadium to house the Nimitz Bowl football game between the Army and Navy All-Stars. They tossed up an amphi-theater in a hurry and then, on the last day before the game, learned there were no provisions in the Navy's building program for seats for the Seabees. Without asking, they built an extra section for themselves, on an elevation, and the next day they were sitting in the best seats in the park.

ALL THIS AND A BRASS RAIL

Guam's officers' club for the headquarters people is all right. The Seabees built it, complete with bar. But you ought to see the Seabees' own club quarters. Not only a bar, but very comfy, with brass rail.

They're the champion souvenir people of this Pacific war, incidentally. Their bulldozers uproot many a Jap weapon as keepsake.

In a financial way, the Seabees do all right. At a B-29 base here, the chaplain squawked when a Super-Fortress, distinguished by a beautifully painted nude on its fuselage, drifted into camp. The aviator-artist wasn't on the trip. For 30 bucks, they hired a Seabee to paint swimming trunks and a bras on the lady.

There's no ceiling on the ingenuity of the Seabees. They run a regular souvenir business in the Pacific. Other Navy outfits beat a track to the Seabees for mementoes, and pay fancy prices.

A Jap flag, replete with red meat ball in the center and Japanese characters scrawled beneath, fetched a Seabee 60 bucks from a Navy yeoman.

BUT HE KEPT THE SIXTY

There was a bit of a stink about that. Intelligence officers were forced to confess to the yeoman that the Jap flag was an American sugar sack that had fallen into Seabee hands, that the red center was the handiwork of Seabee artists; that the Jap writing wasn't Jap writing at all, just a Seabee's idea of what Jap writing ought to look like. But he didn't get his 60 bucks back.

The secret weapon of this war is the Seabees' bulldozers. They knock over trees, hillsides, moderate-sized volcanoes, and anything else on the elimination list. At work, the Seabee bulldozer drivers always have an audience of men from other outfits, enchanted by the results the bulldozers get.

Machinist Mate (2d cl.) George Winston Allen, of Texas, a bulldozer jockey, was pounding away near the jungle edge on a Marianas island the other night after dark when his headlight suddenly spotlighted four Japs sitting on a log. They had been watching the operation, apparently quite fascinated by it all. The Japs were doubtless thinking of their own dinky garage, showers, and, oh, yes, a nice highway from the beach. The Seabees just whip out the tools and go to work.

Seabee Allen didn't let the incident disturb him. "It's all in the night's work," he said. "I've decided to elect those four Japs to my 'sidewalk superintendents' club.' It's growing."

Forest Products of the Pacific Northwest Helping to Win War

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. ANGELL. Mr. Speaker, in the States of Oregon and Washington is growing the largest stand of virgin timber we have left in the United States. It has been drawn upon for immense quantities of wood products for war purposes. This great asset is being consumed at a rapid rate, far beyond nature's power to reproduce it.

It is unfortunate that only a third of the wood content of a tree that is cut for commercial purposes is utilized as lumber. It has been estimated that a ton of wood for each thousand board feet of lumber is contained in the sawdust, slabs, and edgings, in addition to several tons that are left in the forest from the limbs and other noncommercial wood products not utilized. There are, however, large values left in these wood products which could be saved through scientific processes.

The Forest Products Laboratory at Madison, Wis., has been doing an outstanding work in the development of uses for wood products and in wood utilization for new purposes. There is established in Portland, in my district, the Pacific Northwest Forest Experiment Station, which is carrying on a most useful work in determining processes and uses for forestry products to the end that the full tree, when it is cut for commercial purposes, may be utilized. This station is in need of funds, and a modest appropriation of $50,000 annually has been requested for that purpose. The legislature of my State, which is now in session, recently passed House Joint Memorial No. 4, petitioning the Congress of the United States to appropriate this sum for the establishment of a Forest Utilization Services unit to carry on this useful work on the ground in the Northwest where these large timber assets are located.

The Portland Chamber of Commerce has likewise urged that this appropriation be granted and that an additional appropriation be given to the Forest Products Laboratory at Madison, Wis., to carry on its work in this field.

I appeared today before the subcommittee of the Appropriations Committee which has jurisdiction over appropriations for the Department of Agriculture and urged that these appropriations be granted, and I respectfully request that the Congress give its approval to these appropriations when the bill reaches the floor so that the timber resources of the Northwest may be fully utilized. In this connection it should be remembered that the Federal Government itself owns considerably more than 50 percent of the standing timber of the Northwest and is directly interested in the full utilization of these forest products.

I include as a part of these remarks the memorial of the Oregon State Legislature and the resolution of the Portland Chamber of Commerce to which I have referred, as follows:

RESOLUTION OF BOARD OF DIRECTORS OF THE PORTLAND CHAMBER OF COMMERCE

Whereas the future development of the lumber industry of Oregon and Washington is closely linked with the development of new processes for the improvement of lumber and the use of wood now wasted in the manufacture of lumber; and

Whereas these developments will only come through research in the nature of wood, the discovery of methods for its new and better use, and through the secondary research necessary for the economic application of new methods when developed; and

Whereas the Forest Products Laboratory at Madison, Wis., and the Pacific Northwest Forest Experiment Station, located at Portland, Oreg., and operating in Oregon and Washington, have made notable contributions to such developments in the past; and

Whereas post-war development of new and better uses of wood in Oregon and Washington should be further expanded through the work of these organizations: It is therefore

Resolved, That—

1. The appropriations to the Forest Products Laboratory at Madison, Wis., should be increased by $1,500,000 annually, beginning July 1, 1945, and that this sum should be specifically used for the development of new and better uses for wood; and that

2. There should be appropriated not less than $50,000 annually to the Pacific Northwest Forest Experiment Station at Portland, Oreg., for the establishment of a wood-utilization unit. This unit should consist of a group of men especially trained in the various fields of wood technology. It should be the duty of this unit to take the problems in wood utilization which are peculiar to the States of Oregon and Washington to the Forest Products Laboratory at Madison, to aid there in the technical solution of these problems, and to bring to the States of Oregon and Washington the results of such research in form most applicable to industrial use.

It should be further understood that the work of the wood-utilization unit at the Pacific Northwest Forest Experiment Station at Portland and the Forest Products Laboratory at Madison should be conducted in the closest possible cooperation with work in these fields now under way at the Oregon Forest Products Laboratory at Corvallis, the University of Washington, at Seattle, and any industrial groups or concerns now engaged in such research.

House Joint Memorial 4

To the honorable Senate and House of Representatives of the United States of America in Congress assembled:

We, your memorialists, the Forty-third Legislative Assembly of the State of Oregon, convened in regular session, respectfully represent that:

Whereas timber stands in the Pacific Northwest, both public and private, are being cut at an accelerated rate, far beyond the natural growth of the timber; and

Whereas, in converting timber to lumber, less than one-third of the tree is utilized as lumber. About a ton of wood per thousand board-feet of lumber is left at the sawmill as sawdust, slabs, and edgings, while about 8 tons are left in the woods as tops, limbs, broken and cull logs, cull trees, and noncommercial species. Such wood is perfectly good chemical raw material; and

Whereas diversified utilization of timber, taking the forest crop as it comes and using those portions of it for those uses to which they are best suited, will eliminate this extravagant waste of a dwindling natural resource; and

Whereas the full utilization of timber products and waste material not only means the answer to future employment but the maintaining of many important communities as well: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the senate jointly concurring), That the Forty-third Regular Assembly of the Oregon Legislature petition the Congress of the United States to appropriate an additional $50,000 to the Pacific Northwest Forest and Range Experiment Station for the establishment of a forest-utilization services unit to bring the results of wood utilization research to the forest industries of the Pacific Northwest; to take the problems of industry needing solution to the forest products laboratory of the United States Forest Service and to conduct other urgently needed work such as participating in local pilot plant demonstrations of promising new processes and products; and be it further

Resolved, That adequate Federal appropriations be provided the Forest Products Laboratory of the United States Forest Service which would enable it to make full use of its present facilities; and be it further

Resolved, That copies of this memorial be sent to both branches of the Congress of the United States, the Department of Agriculture, and to each of the Senators and Representatives in Congress from the State of Oregon.

Adopted by the house February 14, 1945.
EUGENE E. MARSH,
Speaker of the House.
Adopted by the senate February 28, 1945.
HOWARD C. BELTON,
President of the Senate.

Mississippi's "Angels of Bataan" Come Home

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. RANKIN. Mr. Speaker, on yesterday in my home town of Tupelo, Miss., there was held one of the most unusual celebrations in the history of this country, when a young lady, Lt. Inez McDonald, a nurse who was captured at Corregidor, and who has been recently released from a Japanese prison, came home and gave an account of her experiences as a prisoner of those savage apes we are fighting in the Pacific.

I am inserting a report of her homecoming, as well as her statement, in the RECORD, and I want all of you to read it.

I hope those individuals who are going around trying to get us to coddle the Japs will understand that we are up against one of the most savage, ruthless, and repulsive enemies that civilization has ever known. I think you will come to that conclusion when you read this young lady's statement.

The matter referred to follows:

ROUSING WELCOME AWAITS HEROIC ARMY NURSES FREED BY YANKS FROM JAP PRISON CAMP IN MANILA AFTER WEARY MONTHS OF HUNGER AND HARDSHIP AS CAPTIVES OF THE JAPANESE

(By Robert Talley)

Back from Bataan, from Corregidor, from nearly 3 years in a filthy Jap prison camp in Manila.

Lt. Inez McDonald, a slim, blond Army nurse who weighs just 110 pounds with all her medals on, is preparing today at her farm home at Plantersville, Miss., Tupelo, for the most terrifying experience of her life.

That experience isn't the almost daily rain of Japanese bombs that she underwent as she bandaged the wounds and gave blood plasma to American soldiers on Bataan. It isn't the grim and hopeless days that she spent in the dark tunnels of Corregidor's stony fortress as the Japs drew ever closer. And it isn't the long and weary months that she lived as a prisoner of war in Manila's Santo Tomas University, to which she was subsequently taken. * * * No, nothing like that at all.

What probably will upset Lieutenant McDonald's strict professional composure and cause her star-studded service ribbons to flutter on the breast of her neat-fitting Army nurse's uniform in her quivering excitement is the home-coming reception that Tupelo plans for her Tuesday afternoon at 2:30 o'clock. It promises to be the biggest event in Tupelo since the 1936 tornado that blew down nearly 500 houses in that little city, and only slightly less violent in its intensity.

"I'm dreading it—why should they want to make so much fuss over me?" Lieutenant McDonald said a few minutes after she arrived at Memphis airport Friday on an American Airlines plane from California. "But I'll go through with it, if that's what they want—and I will say it's a lot more than I deserve."

There was drama in her arrival at Memphis Airport, the human drama of parents greeting a daughter returned from heroism, hardship and hunger whom they had not seen for 4 long and worried years.

For hours before the delayed plane arrived the parents, Mr. and Mrs. W. A. McDonald, typical Mississippi farm folk, sat nervously in the airport waiting room. Mr. McDonald struggled bravely to carry on a pleasant conversation with a reporter. Mrs. McDonald, the mother, just sat and thought and said nothing. With them were their youngest daughter, Miss Jimmie Lou McDonald, a cadet nurse at Kennedy General Hospital here, and Charles Monts, Plantersville merchant and old-time friend of the family.

MOMENT OF EMOTION FOR ENTIRE FAMILY

At 4:08 p. m. the waiting room's loud speaker rumbled: "Flight No. 10, arriving from California, will land in 5 minutes. Passengers will debark at Gate No. 4."

Electrically, it seemed, Mr. McDonald forgot all about his pleasant conversation with the reporter and Mrs. McDonald's eyes, wet with expectancy, suddenly sparkled. They hurried to Gate No. 4, got an attendant's permission to pass out to the concrete landing apron.

"That's her. See her waving through the window at us," shouted Miss Jimmie Lou McDonald as the big silvery American air liner taxied up to the gate and coughed to a stop.

Mr. and Mrs. McDonald, aflutter with excitement and tears, were waiting at the foot of the passenger ramp when it was pushed up to the door of the big plane.

Lieutenant McDonald, a thin figure in her Army nurse's uniform, rushed down the ramp into her parents' arms.

"Honey, thank God," were the only audible words, for by that time they had her around the neck and whatever else was said was lost in a welter of sobs and kisses.

A short time later, Lieutenant McDonald, her parents, her sister, and Mr. Monts entered the McDonald auto and departed for their farm home near Tupelo. Mrs. McDonald, the mother, was still crying.

BROTHER'S UNIT FIRST TO REACH THE RHINE

Even as Inez McDonald landed at Memphis airport, the telegraph wires were clicking with more astounding news about her family—her eldest brother, Lieut Col. Leniel E. McDonald, commander of an outfit of Infantry Rangers in Germany, had commanded the first American fighting unit to reach the Rhine.

And so, Tuesday afternoon, Lieutenant McDonald's big homecoming celebration at Tupelo that had to be postponed from Friday afternoon because of the bad flying weather that delayed her arrival in Memphis, will take place. Schools and stores will be closed and the entire town will turn out.

Inez McDonald, who took her nurse's training in Memphis, is one of those 68 "Angels of Bataan" who are now returning to their homes all over the United States. Behind them lie 3 months of unanswered fire on that bloody peninsula, hopeless days in Corregidor's gloomy caverns, and nearly a year of semistarvation in a Jap prison camp in the Philippines. Of these heroic nurses, President Roosevelt recently said: "You have served valiantly in foreign lands, and suffered greatly."

PHILADELPHIA, MISS., NURSE ANOTHER BATAAN ANGEL

Another of these "Angles of Bataan" is Lieut. Imogene Kennedy of Philadelphia, Miss., for whom a similar celebration was waiting in her home town. Both attended the University of Tennessee's School of Nursing at Memphis and trained at John Gaston Hospital here, although in different years. Miss McDonald and Miss Kennedy landed back in America last week at San Francisco, after an airplane flight from the Philippines.

But let's get back to Lieutenant McDonald's gala homecoming at Tupelo on Tuesday afternoon, which probably will upset her professional composure that even Japanese bombs and bullets failed to waver. Her emotional reactions about that homecoming celebration are easy to explain—after all, women are only women, regardless of what kind of clothes they wear.

On Tuesday afternoon at 2: 30 o'clock, here is what Nurse Inez McDonald will see:

From her farm home at Plantersville she will be driven, in her parents' car, to the fairgrounds at Tupelo. Arriving there, she will see a parade all lined up and waiting. Mayor J. P. Nanney will be there to lead it. The colorfully uniformed musicians in the band of the Tupelo High School, which she once attended, will have their shiny instruments poised and waiting. The color bearers of Lee County American Legion Post, No. 49, will be standing there with their fluttering flags. So will the ladies of Tupelo's American Legion Auxiliary, the town's military personnel of Army and Navy recruiting officers, and hundreds of Tupelo school kids all lined up and waving tiny American flags.

TUPELO WILL ACCLAIM DISTINGUISHED DAUGHTER

Nurse Inez McDonald will transfer to an open car, the top down and decorated with flags and bunting, in which Mayor Nanney will sit beside her as they lead the parade. With them will be John K. Grower, the energetic manager of Tupelo's two movie theaters, the Lyric and the Strand, and "the one-man committee on arrangements," whom Mayor Nanney will introduce as "Inez, he's the guy who planned all this—and you've got to go through with it; you can't let John down." And in the same car will be Lieutenant McDonald's parents.

In the second open-top auto will be Cadet Nurse Jimmie Lou McDonald and other members of the family. The third car will contain Capt. Sam Lumpkin, former speaker of the Mississippi House of Representatives and now commander of the Lee County American Legion Post; Mrs. L. D. Biggerstaff, president of the Tupelo Legion Auxiliary, and other Legion officials.

A lot of Tupelo citizens will march, too, including members of the Pilot Club, organization of business and professional women, who will carry a huge American flag (18 by 30 feet) between them like a blanket, holding to its edges. Then Tupelo members of the Mississippi State Guard, in uniform and with rifles on their shoulders, under Capt. Louis Cook and Lt. Bill Patton. After that, hundreds of flag-waving school kids.

Down Main, Green, Jefferson, and Broadway the parade will wend its way to the courthouse, where a reviewing stand has been erected on the lawn. There the homecoming exercises in Inez McDonald's honor will take place. The program will open with the playing of the Star-Spangled Banner by the high-school band and a prayer by the Reverend H. R. Holcomb, pastor of Tupelo's First Baptist Church, who will offer thanks for Lieutenant McDonald's "safe return to her native soil after many trying months of heroism, hardship, and danger."

Several nurses from Tupelo's Northeast Mississippi Hospital, precise in their crisp white uniforms and starched caps, will step forward and present Lieutenant McDonald with a bouquet of roses.

This done, Mayor Nanney will arise and present her with a 14-inch gold key, and ringed to it will be 22 smaller cardboard keys. The big key will be lettered, "Key to the city of Tupelo" on one side and, on the other side, "Presented to Lt. Inez McDonald for meritorious service to her country."

Then Mayor Nanney will call her attention to the 22 small keys attached to the big key.

"These," he will say, "are the symbolic keys to 22 of Tupelo's leading stores, business houses, beauty parlors, cafes, and restaurants. "They will unlock the doors of these establishments just as you have unlocked the doors of our hearts; with these keys, enter these places and take whatever you want. It is waiting there for you, gladly."

Mrs. Biggerstaff, of the Legion Auxiliary, will introduce Captain Lumpkin, Legion commander, who will deliver the formal address of welcome. Then he will present Lieutenant McDonald with a mahogany chest of silverware, purchased with money contributed by the citizens of Tupelo. Inscribed on a silver plate on the chest's cover will be: "Presented to Lieutenant McDonald, an angel of Bataan, by the citizens of Tupelo, Miss., 1945."

Honors have come to Lieutenant McDonald—the wan, frail figure bearing the unmistakable stamp of hunger in a Japanese prison camp—who landed at Memphis Airport Friday afternoon, and they have come the hard way.

"Why should anybody care about all that now?" Miss McDonald demurred to her interviewer. "I'd rather forget it—honest."

But the reporter persisted, and she complied.

She talked like a woman who was trying to forget a bad dream. She was slim and small, her blond hair was smooth and glossy and was drawn neatly into a bun on the back of her neck. Her nails were dainty and crimson-tipped. Despite her thin frame, she looked far younger than her 33 years.

She was still very feminine despite her Army uniform (she was wearing a new uniform, as her old uniforms are too large for

her now, since her days of hunger in a Jap prison camp) and her numerous decorations gleamed proudly on the front of her olive-drab tunic. Crowding each other for space there, it seemed, were the Presidential Unit Citation (with two Oak Leaf Clusters), the Bronze Star for gallantry, the Asiatic Service Ribbon, the pre-Pearl Harbor Ribbon, and the new Philippines Liberation Ribbon.

HIT THE DIRT WHEN BOMBS CAME

She told her story like a person ferreting in the past, like one striving to piece together the fragments of a half-forgotten dream.

"When you hear that scream high overhead you know that means bombs and you hit the dirt," she said. "No, you don't just hit the dirt; you eat it. You grab it with your fingers and you push it into your face—and you pray.

"The day I was at Little Baguio I did that. The bomb came down on a hospital ward nearby. I lay flat on the floor of the ward and while I was there the bamboo and tar paper flew up into the air and came down all over me. I lay there for a few seconds. The air was full of dust and smoke.

"Then I got up and walked over to the bomb crater. It was from here to about that building out there—maybe it was 20 yards, if that's 20 yards. Then I went back to the ward, for I wanted to see how many of my patients had been hit. Some were. I really don't know how many were killed at that time.

"I knew one, though, a boy I'd worked with, a Medical Corps man. He was a swell kid. Everybody looked strange, smeared with dust and blood and talking excitedly and loud. I guess I looked odd, too. I remember that a couple of days later I found a wad of chewing gum in my hair. It was blown there by the bomb. I don't know yet where it came from."

CORREGIDOR—AND THEN THE BEASTLY JAPS

The trim little figure straightened up, alertly. Her voice began to lose its faint trace of suppressed emotion.

"That was 2 days before Bataan fell," she went on. "Honest to God, my heart broke when Bataan surrendered. I knew we were beaten then. I never believed that Corregidor would hold out or that help would come after that. None of us had ever believed that those silly little Japs could ever beat us—they just couldn't—but they did."

As Bataan was lost, the battered remnants of its heroic American defenders fell back to Corregidor.

"We were ordered down to the water's edge and told to climb into some little harbor boats," Lieutenant McDonald went on. "It was then about 8 o'clock at night, I guess. We got to Corregidor about 2 in the morning. I remember we crawled along a narrow plank from the boat to the dock. We could still hear firing on Bataan. It was pitch dark.

"But, gee, we felt safe in those deep tunnels of Corregidor. Who wouldn't, after having been exposed to bombing in the open? I was glad to get away from the bombs that at first I almost cried. Later, we used to sit there and laugh when the concussion of falling Jap bombs shook the tunnels. We could afford to laugh then, for we were under 64 feet of solid rock. The only thing we were afraid of was being trapped down there by an explosion."

Lieutenant McDonald described life in the dark tunnels of Corregidor as the Americans made their last valiant stand against hopeless odds.

"The food wasn't bad," she said. "We always had enough to eat. But sometimes I wondered if all the boys did. But we didn't have much time for worry; there was plenty of work that needed to be done. We were too busy hurrying from one casualty to another. Quinine was very scarce for fever patients. Malaria and dysentery cases outnumbered the wounded much of the time."

WORKED ALL DAY

"As time passed, some of the nurses were evacuated. No, I don't know how they were chosen. But I never expected to get away. I just worked all day, or all night—there wasn't much difference between day and night down there in our hole in that rock. We worked pretty hard. We got mighty tired. We slept all right, for even the Jap bombs falling on the rock overhead couldn't keep us awake after so long a time."

Lieutenant McDonald stopped to light a cigarette. She used a Ronson lighter that she had bought last week in Honolulu. It was the first purchase she had made since her return to civilization.

"It seems strange now to think that I can take a bath whenever I want to," she resumed. "There wasn't much water to bathe with on Corregidor. There was only one tank. It was turned on at a certain time every night and turned off a few minutes later. More than once I've got soaped all over, and then the water went off. But at least we nurses had a bathhouse. That was better than at Hospital No. 2 on Bataan, where the nurses often had to bathe in a creek."

Corregidor fell on May 6, 1942.

JAPS CAME, THEN HUNGER

"After the Japs came to Corregidor we started to get hungry," Lieutenant McDonald continued. "It's funny how hunger affects your whole way of living. It seemed that every book or old magazine we picked up told about people eating—families sitting down to a big dinner table, or somebody going into a restaurant. It seems all those characters did was eat. Funny, you never notice such things until you get hungry.

"The Japs kept us there in the tunnels until June 25. They didn't bother us nurses—they came poking and grinning around sometimes, but they never molested us. We just went ahead taking care of our American boys. That kept us busy nearly all the time. The Japs turned off so many lights and dimmed so many others that we lost our only source of relaxation—we couldn't play bridge any more during our brief off-hours.

REWASHED USED GAUZE

"Medical supplies ran low. We kept using and rewashing bloody gauze bandages, and sterilizing them again. You can't wash adhesive tape, so we measured out our tape in little tiny pieces—just enough to bandage the wound and no more. The other day when I saw doctors at Letterman General Hospital in San Francisco tear off long strips of adhesive tape I felt funny. I wanted to say, 'Not so much, doctor; take it easy.'"

On June 25, Lieutenant McDonald and other nurses were taken on a Jap freighter from Corregidor to Manila.

"There were some civilian women in our group and the Japs put them in Santo Tomas, their internment camp for civilians," she went on. "We nurses never expected to go any place but with our wounded men, so we could be with our boys, but the Japs fastened us up in two rooms—all 70 of us—in the Santa Catalina girls' dormitory, next to Santo Tomas University. We slept in one room and had a few tables and chairs in the other.

"Every day we were taken outside by Jap guards and exercised, 1 hour in the morning and 1 hour in the afternoon—when it wasn't raining. Most of the time it was raining."

At Santo Tomas prison camp, the prisoners fell by slow degrees into their strange way of life. Getting enough to eat was the most important thing in life. Keeping clean amid those filthy surroundings was the next. Everything else seemed trivial."

JAP MILITARY WERE BEASTS

"Later, we lived in the classrooms of Santo Tomas University," Lieutenant McDonald went on. "We cooked our meals over charcoal, on a funny little stove, and used pottery pots to cook in.

"We did our own laundry and saved every scrap of soap for it. We worked 4 hours a day in the prison hospital. It was sort of like general duty in a hospital at home—not wounded men, but sick people. There was a lot of broken glass around the grounds from the bombing of Manila, and we treated an awful lot of people for cut feet. Again, we carefully saved our gauze and rewashed it.

"At first we were under civilian Japs. They weren't so bad. They seldom came around, and seemed to treat us like human beings. But in December 1943, the Jap military took over. Santo Tomas became a military prison and we had to bow to every stinking little Jap soldier that we encountered. On a good day we would run into only two or three of the little beasts."

As time wore on, the months passed slowly and drearily in Santo Tomas prison.

FOOD WORSENED AS JAPS LOST

"Every time the Japs lost another island, the food got worse," Lieutenant McDonald said. "But we knew what was going on, for rumors buzzed around the camp constantly, and these rumors had a strange way of coming true. Eventually, I learned what I had long suspected—that there were several hidden radios in Santo Tomas. Some of the men who knew signal corps work had contrived radio sets out of odds and ends. I'll bet we knew more about American victories—and faster—than you did back home."

At last came the moment that Lieutenant McDonald and the other American prisoners at Santo Tomas had awaited so long. It came at night, and at first they didn't recognize it for what it was—liberation.

THEN CAME THE YANKS

"We heard shots down the road," she said. "Then suddenly the whole sky was lighted with flares and searchlights. We hung out the windows and stared in amazement—what was going on?

"Then they came bursting through the gates of Santo Tomas—the Yanks and the tanks and the tanks and the Yanks—and, goodness, were we glad to see them!"

Nurse McDonald's pale blue eyes were shining now, her soft voice was quavering with excitement.

"And the Yank out front, the fellow who led them through the gates, was from my own State—Maj. Robert E. Lee, of Philadelphia, Miss., she exclaimed. "I was so happy I could have hugged and kissed him."

Another nurse prisoner at Santo Tomas who was liberated on that historic night was Lieutenant Kennedy, also from Philadelphia, Miss. She and Lieutenant McDonald had served at different field hospitals on Bataan, but had been together since Corregidor. Together they had gone through the months of little hope and less food.

Lieutenant McDonald and Lieutenant Kennedy have a lot more in common. Both are Mississippians; both attended University of Tennessee School of Medicine in Memphis and trained at John Gaston Hospital here, though in different years.

Lieutenant McDonald, whose parents operate a small farm at Plantersville, near Tupelo, attended Tupelo High School before she came to Memphis to begin her nursing course. After her graduation in December 1934, she engaged in private duty nursing here for a while, mostly at Isolation Hospital.

In August 1936 she joined the staff of Army and Navy General Hospital at Hot Springs, Ark., to be a civilian nurse. Determined to be an Army nurse but 5 pounds underweight, she made up this weight and was accepted

by the Army in April 1937. She served for a time at an Army Air Force hospital at Maxwell Field, Ala., and then, in the summer of 1941, she was transferred to the Philippines. She was assigned to Fort William McKinley, near Manila, and when the war came on in December 1941 she was one of the first Army nurses to go to Bataan.

REACHED RHINE FIRST

She comes from a military family. In addition to her sister, Cadet Nurse Jimmie Lou McDonald, she has three brothers in the service.

Her eldest brother, Lieut. Col. Leniel E. McDonald, a graduate of Mississippi State, is now in Germany with an outfit of infantry Rangers, and dispatches just Friday reported his was the first American unit to reach the Rhine. Another brother, Corp. Quinlan McDonald, is an antiaircraft gunner in Belgium. A younger brother, Apprentice Seaman Raymond V. McDonald, is now at home on furlough from the Navy. Another sister, Miss Katherine McDonald, is at home, and another brother, Preston McDonald, lives in Meridian, Miss.

Lieutenant Kennedy, now 26, finished her nurse's training at John Gaston Hospital here in September 1940 and, after a few months of private duty, joined the Army in March 1941, and was stationed at Fort Benning, Ga. The following September she was sent to the Philippine Islands.

A big home-coming celebration for Lieutenant Kennedy, due to arrive by airplane at Jackson, Miss., Friday night, was scheduled to be held in Philadelphia yesterday morning. Mayor Marshall Prince and other Philadelphians escorted Mrs. Mittie Kennedy, the nurse's widowed mother, to Jackson, 80 miles away, to greet her.

BIG CELEBRATION PLANNED

Plans called for a big parade, followed by the official welcome on the courthouse grounds at which Mayor Prince would deliver the official welcome and Dr. Walter L. Johnson, pastor of Philadelphia's First Baptist Church, would preside. Mrs. A. B. McGraw was to present Nurse Kennedy with emblematic keys to all the stores in town, entitling her to enter and take what she pleased. An Army band from Key Field, Meridian, Miss., was to be on hand, as well as Colonel Peterson, the commanding officer, and his staff. Representative Arthur Winstead and Mrs. Tom Bailey, representing Governor Bailey, were among notables to attend. General chairman of arrangements was B. J. Milling, superintendent of the Neshoba County Schools, and Red Cross chairman for the county.

"We'll make Tupelo's celebration look tame in comparison," asserted Duke Thornton, one of Philadelphia's leading citizens. "You see we've got an 'Angel of Bataan,' too."

Union Leaders Threatened by Mob

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. HOFFMAN. Mr. Speaker, if Walter P. Reuther and Richard T. Frankensteen, U. A. W. C. I. O. union officials, are familiar with the prophet, Hosea, who wrote, "For they have sown the wind, and they shall reap the whirlwind," and with the statement of St. Matthew, who declared, "For all they that take the sword shall perish with the sword"; and if they remembered their own past actions, they were not surprised when last week members of their own union booed them from the platform, following the methods and procedure which Reuther and Frankensteen have taught them, and it became necessary to prevent a group of strikers from mobbing Acting President George F. Addes and Vice President Richard T. Frankensteen.

Reuther and Frankensteen have long advocated and used violence in their war against employers. Now they find the members of their own union turning on them and using the same methods. They should not complain.

But the people have the right to complain because the strikes threw more than 30,000 workers out of employment in war industries; threatened to make over 100,000 idle; interfered with the production of B–29 bombers and other war material which is absolutely necessary if lives are to be saved.

From the March 3 issue of the Sturgis Daily Journal, published at Sturgis, Mich., comes an editorial which reads as follows:

OUTLAW THESE SHAMEFUL STRIKES

"Of all times to strike!"

This bitterly indignant exclamation, heard on every hand, needed no explanation in view of the shocking news from Detroit.

It was the same old sickening story of a body blow to the Nation's war effort, dealt below the belt by workers who had no more right to desert their posts of duty than soldiers on the firing line.

When those 14,000 men quit work at the Dodge plant last Friday they knew well the disastrous consequences of their utterly inexcusable act.

They knew, none better, that at this most crucial stage of the entire war the immense plant's production of B–29 bomber engines, of antiaircraft guns, of rockets and tanks and trucks would be brought to a standstill while the strikers wrangled over the discharge of a few fellow employees accused of loafing on the job.

Government agencies were available to settle the dispute, and labor has learned that it generally gets what it wants.

There's a law requiring notice of intention to strike. The law was trampled under foot in the mad rush of the strikers to run away from their work.

At that very moment sons and brothers of these deserters were rushing too; they were plunging ahead with no thought of self, amidst a storm of shells and bullets, to come to grips with our country's enemies.

But they can't fight with bare hands. Without a constant, ever-increasing flow of weapons and munitions even these bravest of men would be face to face with defeat.

In this most critical hour, how can any man who calls himself an American be so completely callous to his responsibility as to strike against his fellow citizens who are fighting his battle and risking all for their country's safety?

What good is a "no strike" pledge when it can be broken, as it so frequently has been since it was given 3 years ago, with perfect impunity?

These questions apply with equal force to John L. Lewis, who is threatening, for the fourth time during the Nation's emergency, to call a strike of his soft coal miners.

Even before negotiations with the operators, set for next Thursday, have begun, Boss Lewis, with the usual chip on his shoulder, serves notice that he may order his men to walk out on April 1.

Taking advantage of a glaring weakness of the Smith-Connally Act, Lewis holds the threat of still another strike over the heads of the Government and the American people, a strike whose reprehensibility would not be diminished by its technical legality.

Lewis' policy committee met this week in Washington to formulate demands for a new contract. And its first action was to brandish the big stick—not a very hopeful augury for the success of the bargaining program. His accompanying diatribe against the "hostile actions of the operators and the Government" has a strange sound coming from a man who has just announced his readiness to tie up vital supplies for the war effort.

Boss Lewis assails the so-called anti-strike law, but not because of its weakness. The law needs strengthening because it is a compromise with the sound principle that no one has a right to strike against the Nation.

Lewis' menacing attitude and the outrageous situation in Detroit make plainer than ever Congress' duty to outlaw all strikes that would block war production.

Mr. Speaker, many of these strikes would fail if the practice of keeping workers from the plant through the use of a massed picket line was ended.

The prosecuting attorney and the sheriff of the county of Wayne have a remedy at hand. If they refuse to act, the attorney general of Michigan and the Governor of the State have authority to act, for they, too, are charged with the duty of seeing that the law is enforced.

Governor Murphy, at the time of the sit-down strikes, ignored the law because he said he did not want bloodshed. Today we are at war and more and more blood will be shed—the blood of our men who are fighting overseas—if they do not get the bombers, the munitions of war, which they need to carry on the battle; which they need for their own protection.

Yet, the strikers in Detroit are refusing to permit the munitions of war to go through. If the press states the truth, massed picket lines have prevented workers who wanted to return to their jobs from going into the factories.

I say the remedy is already on the statute books of Michigan. Section 17 of Public Act No. 177 of the Public Acts of the State of Michigan for the year 1939 makes it a criminal offense for anyone to, by force or violence or threat of the same, interfere with any worker going to his job.

All the sheriff or the prosecutor of Wayne County needs to do to end the massed picket line is to enforce that statute. Picketing is lawful, but massed picket lines which prevent workers going to their jobs are not. If they fail in their duty, the Governor of Michigan, Harry Kelly, who is himself a veteran of the First World War, who left a leg in France, who certainly knows the feelings of the soldiers, has ample authority to call upon the law-enforcing officers of Michigan to remove the picket lines where they interfere with war production.

If he has not the manpower available for that purpose, he can call upon the Federal Government, and most of us believe that one company of marines, or from any other branch of the service, will

take care of the picket lines for him and do it in a legal, lawful, but effective manner and without bloodshed.

If the law can take the young man from his home and send him to a post abroad where he meets death, there is no reason why it cannot, from a picket line, yank the striker who, by threat of force, prevents that young man's brother or father or sister from going to work in a war production plant.

Debt Limit $300,000,000,000—Stop or Go Over the Precipice

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. ROBSION of Kentucky. Mr. Speaker, I desire to make some observations on H. R. 2404, a bill to increase the debt limit of the United States, and for other purposes.

Many Members of Congress, other persons in civil life, editors, and radio commentators for a year or more have been predicting that the national debt at the conclusion of this war would reach the staggering sum of $300,000,000,000.

Last year Congress passed an act fixing the debt limit at $260,000,000,000. The bill before us, H. R. 2404, makes this prediction a reality. It increases and fixes the debt limit at $300,000,000,000; and the record discloses that those who should know are of the opinion that the national debt will exceed that sum before July 1, 1946. This represents a national debt of approximately $10,000 on an average for each and every family of the United States, and this debt is a first mortgage and lien on every dollar of personal and real property of every person in the United States. The interest on this national debt will be approximately $3,000,000,000 a year. If we paid nothing more than the interest and three billions annually on the principal, it would require approximately 100 years to pay this debt.

But of course there will be other demands that must be met. The time is not far distant when it will require more than four billions annually under our present laws to take care of the veterans and their dependents. It will require other billions annually to maintain our Army and Navy, other billions to take care of social security and carry on the manifold activities of the Government.

We have now more than 3,250,000 Federal officeholders. It takes several billions annually to pay their salaries.

Of course, if the war is not over by June 30, 1946, the national debt will continue to increase. It will not likely end before that date in the Pacific.

Several years ago on the floor of the House I said that taxes would increase and that the national debt would increase so long as the New Deal administration continued in power. There has been a steady increase in the national debt ever since Mr. Roosevelt came into office—in fact, in peacetime during his administration he increased the national debt about forty-eight billions. He has had put through Congress 12 or 13 major tax bills during his 12 years of office, each one of them increasing the tax burden and tax load of the American people. The Federal Government will collect this fiscal year in taxes and revenue $45,730,000,000, and yet there will be a deficit for this fiscal year ending June 30, 1945, of $53,183,000,000.

This administration has set up some 60 Federal corporations and agencies with the power to borrow and issue bonds and disburse the proceeds. These have issued bonds and borrowed money running into many billions. The principal and interest of these bonds have been guaranteed by the United States.

Mr. Bell, of the Treasury Department, testified before the Ways and Means Committee that the unpaid and unliquidated obligations on war contracts as of date December 31, 1944, totaled $62,983,000,000.

The Government owes and will owe on postal savings accounts and interest more than $2,000,000,000.

When we speak of the national debt being $258,000,000,000, as of June 30, 1945, this is based on money that has been appropriated and paid out. It does not include all of these other obligations that I have enumerated. These other obligations, if now paid, would add from fifty to a hundred billions more to the national debt and, therefore, as a matter of fact, the national debt now far exceeds $300,000,000,000.

All of the obligations of the United States Government will likely amount to $400,000,000,000 instead of $300,000,000,000 by June 30, 1946.

In order to get a more perfect picture of the fiscal affairs of this Nation, let us compare the expenditures of the 12 years of Roosevelt's administration with the 144 years of our other Presidents and their administrations, for instance, during the 8 years that George Washington was President, his administration expended $34,088,566.

In the 8 years of Andrew Jackson's administration he expended $152,969,098.

During the 4 years of Abraham Lincoln's administration, which included the Civil War, the receipts amounted to $763,026,123, and he expended $3,352,380,410, and had a deficit of $2,589,354,287.

In the 4 years of William McKinley's administration with the Spanish Amercan War, receipts were $2,076,208,146 and expenditures were $2,093,918,534. In the McKinley administration there was a deficit of $17,710,388.

In the 8 years of Woodrow Wilson's administration, including World War No. 1, receipts amounted to $24,375,781,688 and expenditures were $46,938,260,143 leaving a deficit of $22,562,478,455.

In the 144½ years from Washington down to Franklin D. Roosevelt the total receipts of the Federal Government were $91,586,706,130. The expenditures were $112,203,367,065. The total deficit was $20,617,290,935. With that $112,203,367,065 was paid off the cost of fighting the Revolutionary War, the War of 1812, the Mexican War, the Civil War, the Spanish-American War, World War No. 1 and a score of Indian wars and developed this great country from 13 small colonies on the Atlantic coast and extended its boundaries to the Pacific, with 48 States and our foreign possessions.

Now let us see what amount of money has been taken in and how much expended in the 12 years under President Roosevelt:

Receipts $160,073,270,770; expenditures $369,791,966,466. Deficit, $209,718,695,689, bringing the national debt from twenty-two billions plus when he assumed office up to approximately two hundred and fifty-eight billions for the fiscal year ending June 30, 1945. But this does not include fifty or a hundred billions additional sums for which the United States Government is responsible under his administration, but has not been satisfied.

Mr. Roosevelt's administration in 12 years has collected in taxes and revenues from the American people almost twice as much as all the administrations from George Washington down to Roosevelt in 144½ years; and President Roosevelt has spent in his administration more than 3 times as much in 12 years as all of his predecessors spent in 144½ years. He has created over 10 times as much deficit in 12 years as all of his predecessors created in 144½ years.

OUR FIRST DUTY IS TO OUR COUNTRY AND DEFENDERS

Every Member of Congress and every loyal American is willing to expend every dollar and to make every sacrifice necessary to the winning of the war at the earliest moment possible, but the American people do not approve of the wanton and reckless waste of their bonds and tax money and neither do they approve of the graft or that we bankrupt our own country by an overgenerous use of our tax and bond money to aid everybody in the world who calls on us for aid.

Since we have become involved in World War No. 2, according to the best information I can obtain, our Government has expended more and assumed more obligations than all of the Allied nations, and also including Germany, Italy, and Japan. We have been expending more than two times as much as the British Empire, Russia, and China. We will increase our national debt more than fifty-three billion for this fiscal year. Great Britain will increase hers about six and one-half billions. This could not be unless there was a great deal of inexcusable waste as well as graft. Hon. Lindsay C. Warren, the Comptroller General of the United States, a former Member of this House from North Carolina, and a very able and courageous man, who was appointed to his present high position by President Roosevelt and whose business it is to scrutinize the expenditures of the Government, according to press reports, stated recently that there was ample evidence to indicate that the Government has lost in graft on cost-plus fee contracts and in other matters in connection with the war probably

fifty billions. Hundreds of unnecessary projects have been undertaken and abandoned, which, in the aggregate, cost the taxpayers of this Nation billions of dollars. We have had representatives of our Government and the President going about over the world handling out large sums of money, equipment, and other materials. We have given away under the so-called lend-lease approximately thirty-six billions. A lot of this was necessary and helpful, and about that we have no complaint. We have given billions of dollars in so-called lend-lease to Central and South American countries, and with the exception of a small contingent from Brazil we know of no other contingent or body of men from any of the Central and South American countries shouldering guns and helping us in this great war. Many of us are alarmed over the proposals of the administration to hand out large sums of money, materials, and equipment to the various countries of the world at the close of this war. If this course is followed through we can expect our national debt to rise to four hundred billions and this policy will mean not only an increase in our national debt but a further increase in the tax burden of the American people.

Some of our crystal gazers have plans in mind to build factories, open mines, construct railroads, and air lines in the various countries of the world out of the pockets of the taxpayers of the American people. This simply means that we propose to finance competitors of American industry, agriculture, and labor. If all of the property owned by the American people, both real and personal, was sold at 50 percent more than its appraised value, it would not pay off the present debts and obligations of the United States Government. It is high time that every Member of Congress and every person holding a responsible position in this administration, as well as the American people generally, should take stock of this situation and take steps to prevent another increase in the national debt limit, and an increase in the tax burden. When our 12,000,000 young men return to their homes and loved ones, in my opinion, there will be nothing so disappointing to them as the great debt and the heavy tax burden they will find on their return and which they in a large measure must shoulder and carry throughout their lives. We must wherever and whenever possible prevent the unnecessary expenditure of a single dollar. We must set ourselves to the great task of reducing the national debt and the tax burden. We cannot continue in the course that we have followed for the last 12 years under the present administration. If we do, it means nothing less than repudiation or uncontrolled inflation, and if repudiation or uncontrolled inflation comes, that will mean the end of this Republic. A totalitarian government of communism or fascism will rise on the ruins. In my opinion, there has never been a time in the history of this country when the freedom and prosperity of the people of this nation was in as much danger as it is today. I know there are many who argue that this big debt was due to the war. We are not complaining about the money that was expended in carrying on and winning the war. Billions of dollars of this debt were created before the war in burning pigs, plowing under and destroying farm products, and in boondoggling projects and other billions have been squandered, wasted, and grafted.

Treatment of Disabled Veterans by Gen. Frank T. Hines

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and report:

VETERANS' ADMINISTRATION,
Washington, March 8, 1945.

Hon. JOHN E. RANKIN,
Chairman, Committee on World War Veterans' Affairs, House of Representatives, Washington, D. C.

MY DEAR MR. RANKIN: As chairman of the committee handling veterans' affairs, I feel that you should know that as soon as there came to my attention a current magazine article alleging irregularities in the treatment of patients in the veterans' hospitals, I instituted a Nation-wide survey.

There have already gone forward orders to each station to furnish without delay all pertinent information on conditions in each hospital. These reports will cover medical treatment, quality, quantity, preparation, and variety of food, personnel needs, standard of personnel, and overcrowding, condition of medical equipment, recreational facilities, canteen service, and other material.

As soon as these reports are available they will be studied in the central office and a completely candid report will be furnished your committee.

I have also wired the national commanders of the American Legion, Veterans of Foreign Wars, and the Disabled American Veterans, inviting them to come to Washington in the immediate future for conference on this subject. I believe these veterans' organizations can be most helpful in ascertaining the true facts covering our medical and hospital program.

There is attached a report on the progress of our administration of legislation approved for World War No. 2 veterans and their dependents.

Sincerely yours,

FRANK T. HINES,
Administrator.

FIELD ORGANIZATION

(Sec. 101, Public Law 346, 78th Cong.)

Since the passage of the above-referred-to legislation the Veterans' Administration has authorized 194 contact units and 86 branch offices. Certain of the branch offices authorized were originally authorized as contact units. In addition, a new regional office was established in Washington, D. C., and regional office activities were separated from combined facilities to be located in New York City, Baltimore, Pittsburgh, St. Louis, Kansas City, Boston, and Newark. The Veterans' Administration has contact representatives on duty in 155 Army and Navy installations, including the 17 Army separation centers and the 2 Navy redistribution centers. It also renders itinerant contact service to other Army and Navy installations, to offices of the United States Employment Service, the Selective Service System, and information service centers operated by local communities. Continuous studies are being made as to establishment of new contact units, branch offices, and removal of regional office activities from combined facilities.

Status of World War No. 2 pension claims as of Jan. 31, 1945

	Disability	Death
Filed	655,193	94,735
Adjudicated	589,564	72,178
Pending	65,629	22,557
Active	377,436	55,159

NOTE.—Pending disability claims consist largely of claims filed after discharge from military service where the man was not discharged for disability. As to pending death claims, many of these are pending the submission of necessary evidence.

America's Mass Persecution

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. HOFFMAN. Mr. Speaker, for 3 years the smear brigade, using the United States Department of Justice, has been persecuting American citizens.

There are Federal statutes which clearly define seditious actions and there are Federal courts in every State competent and with ample assistance to bring to trial anyone guilty of a violation of a Federal statute.

But because certain individuals criticized the New Deal; because others were anti-Semitic, they were joined in a blanket indictment and charged with a conspiracy to undermine the morale of the American servicemen.

The Washington Post, which, if it did not instigate the persecution at least participated in its prosecution, was finally, after 2 years, forced to admit that the proceeding was a farce.

Now there is talk that the indictment as to most of the defendants will be dismissed; that only a few will be persecuted. The charges have heretofore been dropped against some of the defendants; at least one died and the trials of others have been severed.

An editorial from the Chicago Tribune of March 6, 1945, gives an accurate account, insofar as it goes, of the proceedings, which smacks largely of the methods of Stalin and of Hitler. The editorial is as follows:

THE SEDITION FARCE RESUMED

Justice T. Alan Goldsborough quailed perceptibly when the sedition case was turned loose in his courtroom on Thursday.

After listening to the babel customary to that proceeding, the judge observed that "if the attitude that exists here today prevails it would be impossible to try the case." This is perhaps the wisest statement regarding this legal monstrosity that has been heard in two and a half years.

In an attempt to transplant a Russian propaganda trial to an American courtroom, the administration named as defendants the most astonishing aggregation of crackpots ever brought together, and brought on a hearing which made a travesty of legal procedure for 8 months, until the harried judge died and a mistrial resulted. No different conduct could be expected if the case were again brought to trial. As Justice Goldsborough observed, a court does not have the right to stop attorneys from protecting as they see fit the rights of their clients. Even leaving out of consideration the character of the clients in this case, the vague and tenuous nature of the charges brought by the prosecution makes an orderly trial impossible.

Leaving out of consideration the few Nazi agents who were added for window dressing and have already been tried on other charges and sentenced to long prison terms, the defendants in the sedition case have only one thing in common. They hate Mr. Roosevelt and the New Deal and have expressed their hatred in violent terms. A good many of them are anti-Semitic, but they cannot be indicted for that by a Federal grand jury. A number of them, if they are not crazy enough to be committed, certainly are not models of rationality. None of them had a tenth of the notoriety that they achieved through the Government's prosecution. Few of them were acquainted with each other, yet the Government undertook to prove that they had all engaged in a monster conspiracy against their country.

Actually the purpose of the trial was, by picking a few obscure, usually poor, friendless, and frequently despicable persons as defendants, to intimidate any criticism of Mr. Roosevelt and the New Deal. In that the prosecution failed. The defendants made use of the courtroom as a forum in which to amplify 20 times over the crackpot ideas that otherwise would have gone largely unnoticed.

The defendants have been subjected to most serious violations of their civil rights. By the improper use of the conspiracy charge they were dragged thousands of miles from their homes to face trial, and have been forced to provide bail or sit in jail while the charges have been dragged through three successive indictments, over 2½ years. If the administration really believes that the defendants have committed any crimes, it should be anxious to bring them to trial in

an orderly proceedings in which it would be possible for a judge and jury to reach a verdict. As Justice Goldsborough said, that is impossible in the present case.

Determination of guilt or innocence would be relatively simple if the present conspiracy indictment were dismissed and those charged with overt acts to the alleged conspiracy were indicted for those acts in the districts in which they were committed, and brought to trial singly. That, however, is a procedure that the administration is not likely to attempt, because it knows that it could not prove its case against very many of the present defendants under such circumstances.

The defendants were indicted three times. The first two indictments were abandoned by the prosecution because of legal defects discovered in them, and the trial eventually took place on the third indictment. Mr. Rogge, the prosecutor, was asked before Justice Goldsborough why the first two indictments have not been dismissed. He asserted that they had been allowed to stand as a favor to the defendants, because the latter had posted bonds under the first one and if it were dismissed they would be put to the expense of finding new bail. If his statement were true, there should have been no objection to dismissing some defendants who were named in the first indictment and not in the later ones. When this was brought to Mr. Rogge's attention, he replied that the indictments had been left standing so that the Department of Justice could further check the records of these defendants.

No better proof could be had that the Department of Justice regards the sedition indictments as instruments of persecution rather than prosecution.

Meeting of Red River Valley Improvement Association

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. BROOKS. Mr. Speaker, during the month of January of this year, at Shreveport, La., the Red River Valley Improvement Association held a most important meeting. In attendance at this meeting were representatives from the States of Texas, Oklahoma, Arkansas, and Louisiana. These prominent businessmen and civic leaders met for the purpose of further laying plans to bring about the more complete development of that portion of the Southwest commonly known as the Nile River Valley of the Southwest, for the reason that our land in this the Red River Valley is as fertile as that of the fabulous valley of the Nile.

The prime purpose of this particular meeting was to discuss the possibility of navigation on Red River. In fully developing this subject, of course, the problems of channel improvement and flood control came in for general discussion. During the course of the session, a number of excellent addresses were delivered; and I arose today to ask that the outstanding speech of Hon. DeWitt L. Pyburn, director of the Department of Public Works of Louisiana, and of Hon. Leo M. Odom, chief engineer of the Department of Public Works of Louisiana, be set forth in full under my remarks.

They are as follows:

ADDRESS OF DEWITT L. PYBURN, DIRECTOR, DEPARTMENT OF PUBLIC WORKS, STATE OF LOUISIANA

The Red River Valley Improvement Association can point with pride to notable successes in past years in development of this valley. In putting across projects of any kind, intelligent and vigorous promotion is one of the prime requirements. The Red River Valley Improvement Association has furnished this driving force for many fine projects in the past, and I feel sure that in the future it will not be found wanting. The Red River Valley has many natural blessings, but as is usually the case, the Lord in creating this great valley did not lay the bounties on a silver tray. The wealth of this valley has been hard to get at but very great when it was obtained.

The first and most difficult developments were made by the pioneers who cleared the wilderness, fought the floods, and were primarily responsible for the great advances made in this valley to this day. The hardships incidental to overflow from the river, inadequate transportation, and, above all, poor drainage were faced and survived and overcome to an extent sufficient for a certain amount of prosperity on the better lands of the valley. It became apparent very early, however, that uncoordinated individual activities had definite limits. Levee districts, drainage districts, and State organizations were quickly formed to go after these problems in a more thorough manner. By the efforts of these agencies great additional fertile areas have been brought into cultivation, and protection from floods has been very much improved. The assumption by the United States, through the Army engineers, of a large percentage of the responsibility for flood control in the lower part of the valley has been a great step forward in that direction.

Today we stand at another crossroad. The local agencies which have done such a great work in improving land and bettering living conditions by drainage have about reached their limit. The hundreds of thousands of acres yet remaining to be developed in this valley and the hundreds of thousands of other acres now in cultivation, but which suffer severe losses from poor drainage periodically, cannot be helped very much more by the individual separate agencies that were responsible for the last phase of development. In order to make further progress, and to bring about the prosperity and wealth latent in the fertile soil here, it will be necessary for much more expensive and extensive developments to be constructed. This state of affairs has been reached, not only in the Red River Valley, but generally throughout the State. This improvement of small streams and the construction of canals such as come within the financial ability of the levee and drainage districts has about reached its limit in every part of Louisiana. In order for more development to be made possible it will be necessary to work on the large outfall streams so that smaller drainage programs can be made effective.

The Department of Public Works of the State of Louisiana has prepared a comprehensive drainage program for the alluvial and prairie lands in the State. The prosecution of this program was authorized by Act 58 of the 1944 State legislature. We believe that funds for construction will be provided in the near future.

The State-wide drainage program will provide adequate drainage for the 11,000,000 acres of farm land where 50 percent of the State's population resides, extending into portions of 47 parishes.

This program contemplates the combined efforts of Federal, State, and parish agencies. The Federal Government, through the War Department, is expected to bear the cost of enlarging and improving the navigable streams of the State which will provide main drainage outfalls. The passage of the present flood-control bill by Congress insures their recognition of the Federal responsibility for these streams and actually includes authorization for improvement of a number of main outfall streams.

The State's functions in this program are:

1. Promoting projects to be constructed by the Federal Government.

2. Furnishing the local financial assistance required by the Federal Government in connection with these Federal projects.

3. Designing comprehensive drainage systems leading into the main outfalls.

4. Providing financial assistance to the parishes and levee boards in carrying out parish-wide drainage programs.

This State-wide program will improve 8,000,000 acres of existing farm lands. Losses throughout the State approximating $25,000,000 annually will be eliminated. Value of lands will be increased $240,000,000. Farm income will increase at least twofold, or about $240,000,000 annually. Approximately 20,000 new farms of 160 acres each can be added to cultivated lands of Louisiana.

For the area on the right bank of the Red River, the Red River Lateral Canal will provide the main outfalls required from Shreveport to the Mississippi River backwater area. All along the route of this canal thousands upon thousands of acres of lands will be made suitable for agriculture by its construction.

The Department of Public Works is preparing a detailed study of the benefits on account of improved drainage which would accrue from the construction of the lateral canal and, although we have left a great amount of work to do, it seems probable that the benefits due to drainage improvements alone would more than justify the expense of its construction.

I want to assure you that this Department is going to do everything possible to help secure for the Red River Valley the Red River Lateral Canal which seems to me to be so vitally necessary to the valley's growth and prosperity.

ADDRESS OF LEO M. ODOM, CHIEF ENGINEER, DEPARTMENT OF PUBLIC WORKS, STATE OF LOUISIANA

The object of my talk today is simply to discuss modern inland navigation such as will be available to the people of this valley when the Red River Lateral Canal is constructed.

I am glad to have this opportunity to speak to the Red River Valley Improvement Association about inland water transportation. I spent several years of my life on the design and construction of inland waterways, and I have seen with my own eyes the great development that has occurred in a relatively short time after these improvements have been provided. I am, therefore, thoroughly sold on navigation as a spur to the growth and improvement of the regions it serves.

When this valley was settled, navigation constituted the first method of transportation, and most of the freight was hauled that way in spite of tremendous difficulties until about 60 years ago. About that time the railroads began to furnish a much more dependable and flexible service, and traffic on Red River rapidly disappeared. The present generation in this valley knows very little about navigation as a means of hauling freight, and much of that knowledge is obscured by the romantic stories that have

survived about the colorful characters who carried on this dangerous and difficult business. Regardless of romance, no amount of subsidy could have kept navigation alive on an uncontrolled Red River to Shreveport in the face of the competition of the railroads and, much later, of the highways and pipe lines. The craft of a half century ago were also unequal to the task. As the interchange of goods with other parts of the country and of the world became more common, it was unthinkable that freight would forsake its newer facilities which offered everyday, dependable, regular service for the risky, uncertain, and often, more expensive river route. It would be well if we bid goodbye, with whatever regrets we may have, to the rip-roaring, swearing side-wheeler captains and their roustabouts. They served their part in the development of America along with the Conestoga wagon and the flint-lock rifle. The transportation pattern of today has no place for them.

Modern inland water transportation is a new industry. It furnishes a very cheap method of hauling, but only if channels are dependable and if sufficient freight can be obtained to justify regular schedules and modern warehouses and unloading facilities. A modern barge line requires considerable investment and reasonable assurance of successful operation must be apparent before it will be undertaken, even if excellent channels are available.

Local inhabitants of an area wherein a navigation project is desired may have several reasons for wanting it, but the main and most proper reason should be, and usually is, that it is hoped that the project will result in development of the resources of the area and increased prosperity for its citizens. The State government and the Federal Government also have this end in view, but the Federal Government is interested mainly in the over-all transportation picture.

In order for the Nation to prosper, it is imperative that all of its functions be handled with as little expenditure as possible in man-hours and materials. Since transportation is one of the most important functions in the economy of the Nation in peacetime and is absolutely vital to success in war, the Federal Government has always taken a very active interest in development of transportation facilities. Navigation on improved dependable channels by modern methods provides, in most cases, the cheapest means of transporting bulk goods. It, therefore, has a definite place in the transportation pattern of the Nation.

At its greatest final development as an element in the transportation pattern, waterway transportation will be restricted by nature to a small portion of the country. As it happens, the areas where waterways are practicable are the most fertile and productive and densely inhabited. The possession of waterway transportation will undoubtedly prove to be vital to the growth of cities and whole sections of this country as competition becomes keener and the great advantage of low-cost bulk-freight movement becomes clearer. Here in Louisiana, and in the Red River Valley, we should realize that there is a national modern inland water transportation system, that all communities denied its cheap rates will suffer in competition with communities so blessed, and that we have the great natural advantages of flat terrain and abundant rainfall which make construction of modern waterways practicable. We have the great physical advantage here that the construction of a modern waterway is feasible. Areas less fortunately favored by nature may suffer serious set-backs to growth and development in the future. The modern barge-line traffic was only approaching maturity at the beginning of this war. The war has greatly expanded it and it has become firmly rooted in the Nation's system.

The only agency that could possibly construct this waterway is the Government of the United States, and the money must be obtained from the Congress for its construction. In other words, the money of all the people must be obtained to help build up this small portion of the Nation.

Congress has now ordered the Army engineers to look at our project and report back to it as to whether the interest of the Nation as a whole would be served by its construction. I believe that it will. I believe that the construction of this waterway will not merely result in cheapened freight rates, but that by placing this valley in a better position, because of cheap hauling of bulk commodities here, the development will be so stimulated that not only will prosperity in general be increased but the traffic in the higher valued commodities on the railroads will greatly expand.

But we have a lot of work to do to get this project over. We cannot get it over by wishing nor just by saying we think it would be a good thing. In order to get the Congress to appropriate the $50,000,000 necessary for its construction we have got to put forth a reasonable and logical picture of what it will do for the valley and for the Nation, and give definite assurance that the necessary steps for growth of traffic will be taken once the waterway is constructed.

Our Government is our servant in this country, but it is the servant of all the people. We can not, therefore, demand from our Government for ourselves what would be against the interest of others, or something that we do not plan to use.

The advantages of modern waterway transportation are great and the greatest thing this association could obtain for this valley at this time is this lateral canal. But we must all work together and convince the Army engineers and Congress that it has a place in the Nation's transportation system and that we mean business about the use of it once we get it, or I do not think we ever shall. Our small delegations in Congress have a hard enough time getting the appropriations which we can show definite justification for. They certainly cannot force the Members from the other 47 States to give us this big project just because we asked for it.

The department of public works of the State of Louisiana is making an economic study in which the effect of this waterway upon the whole economy of this section will be considered. A brief in support of the project will be prepared and submitted to the Army engineers as soon as our information is assembled. We know how to make a study like this and we know the type of information and arguments to which the Army engineers will pay attention. I believe that we can justify this project on its merits and if we can, I know we will get a favorable report from the Army engineers. With such a report our delegation in Congress will have something to work on and can direct their efforts toward getting the project authorized, with good chances for success.

Too Many Silk Gloves

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under unanimous consent, I am including an editorial from the Midland Daily News, of Midland, Mich. The sentiment expressed therein, I believe, speaks the mind and thought of every individual in this country who has any regard for our armed forces on the fighting fronts or for the welfare of this country. It should be publicized everywhere throughout the country. It is timely. It points directly to action which is inevitable unless conditions are soon changed.

The editorial follows:

TO US IT LOOKS LIKE TOO MANY SILK GLOVES

"In war just one thing matters—keeping the flow of production to the fighting fronts and delivering the goods on time. The finest tank in the world is of no use delivered to a dead soldier the day after a battle." (Robert P. Patterson, Under Secretary of War.)

People are getting fed up on these current strikes in Detroit war plants which curb the production of B–29 parts, rockets, tanks, and guns, and a host of other war supplies. They are beginning to lose interest in the cause of such strikes—whether the blame falls on labor or management. Some 161 strikes since Pearl Harbor in Briggs alone is too much. It doesn't make sense.

Labor leaders tried to stop the strikes. Their please fell on deaf ears. Government officials tried in a soft-spoken way. Nothing happened. Production stopped. The supply lines for boys at the front were cut.

What kind of America is this, anyhow? These men had better ask themselves: "Shall we be traitors to our own flesh and blood? Shall we leave them out there facing a cunning and well-armed enemy and let them die for lack of arms?"

This is serious. The coddling period is past. The Government needs a decisive, final policy. It needs to be tough in its enforcement, whether the culprit is labor or management.

Labor and management can get along. They do get along right here in Midland, which can be proud of having had not one strike since Pearl Harbor. Full production every day. Grievances? Sure, but settled promptly through wise labor and management leaders. These men are building confidence in labor and its ability to cooperate; to produce, to settle grievances * * * and do it without stoppage.

Front line soldiers carry out orders in the fight with the enemy or face being shot. Production line soldiers (including workmen and managers) can cut off their supplies, thumb their noses at Washington and get nothing more drastic than a pat on the wrist. When is a traitor and what is a treasonable act? Our boys can answer and the answer will not be pleasant. It's time to take off the silk gloves, go after this strike trouble roughshod and clean it up so that we will convince our boys in the armed forces that this is a country which will back them up; a country worth fighting and dying for. Uniforms for all will be the other alternative, and Army pay and subsistence.

The Dangers of Our Outmoded Electoral System

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include an address delivered by me at the meeting of the Ohio Bar Associa-

tion, Columbus, Ohio, on November 10, 1944. The address is as follows:

The election on Tuesday was not sufficiently close to bring about a constitutional quarrel, as a result of the electoral system as set up in our basic laws. There were, however, during the campaign evidences of what may happen in the future which would upset the tranquillity of the Nation. Most certainly during the next few years and before we enter into another Presidential contest a thorough study of our electoral system should be made by leading constitutional lawyers throughout the country and by a congressional committee. We should not wait until a catastrophe is upon the Nation before remedying some of the apparent defects. Although the question here presented may be academic for the next 3 years, it is an interesting one to lawyers and it is one that should be given legislative consideration before we enter into the heat of another political contest.

In approaching the defects of our electoral system as applied to modern-day political practices, it is necessary to go back and see just what our founding fathers had in mind. Their plan was quite a different animal from the streamlined version we know today. Some day, unless we meet and remedy the imperfection, we will be faced with a crisis of the first magnitude.

The question of how the Chief Executive should be elected presented almost insurmountable difficulties to the men who wrote the Constitution. "If the tranquillity of the Nation is to be disturbed," said Chancelor Kent, "and its liberties endangered by struggle for power, it will be upon this subject of choice for President."

All sorts of plans were proposed, one that the President be chosen by Congress was adopted, and afterward rejected. Another, that the "National Executive" be elected by the Governors of the States was rejected. Gradually the idea of an election indirectly by the people gained ground until at last it was agreed that the choice should be made by electors appointed by the legislators of the States; this was a compromise between the large and the small States. The method was intended to place absolute control in the choice of the President in the small body of citizens selected by the several States. It was intended to avoid on the one hand the popular tumult and passion that a direct election by the people might involve, and on the other hand, it was intended to avoid legislative domination of the Executive by the Congress. Each State was to have electors equal in number to its Senators and Representatives, who were to meet in that State on the same day on which the electors met in all other States. It was thought that each separate State group would be unaware of the decision of the others. The State, if it wished, would have the authority to select electors from the chamber of commerce or any other set of individuals. In the early days of the Republic the electors were not elected at all, but were appointed by the legislatures. South Carolina followed this practice until 1868. The original provision of the Constitution provided that after the President was chosen the person having the greatest number of electoral votes was to be Vice President.

Only a few years were needed to develop some of the worst imperfections of the original electoral plan. As early as 1797 a proposed amendment sought to require the electors to distinguish in their ballots between candidates for the Presidency and the Vice Presidency, but it was not until a real crisis arose which threatened the life of the Republic that some defects were cured. John Adams became Vice President in 1789, though he did not receive half the votes.

In 1800 Thomas Jefferson and Aaron Burr received the same number of votes—73—and each a majority. It was well known that the electors desired Jefferson for President and Burr for Vice President. This demonstrated the unwisdom of voting for both President and Vice President upon the same ballot. It proved the possibility of electing a President from one party and a Vice President from another, and it showed the danger of a tie vote and opened the door to bargains and coalitions. Jefferson was a Republican and Burr a Federalist. Party and personal feeling ran high. High-handed methods were seriously proposed and revolution was threatened. Hamilton, a Federalist, but a hater of Burr, is given credit patriotically for bringing about Jefferson's election on the thirty-sixth ballot, although he regarded Jefferson as "an atheist in religion and a fanatic in politics." It will be remembered that it was Burr who later killed Hamilton in a duel.

The Jefferson-Burr controversy threatened a dissolution of the Government. It was said that the country escaped from a civil war only from the prevalence of that kind temper and magnanimity in the Congress which prevailed in the convention itself. It was seriously proposed to pass a law to create a President in which the person was to be named, leaving the votes and choice of the people out of consideration altogether. Had this been effected, it was freely predicted that such person's head would not have remained on his shoulders for 24 hours afterward. Jefferson himself, in a letter to Monroe, said that the "day such an act passed the Middle States would arm."

This was the first time a Presidential election had been thrown into the House of Representatives, and it nearly wrecked the young Republic.

This controversy resulted in the passage of the twelfth amendment in 1804. The main features of the amendment were that the electors were to vote separately for President and Vice President. If no person received the electoral majority for President, the House of Representatives is to choose from the three highest instead of the five highest as provided originally in the Constitution.

The second and last time an election was thrown into the House of Representatives was in 1824, just 120 years ago. In the electoral college there were 182 votes, of which Andrew Jackson had 99, John Quincy Adams 84, William H. Crawford 41, and Henry Clay 37. Jackson had a plurality of 50,000 in the popular vote. There was no question as to the election of John C. Calhoun as Vice President.

Henry Clay was Speaker of the House at that time. Before the day for counting the votes a great scandal arose. Charges of corruption were made against Clay, which were investigated without result. The situation was one which invited intrigue, and no doubt there was much bargaining and attempted trading of votes. Excitement ran high. A coalition between the followers of Clay and those of Adams resulted in the election of John Quincy Adams on the first ballot. Clay, on account of being fourth in the electoral college, was eliminated in the House. If the old provision of voting for the five highest on the list had not been changed to the three highest, Clay instead of Adams probably would have been the choice. Adams when a Senator had opposed the change from five to three, and had his argument prevailed it is unlikely he would have become President.

In a very short time after the birth of the republic the motivating reasons for the electoral college were either forgotten or abandoned. The electors, whether chosen by the legislatures of the States, as they were originally, or by the popular suffrage, as they now are, became and now are only puppets, selected under a moral restraint to vote for the particular person who represented the preference of the appointing power, whether that be the legislature or the more popular suffrage of the people. So it has come to pass that this curious machinery of the electoral college has become only a mode of casting the vote for that candidate who is the favorite of a majority of the people within the particular State electing the elector.

It is recorded that three electors voted for John Adams against their party, and that one Federalist elector in Pennsylvania voted for Jefferson, but this was before the party system, as we now understand it, came into being.

Nowhere in the Constitution is there any mention of candidate for President or Vice President. Political parties were not contemplated by our Constitution writers. The Constitution only refers to electors who have a legal right to choose anyone they wish for President and Vice President. Political parties are merely instruments used to promote the candidacy of some favorite of that group. They have no constitutional control over the action of the electors.

Then, too, Presidential electors are State officers and not Federal officers. Even though they act under the Constitution, they are no more officers of the United States than are members of a State legislature.

Through political parties we have evolved a system for the naming and electing a President never contemplated by the founding fathers. Our present practice is in fact contrary to their declared intent. We cling to the form but disregard the substance. We are using an expedient gadget which distorts constitutional principles.

Well, during this past campaign the electoral college was resurrected from its innocuous desuetude and brought forth as a live and threatening issue. In Texas 15 of the original electors vowed they would vote for some one other than their party's nominee. Electors in other States had the same purpose. Had the action of the second Democratic Convention in Texas in selecting new electors not been sustained by the Texas court, Roosevelt would have 15 less electoral votes pledged to him today.

The people of the United States have become accustomed to the idea they are voting for a person for President and a person for Vice President. The electors on the ballots are puppets insofar as they are concerned. And yet they may in future years find that they are voting blindfolded or even exactly opposite to their desire. When this occurs, and it surely will unless the system is changed, many thousands of Americans are going to be awfully upset to find their will miscarried. And the country may be brought near revolution in some future January when the electoral college selects a President against the wishes of the majority of the people.

Therefore the system should be changed. We should make our basic law conform to the method practiced for 140 years. At present we are circumventing the clear intent of the Constitution. The dangerous camouflage should be removed. The possibility of fraud and connivance should be eliminated. The people should be allowed to vote for the President by direct vote. Election by either popular vote or by unit vote of the States would be infinitely better than the present risk we are running. The unit system for States would leave the respective States with the same influence in Presidential elections they now enjoy. Election by a national popular vote would give some States a temporary advantage of power, but within a few years this would be equalized. It is the democratic way and in the long run would result in a more even distribution of political benefits. I believe, though, that a constitutional amendment to change the elector system and substitute a unit plan would have the best chance of adoption.

I am very hopeful the lawyers of America may take the lead in proposing a constitutional amendment to revise our election system before it confronts the Nation with a disastrous crisis.

There is another grave danger in our electoral system. It might result in some future election being thrown into the House of Representatives. And unless by statute we make provision for an Acting President, the Nation might find itself with no Chief Executive.

Suppose we had a close election and a number of electors against their party's will voted for some third person for President, or suppose we had a third political party which governed several electoral votes. In either event, if no candidate secured a majority of the electoral votes the election would be thrown into the House of Representatives. In that event, some future inauguration day might find us with no Chief Executive.

It could happen this way. A new Congress meets on January 3 following each Presidential election. Control of the new Congress would be bitterly contested in a close election. When it meets on January 3 it would have to organize. It could not organize until it elected a Speaker. This may not be possible for weeks or months. Deadlocks have occurred in the past. One lasted several months. Should the deadlock over the Speakership not be broken by January 6, the two Houses of Congress could not even meet in joint session on that date to count the electoral vote, much less proceed to the election of a President or Vice President. Assuming, however, the prompt election of a Speaker of the House, the peril of having no President is not avoided. A majority, which is 266, of the electoral votes is necessary to elect. The rebel electors or electors of a third party might deprive any candidate of a majority. The election is then thrown into the House. The Members would then proceed to vote for President. No other business would be in order. With inauguration on January 20, the House Members would only have 12 weekdays to make a choice. Each State would have but one vote depending upon its political complexion in the House. Based upon the pre-November 7 picture, three States—Washington, West Virginia, and Idaho—having an equal number of Democrats and Republicans, would have no vote. The voting might result in a tie or a deadlock. The preelection representation gave the Democrats 24 States, the Republicans 21.

If the House has the duty of electing a President, the election of a Vice President automatically evolves upon the Senate. The Vice President, if elected, would act as President until the House elected one. But the Senate might not be able to elect a Vice President. A majority of the whole number of Senators is necessary for a choice. Third-party Senators, absent Senators, or vacancies might make a majority impossible. Furthermore, a constitutional quorum of two-thirds is necessary to elect a Vice President. It would be an easy matter to prevent the required number from assembling. Even with a quorum present, some Senators might refuse to vote.

Then there is the remote possibility of the death or disqualification of both the President-elect and Vice-President-elect before inauguration day. What would we do then? The Succession Act, passing the office down through the Cabinet, only applies after a President has taken the oath of office. These risks were real even before the twentieth amendment, when inauguration day was March 4. They are enhanced with passage of the Norris amendment. Section 3 recognizes the peril and the absolute necessity of a remedy. It gives Congress the right to designate some person, any person, to act as President and thereby avoid a hiatus in the office of Chief Executive.

On April 19, 1940, I introduced a bill, H. R. 2532, to implement the twentieth amendment and avoid this genuine and grave danger to the Republic. This proposal was that the Speaker of the House, if one had been elected, and the President pro tempore of the Senate, if the Speakership had not been settled, should act as President until one had been elected and qualified. This bill passed the House in the Seventy-seventh Congress, but was pigeonholed in the Senate. In the Seventy-eighth Congress I filed the same bill. H. R. 678 was reported unanimously by the Committee on the Judiciary, but for one reason or another it has slumbered for a year and will expire on January 3 in the tender custody of the Committee on Rules.

In the bill to meet the defect, I named the Speaker of the House as first choice for acting President for these good reasons. He will have been newly elected by the people as a Representative and by his colleagues who are "fresh from the voters" as Speaker. In a lesser degree the same can be said of the President of the Senate pro tempore. The argument against naming the Speaker or President of the Senate pro tempore to act as President is that they would serve in a dual capacity, that there would be too much intermingling of their executive and legislative business. The Cabinet, beginning with the Secretary of State, has been suggested as an alternate. This is objectionable because the old Cabinet might be a repudiated administration and furthermore the members of the Cabinet are not elected officials. It is only necessary that they have the sanction of one man. The paramount issue is not over who is to act. I am not greatly concerned as to the person. The burning necessity is that someone be designated and that it be done at once. Some people have an idea that the Succession Act of 1886 is all we need. They think it would require the Secretary of State to act as President in this dilemma. This is a mistake. The Succession Act only applies after a President is in office. Succession comes to the Cabinet only upon death, removal, resignation, or inability of the President or Vice President. Failure of Congress to elect certainly does not fall under any one of those heads. The third section of the twentieth amendment is ample proof that Congress and the people recognize the Succession Act does not meet the problem.

This bill and a revision of our electoral system by Constitutional Amendment should be high on our legislative agenda. The nation looks to the Bar for guidance in matters of this kind. Let's act before the tragic event is upon us. To wait until the catastrophe is upon us would be wicked and unpardonable negligence.

The Flag Above Iwo Jima

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. ANGELL. Mr. Speaker, our colleague the gentleman from Florida [Mr. HENDRICKS] recently introduced a bill which has for its purpose the erection of a war memorial in the Capital City in commemoration of our fighting marines who have done such heroic work in the prosecution of the war against the Japanese in the Pacific. Their capture of Iwo Jima will be one of the great accomplishments on the part of our fighting men in World War No. 2. The picture which inspired the legislation, to which I refer, showing five marines planting the flag on the summit of Mount Suribachi on Iwo Jima will, without question, be enshrined in the history of the glorious achievements of our fighting heroes.

The Oregonian, published in my district, in its issue of March 3, 1945, published an editorial which I am sure will be of interest to the Members of Congress while considering this legislation. It is an outstanding tribute to our fighting marines in connection with their achievements in the South Pacific culminating in the raising of the Stars and Stripes above Iwo Jima. The editorial is as follows:

THE FLAG ABOVE IWO JIMA

The greatest war picture so far—and it won't be surpassed—is that of the five marines raising Old Glory atop Suribachi, when the volcano of death had been taken. The striving figures whose hands clutch the flagstaff, the helmeted heads, and aslant above them, whipping in the sea wind, the colors. Correspondents who watched from boats offshore of Iwo Jima, the far figures tiny to them, the flag a miniature, wrote that their hearts were lifted as their visions blurred. How the sight of it, at the summit, must have gladdened our troops. Then they knew, if ever they had doubted that, the enemy could not withstand them—for the steep sides of Suribachi, streaming Japanese firepower, had been stormed. Look, Mac, there's the flag!

The Japs have an emperor, still working the mossy old dodge of divinity, who means Japan to them, whether samurai or peasant. We have the Stars and Stripes to signify our America, her past, present, and future. Time was when our attitude toward the flag, the same flag that flies from Iwo Jima's volcanic height, was characterized by what seemed a casual attitude, if not one of cynicism. Who could have known in those careless days that under the froth and the wisecracks the current yet ran strong and deep? Beyond the seas our envious, secret enemies watched us. Such a people—they said—are without patriotism. The Americans are weaklings and fools. We were a people who laughed when somebody wrote (they say it was Eugene Field) a rhyme about the traditional American glorification of the flag.

> "He marched up to the cannon,
> With the colors in his hand;
> And he was blown to pieces
> To the music of the band."

And now, well, we are amused only to think of our amusement that used to be, and we see that it meant little more than mere idleness.

Do you remember a song of the War with Spain? It was called Just Break the News to Mother. It was a song about the flag and of devotion to the flag as a symbol of everything, and when we sang it at the time of San Juan Hill, our eyes were wet for its youthful hero who wasn't coming home. Remember? The flag went down in the fighting, and the captain called for a volunteer and a boy shouted, "I will! I'll bring it back, or die!" And in the song he brought it back—and died. As time passed, and sophistication flourished, it seemed to us that the old song about the flag was—well—perhaps a trifle mawkish. There was too much of sentiment in it. The war scene had dimmed. We smiled at the song.

Have another look at that impromptu grouping of marines in the picture of the boys and the flag on the cindered hill of Suribachi. Can you smile at the old song now? Though it isn't our sort of song today, you will find that you cannot smile. Fashions in sentiment change, as to the media of

expression, but sentiment does not. American boys who won't come home, nor ever shall see their kindred once more, helped put the flag where it waves. And inside us, deep down, welling up to our throats, is that identical emotion which made the correspondents blink their eyes, from the ships that lay offshore that day; the selfsame emotion that a simpler people experienced when they sang or listened to the old song. Who is of the sophisticates now?

Forever America, and forever Americans. Forever the flag! The more one looks at that picture of the flag-raising on Iwo Jima the firmer becomes one's conviction of the dauntless permanency of the American spirit. But we've done with talking of that. What we started to say is that the more one looks at that greatest of front-line pictures, the surer one is that a sculptor—the best that we have, whoever he may be—should be commissioned to do it in bronze, just as it is. It should stand, heroic in proportions as in theme, in our Nation's capital city, in testimony to the flag and its valor. This already has been proposed in Congress. And we repeat this suggestion to Washington, to our Members of Congress, and to all Americans who may know how to begin the undertaking.

The Ohio River

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. BENDER. Mr. Speaker, every few years the Ohio River goes on a rampage and sweeps over its banks from Portsmouth, Ohio, to Cincinnati, down through Louisville to do untold damage. Up at Pittsburgh the converging waters of three rivers periodically invade the Golden Triangle to submerge the business section of one of the Nation's largest cities.

Congress now has before it a proposal to spend hundreds of millions of dollars on a project to harness the waters of the Missouri River. Irrigation, power production, and the checking of soil erosion are parts of the program contemplated for the Missouri. Almost every year, several million acres of farming land are swept by the waters of Big Muddy.

No one objects to the program for making the Missouri stop misbehaving. But in all the concern for this section of the Nation, the Ohio River area is being largely forgotten. Help the folks down Missouri way, sure; but let us help the people of Ohio, too. The facts and figures show that the people of Ohio have contributed 12 cents out of every dollar spent by the Federal Government in the improvement and development of Bonneville, and Grand Coulee Dams in Washington and Oregon, the Central Valley irrigation projects in California, the Boulder Dam in Arizona and California. Ohio folks recognize that what helps the entire Nation helps them, but there are many direct improvements which are necessary right in our own State that have gone by the board. It is certainly time to remember the Ohio, while we are not forgetting the Missouri.

Relations Between United States and France

EXTENSION OF REMARKS
OF
HON. JAMES DOMENGEAUX
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. DOMENGEAUX. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to discuss the very important subject of relations between the United States and France.

President Roosevelt's assertion in his recent address before Congress that it is sometimes necessary to deal with "prima donnas" in handling world affairs was generally interpreted as being directed at General de Gaulle. The President's remark was most unfortunate and untimely.

There are different reports of the failure of the President and General de Gaulle to meet for a conference during the President's overseas trip, but whatever may have been the circumstances the fact remains that the indirect criticism of the French leader is detrimental to the friendly relations between the United States and France. Furthermore, there is nothing definite to indicate that General de Gaulle deliberately avoided a meeting.

The French people are an industrious, warm-hearted, liberty-loving people who believe in right and justice. Despite their unfortunate experiences at the hands of certain of their own officials during the present war, and their tragic history in World War No. 1, they have remained true, as a nation, to their beliefs and fundamental principles. They have a high regard for this country and are grateful for the help our Nation has given them. They wish to continue a friendly relationship, and the American people also desire to maintain this cooperation. The fact that so many of our own people are of French descent makes this bond of fellowship all the stronger.

I am certain that France, with the same courage and determination shown in the past, will solve present troubles and emerge strong and vigorous to take an important and rightful place in world affairs.

Americans admire the spirit of the French people and have always sympathized with them in their difficulties. Much depends upon the preservation of the ties between the two countries. The American people are not particularly concerned with the political fortunes of French leaders, but they are greatly interested in the reestablishment of a free, happy and prosperous France. Everything possible should be done to convey to the French people that they have the support and goodwill and friendship of the United States. Caution should be exercised to avoid any statements or actions by representatives of this government that would tend to create misunderstanding or doubt among the citizens of France over our attitude toward them—an attitude of respect and admiration that is greater and broader than any personality or any issue.

The Quakers and Peacetime Military Conscription

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. WHITE. Mr. Speaker, ever since the day that William Penn met with the Indians under the spreading branches of a Pennsylvania tree and made a treaty of friendship and amity with the red men, the Society of Friends has been a constructive force in the upbuilding and advancement of America.

Today the representatives of this patriotic, religious organization come to us in the hours of stress and uncertainty to point the way and advise us as to the course to be followed in preserving American ideals and the principles of good government.

It is my privilege to present for the consideration of my colleagues a communication from the representative of the Society of Friends inserted herewith:

SALEM, OHIO, *February 10, 1945.*

COMPTON I. WHITE,
Member of Congress, Washington, D. C.

DEAR FRIEND: You who have been placed in positions of responsibility by the votes of a great Nation have been and are now facing truly difficult times and momentous decisions. You have a responsibility toward those whose votes have made each of you the representatives of certain sections of the country, but a much greater responsibility toward the wider and more far-reaching welfare of the Nation as a whole. The urge comes to you from various groups to pass laws which may enhance in some way a specific interest of each group rather than the well-being of the whole people.

Almost the whole history of this country has been that of a free and peace-loving Nation. In these difficult times you are being urged to establish peacetime military training for every able-bodied youth just arriving at the age of manhood. Such a law may do more to convert our beloved Nation into a military power than any law which has ever been placed upon the statute books. It is the kind of a law which has made Germany and Japan and almost every other country of Europe a training ground for the slaughter of men and the destruction of cities.

To escape this compulsory training and service many people were induced to leave their native homeland and come to the United States for its promise of freedom from the philosophy of war and killing and the consequent coercion of their lives and destinies.

Conscription in these countries has not promoted peace. It has not prevented invasion. It has not tended to develop a strong and virile people, but rather has been used in many cases to build up armies of the finest and best manhood for tyrants to use for their own ends of power and aggrandizement, leaving the weaker and less fit to propagate sons and daughters for the future.

Are we ready to adopt the philosophy that nations are great in proportion to the size and efficiency of their armies and navies and air forces? If we go back to the early history of the United States, we find the men who were outstanding in the councils of the people were jealous of their freedom from great military power and were apprehensive of any action which should tend to promote such power. The founders of this Nation were very clear in their opposition to the building and maintenance of a large army in peacetime. Are we, by adopting a compulsory military training law, ready to drop such a fundamental heritage as has been woven into the very fabric of our national life as one of the bulwarks of freedom and democracy?

If we adopt such preparation for war as peacetime conscription for training men and building a colossal military machine, thus using the same kind of tactics against which our men are fighting and giving their lives, the people of the world will probably conclude, if they have not already done so, that our promise of a lasting peace and helpful cooperation are insincere. They will lose faith in us and then will revert to the same old race for armaments as has been going on through most of Europe's recent history.

The United States now has a wonderful opportunity to demonstrate the power of kindness and cooperation. It has inspired hope in the hearts of downtrodden peoples with the promise of peace and a helping hand as set forth in the Atlantic Charter. Is that hope to die because we have repudiated those promises and those ideals?

Religious liberty was one of the foundation stones of this Nation. Religion has been one of its motivating factors from the beginning down through the years. In the Constitutional Convention, when it had reached an impasse, Benjamin Franklin, addressing the presiding officer, George Washington, said: "In this situation of this assembly, groping, as it were, in the dark to find political truth and scarce able to distinguish it when presented to us, how has it happened, sir, that we have not hitherto once thought of humbly applying to the Father of Light to illumine our understandings? The longer I live the more convincing proofs I see of this truth—that God governs in the affairs of men. And if a sparrow cannot fall to the ground without His notice, is it probable that an empire can rise without His aid?" Upon the motion of Franklin, prayers were then held every morning before starting the work of the day imploring the assistance of Heaven and its blessings upon the deliberations of the assembly. From that time, we are told, they began to make progress, and when William Pitt read the completed Constitution he exclaimed, "It will be the wonder and admiration of all future generations and the model of all future constitutions."

Again, when someone remarked to Lincoln that he hoped God was on our side Lincoln's reply was, "My concern is not so much whether God is on our side. My great concern is to be on God's side, for God is always right."

Let us "Keep God in American history." May our beloved country go forward with His blessing, still proclaiming hope to oppressed peoples and demonstrating by its action that there are still those in the world who care and are ready to extend a helping hand. And may you who are in a position to guide the destinies of this Nation, who have great decisions to make which will affect mankind not only now but down through the years to come, may you seek for that "Wisdom that is from above and that is first pure, then peaceable, gentle, and easy to be intreated, full of mercy and good fruits, without partiality and without hypocrisy."

Very sincerely,

CHARLES P. MORLAN.

Bretton Woods Pact and Isolationism

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Tribune of February 17, 1945:

BRETTON WOODS PACT AND ISOLATIONISM

Another concrete test in Congress on what promises to be a series of acts implementing our participation in international agreements is now in the making in connection with the proposals which grew out of the Bretton Woods Conference. The test will come when Congress debates subscription by the United States of $2,700,000,000 to an $8,600,000,000 stabilization fund and of $3,100,000,000 to the capital of a $9,000,000,000 international bank which the Bretton Woods Conference proposed.

The importance of this test is suggested by Secretary Morgenthau when he told a Nation-wide radio broadcast that the Bretton Woods agreements were "a symbol of the end of economic isolationism in the United States." Broadly speaking, Mr. Morgenthau is right. There has been an end, we hope, not only to economic, but also political, isolationism on the part of the United States. But Mr. Morgenthau makes a mistake when he infers, as he did in this speech, that the Bretton Woods Conference was the final word and that any suggestion for changing the specific program as laid down at that meeting is simply the voice of economic isolationism.

There is ample room for difference of opinion wholly within the obvious desire of everyone to arrive at workable international economic agreement on some of the specific proposals made by Bretton Woods. The American Bankers Association, for instance, has taken an objective point of view in its desire to construct what Mr. Morgenthau describes to be "a concrete avenue toward international cooperation on the economic front." But its attitude cannot be called isolationist when it approves the idea of an international bank but would modify the fund's policies and perhaps combine it with the bank.

America is not alone in criticizing details of the Bretton Woods proposals. British opinion is also divided, but for different reasons.

Some Britons feel that it would force them back to the gold standard while some American critics are equally sure that it would debase the dollar. Such differences are inevitable, but they should not obscure the most important contribution that an agreement based on Bretton Woods could make. Its contribution should be to remove, as far as it is possible by international monetary agreement, the underlying causes of failure to stabilize currencies after the last war and the resultant economic instability which contributed to world depression and this war. In reaching such an agreement Morgenthau's loose talk about isolationism is no help.

American World Policy for Peace and Progress

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. JUDD. Mr. Speaker, Commander Harold E. Stassen, our former Governor of Minnesota, is one of the first authentic voices to speak from the almost 15,000,000 young Americans who are or have been in our armed forces in this war. I believe he expresses in forthright and compelling terms the basic views and resolves of the vast majority of these men and women and of the whole American people.

Under leave to extend my remarks, I include herewith a speech given on March 7, 1945, by Commander Stassen in Minneapolis and over a Nation-wide radio hook-up:

Governor Thye, President Coffey, friends, and fellow citizens, in these last 3 years, America, with her allies, has won a long series of brilliant historic victories in this war. The names stand out as grim markers of our march toward victory, from Guadalcanal and Casablanca to Iwo Jima and the Rhine.

These battles will be symbols for generations of how Americans, who love peace, can and will fight when they must.

The superb productive power of our country has played a heavy part in these victories and has contributed to the strength of the other United Nations. American labor, management, capital, and agriculture are entitled to high commendation for their performance. The flow of supplies and munitions and ships and planes and guns has been nothing short of a miracle.

The victories have been actually won by the unbelievably heroic and effective fighting of those wisecracking, good-natured, beloved American sons of yours on the battlefronts of the world.

They take off from rolling carrier decks, or advanced airfields, penetrate thick, soupy weather, fight their way to enemy strongholds and deal devastating blows. They wade into beaches in wave after wave regardless of the whir of machine guns, the wham of mortars, and the blast of bombs. They slog and worm their way up to blast and burn pill boxes and caves. They stand by their guns and pour out their fire in the face of diving planes or roaring counterfire, or charging tanks. They take their guns, their planes, their tanks, their ships, their subs, their small boats, anywhere and everywhere to strike an enemy or support a pal. They die doing these things. They die, and others like them take their places.

With splendid military leadership from the commander in chief, and from generals like Marshall, Eisenhower, MacArthur and Arnold, and Vandegrift, and from admirals like King, Leahy, Nimitz and Halsey, they have brought us within sight of the final victory.

That final victory must be our No. 1 aim until the last enemy has surrendered. Nothing must divert us from following through to early, complete winning of the war. Each new quota of supplies and munitions and men to meet the fluctuating needs of the shifting types of battle must be promptly met. We must not listen to the siren call of reconversion until we can re-

convert together in peace. Each new battle must be fought with vigor and with skill.

But it is right and proper and urgent that we in service, when the opportunity presents itself, and you at home, proceed to think through the world policy of America for peace, lest we lose much of what we are fighting for.

As you know, the President has invited me to serve as a member of the United States delegation to the San Francisco Conference of the United Nations, and I have accepted.

It will be my endeavor to study and to learn as much as possible of the information, ideas and viewpoints of the people of America on the questions coming up at this conference. I have consulted and will consult with leaders of our Government and of my Republican Party; of church, of labor, agriculture, and business; of women, of youth and of veterans. But I will not seek to nor claim to represent any of them as special groups at San Francisco. I will consider it my duty to represent my country as a whole as I see its best welfare, and to be individually responsible for my actions. It will be my aim to assist in securing a result of this crucial conference which will be supported by the overwhelming majority of the people of America, and by substantially all of the other United Nations. This means, of course, that the result will not be, and cannot be, entirely in accord with any nation's or any person's individual views. But, I cannot say too emphatically, that the alternative to finding the areas of agreement is to do nothing at all. And nothing at all would start us on our way along the short road of inaction, to worldwide depressions and to the next and most tragic world war.

That is not an acceptable alternative.

It is of tremendous importance that the principles which will guide our actions in the years to come be formulated and clarified and tempered in the heat of free discussion now, so that they may be clearly and definitely set before the world.

To stimulate this search, speaking only for myself, I frankly state what I consider should be the seven cardinal points of our future world policy:

1. That as a nation we will join with our present allies at San Francisco to build a definite continuing organization of the United Nations of the World, based on justice and law, and insured by force. That we will seek to gradually develop a new and higher level of government, with legislative, judicial, and executive functions, and with worldwide jurisdiction, for the future peace, progress, and well-being of mankind. That we are and will continue to be interested in what happens in every other part of the globe. That this is one world.

Nor can I speak those last two words without pausing to pay a tribute to him who made them mean more than mere words, more than a symbol, the veritable keystone to a living cause and hope for mankind—Wendell Willkie.

2. That we do not subscribe to the extreme view of nationalistic sovereignty, that we realize that neither this Nation, nor other nation can be a law unto itself in the modern world, and that we are willing to delegate a limited portion of our national sovereignty to our United Nations organization, so that it may be effective in the tasks we expect it to accomplish. That we hold that true sovereignty rests in the people, and that there is and must be a law of humanity above and beyond the narrow rule of nationalistic, absolute sovereignty.

3. That we consider that the future welfare and peace and happiness of the people of America is inseparably intertwined with the future welfare and peace and happiness of the men and women and children of the world.

4. That we will use the enormous productive capacity of America and the reservoirs of capital and credit and technical skill to contribute to the gradual advancement of the standards of living of the peoples of the world, not as recipients of charity but as self-respecting men and women of dignity and of pride.

5. That we believe in the freedom of information through press and radio and school and forum as a vital factor in the peace and progress of the world and in the fulfillment of the dignity of man.

6. That those who were aggressors in this war shall be stripped of all means to make war and shall remain so stripped. That we propose to remain strong on land, at sea, and in the air, and will join with Russia and Great Britain, China and France, and the other United Nations in furnishing police power in the world.

7. That we are and propose to remain a democracy of free citizens with an economic system of private capital and individual enterprise. That we will constantly seek to improve the functioning of our system, both as to freedom and equality of our citizens and as to the success and adequacy of our economy. That we will explain our system to the world, but will leave it to the peoples in each nation to decide for themselves their own form of government so long as they do not trample on basic human rights, or threaten the peace of the world, or transgress upon their neighbors. That we will permit our own citizens to learn of any other form of government they wish to study, but will not permit any other government to actively seek to undermine our own.

Obviously each of these cardinal points could well be the subject of a major address. Within the limits of my time this evening I will discuss them in turn.

It is very generally agreed now that an international organization should be formed and that the United Nations should be the basis of such an organization.

I am not one of those who feel that the organization must take some certain detailed, exact form. I believe there are many forms that would be a definite step forward and would make a constructive contribution.

I hope that it will include some method of developing basic world-wide law. It should make possible the future enactment of a fundamental code of human rights. The beginning may be very small. But even if we started with the enactment of one law, a law that no country, in time of peace, shall execute a human being without just trial, it would be a significant step. We sometimes fail to realize that there is no such world law today. The Nazi storm troopers and Gestapo who dragged civilians from their houses in Germany and summarily shot them were violating every moral code we know of, but they were not violating any international law, because there is none to protect a human being within a nation. This starkly silhouettes the tragic slowness of the development of society on the world level.

We know full well that Nazi aggression actually started, not when Hitler marched across his borders but rather when he first ruthlessly trampled the rights of men within Germany.

From small beginnings, gradually the rights of freedom of worship, of fair trial, of freedom of speech and press, the right of the worker to organize, and the prevention of discrimination should be developed. With it should be stated the world-wide laws or rules against aggression, for the flight of aircraft, for the use of ports and canals, the restriction of armaments, the availability of resources, the advancement of health and education, and the prevention of unjust confiscation of property.

Obviously, if we are to have laws, we must have a court to administer these laws. Clearly, then, a United Nations court of some type with world-wide jurisdiction is essential.

It is equally clear that a police force of some nature is mandatory to enforce the decisions of the court if order and justice is to be respected and maintained. This definitely does not mean an all-powerful international police force of a superstate.

Let us clarify our thinking.

If either the United States, or Russia, or Great Britain decide in the next 25 years to make war, then there will be another world war, and no organization, or league, or union, or treaties will stop it. But I do not believe any of these countries will want to make war. Each knows the horrors of war. Each has so much to gain by not making war. Each has a great future in the peaceful development of its resources and its standing in the world.

They will not always see problems alike. They will not always please each other. But in the main, they must and should work out their differences of views and find the way for joint action. The Yalta Conference was a very important indication that this can and will be done. Clearly, then, our policies should be based on the development of the world with these three desiring peace.

A note of caution should also be sounded, however, that we should definitely envisage a system of laws and justice and a moral code supported by police force, and must not permit the development of a continuing system of world power and force without law.

The United Nations should also develop an effective and just method of trusteeships for use in governing territories that for reasons of extreme military importance, or inability of self-government, or peculiar economic position, or seizure from an enemy, can best be held in a form of joint United Nations title, rather than in the title of any individual nation. The enlightened interest of the world and the human rights of the people concerned should both be carefully safeguarded. The trustee may be either one of the United Nations, or the United Nations organization itself.

Let us also make it clear that the United Nations organization does not mean breaking up any of the stable associations of nations and peoples now in existence. It is definitely not adverse to the British Commonwealth of Nations, nor to the Union of Soviet Socialist Republics, nor to the United States of America, nor to the various associations of nations through treaties and friendships. On the contrary, we seek to build on these cornerstones of stability a world-wide beginning for order and justice and peace in place of chaos and tragedy and war.

Tremendous steps have been taken in recent months toward the fulfillment of this first cardinal point of our world policy.

With the background of the Atlantic Charter and the commitments of Secretary Hull's conference at Moscow, the declarations of Teheran, the proposals of Dumbarton Oaks, the decisions at Yalta, the President's excellent message to Congress last week, and the never-ending wholesome study and discussion throughout America have brought us to the eve of the San Francisco Conference for the drafting of a definite framework for continuing United Nations action in peace, with the overwhelming support of the people of the country and of the United States Senate for the steps proposed.

We should look, therefore, upon the San Francisco Conference as a golden opportunity to win a beachhead in the battle for a just and lasting peace.

The beachhead is of crucial importance, and requires many sacrifices and never-ending determination.

And, also, the beachhead is not the final goal, but only the jumping-off place for the long, hard drive toward victory.

So it will be, and must be recognized to be, at San Francisco. The results of a successful conference will be of incalculable importance, but they will not be the final answer to our world problems for peace. They will only be the first step. Continuing interest of the American people, continuing devotion of their Government, the approval and support of the proposals by the Senate, and then the steady growth and development of the United Nations organization will be essential if we are to have anything more than a precarious beachhead.

In a discussion of the development of a new and higher level of government you frequently hear the rejoinder, yes, that would be a good step but it would violate the rule of absolute nationalistic sovereignty.

Let us meet this issue squarely.

I do not want my country to face another generation of youth marching off to the horrors of war and say "We could have prevented the development of this conflict but we had to cling to the extreme principle of absolute nationalistic sovereignty." That will not be an acceptable answer.

There may be many diplomats who do not know it; there may be many political leaders who are afraid to admit it; there may be many people who do not understand it, but the extreme possibility of absolute nationalistic sovereignty is of the middle ages and it is dead. It died with the airplane, the radio, the rocket, and the robomb.

It its place we must develop the new principle of the rights, duties, and responsibilities of each nation to the other nations and of each man and each woman to the other people of the world.

No nation has any right in the modern world to do as it pleases without regard to the effects of its actions upon the peoples of other nations. True sovereignty rests in the people, and the people know that for their own future welfare they must exercise a portion of that sovereignty on a world level in place of the nationalistic level.

Just as each freeman must so limit his liberty of action so that he does not injure his neighbor, so each nation must limit its action so that it does not injure its neighbor. And in one world today, the nations of the world are all neighbors.

One of the most striking facts which has been demonstrated in this war is the enormous productive capacity of America. It has been a huge power for destruction and for victory.

It can be an equally great power for world construction and progress after the war if we but lift our eyes to its opportunities and responsibilities and take the necessary steps for world stability.

This will require increased investments by American capital in the resources and facilities of other nations, and increased trade with lower tariffs throughout the world. We must explode the narrow view that if we develop production in other parts of the world we will preempt our own markets. We will create markets as we develop means to produce. Producers are consumers. The capacity of the human race to consume is just as great as the capacity of the human race to produce. Of course, there are and will be acute problems of distribution. But we can either fight over a shrinking wealth or work together to participate in an expanding production and the wealth of the future.

Vast sums of charitable assistance will be needed in the immediate post-war period, but this should be definitely separated from the careful investment of capital in the long-term development of other nations. It is better that American capital be invested and reinvested in various countries of the world to assist in raising their standards of living and indirectly develop jobs in America in the process, than that it be sterile and stagnant in America.

This does not mean a Santa Claus role. Most of the peoples of the world do not want charity beyond the war emergency conditions. They want to be self-reliant. They want to rebuild their own homes and develop their own economy. It is healthy and wholesome for them and for the world that they should.

But it will mean long-term investments and reinvestments.

Nor is this all just an idealistic dream. Never did a country for its own sake more need to clear the cobwebs from its thinking. Never did a country for its own sake more need to appraise the value and the purpose of its great productive strength.

If it does not lift its eyes and use its brain and its brawn for progress of the world, it will wither and deteriorate in petty internal struggles over the division of a shrinking economy.

But, if it contributes to the progress of the world, it will itself share in that progress in high standards of living, a richer life, and peace.

This is also true of other peoples. Any attempt to profit by one nation at the expense of other people will fail. If it meets with temporary success it will soon be lost in either the whirlpool of depression or the cauldron of war. We cannot have continued economic warfare and continued military peace.

The world must advance together and there is room in the world for all the peoples who live in it.

World opinion is almost unanimous that the Germans and the Japanese must be stripped of their means of making war. This can best be done by joint action of the victorious nations through the United Nations organization, with a continuing joint occupation and inspection.

Under that military rule all indemnities and penalties and reparations should take place. Then and only then the gradual development of self-government should be permitted to arise. It should begin in the localities and in the schools and slowly develop as the capacity and desire for nonaggressive, peaceful, and successful administration is demonstrated.

Freedom of information to the citizens of these countries must be a fundamental rule. Open to the children of Germany and Japan and Italy the full access to the radios and publications and books of the world, and if we are right in our basic concepts in America, and I believe we are, in a generation or two we will have a different Germany and a different Japan. When the change is demonstrated they should be permitted to become self-governing and be granted membership in the world organization, but even then there is no reason why they should be permitted to rearm, and there is every reason to prevent them from rearming. We will be saying in effect to the conquered nations, "We will permit you to rise again as successful, self-governing constructive nations, if you so desire, but we will not permit you to rise again as a military power, whatever may be your protestations or intentions."

We ourselves should remain strong. We should maintain a powerful, modern Navy. We should keep an alert, up-to-date Air Force. We should constantly train an efficient land force.

We should do this to fulfill the police force responsibility which will be ours in enforcing and supporting the world code of justice and the United Nations organization and also to assure our own future security and progress. We should make it plain that much as we want peace we will fight again, and will fight anyone who basically violates world justice and seeks to flaunt our policies and tries to make might right. This position, I am convinced, is more likely to maintain peace than an announced policy of making ourselves weak and of not fighting even though provoked.

To those who scoff at thoughts like these expressed tonight as abstract idealism I simply ask that you look out upon the world-wide tragedy of war today. When the terror of war has reached the grand scale that it has today it is time for some thinking for peace on a grand scale. And I add that I will work with you with just as much hard-shelled realism on the emergency of today and with just as much down to earth practicalism on the problems of tomorow.

But our ideals will determine the all-important question of the basic course that we take.

We need not scoffers today. We need men. Men to assault the pill boxes of lethargy—the emplacements of prejudice—the spitting guns of intolerance. Men who are willing to fall in the assault so that others may carry the day. It will take that to build the world. It will take that to raise the standards of mankind—to make freedom and liberty and peace—living symbols to men and women and children—and not mere words in speeches or in charters.

Our fighting men want America to have a world policy for peace that is as big, as definite, and as successful as has been our strategy for war.

It will take time and it will cost.

But the alternative makes it worth the cost.

They do not want you to surrender before the counterattacking assault waves of cynicism this best hope of enduring peace on earth.

Some people say that our democracy is not perfect and that there is discrimination and inequality and apathy and corruption. They are right. Some say that our economic system has not functioned perfectly and that there are maladjustments and sufferings and faulty distributions. They are right.

But neither of these facts are any reason for waiting for the correction of these imperfections before we step forward to fulfill the world leadership which it is mandatory that we exercise.

We must advance on both the world front and the domestic front at the same time. In fact, they are in large measure interdependent.

I speak not of a Utopia. I speak not of a human race suddenly turned angelic.

There will be selfishness and greed and corruption and narrowness and intolerance in the world tomorrow and tomorrow's tomorrow. But pray God, we may have the courage and the wisdom and the vision to raise a definite standard that will appeal to the best that is in man, and then strive mightily toward that goal.

Federal Housing Administration

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. PRICE of Illinois. Mr. Speaker, most of the agencies created under the administration of Franklin D. Roosevelt have accomplished much to help the rank and file of our people. It would require considerable time and space to enumerate the many benefits resulting from the social reforms inaugurated by a progressive Congress under the leadership of the President since 1933.

I would like to call to the attention of the Members of the House of Representatives a few of the achievements of one of the most successful agencies of the Federal Government created to help the home owners throughout the Nation. I refer to the Federal Housing Administration.

The F. H. A. operates entirely through private capital of local financial institutions. It insures the loans these institutions make for property repair and mortgages for the purchase of homes and the construction of new homes. It has done a remarkable job in every part of the country.

I am indebted to the Honorable Abner H. Ferguson, Commissioner, Federal Housing Administration, for the following detailed report on the operations of F. H. A. in Illinois to the end of June 1944:

A total of $110,383,299 lent by private local financial institutions, under F. H. A. encouragement and guaranteed against loss, has enabled 298,650 Illinois families to maintain or improve their properties, while over 70,018 families have been able to build or buy homes through mortgage loans in the original face amount of $370,790,994.

In addition, 13,425 families of war workers, newly arrived in war congested areas in Illinois, have been provided with homes through mortgage loans amounting to over $68,753,550.

The F. H. A. has for over 5 years been paying all operating expenses and losses of its mortgage insurance programs, at the same time adding substantially to its insurance reserves which now total more than $97,000,000. Losses have been only a fraction of 1 percent. Likewise, the property-repair program is currently paying its own way from revenues derived from insurance premiums and for nearly a year collections on defaulted loans have shown a substantial margin over claims paid.

According to Mr. Ferguson, within 60 to 90 days the F. H. A. will start distribution of mortgage prepayment dividends to 13,000 home buyers who paid off their mortgages in full during the calendar year of 1944. These mortgages were in group accounts which had developed credit balances by January 1, 1944. These dividends will range from a few dollars to nearly $200 each.

I am certain the Members of the House will agree this is a gratifying record.

Leadership—That Which Leads or Directs

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Nor'easter, Philadelphia, Pa., for March 1945:

LEADERSHIP—THAT WHICH LEADS OR DIRECTS

Sports, social activities, business, politics, all support leaders; sometimes they are strong, brilliant, accomplishing results, at other periods mediocre, merely carrying on. Versatile leaders keep abreast of the times, forsee and plan for future activity as well as direct immediate operations. Leadership must sustain itself to a great extent, however; individuals, groups, organizations, will follow able leadership but will also gradually desert that which proves itself inefficient and fails to produce results.

Political thinking has and is changing in many ways; different theories, new programs, readjustments are in process and the trends and final procedures depend much on the leadership displayed. The originality of thought, the approach to subjects, the application of regulations, the executive ability to guide and please, and the last is important to any leadership striving for permanency, are all phases of leadership.

Political leadership attracts attention as something apart from business and living realities, and yet it is an important and integral part of American progress; it is continually before the public and continuously discussed and commented upon. Important communities and States through volume of population or industrial or commercial achievements are watched, criticised, or acclaimed on account of pressure they can exert by the leadership they maintain.

Industrial Philadelphia and diversified Pennsylvania are as important cogs in any political regime as in the industrial world, commercial progress or professional advancement and are watched and studied by other political units.

Both major parties have their peaks and valleys of attainments and popularity. Not long ago the Democratic leadership in Pennsylvania encountered serious internal strife that weakened it at that time. Today the Republican Party in Philadelphia and Pennsylvania is lacking in virile qualities and has lost popularity through lack of strong leadership, at least Northeast Philadelphia is so viewing it.

The reason is simple. The Republican Party has been the majority party in Philadelphia for many decades; it has been the majority party in Pennsylvania for a long time with one recent exception and thus could control legislation in practically all cases. Northeast Philadelphia, an important industrial area with a fast-growing population, has had problems, serious to its existence and yet such that the authorities of a second-class city, and the legislature of a small State would have easily disposed of as they arose.

Philadelphia and Pennsylvania have not met these problems, let alone solved them, but rather avoided them and alibied their way out.

Three items the solutions of which have been avoided, neglected, and postponed are, as follows:

1. Affecting the citizens: Equitable representation has been denied the citizens of Northeast Philadelphia in direct contradiction to the State constitution, solely to preserve certain political leadership. A letter covering the subject to the Governor appears in this issue. His reply states he believes in separation of executive and legislative branches of the Government and does not favor must legislation. It should be remembered that the chairman of the Republican city committee of Philadelphia is a member of the Governor's cabinet, and there are obligations to the people as well as to the politicians which real leadership acknowledges.

2. Affecting industry: Tremendous damage has been placed on northeast industrial companies for a long time due to flood conditions. The city recently started working on the physical aspect of this condition, but has never done anything constructive regarding the legislative aspect. Industries have been damaged, have been driven out of business, and workers have lost employment. It need never have reached the conditions of today under capable leadership.

3. Affecting war work: Philadelphia has been without air service for more than a year and has wrangled over $200,000 in order to open the northeast airport. A letter sent to city council embodying one to the mayor appears in this issue presenting the facts of the case. Other cities one-fifth in size are planning operations out of all proportion with Philadelphia action. The city recently started to act in this matter after northeast criticism. Alert leadership would have brought earlier action.

Here are three instances of matters of vital interest to a third of a million people of Philadelphia and Pennsylvania that any second-class city or small State would have taken in their stride.

Northeast Philadelphia is a substantial community, a city in itself. It sees obligations that should be met and it visualizes splendid possibilities in the future; it will carry its share of any load, it will cooperate with any constructive advancement, but it sees a vital need for real leadership now and in the days ahead.

There is no reason why Philadelphia and Pennsylvania, too, cannot benefit by politics, by two strong parties, playing politics, if you will, but in a forcible manner by capable leaders with the requirements of the people continually under consideration and vision for the future as a guide.

Real leadership recognizes conditions, meets issues, secures results.

The Mailman's Motto

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news item:

SERVICE THAT BRINGS A SMILE

"Service with a smile" is the motto of the National Rural Letter Carriers' Association. It is not only service with a smile but it is a service which brings a smile of joy into the lives of thousands of people throughout the country every day.

In no other period of history have the daily visits of the rural letter carrier been so important to the people who depend on this service for their mail.

All up and down the rural routes of America are homes from which members have gone forth to help fight for the freedom which our pioneering ancestors founded in this country.

Hardly less important than food is the mail which comes and goes through the services of the rural carrier. In fact, we often read and hear stories about the men in far away places considering mail from home as even more important than food.

Yes; the rural service is not only "Service with a smile"—it is service which brings a smile into the war-disrupted lives of thousands of our people.

Bankers' Strategy

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes from the Washington Daily News:

BANKERS' STRATEGY

(By Thomas L. Stokes)

The principal organized opposition to the Bretton Woods proposals for international governmental machinery in the economic and financial rehabilitation field, which is complementary to the political organization embodied in the Dumbarton Oaks proposals and, equally important, comes from the American Bankers Association.

The association has laid its recommendations, drafted by a special committee, before Congress, which is now beginning to consider this vital program in hearings of the House Banking Committee. These recommendations call for modifications in the proposed International Bank for Reconstruction and Development and for elimination of the second agency, the International Monetary Fund. The association committee advocates that some features of the Monetary Fund, which is to assist in stabilization of currencies, be embodied in the bank.

Because of the importance of the plans for economic rehabilitation of war-devastated countries and for restoration of trade in peacetime, which were formulated by representatives of 44 nations at Bretton Woods, N. H., last July, and because of the influence of the American Bankers Association, it is pertinent to inquire into the attitude of the association and how it was developed.

In the first place, the American Bankers Association, as a body, has never passed upon the Bretton Woods proposals.

At its annual convention last September it delegated a committee to state its position, the so-called administrative committee, of which the chairman is W. Randolph Burgess, vice chairman of the board of National City Bank, New York, and president of the American Bankers Association. This committee approved recommendations to Congress proposed by three other committees of the association.

These recommendations have not been resubmitted to the association as a whole, which has some 14,000 members.

Furthermore, an examination of the personnel of these committees shows the presence of the big New York City banks, including those engaged in international finance, which, if the American Bankers Association operates like other such groups, would be a predominating influence, especially in matters dealing with international finance. There are evidences of this influence.

It is also interesting and significant that this same group of bankers first approved of the fund and opposed the bank. The position now has been reversed, which seems to indicate a capricious attitude.

But, despite the committee's antagonistic attitude, there are many bankers who approve the program in its entirety, including southern and western bankers not closely affiliated with the Wall Street group. The Independent Bankers Association, comprising some 2,000 country banks, has memorialized Congress in favor of the program. Some outstanding individual bankers are for it, such as Edward E. Brown, chairman of the board, First National Bank of Chicago, who recently made a speech approving it as the most practical program possible. Outstanding economists have endorsed it.

The strategy of the international bankers who are trying to hamstring the program is an obvious and familiar one, to amend and make reservations, to stall, to kill by indirection.

This is a real test, in advance of the San Francisco United Nations Conference, of the sincerity of Congress in international cooperation.

The big bankers know their way around Washington, and are clever. They were familiar figures here once a few years ago, during the early days of the New Deal, when some of their own international financial operations of the twenties which went sour were revealed to the public in the Senate Banking Committee investigation.

This raises the question as to how valuable their advice may be.

Drafting of Nurses

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. KEEFE. Mr. Speaker, the House has just passed a bill for the drafting of nurses. In view of the arguments made as to the critical character of the need for the immediate services of Army and Navy nurses, I desire to read from a letter received this morning from one of my constituents. I quote:

December 7, 1944, I graduated from nurses' training from St. Barnabas Hospital, Minneapolis, Minn. Ever since then I have been trying to become a member of the Navy Nurse Corps. I took my State board examinations on January 8 and 9 in St. Paul, Minn.

They informed us that we could make application to the armed forces before receiving our final returns on the examinations. It was at this time that I filled out my first application blanks for the Navy Nurse Corps.

After a period of 6 weeks had gone by and I hadn't received my orders to report for my physical examination, I decided something should be done.

I reported to the Office of Naval Officer Procurement. There I filled out a complete new set of application papers. At the same time they authorized my papers and passed me on my physical examination.

Then I had to notify the Procurement and Assignment Service for Nurses so they could reclassify me I-A. I explained to them that my papers were ready to go to Washington and would they please act immediately. That was nearly 3 weeks ago. Two days ago I received my first notice that they had finally reclassified me.

This morning I received the enclosed letter, which I answered immediately.

When I passed my physical exam they said that within 3 weeks I would receive my final orders. Consequently I gave up my job as a general-duty nurse at St. Barnabas Hospital in Minneapolis and came home to get my personal affairs straightened out.

Now, as I see it, I will have to wait 3 more weeks before I hear anything further.

Just what is the trouble? Every place you go you hear about the drastic need for nurses in military service and about the draft bill. And yet they are just this slow about taking those of us that are more than willing to go.

Bob and Don are both in the South Pacific, and that is where I belong.

I fully realize I have to go through a basic training period first. But isn't there some way we can speed things up so that I could get into the Navy and feel that I am doing my part. More than anything else, I want to eventually be stationed on a hospital ship.

If it takes them as long to draft the nurses as it does to accept the enlisted ones, our boys will be home before we can get over there to give them our much-needed aid.

Thanking you in advance for anything you may be able to do to speed up this matter, I remain.

Mr. Speaker, need I say anything more? This letter clearly and succinctly states the case.

Amendment of the Social Security Act

EXTENSION OF REMARKS

OF

HON. BERKELEY L. BUNKER

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. BUNKER. Mr. Speaker, the following resolution was approved by the members of the Nevada State Legislature and ably expresses the feelings of the majority of the residents of my State. I concur wholeheartedly with the statements contained and respectfully submit the expressions to the Members of this Congress:

Assembly Joint Resolution 10

Assembly joint resolution memorializing the Congress of the United States to amend the Social Security Act to permit old-age pensioners to earn wages without penalty

Whereas the American people are engaged in a war which has utilized the services of younger men and women throughout the entire Nation; and

Whereas because of this condition an acute labor shortage has developed to such an extent that it has become the No. 1 problem of our Government; and

Whereas many old-age pensioners are able to perform many types of work that would relieve the labor situation: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of Nevada (jointly). That the Congress of the United States be, and it is hereby, memorialized to amend the present restrictions in the Social Security Act to the end that any person who receives or is eligible to receive old-age assistance shall be permitted to do and perform odd jobs of labor, caretaking, and similar classes of casual work not in the general course of a trade or business, at such rates of pay commensurate with their abilities to perform the same, but in any event, in an amount not to exceed $25 in any one month without being penalized therefor; and be it further

Resolved, That a copy of this joint resolution be transmitted by the secretary of State of the State of Nevada to the President of the United States, to the Vice President of the United States, to the Speaker of the House of Representatives, to our congressional Representatives in the Congress of the United States, and to the presiding officers of each State legislature now in session.

PETER A. BURKE,
Speaker of the Assembly.
VAIL PITTMAN,
President of the Senate.
J. E. SPRINGMEYER,
Chief Clerk of the Assembly.
F. BUCKINGHAM,
Secretary of the Senate.

State of Nevada Executive Department, approved February 28, 1945.

E. P. CARVILLE, *Governor.*

Letter From Frank Scully, a Hollywood Democrat, to the President

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

FRANKLIN D. ROOSEVELT,
White House, Washington, D. C.
(Hold 'till called for.)

MY DEAR PREZ: I don't see why I can't write a letter to you accentuating the positive of a domestic problem that is definitely lousing up the war effort. I refer to housing.

This is not a problem which personally crowds you or me, because you live rent-free at the White House and the old homestead at Hyde Park, whereas I have Bedside Manor in Hollywood and a desert hideaway on Mount Sinus at 29 Palms. But it affects about everybody else.

Your boys wouldn't think of shipping recruits out to a camp without first building barracks, yet they shipped a half a million defense workers into Los Angeles without providing homes for them. More, they barred anybody else from building them. Thus, they made two bottlenecks and closed both of them.

BIOLOGY IN SPITE OF WAR

Well, biology has a way of going on even in wartime. As a result, Los Angeles is bulging at the seams. Families are being evicted wherever you turn. And they are your babies, Mr. Prez. You stopped traffic in steaks and shoes. You rationed gas. You put ceilings on rents. Excellent! But you let people buy and sell real estate in a closed market and gave the new buyer permission to throw out the tenant.

As a result, owners have sold their own homes for as little as a lousy $500 profit and bought next door, ousting a tenant who had lived there for as much as 8 years or more. Mothers with babies have been denied the right to rent. Some, about to have babies, have had to hunt and hunt for homes until they have scared tax drivers with a phobia against doubling as midwives. I know one mother who has had to go from Hollywood to Susanville, a jump of several hundred miles by bus, to find a place with a relative where a new-born baby would be welcome.

MAKE HOME FIT FAMILY

Canada solved the problem of migratory homeseekers by issuing licenses limiting the renter or buyer to a home comparable to the size of his family. Is it too late to do this here?

Lucien A. Sauvage, an attorney, has given me a copy of a letter he has written to some local softies who want to take in a dog that killed a child and have succeeded in preventing the dog from being done away with. He has asked if they would be equally kind to a mother and five children. He even wondered, if the dog is such a good killer, why he couldn't be shipped to the South Pacific and the father of the five children released from military duty in his stead.

WHY NOT RATION ROOMS?

Well, Mr. Prez, all this is symptomatic, and it becomes my duty to ask a few questions. If housing is so acute in most parts of Los Angeles I can assure you it isn't like that all over town. On one side of me is a house with five bedrooms and three baths. Two well heeled alien refugees occupy it. On the other side is a house of three bedrooms and two baths. Two natives occupy it. Our house has three bedrooms and two baths. Six people occupy it. Around Beverly Hills are hundreds of houses of 10 and 20 rooms. They are frequently occupied by 2 or 3 persons.

Now what I want to know is this: Why aren't rooms rationed as equitably as food? Why not two rooms per person? Does any childless couple deserve to enjoy the freedom of a 10-room house, while a family of 6 suffers the tyranny of 2 rooms, or even none?

THEY'LL SCREAM "COMMUNISM"

Okay, I hear people screaming, maybe even you, "communism." But is this other thing democracy? The family is the basis of American life and it's being kicked around like a football, all for a lousy fear of the invasion of private property rights. Millions of boys have been stripped of every right and nobody has thought it unpardonable. What is there so sacred about the rest of us? Should any of us hoard privileges which those who are protecting us from outright slaughter are denied?

All right, so 20 years ago the Russians cut up apartments and houses and even rooms, and rationed them to take care of a housing shortage. So what? It got them out of a housing bottleneck, didn't it?

FAIR TO EVERYBODY

They did it because they didn't see the point of young Russians freezing to death in the streets or fields, while other Russians had too many rooms to sleep in all of them. They did it because they needed those children to grow up and save their country from an inevitable invasion. They like privacy as much as anybody, but they don't think it is exclusively the prerogative of those who already have it, and certainly not of those who have too much of it.

It would be swell if people would open up their hearts and homes and solve this problem voluntarily. But you know they won't. It's been urgent for 2 years and they have done absolutely nothing about it, except to aggravate it by more greed.

ONE MORE DIRECTIVE NEEDED

So all I'm asking you to do, Frank, is to put the needle into the O. P. A. and W. P. B. boys, or, better, into Jimmy Byrnes. Tell him to issue one more directive. What will one more be among so many? Tell him that charity, which is the soul of Christianity, begins at home and that the new order of the day is "Share the rooms. Two to a customer. No more."

The way I believe there will be enough to go 'round. And if not, for Pete's sake, have the Seabees piece out the difference with Quonset or Nissen huts or even some old barracks.

ONE HUNDRED THOUSAND HOMES SHORT

I'm writing this on stationery of an extinct low-cost-housing project. Seven or eight years ago I was chairman of its labor relations committee, which consisted additionally of C. J. Haggerty, president of the California A. F. of L., and Rabbi Coffee, of San Francisco. The project was set up to build at least 100,000 low-cost homes around Los Angeles at no down payment to deserving people if permitted and to kick back all the rebates from mass building to the home owners. O. R. Angelillo resigned as your farm-loan registrar of the Western States to head this project. He was assured of every Government aid. Well, he got his back broken from both the banks and the Government agencies, and Los Angeles is now 100,000 houses poorer. So don't blame us for the shortage. We did our best and your boys did their worst.

So I remain, as one enjoying all the comforts of light housekeeping, but with a heavy heart for those denied same, your devoted county committeeman from the fifty-seventh assembly district, Hollywood.

Faithfully ever,

FRANK SCULLY.

Hawaii Troops on European Fronts

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein some observations and information on the record of troops from the Territory of Hawaii in the European theater of war that came to my attention as a result of my tour of the battle fronts in this area as a member of the House Committee on Military Affairs. I believe this record is of sufficient interest and significance to warrant the attention of Members of Congress.

Like the youth in all other parts of our country, the young men and women of the Territory of Hawaii have found their way into most branches of the armed services.

The record of their service and sacrifices reflects the same fine patriotism that has marked the performance of our young people in all phases of the war.

The full impact of the tragedy of Pearl Harbor was felt in all its treachery and fury by every man, woman, and child in the Territory of Hawaii. The people of the islands responded then, and in the months that followed, to the responsibilities of life in a combat zone in a spirit that has prompted Lt. Gen. Robert C. Richardson, the commanding officer for the Army in the Pacific Ocean areas, to describe the population of the Islands as the most war-conscious community in the country.

The demands that were made on the people of Hawaii on what was, in fact, a battle front, but for them actually the home front, were numerous, and many of them of an extraordinary character. The response was in the best traditions of America. It has won the praise of members of the Cabinet and many high-ranking officers of the Army and Navy.

But the service of the people has not been confined to the Territory of Hawaii alone. The sons and daughters of the Islands have found their way to all the major battle fronts. Their participation has reflected the best traditions of our country.

It is only natural that a very large portion of the young men and women from Hawaii should be in service on the Pacific front. The number who are on other fronts is, however, very considerable.

I was able to learn at first hand something of their service on the European battle front as a member of the House Committee on Military Affairs that toured these areas during November and December of 1944. I heard from their officers and the men with whom they had fought something of their record, and was gratified to be told repeatedly of the high regard in which they were held.

I found young men and women from Hawaii in London under fire of buzz

bombs; along the docks of Liverpool operating ships of supply; in eastern England piloting bombers; in Paris grappling with problems of military government; at Rheims in the Red Cross; in combat on the German and Italian border; in Italy flying Army transport planes; in Rome in hospitals; and in the Service of Supply at Florence.

They are serving their country as individuals who have found their way into these varied activities without regard to the section of the country from which they were either selected or volunteered. Many achievements have attested to the fine record they are making.

The policy of the War Department in not concentrating in the same unit young men from the same districts has placed many of them with troops from other parts of the country. There is, however, one exception to this policy that has attracted an unusual amount of interest. The record of this group, moreover, reflects impressively the results of long years of training provided principally in the school system of the Islands for the responsibilities of American citizenship.

These troops were organized into a separate unit as the result of the War Department's decision to place Americans of Japanese ancestry, who were in the United States Army in Hawaii at the outbreak of war, in combat in the European theater of war, under the immediate leadership of officers of the Reserve or National Guard of Hawaii. Most of the latter were of Caucasian antecedents.

The attack of December 7, 1941, found more than a thousand Americans of Japanese ancestry among the large number of young men of the Islands on duty in the Territory of Hawaii as soldiers of the United States Army.

Most of the officers had begun their active service during the emergency preceding the outbreak of war. They had received their training in the National Guard or Reserve Officers' Training Corps. The enlisted men included a few members of the National Guard.

By far the largest part of these men had been called into the service in the first, second, third, fourth, and fifth drafts under the Selective Service Act beginning December 10, 1940, and continuing until February 7, 1942. After the latter date the operation of the Selective Service Act, so far as Americans of Japanese ancestry were concerned, was suspended.

Shortly thereafter a large number of Americans of Japanese ancestry, who had volunteered for service in the Hawaii Territorial Guard, a home guard organization, following the outbreak of war, and who were being used to guard utilities and other vital installations, were inactivated. Many of them subsequently volunteered for a labor battalion in which they did much useful work, but their services as soldiers in uniform were discontinued.

And in June of 1942, almost simultaneously with the Battle of Midway, the One Hundredth Infantry was formed out of the Americans of Japanese ancestry already serving in the Regular Army with other troops and sent to Camp McCoy, Wis., and later, Camp Shelby, Miss., for battle training.

There were about 1,300 men, all from Hawaii, in the original unit. Of this number, slightly more than 100 were still in the service of the One Hundredth Infantry when I visited this unit on the Franco-Italian front last December. They now constitute a part of the Four Hundred and Forty-second Combat Team, into which Americans of Japanese ancestry from other parts of the country have been assembled.

PRAISED IN INFANTRY JOURNAL

The One Hundredth Infantry went overseas in the summer of 1943. In the fall of that year it joined the veteran Thirty-fourth Division in Italy. In an article in the December issue of the Infantry Journal Lt. Col. James J. Gillespie and Capt. Lawrence E. McBride said this unit "helped mightily in the crossing of the Volturno, spearheaded the crossing of the Rapido, fought in and around Cassino, and after the capture of Rome helped in the pursuit of the Germans up Italy's boot."

In a maneuver along the Volturno, prompted by a determination to rescue a missing lieutenant, these troops are credited in this article with "the first American bayonet attack in Italy."

Through the winter of 1943 and 1944 they were in the thick of the fighting in Italy. Their losses were very heavy.

RECEIVED PRESIDENTIAL CITATION

The One Hundredth Infantry Battalion was awarded a Presidential citation on August 10, 1944. It was presented by Lt. Gen. Mark W. Clark. The battalion was cited for outstanding performance of duty in action on June 26 and 27, 1944, in the vicinity of Belvedere and Sassetta, Italy.

After reciting the detail of the maneuver the citation read:

> Doggedly the members of the One Hundredth Infantry Battalion fought their way into the strongly defended positions. The stubborn desire of the men to close with a numerically superior enemy, and the rapidity with which they fought enabled the One Hundredth Infantry Battalion to destroy completely the right-flank positions of a German army, killing at least 178 Germans, wounding approximately 20, capturing 73, and forcing the remainder of a completely disrupted battalion to surrender approximately 10 kilometers of ground. In addition, large quantities of enemy weapons, vehicles, and equipment were either captured or destroyed, while the American infantry division operating in the sector was able to continue its rapid advance.
>
> The fortitude and intepidity displayed by the officers and men of the One Hundredth Infantry Battalion reflect the finest traditions of the Army of the United States.

By that time, more than 1,000 men of the unit had received the Purple Heart.

The total of individual awards to this unit of boys from Hawaii by this time included 3 Legion of Merit Medals, 16 Distinguished Service Crosses, 57 Bronze Stars, 61 Silver Stars, over 1,000 Purple Hearts, and over 15 battlefield promotions from noncommissioned to commissioned officers.

NINE THOUSAND FIVE HUNDRED VOLUNTEERED IN HAWAII

The record of these men was having an important influence at home. The War Department decided to call for volunteers among Americans of Japanese ancestry. Its original quota for Hawaii was fixed at 1,500, but more than 9,500 in Hawaii answered the call for service, and in the spring of 1943 some 2,600 were accepted and went into training.

Soon afterward the Four Hundred and Forty-second Combat Team, composed of Americans of Japanese ancestry in the States as well as Hawaii, was organized and trained at Camp Shelby, Miss. Inspired by the record of the One Hundredth Infantry, this unit proceeded from the outset to make for itself a record that won strong approval in the War Department.

The Four Hundred and Forty-second Combat Team left the United States on the 1st of May 1943 from the Newport News, Va., port of embarkation. It arrived in Naples 28 days later.

The One Hundredth Infantry thereafter became a part of this combat team.

The Four Hundred and Forty-second went into action below Suvereto, Italy, on June 26 and remained in the line constantly until July 23. During that time it liberated some 11 villages and towns. It cracked the so-called Little Cassino line which served as the main German line of resistance before Leghorn, Pisa, Florence, and the Arno River.

FIRST IN LEGHORN

Troops from the unit were the first in the historic and important port of Leghorn. Members of the One Hundredth Infantry Battalion, acting as the First Battalion of this unit, were among the first infantry troops to enter the city. In the meanwhile, protecting the entire land flank and making the entry into Leghorn possible, were the Second and Third Battalions of the Four Hundred and Forty-second.

A few days later, a volunteer reconnaissance patrol from the Third Battalion became the first Allied soldiers to penetrate into the city of Pisa. Just about the same time, other patrols from the Second Battalion reached the Pisa airport and the bridges crossing the Arno River into the city.

After these actions, the Four Hundred and Forty-second combat team was relieved for a period of almost a month to rest.

On August 20, the unit was returned to action, the One Hundredth near Pisa and the rest of the combat team near Florence. These troops relieved an entire British division in this sector on the southern banks of the Arno River and west of Florence. The combat team was committed to holding action until the first of September when it became the spearhead of the great Allied drive to cross the Arno. Members of this unit were the first American troops to ford the historic and strategic river.

PRAISED BY FIELD MARSHAL

It was during their assignment near Florence that the Four Hundred and Forty-second combat team was selected as a model of operation for official observers from the Brazilian Expeditionary Forces to look into. Field Marshal Sir Harold Alexander, Allied Supreme Commander in the Mediterranean, visited the command post of the Four Hundred and

Forty-second and paid high tribute to the record of these troops.

The unit was withdrawn from the lines on September 5, transported to Naples, and then shipped to southern France.

The Four Hundred and Forty-second unit went into the lines again in the Vosges Mountains of northeastern France for the Allied offensive on October 15. The unit was assigned to take four key elevations dominating the city of Bruyeres, the key communications and road center leading into Germany proper. Three or four other regiments previously had been repulsed in attacks on these strongly fortified areas. Three days later Bruyeres was liberated.

In this engagement, the Four Hundred and Forty-second experienced extremely difficult fighting. It suffered heavy casualties. Captured German documents showed the German main lines of resistance in this area. The Four Hundred and Forty-second operational charts showed this unit was right in the middle of them.

The commanding generals of the Seventh Army and the Sixth Army Group praised this unit for its part in breaking the stalemate that came after the victorious Allied sweep through southern and eastern France had slowed down to a stop. The break-through at Belfort Gap and the capture of Strasbourg came as sequels to the liberation of Bruyeres and vicinity.

The Four Hundred and Forty-second Combat Team was sent to the rescue of the "lost battalion." This was the first battalion of the One Hundred and Forty-first Infantry. From October 27 to 30, the men of the unit fought through rough, heavily wooded terrain to reach the battalion when it did not believe it could hold out much longer. The casualties suffered by the Four Hundred and Forty-second in successfully carrying out this mission numbered almost three times the number of the men rescued.

Because of the terrific losses sustained by the Four Hundred and Forty-second Combat Team in this sector, it was relieved on November 17 and sent to the Franco-Italian border to recuperate while holding the lines.

ON FRANCO-ITALIAN FRONT

I visited the officers and men of this unit on the Franco-Italian front on December 13, under an arrangement that had been made for me by the commanding officer at Marseille. Instead of proceeding to Naples with the other members of the House Committee on Military Affairs, I was able as a result of this arrangement to travel some 150 kilometers to the point where these men were situated.

I found the officers in command at this front, and in immediate command of the unit, enthusiastic in their praise of the members of their command, and the latter intense in their devotion to their officers.

The esprit de corps of the officers and the men was exceptionally good.

In talks that I made to the officers, I expressed the deep appreciation of the people of Hawaii for the great sacrifices they were making and the fine leadership they were providing for the young men from the Territory. I was happy to tell a group of men who were assembled to hear me talk that in a tour of the Islands last summer I had found the people of the Territory immensely proud of the record that had been made by the members of the One Hundredth Infantry and the Four Hundred and Forty-second Combat Team from Hawaii, and looking forward eagerly to their return to their homes in the Islands is not only a spirit of appreciation for their service but in hopes they could again find place for a useful and a happy life among these Islands.

HAWAII GRATEFUL FOR SACRIFICES

I was anxious that these men should not have the feeling apparently prevalent at that time at other points on the European front among our troops that the enormous sacrifices that were being made were not appreciated by the folks on the home front. I also wanted them to know that Hawaii had not departed from the tolerance that marked the relationship of people of the unusually diverse races of those Islands.

I found not only among the men in immediate command of these troops, but also among those of highest rank in this theater, that these men were held in very high regard for their record as combat troops and splendid conduct while off duty. The officer in command of the Four Hundred and Forty-second said that there had not been a single case of absence without leave since it was organized.

The record of the Four Hundred and Forty-second Combat Team was the subject of an article in the supplement of Beachhead News of Sunday, November 12, 1944. The Beachhead News, issued in Italy for American troops, carries the legend under its title, This Newspaper Must Not Fall Into Enemy Hands. Three of the four pages of this issue were devoted to an article entitled "Under Stars and Stripes—Japanese-American Volunteers Fighting for Four Freedoms—'Best Outfit in Army,' C. O. Claims," by Pvt. Joseph E. Palmer, a staff writer. After quoting the enthusiastic praise of Lt. Col. Virgil R. Miller, executive officer of the Four Hundred and Forty-second, about this outfit, the article says:

You hear a lot of questions about the paradox arising when Japanese-Americans fight allies of Japan. How do the boys of the Four Hundred and Forty-second feel about it? Is there any trace of remorse? etc., etc.

Well, to start with, it is estimated that at least 90 percent of those in the Combat Team who volunteered from Hawaii, either saw the sneak attack on Pearl Harbor or had relatives injured in it. That explains a little, doesn't it?

When MacArthur's forces stormed shore in the Philippines on Leyte Island, the invasion was marked by a big cheering section from the Four Hundred and Forty-second.

Sgt. Royal Manaka, for instance, had this exclamation to make when informed of the Philippine invasion:

"That's the biggest news since D-day in Normandy."

"I hope they get worse than they gave us at Pearl Harbor," offered Sgt. Jitsui Yoshida, who saw the attack in Hawaii and won't forget it.

JAPAN NEXT

But it was left for Sgt. George Y. Morikawa, who resided for 12 years in Japan, to express the fondest hope of all members of the combat team. Said he, "Soon they'll be able to bomb Japan like Germany—that'll be the end of Japan as such."

"What we want to do is win the war and get home as quickly as possible—just like everyone else," explained Corp. Fred T. Matsuo. "It would be the same thing if we were fighting the Japs—we'd kill 'em just the same."

TROOPS PRAISE RECORD

The Stars and Stripes in its letter column at this time carried the following:

LAUD JAPANESE-AMERICANS

DEAR EDITOR: We've seen beaucoup combat and feel qualified to pass judgment on combat troops. A short time ago my platoon came in contact with a part of a Jap-American unit. We have seen them in action and we label them the best of our troops. They are very aggressive in attack and have no regard for casualties while attacking. They know their weapons and employ them to the best advantage—they use them all. Their fox holes are well camouflaged and are constructed for fighting purposes and not for a comfortable night's sleep.

I noticed especially the equipment they carried. Judging them by equipment alone, they would have been called rookies. They carried compasses, field glasses, telephones, bayonets, and other items frequently "lost" by our troops. In addition to this equipment, they also carry overcoats and blankets. Yet these Jap-Americans have fought with us around Cassino and Rome and we know that they are not rookies, but exceptionally damn good soldiers.

Such soldiers are deserving of citizenship—much more than a lot of blue-blooded Americans who have their citizenship handed down to them for two or three generations. These Jap-Americans are fighting to prove they are worthy and are doing a good job—ask the Jerries. (Lt. W. I. Siebold.)

• • • We should like to read a substantial article on the Jap-American soldiers. They have had more than a year of actual combat, and it was they who recently displayed their ability by taking the pressure off the "lost battalion." It is an honor to witness these men in combat. (Staff Sgt. Tom Clark.)

• • • We, as infantrymen, realize what a tough squeeze the "lost battalion" had, but it was the Jap-Americans who fought their way through to them. They seem to be getting as much credit as Paul Revere's horse. (Tech. Sgt. L. B. Maples.)

• • • Not a "bitch" or a praise. Just a request for credit where it is due—to the Jap-Americans for their recent exploits. (Sgt. Joe Balsano.)

MAJOR GENERAL'S OPINION

The Stars and Stripes of December 11, 1944, reports a speech of Maj. Gen. John E. Dahlquist, commander of the Thirty-sixth Division, at an infantry regimental citation ceremony in the vicinity of Lepanges in northeastern France.

SPECIAL TRIBUTE PAID TO FOUR HUNDRED AND FORTY-SECOND FOR BATTLE DEEDS

(By a Staff Correspondent)

WITH THE SEVENTH ARMY, December 10.—Special tribute was paid to the fighting qualities of the officers and men of the Four Hundred and Forty-second Japanese-American Combat Team by Maj. Gen. John E. Dahlquist, commander of the Thirty-sixth Division, at an infantry regimental citation ceremony held recently in the vicinity of Lepanges in northeastern France.

After personally decorating 20 Americans of Japanese descent and paying his respects

to 8 who received their awards posthumously, General Dahlquist told the assembled regiment: "We have only the utmost admiration for you and what you have accomplished. No fighting, no finer soldierly qualities have ever been witnessed by the United States Army in its long history."

Speaking of Seventh Army operations in the Thirty-sixth Division sector, spearheaded by the Four Hundred and Forty-second Combat Team, the general credited the regiment, which had already won fame in eastern France by making contact with the "lost battalion," with gaining all its objectives through some of the most difficult terrain in the world.

The same generous feeling of comradeship and mutual trust permeates the comments concerning these men among troops in the Italian theater where the record of their performance in combat is widely and favorably known.

I was told by Lt. Gen. Mark W. Clark, then in command of the Fifth Army, and Lt. Gen. Lucian K. Truscott, Jr., just as he was about to assume this command, that the record of these men reflected great credit not only to themselves as American citizens but upon the Territory from which they had been drawn.

The service of which they were proudest, however, and the unit with which these men have always been proud to be identified is the Thirty-fourth Division, with whose command I had a most interesting conversation during our tour of the Italian front.

MAJOR GENERAL BOLTE'S LETTER

Maj. Gen. Charles L. Bolte not only commanded these troops while in training in the States, but subsequently in action in Italy. His opportunities for observing them before, during, and after combat have been unusual. In consequence of this conversation, General Bolte has addressed a letter to me under date of January 7 concerning their service, which is as follows:

HEADQUARTERS,
THIRTY-FOURTH INFANTRY DIVISION,
OFFICE OF THE COMMANDING GENERAL,
A. P. O. No. 34, care Postmaster,
New York, N. Y., January 7, 1945.

Hon. JOSEPH R. FARRINGTON,
House of Representatives,
Washington, D. C.

MY DEAR MR. FARRINGTON: This letter is written as a result of our conversation during your recent visit to the Fifth Army front in Italy. Because I have the honor to command the Thirty-fourth Infantry Division and because the One Hundredth Infantry Battalion (Separate) and the Four Hundred and Forty-second Regimental Combat Team (-1 Bn) were a part of my command for a period, you asked me what had been my experience with, and opinion of, those two organizations composed of Americans of Japanese ancestry.

The One Hundredth Infantry Battalion (Separate) joined the division September 8, 1943, and the Four Hundred and Forty-second Regimental Combat Team (less one battalion) joined the division June 10, 1944. While attached to this division the One Hundredth Battalion was in combat for 182 days and the Four Hundred and Forty-second Regimental Combat Team for 28 days. I assumed command of the division July 21, 1944, and both of the above mentioned were relieved from duty with the division August 15, 1944, for use in another theater. During my period of command the One Hundredth Battalion was not employed in actual combat, but the Four Hundred and Forty-second Regimental Combat Team was employed for 2½ days. I might say here that prior to transfer overseas I had a brief acquaintance with the One Hundredth Battalion, but a more extended opportunity to observe the Four Hundred and Forty-second Regimental Combat Team at Camp Shelby, Miss., during their training periods. The latter was under my command for a series of maneuvers in the De Soto National Forest, and I acquired the affection and respect for them which comes only from having exercised command of good troops.

I shall not attempt to cite or describe the accomplishments of these units in battle, or the human cost in their attainments. These data, which arose largely during operations before I assumed command, are in the possession of the War Department, and are, no doubt, familiar to you.

It cannot but be a source of great pride to the men of these units, in which I am privileged to share in some small measure, that under conditions which tended to make their service difficult, they stood shoulder to shoulder with comrades in arms and performed their grim tasks with a patriotic courage and loyal devotion which are not to be minimized. Their discipline and general conduct have been exceptional, and I would be pleased to have them again under my command. Many of the men came from the Territory which you represent officially, and I believe you, too, may well be proud of their service to their country.

The feeling of comradeship which grew up between these two units and the Thirty-fourth Division can well be illustrated by the fact that the One Hundredth Battalion and later the Four Hundred and Forty-second Regimental Combat Team were authorized by the division commander to wear the insignia of this division. The granting of this authority was viewed with favor by both officers and men of the Thirty-fourth.

It was a pleasure to participate in acquainting you with the conditions and situation on this front, and your visit did much to stimulate the high spirit of the personnel of this division.

CHARLES L. BOLTE,
Major General,
United States Army, Commanding.

The letter from General Bolte testifies eloquently to the tolerance and generous spirit of the men who have so ably led these young men into battle. Like the blunt comment of the men in the ranks who fought and died with these boys from Hawaii, it breathes fair play and the human sympathies that have united in this country people of such diverse racial origins.

The people of the Territory of Hawaii are particularly proud of this record. It attests eloquently to the success of the efforts in these Islands to unite in loyal service to our country the descendants of people of many races. Not the least of these are the boys whose ancestors, a generation or two ago, came from the country with whom we are now engaged in such bitter conflict.

These young men are fighting as Americans against these same people so that they, too, may enjoy the great privileges of American citizenship.

Beyond this, they are demonstrating in their service, and by the lives they have given, their allegiance to this country.

I am confident the record is one in which every American who believes in the fundamental principles that have united us in this great fight for liberty and freedom should find inspiration and hope for the future greatness of this country.

Unique Vermont

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 9, 1945

Mr. PLUMLEY. Mr. Speaker, in the March number of the American Mercury magazine, there appears an article contributed by Robert W. Mitchell, now editor and publisher of the Rutland Herald, Rutland, Vt., entitled "Unique Vermont."

As a newspaper reporter and State capitol correspondent for the Rutland Herald and Burlington Free Press, and a native Vermonter, he is very well qualified to have written such an article, which is receiving very favorable comment country-wide, by those competent to judge, who have had an opportunity to read it.

In order that it may have a wider and more extended public reading, under leave heretofore granted, I am including it as an extension of my remarks:

UNIQUE VERMONT
(By Robert W. Mitchell)

One of Vermont's Democratic leaders, Park H. Pollard, was once advised by Calvin Coolidge either to move to some other State or to change his party affiliation if he were really politically ambitious. The advice of Coolidge was sound enough, as his own career illustrated but it was ignored by Pollard, who is still a Democrat, still in Vermont—and who has never held State office.

In the field of political novelties, Vermont has a place all its own. It is the only State that has maintained steadfast loyalty to the Republican Party in both State and National elections since the party was organized, 90 years ago. In fact, even before that time, Vermont was well known for its independence of political trends sweeping the other States. It was the only State in the Union that gave its electoral votes to William Wirt, the anti-Masonic candidate, when Andrew Jackson was reelected President in 1832.

In 1936 it may have been a novel experience for Maine to be a member of a minority of two, but not for Vermont, whose voters had not forgotten the election of 1912, when the State supported William Howard Taft. On that occasion Utah was the only other Taft State.

The closest Franklin D. Roosevelt ever came to victory in Vermont was in 1940, when he won a popular vote of 64,269, which was 14,102 short of Wendell Willkie's total and the narrowest margin on record for a Democratic candidate for President in Vermont.

Though no Democrat has held elective State office or won a seat in Congress from Vermont since the first Republican State convention was held in 1854, this consistent record has no great importance politically. The State hasn't enough votes to excite much interest from the national leadership of either party as far as campaigning is concerned. However, leaders of both parties are puzzled by the phenomenon of this one-party State and interested in it as a symbol. They want to know why it is Vermont rather than any other State that demonstrates this tenacity of affiliation—not only what there is about the State that makes it persistently Republican but also what there is about the Vermont Republicans that keeps their State so uniquely loyal to them.

II

Vermont has no single distinguishing characteristic that sets it apart from other States

as it is set apart in politics. There is no single obvious link between its politics and the nature of its people, its economics, or its geography. The reasons why Vermont has remained consistently Republican cannot be summed up neatly in a paragraph, as it is possible to sum up the basis for one-party control in the solid South. Many elements are involved, any one of which might be common to other States, but it is the combination of elements that is unique.

Perhaps the most important reason is the fact that Vermont is dominated politically by the voters of nonindustrial towns and cities. It has remained a State of small towns and has only 8 cities, the largest having a population of 27,686. It is an agricultural State, and dairying is the leading farm occupation. As the leading dairy producer of New England, the State has needed and obtained tariff protection against milk imported from Canada. In earlier years the tariff helped Vermont wool and iron production and was a big factor in building the marble industry.

New England is famous for its conservatism and Vermont epitomizes this characteristic to a high degree. The Republicans' sound money policy was always popular with the thrifty Yankee farmers. In regard to liquor, conservatism was carried to what some might consider an extreme. The State had prohibition from 1852 to 1903 and a local-option liquor law from 1903 until national prohibition—evidence of an attitude more in line with Republican than with Democratic Party policy.

Another important factor to be considered is a historic one. It was the intense antislavery feeling in Vermont that accounted for the strong start of the Republican Party, bringing under one party label a coalition of Whigs and antislavery or free-soil Democrats.

Lawrence Brainerd, of St. Albans, Vt., a former Free Soil Democrat, called to order the first Republican national convention in Philadelphia, June 17, 1856. Brainerd had previously been one of the leaders in calling a convention of antislavery groups in 1854, which was Vermont's first Republican State convention. The candidate for Governor who was nominated at this convention refused to accept the nomination and the new party endorsed the Whig candidate, Stephen Royce, who had won the 1854 election. Governor Royce was reelected in 1855 on a ticket which was referred to as Republican by at least two Vermont newspapers and in 1856 the coalition officially adopted the Republican name.

This early Republican tendency in Vermont was solidified a few years later by Redfield Proctor, who became, consecutively, Governor, United States Senator, and Secretary of War. Proctor strengthened the new party by building an organization around returned Civil War veterans. He was said to have had at least one of these veterans in every town in the State, and for a half century or more the pro- or anti-Proctor tag was of key importance in Republican nominating conventions and primaries.

Once well established, the Republican Party's success has been cumulative. Vermonters like to serve in public office, and they know that the best way to be elected is on the Republican ticket.

Yet being in a Republican rut hasn't developed machine politics in Vermont. The party is under such loose control from the top that it is wide open for any newcomer who wants to go through the preliminaries and doesn't expect to be elected Governor or Congressman on the first try. You can run for any office in Vermont on the Republican ticket without permission from any individual or organization. The party has no boss, unofficial or otherwise.

Candidates who seek the Vermont governorship have been most successful in recent years with the advancement technique. The procedure starts with service in the legislature, election to the speakership of the house and then serving as lieutenant governor. Vermont hasn't had a governor for more than 20 years who didn't have legislative seasoning before reaching the top.

The Republican State committee has little power in Vermont. One reason is lack of control over patronage, and another is lack of control over candidates. A Vermont governor goes his own way, making appointments as he chooses without ever consulting the party chairman or any member of the State organization. The State committee does not allow this situation to prevail unopposed. Only this year State Chairman James F. Dewey called on the governor and the State delegation in Congress to adopt a system of patronage consultation with the State committee. All four men stepped on the proposal decisively.

Vermont Democrats run their party in an altogether different way. All candidates for State office and Congress are carefully chosen by the organization leadership in advance of the primary. The Democratic primary has become a method of endorsing the nominees already chosen either by the Democratic State committee or by convention in the old style. The organization candidates are never apposed in the primary.

The Democratic Party is tightly controlled from the top by a group of five or six men. The same candidates run repeatedly in election after election and newcomers have difficulty breaking into this exclusive coterie of losers. As a result, some disgruntled young Democratis feel that the leadership of their party is more interested in maintaining its control of the organization than it is in conducting a winning election campaign against the Republicans.

III

Vermont has reason to be satisfied with its continued Republican administrations, which are frequently more liberal than the party platforms would indicate. The Republicans promise little and do more, which is rather unorthodox in politics. The party seldom leads in espousing a liberal cause, but many Republican candidates use the party label and develop their own kind of program.

Controversial issue are often taken to the people. The referendum has repeatedly been used by the Vermont Legislature to settle troublesome questions and avoid responsibility. The Republican Party has unquestionably used it for political purposes to avoid too close identification with one side or the other of closely contested issues, but it has been good strategy. For example, the referendum was used in 1936 to decide whether the State would permit the Federal Government to build a $15,000,000 parkway through the State. The issue, which was decided in the negative, was the cause of the bitterest political fight in recent Vermont history, yet neither of the two men who won the governorship during the period took any public stand on the question.

The short, 2-year tenure in office for Vermont governors has been a major factor in the relatively high quality of Vermont Republican politics. No governor has remained in office more than 4 years since 1809. The honor is passed around and no individual ever obtains a strong enough grip on the State as a popular leader to upset the tradition. Vermonters have no fear of a one-man monopoly in their State government. Unless a governor is running for renomination for his second term, there is usually keen competition in the Republican primary. Local contests in the primary also help to stimulate interest and a division within the party, which has a healthy effect in the absence of more serious competition from the Democrats.

The standard of ability for men who hold public office in Vermont may often leave much to be desired, but their record for honesty is far above the average in politics, and this clean record is an outstanding reason why the voters have not felt impelled to change to another party. Most States have had political scandals which discredit the party in power and result in waves of reform that sweep the minority party into office, but scandal and graft have never been a problem to the Vermont Republicans.

The late William Allen White, who used to visit in Vermont at the home of Dorothy Canfield Fisher, the novelist, refused at first to believe that there was no corruption in a party so long in power. He admitted later, however, after a study of conditions in Vermont, that the State was so small and everyone seemed to know so much about his neighbor's business that graft was practically impossible.

There is no reason to suppose that because Vermont is for all practical purposes a one-party State its residents have no interest in political affairs. The Republicans have not stayed in power because of apathy on the part of the voters. Under the town system of government, with the old annual town meetings, and with a 276-member legislature including a representative from each town, Vermont has a large number of public offices for a small State. This helps to stimulate voting, particularly since in the small communities of which Vermont is primarily composed the voters know most of the candidates personally.

Not only is there a high degree of interest in voting in Vermont; there is also a remarkable lack of restriction upon the privilege. In 1940 Vermont had 191,273 registered voters, of whom 143,000 voted in the general election, from a population of 359,000. It makes an interesting comparison with Georgia, for example, one of the one-party States of the Solid South, which has a population of 3,123,723 and cast only 311,556 votes in 1940. In this respect Vermont may well be proud to be called unique.

Construction of Veterans' Hospital at Fort Wayne, Ind.

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution 24

Whereas the United States Government proposes to build Veterans' Administration hospitals in various localities to care for the wounded and incapacitated veterans of World War No. 2; and

Whereas the city of Fort Wayne, Ind., would be an ideal location for a Veterans' Administration hospital: Now, therefore, be it

Resolved by the Common Council of the City of Fort Wayne, Ind., That the proper Federal authorities in charge of the program of building Veterans' Administration hospitals be advised that the city of Fort Wayne, Ind., will gladly cooperate with the Federal Government for the erection and building of a Veterans' Administration hospital in or near the city of Fort Wayne, Ind.; and be it further

Resolved, That the within resolution be made a matter of record and that copies be sent to Senator HOMER E. CAPEHART, Senator RAYMOND WILLIS and Congressman GEORGE W. GILLIE.

Arno C. Spiegel, Frank W. King, Jr., Ben F. Bennett, Harry Hamm, Wm. H. Knoche, Harry M. McMillen, Edw. H. Fisher, Harold A. Hart, Paul C. Wolf.

Two-thirds Rule as to Treaties

EXTENSION OF REMARKS

OF

HON. LOUIS E. GRAHAM

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edwin Borchard, Hotchkiss professor of law, Yale University:

THE TWO-THIRDS RULE AS TO TREATIES—A CHANGE OPPOSED

(By Edwin Borchard, Hotchkiss professor of law, Yale University)

The Committee on International Law of the New York State Bar Association has recommended, by a majority of 11 to 2, that the Constitution of the United States be amended to enable the President to conclude treaties, provided he obtains the advice and consent of a majority of the members present in the Senate and the House of Representatives.

To this recommendation I shall address this paper. Its purpose will be to show the recommendation is unsound and that it should be disapproved.

I

The proposed amendment has one advantage over other recent plans to change the two-thirds rule of the Constitution—it is a lawful method of making the change. That is more than can be said for the frequently misused executive agreement, which is characterized by some proponents of the suggested amendment as an evasion of the Constitution.

The proposal to make the change finds its most recent source in the grievance, assumed to be valid, that the Senate of the United States prevented this Government from adhering to the Covenant of the League of Nations and thus contributed to the present disaster. It finds its current motivation in the apprehension that the proposed peace treaties or the Security League to Enforce the Peace, might not be promising enough to command the support of two-thirds of the Senate, and that to facilitate the adoption of these still unknown treaties a less cumbersome legislative approval is required. Charges are made that the two-thirds rule is undemocratic, obstructive, and inefficient.

To determine the validity of these objections and charges, some inquiry is required into the historical reasons for the treaty-making rule, into the record of the Senate, into the probable effects of the new proposed rule, and some discussion is necessary of the reasons advanced in the report of the House Judiciary Committee, December 13, 1944, adopted in the report of your committee, as to why a change in the Constitution becomes necessary or desirable.

II

The modern movement to reform the Constitution may be said to have begun shortly after the treaty with Spain of 1898 was approved by the narrow margin of one vote. Perhaps the minority, in opposing the Philippine annexation, was better advised. It received special impetus after 1905 from Secretary Hay's denunciation of the Senate for substituting the word "treaty" (requiring Senate approval) for the words "special agreement" in the proposed arbitration treaties of 1904, a change which Theodore Roosevelt rightly thought, in view of the reservations of "vital interests," "independence," and "national honor," was of no special importance. Perhaps it would have been preferable to leave the arbitration treaties unamended, although an agreement to arbitrate everything except that which is important does not add much to the judicial function. It cannot be said to have prevented the submission of any dispute which the Department of State wished to arbitrate.

As to the present grievance of the proponents, found in the unwillingness of the Senate to adhere without reservations to the Covenant of the League and in attributing to the Senate responsibilities for the current crash, no assumption could have less substantive foundation or do greater injustice to the Senators who made an effort by the reservations to protect the interests of the United States. To ask the United States willy-nilly to support without precautions an unprecedented scheme which might entail ruinous and unknown obligations is to ask too much.

Three votes on United States adhesion to the League Covenant were taken. The first, on November 19, 1919, rejected the Lodge resolution of ratification with the Senate reservations, by 39 in favor and 55 against, and on reconsideration, 41 to 51; the second, the Underwood resolution of unconditional ratification was defeated, 38 to 53. In the next session of Congress, on March 19, 1920, the Lodge resolution was again submitted to a vote. This time it received 49 "yeas" and 35 "nays." President Wilson, who throughout had exhibited very little capacity to cooperate with a coordinate branch of the treaty-making power, exhorted the Democratic membership to disapprove the treaty with its reservations, although Earl Grey had written a letter to the New York Times expressing the belief that Great Britain could safely accept the reservations. Many Democrats voted against the resolution. Had President Wilson not insisted upon opposition to the reservations, it is probable that the Covenant would have been accepted.

Thomas W. Lamont, one of the attendants at Versailles and an important figure in the negotiation of some of its clauses, has recently remarked:

"As has been many times pointed out since 1920, had the administration at that time been content to accept American participation in the League on a somewhat more limited scale rather than on the basis of wholesale commitments, our Senate might well have accepted the League Covenant. It was upon the administration's insistence that the Democratic Senators voted against acceptance of the Covenant with reservations and thereby automatically voted to defeat the treaty."

III

Historical reasons for the two-thirds rule: The Senate was expected to play a prominent part in the treaty-making power. Before the Articles of Confederation, unanimity of the States was required. Under the articles, adopted in 1781, 9 States out of 13 had to approve treaties. It was therefore natural that the several plans under consideration at the Constitutional Convention made two-thirds of the Senators representing the States necessary for ratification. Not until September 4, 1787, 13 days before final adjournment, was the President brought into the picture at all. The evolution of the compromise has been often discussed. The two-thirds rule on treaties was adopted by 9 States to 1, Delaware voting in the negative and Connecticut dividing. While Madison proposed an exception for peace treaties, this was not adopted. The motion of Pennsylvania's representative, James Wilson, to bring in the House as a coordinate approver, was defeated 10 to 1. Alexander Hamilton considered the clause "one of the best digested parts of the plan." Story considered it a power which could not have been "better deposited, with a view to its safety and efficiency." Many of the participants, realizing the importance of a treaty with a foreign power, considered two-thirds too small rather than too large a protection. That was the view in some of the ratifying States, particularly the small States, who did not wish to be overruled by a mere majority. Virginia valued the right to navigate the Mississippi, which the Northeastern States were disposed to bargain away. Others valued the Atlantic fisheries. While some of the original reasons for excluding the House from participation in treaty approval—the necessity for secrecy and for speed, the short sessions, the short terms of House Members, and the fluctuating membership—might not today be convincing, others are still valid, and new reasons, such as the expansion of Executive power, have accrued. With 298 House Members east of the Mississippi and 137 from the West, it is still possible for the small States to be outvoted on sectional issues.

The location of the word "advice" in the clause "by and with the advice and consent of the Senate," following the word "power," indicates that the President was to consult the Senate in the progress of the negotiations. While George Washington soon abandoned the process of oral consultation, his successors have on many occasions sought the advice of the Senate before concluding their negotiation. Wilson's view that the Senate could be confronted with a completed treaty, which he purported to make it difficult to change, is not the better view of the meaning of the constitutional provision. It can be contended, as Senator OVERTON did recently, that the making of reservations or Senate conditions upon its consent constitutes advice to the President. At all events, even though the Senate is no longer the executive council originally contemplated, if the advice should be sought, as is proper, before the negotiation is completed, then it would be necessary, if the new amendment is to go into effect, to consult the House of Representatives as well as the Senate. That would not exactly make for speed, but adds a new encumbrance to the process. If, on the other hand, the House is merely to be added to the Senate in the approval of an Executive fait accompli, the constitutional "advice" becomes a dead letter and is disregarded. The function of the House in any event would probably not be deliberative, as in the Senate, but would become perfunctory, which hardly adds to constitutional safeguards.

Record of the Senate: It might be supposed from the criticisms heard that the Senate had not fulfilled its constitutional functions or had so used the two-thirds rule as to obstruct the will of the Nation. This charge has little foundation. Even the alleged example of the Covenant of the League shows not a single Senator who lost his seat in the 1920 elections because of his position on that treaty. Public opinion is emotional. While it may once have seemingly approved the covenant, not knowing its content or realizing its implications, opinion changed under better instructions.

Nearly 1,000 treaties have been adopted, and of the 820 signed by the United States from 1789 to 1928, 24 were never submitted to the Senate and 9 were withdrawn by the President. Of the 787 submitted, 47 were never acted on, 15 rejected, and 162 amended. In other words, the Senate intervened in the making of 234 treaties, and by and large either improved the treaty by so doing or saved the country from unfortunate commitments. Secretary Hay's remark that "but one thing is certain, (the treaty) will never leave the arena alive" is not borne out by the evidence. It is an interesting subject of speculation whether any better result would have been achieved had the House been added to a majority of the Senate as a "ratifying" body.

Figures are sometimes adduced designed to show that a small minority of Senators from the populous States could block a large majority of the Senators from the less populous States. Such figures have no justification in experience. Senators rarely cast their votes according to the size of their States.

It is not possible to prove that a considered public opinion has opposed a final Senate vote or that a minority of the Senators defied public opinion in voting as they did. The necessity of obtaining a two-thirds vote assures a good treaty rather than the hasty or emotional consideration which a bare majority might reflect. Had the oil agreement of August 1944 not been submitted in the form of a treaty, this vulnerable agreement, contrary to the interests of the industry and probably of the country, would have been adopted by Executive agreement or approved by a majority possibly influenced by the Executive. The fact, as reported, that a new treaty will now be drafted is evidence that the Senate two-thirds rule has valuable functions to perform in the assurance of a treaty beneficial to the country. It is stated in some quarters that majority control by House and Senate means in fact Executive control, since the President can exert patronage and other pressures on a bare majority if necessary. The two-thirds rule places the Senate in an independent position beyond Presidential control, even if his party should command a bare majority.

Effects of the change: It is said that the two-thirds rule requirement enables a minority to control the majority, which the new rule would obviate. It is also said that politics controls the minority one-third plus 1. It is fashionable in certain quarters to believe that Senator Lodge's personal antagonism to President Wilson caused the rejection of the Treaty of Versailles. All these are myths. It may be true that occasionally politics has entered into the consideration of the question. This is not necessarily reprehensible and cannot be foreclosed in a popular government. Politics has in fact played a minor role, since most treaties are adopted with relative speed and not on party considerations. From 1899 to 1909 the Democrats controlled less than one-third of the Senate. From 1932 to 1942 the Republicans had the same experience. While the role of politics is minor, antagonism to a particular President or Secretary of State accounts for some votes. If the Constitution should now be changed making bare majorities adequate, politics would be likely to become a much more important factor in the consideration of treaties. If the two Houses did not belong to the same party or to the President's party, the chances are that the defeat of the President's treaties would become a political issue, a fact which might defeat many treaties. The assumption that ratification would by the amendment become much easier, may be mistaken.

Besides, proponents have in mind just one treaty or a set of treaties, namely, the forthcoming peace treaties and the machinery for enforcing them. All human experience contests the view that peace among nations can be enforced by any one or more of them, that their will and the law are identical, or that any country can be guaranteed against the result of its own ineptitude. Demographic considerations enter. Yet on the gamble that experience is wrong, many would upset the Constitution of the United States for the long future.

The decisive control over the vagaries of an Executive exerted by the two-thirds rule is compatible with an unchangeable administration. Majority control might possibly be considered if this were a parliamentary government, in which the administration could be removed if it incurred the displeasure of the people. The proposed amendment includes no such proviso, and is therefore inadequate.

There is another and fundamental reason why the two-thirds rule, a linchpin of the Constitution, and taken for granted in the matter of impeachment, overriding a veto, and expulsion of a member, should not be changed. A treaty is something quite different from a statute. A treaty binds the nation and cannot be changed by an act of legislation. A statute can be. A treaty may deal with any power suitable to negotiation with a foreign country. A Federal statute can deal only with such powers as Congress possesses. But by making a treaty with a foreign country, say, Canada, like the Migratory Bird Treaty of 1918, Congress can obtain for itself the implementing power to enact legislation which could not rest on any other basis than a treaty. A treaty overrides all State laws. By making the treaty-ratifying power of Congress equivalent to that needed for a statute, a bare majority of those present, Congress will thus be enabled to arrogate to itself not merely the limited powers named in the Constitution but the unlimited powers of a treaty, thus overriding the States and reducing them to innocuousness. A treaty is the practical equivalent of a constitutional amendment, the submission of which requires two-thirds vote of the Senate. But the proposed majority-approved treaty, reducing a treaty to the congressional requirements merely of a statute, has nevertheless the force of an amendment, while escaping the two-thirds requirement and ratification by three-fourths of the States.

The proposed amendment could thus serve to arrogate to Congress complete legislative power over the internal affairs of the Nation and would thus distort the Constitution in a most fundamental aspect. No other reason is necessary to indicate the unwisdom of the proposed amendment.

IV

Let us now examine the considerations advanced in the committee report in support of the proposed amendment. Relying on the House Judiciary Committee, your committee repeats that—

"The maintenance of the two-thirds rule, instead of working to maintain a great power in the Senate, is actually taking that power away from the Senate.

"Congress should act as a check upon the treaty-making powers of the President, but by maintaining a rule which prevents negotiations which the people desire, the Congress is on the road to eliminating itself from this important function of Government."

It was the Senate and not Congress which was to act as a check upon the treaty-making powers of the President, and there is no evidence that the two-thirds rule prevents negotiations which the people desire. But the point of these two paragraphs is that if the Senate insists on its constitutional prerogative, the President will circumvent both Senate and Congress by making his compacts with foreign countries in the form of executive agreements. During the last 7 years this has in fact largely taken place. But this is not in accordance with the Constitution; it is directly contrary to the Constitution. The inflation of the Executive power and the deflation of the Senate is, in addition, a departure from the constitutional duties assigned to these public officials.

The gist of the argument of the two paragraphs is that unless the Senate abandons the Constitution and consents to a change, an unconstitutional form of executive government will replace the Constitution. This argument may appeal to some gentlemen as a sound one, but I should think most Americans would repel the suggestion. Mr. Fraser has mentioned the statistics which are reiterated in the table. I have devoted an article to the question whether the Executive agreement shall replace the treaty, and will not here repeat the argument.[1] It is a danger without a doubt. But the willingness of the Senate to abandon its constitutional prerogatives will hardly be promoted by the suggestion that an unlawful method of change will overcome their reluctance.

[1] "Shall the Executive Agreement Replace the Treaty?" ((September 1944), 53 Yale Law Jour. 664.)

Number of treaties and executive agreements published to Jan. 1, 1945

	Treaties	Executive agreements
Year of official printing:		
1930	25	11
1931	13	14
1932	11	16
1933	9	11
1934	14	16
1935	25	10
1936	8	16
1937	15	10
1938	12	24
1939	10	26
1940	12	20
1941	15	39
1942	6	52
1943	4	71
1944	6	71

Here it should be said that the recent method of sending an Executive agreement to the Congress for its information—where congressional support is deemed desirable—is particularly vulnerable to constitutional attack. The agreement is not submitted to the Congress and cannot be changed or amended in the slightest degree. By a separate bill it is approved or disapproved by reference. This is an unsustainable method of evading the Senate's concurrent power over treaties, which at least can be considered with a view to amendment.

The third argument in support of the amendment reads:

"The record of the Senate in handling treaties of peace is long, and it is disturbingly bad."

The record of the Senate is necessarily nearly as long as the history of the Nation, for which fact we should be grateful and for which the Senate can hardly be held responsible. As to whether its record is bad, a consultation of chapter VI of the book of Prof. Denna Frank Fleming, a severe critic of the Senate's two-thirds rule, indicates no such record of inefficiency or impropriety in dealing with our treaties of peace as the report might indicate. Beginning with the Jay treaty of 1794, not technically a treaty of peace but more important than the peace of 1783, the record of the Senate is amazingly good. It amended comparatively few treaties and generally to their advantage. Had Senator Hoar succeeded in eliminating from the Treaty with Spain the provision for acquisition of the Philippines, we might have been even more grateful. The Senate actually did not balk at the terms of the Treaty of Versailles, as well it might have, but concentrated its objections and reservations on the obligations imposed on the United States by the experimental covenant of the League of Nations. The reason for the failure of that treaty was the device of tying the covenant and the League together in one document, and the President's objection to approval of the reservations by the Democratic Senators.

The fourth objection cited in support of the proposed amendment reads:

"From the moment the United States became a world power as a result of the Spanish-American War, the Senate has frustrated every significant move to make it possible for the country to participate in settling international disputes.

Nothing could be more misleading than this paragraph. The United States was a world power from the beginning. It simply did not become imperialistic until 1898. It is true that from 1897 to 1911 the Senate was somewhat skeptical about the conclusion of grandiose agreements for the arbitration of future disputes, except those that are important. They rejected the first Hay-Pauncefote Treaty, and they attached important reservations to Secretary Hay's treaties, reservations which Mr. Hay considered fatal. Secretary Root met the Senate's objections in 1908 by submitting to it the compromis of any particular arbitration, whereupon 22 arbitration

treaties were signed. They made amendments to the Taft-Knox treaties of 1911, which President Taft declined to accept. These arbitration treaties were a response to the predilections of the period, which found it fashionable to propose abstract agreements to arbitrate future disputes, which on negotiation had to be narrowed to a point where the commitment weakened rather than promoted arbitration. They were not agreements to arbitrate a specific issue. No evidence can be cited of cases in which the Senate frustrated in a specific case by disproving a protocol or compromise the American practice of arbitrating legal questions. The draftsman of the report must be able to cite cases in which the State Department was willing to arbitrate specific issues—a willingness which was frustrated by Senate opposition. It is believed that no such evidence exists.

Under the Root treaties of 1908, the important fisheries arbitration was held with Great Britain at the Hague in 1910, and the claims arbitration under the Convention of August 18, 1910. Other arbitrations have been held under the Hague Convention before the Permanent Court of Arbitration or by individual agreement for an ad hoc tribunal. The 1922 Washington treaties were approved. An arbitration convention with the Latin-American countries was signed in 1929. The Rio agreement of 1933 was promptly ratified. The Kellogg Pact was uncritically accepted. If the report refers to the Senate objection to the Permanent Court of International Justice, it may be said that few American questions could have been submitted to that tribunal. The Senate's objection to the Covenant and Court Statute related to the procedure for soliciting advisory opinions by the Council of the League. The Court was largely concerned with construing the meaning of doubtful clauses in the peace treaties and deciding other European questions. I know of no case which was refused arbitration because of the Senate's objection to adherence to the Court protocol. But I have a nostalgic regret that we shall never return to the good old days when the signature of an abstract arbitration treaty excited the Nation.

v

We come now to other considerations advanced by the report in support of the proposed amendment. It speaks of the "need for promptitude in decision." Reference to Mr. Dangerfield's table on page 104 of his book, In Defense of the Senate, discloses that from the time of President Washington to that of President Coolidge, the long delays of a treaty have occurred in the Department of State before submission to the Senate or after action by the Senate. The Senate delays, strange as it may seem, have been relatively short. On one day Mr. McClure states that 13 treaties were approved without change. While a few treaties have lingered long, one of President W. H. Harrison having been in the Senate for 361 days, the average is about 30 to 60 days. The charge of excessive delay cannot legitimately be laid at the door of the Senate.

It is true that lack of cooperation between the executive and the legislative branches of our Government is accountable for some of the objections. The objection of the Senate to Secretary of State Seward and Secretary of State Hay had something to do with their failure to enlist the cooperation of the Senate. Nothing can change such possibilities of friction—not even the amendment. But the practical impossibility of a unified party control ovtr two-thirds of the Senate seems to me a desirable rather than an undesirable feature of the American Government. Majority control in foreign affairs would expose the Senate to the influences of patronage, purge, logrolling, and other kinds of pressure noticeable in ordinary legislation. The two-thirds rule helps to place Senators above such influences. The provisions of treaties, notably those of a treaty of peace, are as fundamentally important as the provisions of the Constitution itself, and should not merely represent the views of the party that may have a bare majority in Congress.

In all constitutions of which I am aware, important decisions must be made by two-thirds or greater majority. The Dumbarton Oaks draft, chapter V, section C, provides:

"2. Important decisions of the General Assembly, including recommendations with respect to the maintenance of international peace and security; election of members of the Security Council; election of members of the Economic and Social Council; admission of members, suspension of the exercise of the rights and privileges of members, and expulsion of members; and budgetary questions, should be made by a two-thirds majority of those present and voting. On other questions, including the determination of additional categories of questions to be decided by a two-thirds majority, the decisions of the General Assembly should be made by a simple majority vote."

It is no objection to a legislative body that it has a "natural tendency" to debate. That, I thought, is one of its main functions. If we are to deprive a legislative body of the power to clarify, object and debate, it would be more feasible to abolish it entirely.

Reference is also made to specific treaties, the failure to approve which is criticized. In most cases many considerations enter into the Senate's refusal to approve a particular treaty. The annexation of Texas by a treaty of 1844 failed because it was feared by northerners that Texas would become a slave-holding Territory, because President Tyler was unpopular in the Senate, and because Mexico had threatened to make the treaty a casus belli. Under Polk's administration in 1845, Texas was annexed by joint resolution of Congress. But for the controversy concerning slavery there would have been no appreciable opposition to the treaty acquisition of Texas.

The Virgin Islands were offered to the United States by treaty in 1867 for seven and a half million dollars. The treaty never was discussed in the Senate. Historians attribute opposition to the treaty to Senate hostility to Secretary Seward. President Grant did not renew the proposal. But in 1902 a treaty for annexation was concluded at a price of five millions, Denmark to assume a series of obligations. It was the Danish Parliament, not the American Senate, which frustrated that treaty. Purchase was not finally effected until August 1916, when the Panama Canal made possession of the Virgin Islands seem imperative. They then cost twenty-five millions. But in 1867 their acquisition did not seem important, and the opposition to imperialism was great.

The Bayard-Chamberlain treaty of 1888 was defeated because the Committee on Foreign Relations advised rejection, denied Presidential power to negotiate the treaty without previous consent of the Senate, and raised other intrinsic objections to the treaty, particularly the belief that it would lead to free trade. But the particular reason the citation appears inappropriate in this connection is that it was defeated by a vote of 28 for and 30 against, so that even under the proposed amendment it would have been lost. The two-thirds rule had nothing to do with its defeat.

Mr. Fleming lists in chapter IV of his book the few treaties rejected by the Senate, and explains the variety of reasons which militated against their acceptance. He says that only seven had a majority, but not the required two-thirds, and the treaties defeated comprise but a very small percent of those considered. He adds that "five-sixths of all treaties laid before it (the Senate) have been approved unconditionally."

An argument advanced in support of the change is that Congress declares war and should therefore have the power to pass on the treaties of peace. Apart from the fact that Congress seems to have had difficulty in extricating itself from the 1917 war, as witness the Knox-Porter resolution of June 2, 1921, there is no analogy between the two powers. Congress is supposed to initiate a declaration of war. When war impends there is little time or opportunity for debate, since the foundation has been laid by diplomacy. Nor are the issues at stake often of a controversial nature. But treaties of peace are drafted by the Executive after long negotiation. They need the check of Senate control. They fix the conditions of future life and are usually exceedingly controversial. It is necessary to debate them at length and in detail. The two-thirds rule prevents the ill-considered or hasty adoption of a treaty before the public can be fully advised of what is under consideration. Submission to the House would add only confusion and probable delay, if debated, or be perfunctory and subject to political pressures, if not.

This paper has intentionally avoided thus far any discussion of the practical feasibility of adopting the proposed amendment. It has confined itself to the merits. It should be said, however, that in addition to House Resolution 320, reported out by the Judiciary Committee, resolutions for the proposed amendment have been introduced in the Senate by ex-Senator Gillette and others. Some advocate as a substitute for the two-thirds Senate approval a majority of the Senate or a majority of both Houses. These resolutions cannot command even majority support in the Senate committee to which they have been referred, for as yet they have not been reported out. Recently the New York Times took a poll on this question among the Senators who were candidates for election to the new Senate. The results were not encouraging. Among the 62 senatorial candidates polled, 24 did not answer the inquiry, 18 were in favor of the amendment, 8 were against it, 10 were noncommittal, and 2 agreed to submit it to the votes of the States. It is apparent that it will be difficult to enlist the votes of two-thirds of the Senate for submission of such an amendment.

Nor does there seem to be a sufficient public demand for such a change in the Constitution to justify a belief that three-quarters of the States will ratify the proposed amendment. Indeed, as former Ambassador Gibson points out, if an amendment is to be considered, it must be much more fundamental than the present proposal, which merely adds the House to the Senate as a ratifying body and substitutes a majority for the existing two-thirds. We should find a method analogous to the old French system, by which an informed group of the Senate Committee on Foreign Relations and perhaps of the House should be called into conference by the Department of State and participate as an executive or advisory council in the making of treaties. This might insure a sounder and less vulnerable treaty with probable legislative support.

On the whole question of an amendment it seems likely that the nature of the problem which will confront the new Congress and its successors for the next few years will be of a character so profound that there will be little opportunity to consider such a formal change in the Constitution as is embodied in the proposed amendment.

Emissary to the Orient

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. BARTLETT. Mr. Speaker, one of the most important theaters of war is in

China, where our Chinese Allies have been resisting the Japanese barbarians for nearly a decade. Perhaps in this theater will be delivered the final thrust against Japan. Recently the Congress was honored when the President of the United States selected a Member of this body to go to China and bring back a report on the progress of the war there. The Member thus entrusted with a mission of such significance was our popular and distinguished colleague from the First Montana District.

All of us have listened with interest to the information and facts which the gentleman from Montana, MIKE MANSFIELD, has brought back from the Chinese theater of war. And I am sure that we all have sensed the solid background of knowledge from which Mike made his observations. More than 20 years ago Mike served in China with that splendid and outstanding military organization, the United States Marines. During the First World War he was Montana's youngest serviceman overseas, donning a uniform when he was only 14 years old.

Eventually the tangled web of war, politics, and economics in China will have to be unraveled before we can defeat Japanese military power on the continent of Asia. The knowledge, information, and skill of such observers as our colleague, the gentleman from Montana, MIKE MANSFIELD, will be invaluable to that process. In addition, it is especially helpful to have as a Member of the Congress a man who has seen for himself the conditions and situations which actually obtain in China today.

I should like to conclude this brief tribute to Mike with inclusion in the RECORD of an article about him by Capt. Richard L. Neuberger, which appears in the current issue of the Progressive. The title of the article is "Emissary to the Orient," and it describes the career and achievements of our illustrious colleague.

The article follows:

EMISSARY TO THE ORIENT

(By Richard L. Neuberger)

MIKE MANSFIELD'S rugged congressional district in western Montana includes a long stretch of the Continental Divide which the United States Geological Survey calls "the Chinese Wall." It is a towering cliff broken into seams and crags that look like gargoyles on a great cathedral. The layers of basalt and granite are serried with many colors. Creeks on one side of "the Chinese Wall" flow to the Columbia River and the Pacific Ocean. Water on the other slope joins the Missouri Valley and eventually reaches the Gulf of Mexico.

MIKE MANSFIELD was pretty sure a few months ago that this frowning precipice, "the Chinese Wall," would be as close as the Representative from the First Montana District was going to get to China. Then he received a summons to the White House.

"Mike," said President Roosevelt, "you served in China in the Marines. You know something about the Orient. I've had reports from economists and trained military experts. Now I want a report on what an average, intelligent American civilian thinks of the situation out there. Will you go?"

"Yes, sir; Mr. President," answered Mike.

VETERAN OF THREE SERVICES

Three weeks later Mike was on his way across the globe to China in a C–54 transport of the United States Army Air Forces. The material collected on that eventful trip provided the basis for the series of articles on China which recently appeared in the Progressive under Mike's by-line.

Congress is full of interesting individuals with colorful careers behind them, but MIKE MANSFIELD'S life sets a new record in this respect. He has been everything from a marine sergeant to a college professor, with time out for mining engineering in between.

Mike was born 42 years ago this month in the town where he now lives, Missoula, Mont. At the age of 14 he left school and joined the United States Navy, serving on a cruiser during the First World War. He was one of the youngest men in uniform and Montana's youngest veteran overseas, where he fought for 10 months. After the armistice he enlisted in the Army and then served a hitch in the Marine Corps. While with the marines he served in China from 1920 until 1922.

Mike is the only Member of Congress who has seen duty in all three major fighting services—the Army, Navy, and Marines.

In 1922 Mike returned to Montana. He had no high-school education. His career consisted exclusively of military service. But Mike went to the Butte and Missoula libraries and studied. He read the classics—Shakespeare, Milton, Carlyle, Emerson's essays, Lincoln's speeches, Jefferson's writings. He worked for 9 years in the copper mines beneath Butte's "Richest Hill on Earth." He started as a mucker, miner, and sampler.

Then Mike took the college entrance examinations at the Montana School of Mines. Despite his home-made high-school education, he passed. So Mike became a mining engineer. He went to the University of Montana, too, the only university in the U. S. A. with a full-fledged mountain on its campus—Sentinel Peak. He took both his bachelor's and master's degrees, majoring in Far Eastern history.

So by 1933 the ex-marine sergeant, the boy who never went to high school, was a professor of far eastern history at the University of Montana. Mike married Maureen Hayes, a Butte girl, and now they have one child, a daughter, Anne, who is 6 years old.

In 1942 Jeannette Rankin retired from Congress and Mike was elected to succeed her. Last November he was reelected overwhelmingly. Mike—his full name is MICHAEL J. MANSFIELD—is a liberal. When he announced for the House of Representatives, here are a few of the things he said:

"The farmer constitutes 23 percent of our total population but receives only about 7 percent of the national income. He is entitled to parity in his struggle with industry. If the farmer is to continue to produce for victory, he must be assured of sufficient help and fair prices."

"I believe in the cause and rights of labor."

"Small business must be helped so that it can survive. Legislation must be enacted to safeguard small businesses and the people depending upon them."

"Federal pensions for the aged and security for the young must be granted as a matter of right."

"Service pay for our U. S. soldiers must be continued after they come home and until they receive paying jobs under good conditions. If this country is worthy of defense—and it is—then it must support and help the boys who are sacrificing their lives to bring us victory."

FROM FOREIGN AFFAIRS TO MONTANA'S

MIKE MANSFIELD, the author of these sentiments, is a lean, dark-haired young man who perennially smokes a pipe. He is calm and collected; the excitement and drama of politics seldom perturb him. Many people in Montana believe Mike will be a United States Senator or Governor of the State some day, but he says he is taking things as they come.

Mike is keenly interested in Montana. When he first came to Washington he was appointed to the Committee on Foreign Affairs, a great honor for a freshman Representative. Yet he resigned his membership on the Foreign Affairs Committee last month when his colleague from Montana, Jim O'Connor, died suddenly of a heart attack. The reason is that Mike is taking over O'Connor's old posts on such committees as Reclamation and Irrigation, Indian Affairs, and Public Lands.

"I regret leaving the Foreign Affairs Committee," said Mike. "Yet I realize that public lands, irrigation, and the welfare of Indians are topics closer to the State of Montana. My job in Congress is to represent Montana."

There is much interest nationally now in various proposals for river authorities patterned after T. V. A. MIKE MANSFIELD is the only Member of Congress whose district would be divided between two of the regional agencies. Part of the First Montana District would be in the Columbia Basin Authority as proposed by Senator HUGH B. MITCHELL, of Washington, and the remainder of the district would be in the Missouri Valley Authority as proposed by Senator JAMES E. MURRAY, of Montana.

The Continental Divide, running through Mike's constituency like a great bastion, separates the waters which flow to the Pacific and those which eventually join the Atlantic. But regardless of which direction the creeks and rivers flow, Mike favors regional development of the resources of Montana under the pattern originally established by the T. V. A. "I only hope all progressives can get together on a unified plan," he recently said.

MIKE MANSFIELD is one of the younger men in Congress. At the age of 42 he still has much of his political career ahead of him. He comes from the far West, a region on the march. He is looking toward the Orient, toward Alaska, toward the trade routes and markets of the future. He is proud of the fact that Great Falls, Mont., is the taking-off point on the great new air route which stretches across Alaska and across the Canadian Arctic to Soviet Russia. "We are on the brink of a vast new Pacific era," Mike declared not long ago. "In that era the United States must join hands with China and other Pacific nations, in an international effort to restore trade and end the rivalries and hatreds of war."

Rodger Young

REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. WEICHEL. Mr. Speaker, from up in my district, I want to pay tribute to a courageous soldier who not only gave his life for his country,, but that his comrades might live.

He was the first to receive the Congressional Medal of Honor in the Thirty-seventh Division from Ohio, now fighting in the South Pacific.

His distinguished service will be especially memoralized on March 25 at Fremont in my district, where the Army, his State of Ohio, and the home folks, will bring back home and dedicate forever the sacred memory of the boy buried under the little cross on New Georgia in the South Pacific.

His simple courage and sacrifice pictures the unsung American foot-soldier,

and was put in words by Pvt. Frank Loesser, a noted composer, in his ballad "Rodger Young," and, Mr. Speaker, I quote it for the RECORD:

RODGER YOUNG

Oh, they've got no time for glory in the Infantry,
Oh, they've got no use for praises loudly sung,
But in every soldier's heart in all the Infantry
Shines the name, shines the name of Rodger Young.
Shines the name of Rodger Young,
Fought and died for the men he marched among,
To the everlasting glory of the Infantry,
Lives the story of Private Young.

Caught in ambush lay a company of riflemen,
Just grenades against machine guns in the gloom,
Caught in ambush till this one of twenty riflemen
Volunteered, volunteered to meet his doom.
Volunteered Rodger Young,
Fought and died for the men he marched among,
In the everlasting annals of the Infantry,
Glows the last deed of Private Rodger Young.

It was he who drew the fire of the enemy,
That a company of men might live to fight,
And before the deadly fire of the enemy,
Stood the man, stood the man we hail tonight,
Stood the man Rodger Young,
Fought and died for the men he marched among,
Like the everlasting courage of the Infantry,
Was the courage of Private Rodger Young.

On the island of New Georgia in the Solomons,
Stands a simple wooden cross alone to tell,
That beneath the silent coral of the Solomons,
Sleeps a man, sleeps a man who's remembered well.
Sleeps a man, Rodger Young,
Fought and died for the men he marched among,
In the everlasting spirit of the Infantry,
Breathes the spirit of Private Rodger Young.

No, they've got no time for glory in the Infantry,
No, they've got no use for praises loudly sung,
But in every soldier's heart in all the Infantry,
Shines the name, shines the name of Rodger Young,
Shines the name of Rodger Young,
Fought and died for the men he marched among,
To the everlasting glory of the Infantry,
Lives the story of Private Rodger Young.

It has been especially presented and the ballad sung over the Nation-wide network on the stage-door-canteen program from New York, and Rodger Young may well become the theme song of the Infantry.

In this war, as in every war, it has been the infantryman's peculiar lot to do the most of the hardest fighting. You cannot knock out a specific enemy machine gun from the bombardier's seat in a plane, from the bridge of a giant battleship, or from a camouflaged battery of long-range artillery. It has to be done from close up by the men who fight close up—the Infantry. The Infantry riflemen, who are always at the front of our battle lines, take the greatest risks, endure the greatest hardships, suffer the greatest number of casualties, and often get the least credit for their efforts of any of the members of our fighting forces. When an infantryman is singled out from among other infantrymen to receive the Medal of Honor, our country's highest reward—and those who have been so honored do not comprise thousands or even hundreds but a mere handful—he has to be good.

Rodger Wilton Young was awarded the Medal of Honor, posthumously, for his outstanding bravery while serving as a rifleman in Company B, One Hundred and Forty-eighth Infantry Regiment, Thirty-seventh Infantry Division. His official citation read:

For distinguishing himself conspicuously by gallantry and intrepidity above and beyond the call of duty in action with the enemy on New Georgia, Solomon Islands. On July 31, 1943, the Infantry company of which Private Young was a member was ordered to make a limited withdrawal from the battle line in order to adjust the battalion's position for the night. At this time Private Young's platoon was engaged with the enemy in a dense jungle where observation was very limited. The platoon suddenly was pinned down by intense fire from a Japanese machine gun concealed on high ground only 75 yards away. The initial burst wounded Private Young. As the platoon started to obey the order to withdraw, Private Young called out that he could see the enemy emplacement, whereupon he started creeping toward it. Another burst from the machine gun wounded him the second time. Despite his wounds he continued his heroic advance, attracting enemy fire and answering with rifle fire. When he was close enough to his objective he began throwing grenades and while doing so was hit again and killed. Private Young's bold action in closing with this Japanese pillbox and thus diverting its fire permitted his platoon to disengage itself, without loss, and was responsible for several enemy casualties.

There was, of course, more to the story than just that. Eyewitnesses have agreed that Rodger Young deliberately moved toward that machine gun to sacrifice himself so that they might survive. "It happened in a very critical moment," one private of Company B later wrote to Young's father, "and if that bit of strategy had failed we all would have been sunk."

Technical Sgt. Walter J. Rigby, a boyhood friend of Young's from Green Springs, Ohio, where he and Rodger went to school together, was Young's platoon leader at the time the infantryman went resolutely forward to his death. "If it had not been for his heroism," Rigby has since said, "our platoon could not have successfully withdrawn. The machine gun was in such a position that it could well have covered the whole front of our platoon."

The engagement in which Young was killed was part of a drive that culminated in the seizure by American forces of the important Munda Airfield on New Georgia. The Japs fought every step of the way, often from coral pillboxes so well hidden in the jungle undergrowth that a burst of fire from them was the first warning our troops had of their presence. It was by a machine gun hastily dug in to delay the Americans' advance that Rodger Young was killed.

"My platoon was in the middle," Sergeant Rigby has said, "we were under rifle fire, and all of a sudden this machine gun opened up. Rodger Young started firing back at it. Then the machine gun picked him up. He fired a couple of more rounds, and then he was hit. He kept on going forward, throwing grenades and firing his rifle. I do not know whether or not his grenades knocked that machine gun out, but I do know that by the time he was killed that gun had stopped firing."

In a letter to Young's mother, written several months after his death, the regimental commander of the One Hundred and Forty-eighth Infantry told her that "his act of courage, bravery, gallantry, and devotion to duty was an inspiration to us all." The officer, Col. Lawrence K. White, of St. Louis, added: "Private Young fought and gave his life in order that you and his other relatives and friends might continue to enjoy our American way of life. Now that he has so gloriously paid the supreme sacrifice we pledge to assume that responsibility for him and to continue to fight until the loss of Private Young and our other comrades in arms are avenged and the enemy is brought to unconditional surrender. We are indeed proud to be members of Private Young's regiment."

On February 4, 1945, the One Hundred and Forty-eighth Infantry, Private Young's regiment, under Colonel White, led the march of the Thirty-seventh Infantry Division into liberated Manila. The pledge to a dead hero had been faithfully fulfilled.

Rodger Young was born in Tiffin, Ohio, on April 28, 1918. He had three brothers, two of them older, and one sister. His oldest brother, George Webster, is now a staff sergeant and recently returned to overseas duty from a furlough home after 2½ years' service in the South Pacific. Their father, Nicholas E. Young, is chief engineer of the Clyde Porcelain Steel Corporation of Clyde, Ohio, where the Youngs lived at the time of Rodger's entrance into the Army on October 15, 1940. Mr. Young is now in charge of war production—tank treads and tank-engine compartment doors—at the company's plant in Baltimore, the Baltimore Enamel & Novelty Co. He lives with Mrs. Young at 4002 Chesley Avenue, Baltimore 6, Md.

As a boy, Rodger lived the typical life of a child growing up, in moderate circumstances, in a small Ohio town. He attended school in Green Springs, a few miles from Tiffin, and moved with his family to Clyde just before the outbreak of war. He liked Clyde, was proud of living there, and, when his family was breaking ground for a new house a few months after he had entered the Army, he came home on furlough and delightedly took photographs of the excavating with his own camera. He had long been an indefatigable amateur photographer.

Rodger liked to fish and hunt, and spent a good deal of his time stalking cottontails near his home. He acquired the nickname of Fuzzy early in life when watching his father shoot a rabbit, he exclaimed, "Gee, look at the fuzz fly." On week ends, the family used to take picnic lunches and swim and fish in Sandusky Bay. He worked on odd jobs as a boy, picking raspberries during the berry season at from 5 to 8 cents a

box, for instance, and serving as a newsboy for the Toledo News-Bee with such conspicuous enthusiasm that he won trips to Cleveland, Akron, and Chicago, during the World's Fair, as well as a new balloon-tire bicycle.

He left the Green Springs High School, where he had been an average student, after his junior year, and went to work as a laborer for the same plant in which his father—along with his brother Dick—had been working for several years.

Rodger's marksmanship training stood him in good stead when he joined the Army. His own platoon sergeant described him as the best shot in their company, and he was an expert with the M-1 rifle with which he was armed at the time of his death. His skill with weapons may have been partly responsible for the sacrificial deed which cost him his life. He may have felt that his superior marksmanship made him one of the few men in his outfit who had the slightest chance of knocking out the Jap machine gun that had the doughboys pinned to the dank ground in that New Georgia jungle.

Rodger joined Company B of the One Hundred and Forty-eighth Infantry—the Fremont company of the Ohio National Guard—in January 1938, when he was 19. He had always been small, and at that time weighed 125 pounds and stood 5 feet 2 inches. He gained about 10 pounds and 2½ more inches afterwards, but he was still one of the smallest men in his outfit. Nevertheless, he never dropped back on a march. He was one of the most popular men in his outfit, frequently, after the Thirty-seventh went overseas early in 1942, being called upon to entertain his buddies on whatever musical instruments happened to be around. He played the harmonica, guitar, and banjo, and often played in a family orchestra in Ohio—his mother at the piano, his father at the clarinet, and the other young Youngs playing a variety of other instruments.

As members of the Ohio National Guard, Rodger and his brother George went on active duty in October 1940 when the guard units were activated as the Thirty-seventh Infantry—Buckeye—Division, under Maj. Gen. Robert S. Beightler, who still commands the division and was the first National Guard commander to lead his outfit into battle in this war. The division trained at Camp Shelby, Miss., and later moved to the Indiantown Gap Military Reservation, Pa., before embarking for the Pacific. At the time he left the country, Rodger was a sergeant and a squad leader.

When his parents were notified on August 25, 1943, that he had died nearly a month before—they did not know until the following January that he had been awarded the Medal of Honor—they were surprised to learn that he was a private, not having heard of his having been reduced in rank. They made inquiries, and finally learned the truth in a letter from the company clerk of his company.

Rodger had for some time had trouble with both his sight and his hearing. He had to wear glasses, and had been slightly deaf ever since being knocked down during a high-school basketball game in Green Springs. As an instructor on the rifle range at Camp Shelby, he had been exposed to so much continuous small-arms firing that his ear trouble had been aggravated, and when he went to the Pacific—training at the Fijis, on Guadalcanal, and on the Russell Islands before moving up to New Georgia for his first combat—his ears got even worse. Army doctors could do little for him, and there seemed to be a possibility that he might get a medical discharge. But that wasn't what worried Rodger.

What worried him was that his subnormal hearing might interfere with his command duties as a squad leader. He was afraid that he might muss some important oral message—or some significant jungle sound—and as a result endanger the lives of the men under him. So he went to his company commander and voluntarily asked to be reduced. His request was reluctantly granted.

Private Rodger Young, ordinary rifleman, was the first Ohio Infantry rifleman to receive the Medal of Honor in this war. One other member of the Thirty-seventh Infantry Division, Pvt. Frank J. Petrarca, of Cleveland, was also awarded the decoration posthumously. He was a medical aid man, and died, coincidentally, on the same day as Rodger Young.

More than a year after Rodger Young's heroic death, his story came to the attention of Pvt. (1st. cl.) Frank Loesser, who had already established himself as a writer of popular war songs—as well as many other popular songs such as Jingle Jangle Jingle, Small Fry, I Don't Want to Walk Without You Baby. Murder, He Says, and They Are Either Too Young or Too Old—by composing Praise the Lord and Pass the Ammunition, What Do You Do In the Infantry?, In My Arms, and First Class Private Mary Brown. In What Do You Do in the Infantry? Private Loesser had answered his own question with the words "You march, you march, you march." After writing that song, he realized that infantrymen do a great many more important things. He wanted to write a ballad honoring the Infantry and its incomparable men. He has done it; its name is "Rodger Young."

THE WHITE HOUSE,
Washington.

The President of the United States takes pride in awarding the Medal of Honor posthumously to Pvt. Rodger W. Young, Company B, One Hundred and Forty-eighth Infantry, United States Army, for service as set forth in the following citation:

"For distinguishing himself conspicuously by gallantry and intrepidity above and beyond the call of duty in action with the enemy on New Georgia, Solomon Islands. On July 31, 1943, the Infantry company, of which Private Young was a member, was ordered to make a limited withdrawal from the battle line in order to adjust the battalion's position for the night. At this time, Private Young's platoon was engaged with the enemy in a dense jungle where observation was very limited. The platoon suddenly was pinned down by intense fire from a Japanese machine gun concealed on higher ground only 75 yards away. The initial burst wounded Private Young. As the platoon started to obey the order to withdraw, Private Young called out that he could see the enemy emplacement, whereupon he started creeping toward it. Another burst from the machine gun wounded him the second time. Despite his wounds, he continued his heroic advance, attracting enemy fire and answering with rifle fire. When he was close enough to his objective, he began throwing hand grenades and while doing so was hit again and killed. Private Young's bold action in closing with this Japanese pillbox and thus diverting its fire, permitted his platoon to disengage itself, without loss, and was responsible for several enemy casualties."

FRANKLIN D. ROOSEVELT.

[From Life magazine]

THE BALLAD OF RODGER YOUNG—AN INFANTRY PRIVATE WHO BECAME A HERO INSPIRES A STIRRING NEW SONG

Rodger Young, of Tiffin, Ohio, was one of the smallest men in Company B of the One Hundred and Forty-eighth Regiment in the Thirty-seventh Infantry Division. He wore glasses part of the time because of a basketball injury and he could not hear very well. But he was a good soldier, and at Munda on New Georgia Island in the South Pacific on July 31, 1943, Rodger Young became a hero.

The Infantry has many heroes. Most of them are usung. But a stirring new ballad called "Rodger Young" has just been published. Its words and music are by Pvt. (1st cl.) Frank Loesser, who wrote Praise the Lord and Pass the Ammunition. Infantry officers who have heard it hope that "Rodger Young" may become an official Infantry song, comparable to those of the Artillery and Air Forces. On the following pages is a biography of Rodger Young and, on page 117, the song that has been written about him.

Rodger Young was a corporal in the National Guard when it was activated in 1940. He was a sergeant and a squad leader when he sailed for the Pacific in 1942. In the Fiji Islands, Guadalcanal, and the Russells the Thirty-seventh Division got advanced training. On New Georgia Island it got its first taste of combat.

Just before the New Georgia landing Sergeant Young had been worrying that his subnormal hearing might interfere with his command duties as a squad leader and endanger his men. He requested and was granted a demotion to private. A week later, at Munda, his platoon was ambushed by a hidden Japanese machine gun. Young spotted it, realized that fast action might save his platoon. He attacked, singleheaded. What happened is told tersely in the citation with which President Roosevelt posthumously gave Rodger Young the country's highest award for heroism, the Congressional Medal of Honor.

Obstra Principiis

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 9, 1945

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Fort Wayne (Ind.) News Sentinel, which was reprinted in a recent issue of the National Republic:

OBSTRA PRINCIPIS

Father William Smith, of the Crown Heights (Brooklyn) School for Catholic Workmen, warns that although "supposedly the Communist Party" has been dissolved as a political entity," still "no man in his right mind will be led to believe that the Commies have given up political activity."

Father Smith, being a man of intellectual honesty and clear perception, is disturbed over the indisputable fact that the Communists "have moved into P. A. C. with the blessing of its chairman, Sidney Hillman," and that "they have been discovered worming their way into key positions, not only in the labor unions, but in every branch of the military service."

Finally, as one of the best-respected members of the Catholic clergy in America, Father Smith quite candidly asserts that "if Catholic leaders among the C. I. O. officials have approved this open alliance of the C. I. O. and the Communists, our respect for them is swiftly on the down-grade, and our former support of the C. I. O. will be lessened in the future."

Pointing out that in his own area, "there is a union of 12,000 members absolutely controlled by no more than 150 Communists," the Brooklyn priest appeals for an end of "head-in-the-sand" attitudes, and admonishes—

"We must take things as they are; we cannot transfer them to a vacuum or write about them as though they existed in the abstract * * * nor, I would add, as they exist on paper."

In full agreement with Father Smith, one of the most distinguished of his fellow-priests, the venerable Father James M. Gillis, repeats the injunction of Ovid, Obsta principiis:

"Resist beginnings. All too late the cure, when ills have gathered strength by long delay."

A few years hence, Father Gillis suspects, everyone will be asking: "How did this abominable atheism, this un-American, anti-Christian system of thought and action, ever get such a hold upon our country?"

Such questions, of course, will be belated—and may well be futile—unless the warnings of such clear-sighted, realistic men of God are heeded right now.

Father Gillis is certainly right when he declares that all who pooh-pooh such warnings "may think themselves optimists or liberals, but they are living in a fool's paradise."

Among those who are still criticizing Great Britain for interfering in the political situation in Greece, there seems to be lack of comprehension as to what obviously went on. It seems very plain that Churchill interfered in Greece only after the Communists tried to seize control of the Government by force of arms. If the ELAS, which appears to be a distinct minority, had got in control, it naturally would have rigged the elections so that they came out like some of Mr. Stalin's plebiscites in Poland, or some of Hitler's, a few years ago, in Austria. There is little doubt in the minds of most alert persons that the Communist uprisings in Greece were Moscow-inspired and directed. We believe subsequent events will prove Churchill did Greece a signal favor when he balked the Red coup d'état.

Inter-American Conference at Mexico City

REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, I have just returned from Mexico City, where I attended the Inter-American Conference on Problems of War and Peace. This Conference surpassed all expectations, both for the significance of its accomplishments and the depth of the international friendship which it revealed.

The Republic of Mexico was a splendid host for this Conference, which held its meetings in the Chamber of Deputies and the magnificent Chapultepec Castle. The Mexican people manifested the same cordiality as the chiefs of their Government, and every delegation seemed to feel the pervasive good will.

A group from the Congress of the United States acted as advisers to the United States delegate, the Honorable Edward R. Stettinius, Jr., Secretary of State. Members of this group were Senator TOM CONNALLY, chairman of the Foreign Relations Committee, Senator WARREN AUSTIN, of Vermont, Representative EDITH N. ROGERS, of Massachusetts, and myself.

We were invited to participate in all the labors of the Conference, and were impressed not only by the agreements reached, but also by the democratic procedures which were adopted—especially the open treatment to the press.

In my personal opinion, the most significant acts of the Conference were, first, the resolution which endorses the Dumbarton Oaks proposals as a basis for the world security organization and favors participation of the American republics in the world organization, when established; second, the act of Chapultepec, which provides that all the republics of the hemisphere will share the responsibility of resisting aggression, whether from within or without the hemisphere; and third, the program to strengthen the inter-American system with a reorganized governing board of the Pan American Union as the central agency in inter-American relations.

The Conference has helped the war effort by resolutions which strengthen controls against subversive activities of Axis agents, and deny refuge to war criminals in this hemisphere. The economic resolutions assure the steady flow of essential war materials from other republics to the United States during the war, and at the same time outline the measures which will be needed when the termination of the war necessitates transitional readjustments toward normal commerce and industry.

In my opinion, the accomplishments of the Conference will commend themselves to the House of Representatives as being in conformity with the views of that body on these matters, and I believe that the act of Mexico City has already attracted and merited the approval of the public in the United States and the other American republics.

I think that my own State of Texas, no less than all others of the United States, will ultimately benefit greatly by the provision made for satisfactory post-war economic relations. The tremendous publicity attending every phase of the Conference undoubtedly will help eventually to expand the prospective great volume of business and tourist travel between the United States and Mexico.

Lend-Lease Agreement With France Signed

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under unanimous consent to extend my remarks, I include the following article by George Rothwell Brown, well-known and able newspaper commentator.

In view of the legislation facing the Congress, and the implications of such legislation, no Member of the House or the Senate should fail to read this splendid article:

POLITICAL PARADE

(By George Rothwell Brown)

The State Department's lend-lease agreement just signed with France, under which that country will get an undetermined sum for the war, and $2,575,000,000 for post-war reconstruction, is probably perfectly legal.

But it is a use of American financial resources that was not in the minds of the gentlemen of the Congress when lend-lease was enacted in 1941, wholly as a measure of our own national defense.

As has been so often the case in New Deal legislation, the real meat is concealed in the clauses of "exceptions," the "fine print," as it were.

Thus under section 3 C of the original lend-lease law, under which the post-war reconstruction billions are to go to France, it is provided that after June 30, 1945, "Neither the President nor the head of any department or agency shall exercise any of the powers, except—

"Except that until July 1, 1948, any of such powers may be exercised to the extent necessary to carry out a contract or agreement * * * made before July 1, 1945."

The French agreement of course beats the gun of July 1, by a comfortable margin. It provides for repayment by France on all civilian materials accepted after the war ends.

France being already in default to the United States on World War No. 1 it is of course problematical whether this provision is anything more than a friendly wink at an old friend.

No one underestimates the great necessity of France. But there is strong misgivings in Congress as to the ability of the United States to continue indefinitely its generous role of Santa Claus to all the world.

In addition to Soviet Russia, which is reported to be seeking $6,000,000,000 in heavy goods under a provision similar to that in the French agreement, there are said to be a dozen other countries also looking hopefully toward the United States Treasury.

It had been assumed that post-war reconstruction in various of the so-called United Nations were to be provided for under the twin multi-billion-dollar schemes of an international monetary fund, and an international bank, under the Bretton Woods agreement.

It also will be recalled that President Roosevelt has now before Congress a recommendation for the repeal of the Johnson Act, which prohibits private capital loans to debtor nations.

Until that act was passed the United States had financed the world from the private pocketbook of its citizens to the tune of about $5,000,000,000.

The Bretton Woods agreement is coming under an increasingly close scrutiny in Congress. The bills now before Senate and House to carry out its provisions may be a long time in getting through those bodies.

In fact hearings on the House bill will not begin until next week.

Thus the French agreement, which is a sort of trail blazer, indicates perhaps an unwillingness on the part of the administration to await the slow processes of Bretton Woods.

Meanwhile, a bill is before the House Foreign Affairs Committee to extend the lend-lease law for a year from June 30 of this year.

The committee probably is unanimous in favor of the continued extension of military aid, but a hitch has occurred over an entirely new provision, which would extend the power to carry out contracts or agreements already entered into, not for the heretofore period of 3 years, which would bring the period to June 30, 1948, but for 4 years, which would bring it to June 30, 1949.

This, it will be noted, would extend the period for which contracts with foreign governments might be made good by this Government throughout the whole of the Roosevelt fourth term, and into the next Presidential administration which will begin on January 20, 1949.

Census Bureau Report on Women

REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. ALLEN of Louisiana. Mr. Speaker, in the Washington Post of March 5 there was an article by Jerry Kluttz headed "Census Bureau tells about women—in $2,000,000 volume." The writer of the article was evidently misinformed on his facts. Mr. J. C. Capt, Director of the Census, advises me that the information in the volume to which Mr. Kluttz refers was secured in the regular Decennial Census of 1940 and also the census of 1910. The information was collated from one of a number of questions asked in the regular census and no one could fix the cost of simply one question. As to the cost of printing the volume, Mr. Capt advises that instead of costing $2,000,000, as Mr. Kluttz says, the direct cost incurred in printing the report amounted to less than $2,000. The statement was so misleading that it is felt this correction should be made. Mr. Capt has set forth the facts in a letter to me which I am including with my remarks.

The letter referred to follows:

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, March 6, 1945.

Hon. A. LEONARD ALLEN,
House of Representatives,
Washington, D. C.

MY DEAR MR. ALLEN: This letter is written with reference to a statement in the Monday, March 5, issue of the Washington Post, by Jerry Kluttz, that a cost of $2,000,000 was involved in the publication of a recent report by the Bureau of the Census entitled "Differential Fertility: 1940 and 1910—Women by Number of Children Under Five Years Old."

For your information, the direct costs incurred in printing this report amounted to less than $2,000. Of this amount, $750 covered the cost of preparing typed manuscript for the printer, and $1,132.62 was the actual printing bill, according to advice from the Government Printing Office. In the interest of economy, the report was printed by photolithographic method at about one-third the cost of the standard letterpress method.

The basic cost of collecting the information, processing it manually and mechanically, was part of the total cost of conducting the Sixteenth Decennial Census required by the Constitution and the Decennial Census Act. The data utilized in preparing this report would have been collected, as it was in 1940 and in 1910, whether or not this specific report was prepared. Even though already incurred for other purposes of the census, the indirect cost back of this project can be estimated after a fashion on a prorated basis. Accountants generally recognize that this is a difficult problem, however, because it involves joint cost allocations. Arbitrary application of joint cost factors would make the apportioned cost of compiling this report about $49,000 out of the total cost of the population census.

The statistics published in the instant report were based upon information collected in the Sixteenth Decennial Census of the United States conducted in 1940 and the Thirteenth Decennial Census conducted in 1910. They were compiled and published at a low cost because they are a by-product of the inquiries on age and sex which were included in the Census of Population schedule. Ever since the census of 1850, there have been questions on sex and age.

This volume has been published by the Bureau to provide information essential to the prediction of population trends in the United States, and thus deals with a subject that is of the most urgent importance, both in consideration of future national security and of post-war markets and reconstruction. A knowledge of future population trends of this Nation and of other nations of the world will be one of the most important factors to be taken into consideration in international relationships, migration policy, and the maintenance of the peace. Not only are population trends of fundamental importance in the determination of post-war markets, both domestic and international, but military policy itself is dependent upon a knowledge of present and potential manpower of this and other nations.

The statistics presented in the report are useful in forecasting population problems arising from low birth rates and from differences in the reproduction rates of various social and economic groups of the population. This report presents statistics on the fertility of native white and Negro women 15 to 49 years old in the United States, according to the social and economic characteristics of the woman and her family.

By an interesting coincidence, there appeared in the same issue of the Washington Post, in the column adjoining the Kluttz piece, a report from Paris by Edward T. Folliard which bore the headline: "Dwindling Births in France Peril Nation's Future Power." Obviously it is more important that Americans be informed on the factors which have a bearing upon America's future status in the world, and it is also vitally important that American businessmen in planning their programs of production, marketing, and distribution be fully apprised of the factors bearing on the future size of the population which constitutes their market.

The trend of the birth rate in the United States has been generally downward for many years. In the decade of 1930–39, the birth rate fell below the level required for the permanent maintenance of the population. A low point was reached in 1933–34. Despite a temporary increase in the birth rates in recent years, due to the accelerated marriage rate as a consequence in part of improved economic conditions and in part of wartime influences, the downward trend is expected to continue. The statistics presented in this report provide the basis for forecasting the effect upon the Nation's future population of the indicated trends.

It is of further interest to note that the Population Association of America in the January 1945 edition of Population Index, page 7, at the conclusion of a lengthy review of the Census Bureau's report, says:

"The Bureau is to be congratulated on producing with neat economy, high technical efficiency, and timeliness, a body of information that is essential to the proper appraisal of the Nation's population position at the end of the interwar period."

I am enclosing a photostatic copy of the articles by Kluttz and Folliard referred to above.

Sincerely yours,

J. C. CAPT,
Director.

Freedom of the Press

REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. FLOOD. Mr. Speaker, I am devoutly interested in extension of the principles of freedom of the press, freedom of international news exchange, and that all news everywhere shall be equally available at the source to all without delay or hindrance, and I do not want to see any agency given any exclusiveness or any advantage in the matter of availability of Government news. Truthful and unbiased news only can be guaranteed the public when there is equal availability at the source and no favoritism in its transmission.

Convinced of this, it must be the people who shall secure the guaranty of a free press, and any country that comes out of this war with power to impose the terms of peace should insist upon not only a free press but freedom of international news exchange. I come to this conclusion because, having had no freedom of the press in the world and no means of international exchange of unbiased news, this war that now is had to be.

It is for the reasons I have stated, Mr. Speaker, that I direct the attention of the House this afternoon to an article by Mr. Kent Cooper, executive director of the Associated Press, which appeared in the magazine section of the New York Times for Sunday, March 11, 1945.

Mr. Speaker, I now ask unanimous consent that the said article be inserted in the Appendix of today's CONGRESSIONAL RECORD:

TO PREVENT WAR—NO NEWS BLACK-OUT

(By Kent Cooper, executive director of the Associated Press)

I

Nestled in a small space not far from the north bank of the Thames in battle-scarred London is Printing House Square. There—through all that has happened to the British in more than 150 years—there is still published a newspaper called The Times. In its fifty-thousandth issue recently it reviewed the century and a half of its existence, commented on the difficulties of publication,

shortage of materials and of staff, the dangers of continued effort in wartime, and concluded:

"Though, before the sixty-thousandth issue of The Times makes its appearance, science may well have revolutionized the mechanism by which the written word is reproduced and distributed, the fundamentals of journalism will not vary. It will still be the duty of a newspaper to hold fast to the distinction between fact and opinion and, whatever views it may hold and express, furnish for the readers' judgment a supply of news as full and impartial as energy and good faith can make it."

Unfortunately, that declaration of the function of newspapers could not have defined the actualities of newspaper publication in many lands before the war. If it could, there would have been no war. And that is just how transcendently important to peace is "a supply of news as full and impartial as energy and good faith can make it." For news is the sole basis upon which men promptly learn and judge the thoughts and actions of their fellow men who are beyond their immediate local acquaintance.

If, in the news processes, there is intentional and persistent distortion of facts with the purpose of inciting prejudice, men will respond to the passions thus aroused. When the people of one nation are thus incited against the peoples of other nations, the result is war.

The part false news plays in bringing about war is as amazing in its extent as it is little understood. Malevolent-minded governments long have recognized the power of news. Tainting and distorting it, they have used it to serve their selfish purposes. Benevolent and peace-minded governments have not concerned themselves about these distortions by others—until war has overtaken them.

Every country, even though only partly civilized, has laws to punish those who intentionally poison the food of others. Through jealousy or in revenge such crimes have been committed, but usually only one or two lives have been placed in jeopardy. No fiend has yet concocted an attempt to poison the bodies of an entire population of his own or another country. But through jealousy or in revenge there are fiends who, through the news, have successfully poisoned the minds, not of one or two persons, but of a whole nation.

For an understanding of how news has come to play so important a part in the lives of civilized men let us go back to the beginning. Once the town crier spread the news. Then came the newspaper, supplemented later by the broadcasting station. The marvel known as electricity served to bring men into closer knowledge of one another. Actually, the first practical application of electricity for the benefit of the whole people was to bring the news from far and wide. The telegraph, cable, telephone, and finally the wireless annihilated the distance between nations and between individual communities.

In this country each locality was linked with all others, and our whole life integrated into one homogeneous national community. And yet our conception of the importance of news dissemination and publication, for which science furnishes means of instantaneous world-wide transmission, remained provincial; or perhaps we ignored the subject altogether. The news was one of the things to which we had become so accustomed that we thought about it only when we could not get it. While we had seen, unconsciously, what it had done to unify our own country, we had never realized, fully that it contributed more than anything else to synchronized thinking and action.

The news could never have served us as it did and does serve us had it not been for the freedom of the press, which made the printing of that news possible. We had our freedom, we had a press free of Government control which stood guard for that freedom. Satisfied with our own development, we did not greatly concern ourselves with the affairs of the world. Then from our provincial dreaming we were twice rudely awakened to find that science had indeed made our globe smaller. News could no longer be confined principally to our own activities, and with the coming of the Second World War we began to ask curselves where these wars are bred.

II

The history of the European press in the years that preceded the present war reveals clearly how large a part poisoned news played in bringing on the war. That poison was of two kinds—a kind of gray poison that was doing its work almost everywhere in Europe and in Asia before the advent of Hitler, and the utterly black poison that came with the Hitler-Goebbels scourge.

Even in the years before the Nazi blackout, events had given little comfort to those who believed that freedom of information and an honest, responsible press were the surest shields of peace. In almost no country was the truth faced. Typical of the situation, and possibly in its worst form, was what was happening in France from 1919 to 1939.

Not only were Havas, the French news agency, and the French Government in effective league to prevent the full picture of world developments from reaching the French people, but the French press itself all but abdicated its proper responsibilities and functions. Long before the Second World War fell upon the bewildered French people they had been deserted by all but a small fraction of their press.

Newspapers were largely subsidized in one fashion or another. Editors and reporters frequently were on government, party, or business pay rolls and many newspapers were directly controlled by political or financial groups. News columns were bought as a common practice. This was true particularly of the Paris press. There were some independent newspapers, but most of these were in the provinces. The character of the French press was a mighty contribution to the disunity and confusion in which France marched to her catastrophe in 1939–40. And this was the picture in a nation that was considered a democracy.

But the blackest poison was that generated in the thirties in Germany, Japan, and Italy. Then the suffocation of truth in the news was put on a totalitarian basis.

Freedom of the press died with all the other freedoms in Germany on the night of January 30, 1933, when Hitler became chancellor. Newspapers and radio became instruments of a regime with criminal purposes. Editors and reporters became functionaries of the state. Journalism was defined by law as a public task regulated by the state. The Ministry of Propaganda and Public Enlightenment was established under Goebbels. All media of information and expression were crushed into the Nazi mold, all bent to the purpose of whipping the German people into that fanatical frenzy necessary to the savage purposes of the Nazi dictator. By 1939 it was done; the Germans were ready to assume the responsibility for plunging the world into war.

Japan's road into the darkness was similar. The press of Japan never had been free of rigorous Government control, but in the late 1920's there was developing a small group of Japanese newspapermen and thinkers, with an enlightened conception of the responsibilities of the press and the importance of truth in the news transmitted from one country to another. Some beginnings were made toward adaptation of the cooperative principle of news-agency operations.

When the militarists on September 18, 1931, embarked on the conquest of Manchuria and seized the reins of power in Tokyo, they began a revolution of which the significance was little understood abroad. The small element of the press that valued the small measure of freedom previously enjoyed was among the first victims. Terrorism, intimidation, powerful pressures were enlisted to bring the whole press into line. Even the comparatively liberal Asahi newspapers of Tokyo and Osaka eventually had to succumb.

The story of the Italian press under Mussolini's dictatorship followed what we now recognize as the pattern for destroying all freedom of the press.

III

The deep night that blotted out the truth in Germany, Japan, and Italy need not fall on any country again, nor need there be maintained in most countries a murky twilight as far as knowledge of other peoples is concerned. Since it has been proved that poisoned news can generate a war its antithesis, truthful news, should have a chance to prove that it can maintain the peace. Truthful news and a free press can do more than anything to avert war, but the acceptance of both must be real and sincere, not lip service paid to the ideals of a free press in countries which pride themselves on democratic institutions.

We should realize today as we should have 25 years ago that members of this great world family of human beings are either not well enough acquainted or not acquainted at all. Since they do not all live in physical proximity, they can come to know each other only by what they hear and what they read. An exchange of truthful international news would bring acquaintance, and the result of acquaintance would be world-wide community of interest.

If we are convinced that for an enduring peace an international community of interest should be established, we should see to it that America holds out inexorably for the two things that make world-wide community of interest possible—a world-wide free press and a communications system adapted to serve the press everywhere in a truly practical manner.

For myself, I would proclaim now that we expect to accomplish this in the peace. I would not wait until the war ends, would not leave these vital elements to be tossed around upon the sea of indecision and intrigue which always prevail in peace negotiations.

The establishment of a free press involves no expenditures, though it does involve a great deal of practical enlightenment on how newspapers through advertising and subscription rates can maintain themselves independent of political or private subsidy. On the other hand, an international communications system would cost a great deal of money, but it would not cost more than a fraction of 1 percent of the cost of world armament.

With these two instruments available for the establishment of an international community of interest, we shall have at least a groundwork for what might seem now to be utopian.

The blessings of adequate communications and a free press surely were not given to us to exploit solely for our own benefit and to keep just for ourselves. Here in the United States the principle of true and unbiased news was first developed. If we would keep out of another war, then in self-interest we should see to it that the principle is given to the world in a militant effort to improve international relations. Availability of the

truth, the most powerful force in the world, through a free press served by an adequate system of world-wide communications established for the purpose, should be our aim. For we should not forget that when we plan to enshrine freedom in any field the first requisite is the right to know.

Bretton Woods—Why the Hurry?

REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. PLUMLEY. Mr. Speaker, the evident interest which the general public is manifesting in the Bretton Woods plan is a very fine reaction to the situation generally so far as the body politic is concerned.

As evidenced by the many letters and telegrams I have received pro and con with respect to the consideration which it is insisted ought to be given to the matter by the Congress, this plan for international monetary stabilization and the establishment of a world bank has aroused general public interest. That is good, anyway. The arguments offered me are both for and against the plan itself as announced. This is a peoples' war and a peace for posterity which we contemplate.

It cannot be successfully denied that the plan furnishes a substantial basis and a foundation, at least, for action. That is not to say that its particular recommendations and the methods of accomplishment it proposes should be adopted by Congress in toto or as written without and until after very careful consideration by the representatives of the people.

STATE DEPARTMENT

Dean Acheson, Assistant Secretary of State, appearing before the House Banking and Currency Committee, suggested that the response of all sections and groups in the country to the proposals makes it clear that the people are determined to meet resolutely the tasks and responsibilities of international collaboration and warned that the world faces only tragic woe if nations are permitted after the war to slip into a new wave of economic warfare.

C. I. O.

Philip Murray, chairman of the powerful C. I. O., wrote the chairman of the committee to the effect that his organization pledged its support to the commitment of the United States to the Bretton Woods program, not dotting an "i" or crossing a "t."

THE PEOPLE

On the other hand, those who oppose the plan suggest, among other things, that the agreement constitutes an effort to evade the constitutional provision for ratification of treaties by the Senate; fails to set up sufficient safeguards for vital American interests; makes it possible for representatives of foreign governments to destroy American export markets by placing control of our tariff policies in foreign hands, and by so doing opens American markets to an influx of foreign products; ratifies defaults of foreign debtors and merges the sovereignty of the United States in the machinery of a supergovernment; all of which charges are interesting, if true.

If the plan does, in effect, or in fact, commit us to an international W. P. A. program, and other programs of a similar nature, as it is alleged to do by its opponents, then, of course, it should not be adopted as written. It should be so modified as not to do those things, for that spells the beginning of the end of democracy.

TREASURY DEPARTMENT

Dr. White, the Treasury Department's Assistant Secretary, says that America did not get everything out of the Bretton Woods Conference but stands to gain more than any other nation. He insists that world recovery and future peace will be impossible unless we have the stabilization agreement and the international bank called for in the Bretton Woods agreement. Only the intense consciousness of the nations of the world that only some such system of economic cooperation can and will save us from an era of tragic chaos, could have effected the adoption of the agreement by the representatives of the people who shape the central-bank and treasury policies of all the interested countries.

LEND-LEASE

If lend-lease is to provide equipment for post-war use under provisions for repayment over a long term of years, then the question arises—and it is a highly pertinent one, for our resources are limited and daily growing more and more so—Why is it necessary for us to become participants in a world bank or why should be enlarge the Export-Import Bank? We should take time to find the right answers.

It has been said, and truly, that "We cannot continue for several years after the war to supply billions of equipment to foreign countries and, in addition, lend billions of dollars to foreigners that would entail further inroads on our supplies of essential goods and machinery, without consideration for domestic needs. This is not an argument against participation in the world bank or extension of long-term loans but, rather, a warning that we must make sure that our promises do not exceed our ability to perform."

There are a good many people who express concern because of the alleged determination of the administration to drive the Senate to early and favorable action. A poll of the Senate, so it is alleged, shows a majority sentiment for approval, but some amendments have been suggested.

WORLD-WIDE NEW DEAL

Some people do not forget that Secretary of Commerce Henry A. Wallace, according to the newspapers, said at Omaha in 1942, "the United Nations are fighting for a world-wide New Deal" after the war. It is agreed that if such is the case and a world-wide New Neal is contemplated, it would most easily be brought about by means of international economic agreements.

MARK SULLIVAN

My attention has been called also to the fact that Mark Sullivan has recently said that—

MRS. ROOSEVELT AND WORLD REVOLUTION

Mrs. Roosevelt, in a magazine article written in 1942, entitled "What We Are Fighting For," went further than Wallace. She said the war is a kind of world revolution. That she understood this to include economic revolution is shown by her statement that one of the objectives of the war is a world economy guaranteeing to all people free trade and access to raw materials.

A world-wide New Deal, as predicted and approved by Wallace, would mean application to the world as a whole of the New Deal instrumentalities already practiced in the United States.

SECRETARY MORGENTHAU

Then, there are a lot of people in this country who are not so sure that Secretary Morgenthau's advice is always so good with respect to international finance They cite cases to support their arguments; what they say should at least invite our careful attention.

NONCOMMITTAL

I have not committed myself. I admit that I am inclined to favor adoption of the plan substantially as drawn. However, I have to be shown that the plan will work out as its advocates declare it will and not as its opponents say it is bound to work out, disastrously to democracy.

Of one thing I am sure and that is that there is no need for such a great power politics rush. Since time permits, why not do as careful and considered a job, in the interest of the future in the present, as can be done in advance?

PERPETUAL PEACE

We are working for perpetual peace. It can neither be planned hastily, nor achieved without due deliberation. We will make time and save time by taking time to know what, in these times, we are undertaking to do in perpetuity.

THE WAR

The war is far from over and haste makes waste.

U. S. S. "Helena" Receives First Navy Unit Citation

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, it was with great pleasure that I received the news this morning when I was informed that the U. S. S. *Helena*, sunk at Kula Gulf, was the first naval vessel to receive the newly created Navy unit citation.

We of Montana are extremely proud of this great honor. The part played by

the *Helena* in getting our country's counteroffensive started against Japan was outstanding. She was a real fighting ship and though she was eventually sunk she exacted a huge toll in Japanese ships and personnel before she went to the bottom.

The new U. S. S. *Helena*, when completed, will carry on the glorious tradition of her predecessor. We of Montana will watch with interest her progress and in time we will have the same pride in her that we had in the old *Helena*.

Mr. Speaker, under unanimous consent I am inserting an article from this morning's Washington Post as well as a previous exchange of correspondence covering an awarding of the Presidential citation unit between President Franklin D. Roosevelt and myself.

[From the Washington Post of March 12, 1945]

CRUISER "HELENA" FIRST NAVY SHIP TO WIN UNIT CITATION

The light cruiser *Helena*, one of the fightingest ships of the fleet until a Japanese torpedo sent it to the bottom of Kula Gulf, became last night the first naval vessel to win the newly created Navy unit citation.

All personnel serving aboard the ship during one or more of the three engagements in which the *Helena* distinguished herself are authorized to wear the unit commendation ribbon.

The ship's citation commends her for "outstanding heroism" in action in the central Solomon Islands.

In the night battle of Guadalcanal, the *Helena* was credited with "rallying our own forces after the flagship had been disabled and contributing to the enemy's defeat."

APRIL 3, 1944.

Hon. FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: I am writing you in behalf of the citizens of the State of Montana to request that a Presidential unit citation be granted the U. S. S. *Helena*, sunk in the Battle of Kula Gulf, and its crew. It is not necessary for me to go into detail concerning the many magnificent exploits of that ship, named after the capital of my State, but suffice it to say that in all her 13 major naval engagements the *Helena* performed its part extraordinarily well and was responsible for a great loss in tonnage and personnel in the Japanese Fleet.

We in Montana feel a special pride in the *Helena* because of her exploits and because of the fame it has brought to our capital. The exploits of the *Helena* were vividly brought to the attention of the people of Montana during the Third War Loan drive, and as a result our allotment was oversubscribed tremendously. The story of the *Helena* has been carried in all our newspapers, and its heroism is known to every man, women, and child in Montana.

Will you please give this matter your most serious and earnest consideration?

Most respectfully.

THE WHITE HOUSE,
Washington, April 20, 1944.

Hon. MIKE MANSFIELD,
The House of Representatives,
Washington, D. C.

DEAR MR. MANSFIELD: I am glad to have your letter of April 3, 1944, by which you recommend the U. S. S. *Helena* for the Presidential unit citation. I followed with interest the many fine performances of the *Helena* during the course of her career, and I was, therefore, glad to forward your recommendation to the Navy Department Board of Decorations and Medals for consideration. That Board has before it all of the facts about all ships in the Navy, and it recommends awards for outstanding service in the same manner that it does for individuals.

I am informed that, fine as was the record of the *Helena*, the standards of her contemporaries are also so high that she cannot, in fairness to others, be singled out for individual citation. The acts of many of her personnel have been recognized by citations, and I join with you in applauding those citations.

Sincerely yours,

FRANKLIN D. ROOSEVELT.

Sgt. Alexander Drabik, of Holland, Ohio, First Doughboy To Cross Rhine River

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. RAMEY. Mr. Speaker, confusing statements have been made on the floor of the House as to who was the first American soldier to cross the Rhine. In asking permission to extend my remarks, I am enclosing an article from the Toledo Blade of Saturday, March 10, an Associated Press dispatch indicating that the first American soldier to cross the Rhine was Sgt. Alexander A. Drabik, of Holland, Ohio.

I am most happy and proud to announce also that the Ninth Armored Division was under the command of Maj. Gen. John W. Leonard, a native Toledoan.

SGT. ALEXANDER DRABIK, OF HOLLAND, OHIO, FIRST DOUGHBOY TO CROSS RHINE RIVER

(By Don Whitehead)

ON THE RHINE BRIDGEHEAD, March 10.—A 34-year-old Ohio sergeant has been singled out as the man first across the Rhine in the daring establishment of the United States First Army's bridgehead.

Without detracting glory from other soldiers in the history-making coup, Brig. Gen. William M. Hoge, Lexington, Mo., whose Ninth Armored Forces took the Remagen Bridge, named Sgt. Alexander A. Drabik, butcher boy of Holland, Ohio, as the outstanding hero of the day.

General Hoge said yesterday a careful check disclosed Sergeant Drabik actually was the first American to step on the east bank of the river in the forefront of 10 riflemen shooting as they ran in a wild dash which so astounded the Germans they failed to blow up the vital structure.

Also in the vanguard of the first Americans over the river was Lt. Emmet Burrows, Jersey City, N. J., officer whose platoon was in the initial fighting.

And today it was disclosed that the first tank to roll into the now solidly held bridgehead carried sons of four States.

Hitting the shore Wednesday, the tank was manned by Sgt. William B. Goodson, Rushville, Ind.; Corp. William E. Richards, Shrewsbury, W. Va.; Pvt. Berthold Fried, Shade Hill, S. Dak.; and T/4 Robert A. Jones, McKee, Ky.

Sergeant Goodson was in command as the iron war horse crashed through the murky night, Private Fried, the cannoneer; Corporal Richard, the gunner, and T/4 Jones at the controls.

Sergeant Drabik was called to General Hoge's command post yesterday to be interviewed.

Still grimy from combat and cradling an M-1 gun in his arm, the raw-boned Ohioan spoke in simple, matter of fact phrases of one of the war's most dramatic moments.

"It was like this," he said. "Lieutenant Timmerman (Lt. Carl Timmerman, West Point, Nebr.) told us to go across the bridge, with the first platoon leading.

"I've got the third platoon of a rifle company. We had fought through Remagen to the river and our company was at the edge of the town about 200 yards from the bridge.

"I waited until the first platoon got out on the bridge, but they were held up by machine gun and sniper fire from those big stone towers at the eastern end.

"When I brought up my men the first platoon was keeping the Geramns in the tower busy. So I went by them and yelled to my men to go across, firing into the tunnels in the hill on the other side."

Sergeant Drabik said the first platoon had the Germans "pretty well down" with their fire.

"We ran down the middle of the bridge, shooting as we went. I didn't stop because I knew if I kept moving they couldn't hit me. My men were in squad column and not one of them was hit.

"All of them are good boys. Eight of us have been together since I went into the Army in November 1942.

"We had a machine-gun squad coming up behind us to clear out the tunnel in the hill, but they were not firing because there was too much danger they would hit us.

"What were the Germans firing at us? Well, I swear I don't remember. It's funny, but there was so much shooting I don't even remember whether there was any artillery.

"I kept thinking if we could keep the Germans on the run and win out, then we could cross the Rhine on their own bridge.

"That's what I kept thinking. I didn't think much about them blowing up the bridge while we were on it, although I figured anything could happen. All I was worrying about was getting over and organizing the other end so we could get our armor and men across.

"We got past the towers all right and the first platoon came in behind us and cleaned them out. Then I go to the end of the bridge to see if any of the enemy were around. We left the Germans in the tunnel to the machine gunners.

"We ran down about 200 yards and then I got my men into skirmish line to hold the enemy if they did come. We took cover in some bomb craters. Then we just sat and waited for the others to come in.

"That's the way it was."

RHINE CROSSING TURNED INTO SHOW FOR TOLEDO BY GENERAL, SERGEANT—NATIVES OF LUCAS COUNTY LED YANKS STORMING BRIDGE

(By Eleanor Coakley)

Looking at the crossing of the Rhine from the viewpoint of the folks back home, it seems to be pretty much Toledo's show.

It was the Ninth Armored Division of Maj. Gen. John W. Leonard, native Toledoan, which captured the Remagen bridge, and it was Sgt. Alexander A. Drabik, Holland and Toledo, who was first across the bridge, leading his platoon through a barrage of enemy machine-gun and sniper fire.

Sergeant Drabik's parents, Mr. and Mrs. John Drabik, Sr., received the news of their son's heroism with pride and joy but little surprise.

HERO IN MANEUVERS

He was a hero before he ever left overseas, his father revealed, relating how the

sergeant had rescued a group of some 120 men lost in the California brush land while on maneuvers.

Born on the 80-acre farm in Wolfinger Road near Crissey Road, where his parents still live, Alex was a farmer first and last, his father said.

Although he took a job with the Folger Packing Co., he worked in the fields in his free hours, "as long as it was light," Mr. Drabik continued. He's still planning to come back to farming.

CHARACTERISTIC SHYNESS

The 34-year-old soldier-farmer has the characteristic shyness of so many heroes.

"When he was home on leave he took the chevrons off his sleeve," his parents related. "He didn't want to be anything but a common soldier."

"Alex was the most bashful guy you ever saw when it came to meeting girls," a cousin, Walter Drabik, told the Blade. "I used to see him help his father slaughter pigs on the farm, and later he slaughtered pigs at the slaughterhouse. Nothing ever bothered him but girls."

Sergeant Drabik may have inherited his shyness from his gray-haired mother, who demurred at having her picture taken and appealed to her husband for confirmation of the news that their son was a hero.

MOTHER VERY PROUD

When reassured, she spoke quietly in Polish, "I am very proud."

A brother, Victor, was less restrained. Throwing his hat into the air, he shouted, "Hurrah for Alex."

Two other brothers, John, Jr., and Charles, live near Toledo. Alex is the youngest of the 4 and one of 10 children.

Mr. and Mrs. Drabik came to this country from Germany in 1898 and all but the eldest of their children were born here.

Mr. Drabik, who is 82, is carrying on alone on the farm, but says he won't be able to do much this spring without Alex. All the other sons have left the farm for homes of their own.

Sergeant Drabik was inducted October 25, 1942, and received his basic training at Fort Riley, Kans. He received additional instruction in camps in California and Louisiana and served as an instructor before going overseas last August.

Ship Construction

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a letter on the subject of ship construction from Admiral Vickery and a summary from the Maritime Commission showing tonnage deliveries under the Maritime Commission's program through February 1945:

UNITED STATES MARITIME COMMISSION,
Washington, D. C.

The Honorable S. O. BLAND,
Chairman, Committee on the Merchant Marine and Fisheries,
House of Representatives

DEAR JUDGE BLAND: Believing it will be of interest to you, I am enclosing a tabulation showing monthly deliveries under the Maritime Commission's program to the end of February 1945.

During February, American merchant shipyards delivered 125 vessels of 1,300,340 tons deadweight. As of March 1, deliveries since the United States' entry into the war totaled 4,573 ships with an aggregate tonnage of more than 46,000,000. This represents an average output over a period of 1,179 days, of 3.9 ships—39,300 tons—every 24 hours.

With kindest regards, I am,

Sincerely yours,

H. L. VICKERY,
Commissioner.

Dead-weight tonnage of ships delivered under the Maritime Commission shipbuilding program

Month	1939	1940	1941	1942	1943	1944	1945

Late-Shift Workers Find Curfew Tough

EXTENSION OF REMARKS

OF

HON. BERKELEY L. BUNKER

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. BUNKER. Mr. Speaker, under leave to extend my remarks, I am including a news article which appeared in yesterday's Times-Herald:

Postmidnight hungry Washingtonians and visiting servicemen are finding the Capital a hard place in which to munch a hamburger or dawdle over doughnuts and coffee—all because of the much debated Byrnes curfew.

Workingmen and women, who get off after midnight also claim the curfew is a real hardship. Many of them have worked for hours and say they feel the need of and should be able to get, a good meal.

But their eating problem, none too good at best because of their odd hours, is made worse as they become lost in the hordes of pleasure-bent patrons who storm every available all-night beanery with the 12 o'clock closing of other places.

Saturday, particularly, when thousands of servicemen are in the city on week end passes, finds the all-night spots jammed to the doors.

This past week end found many who couldn't get a seat in the crowded beaneries. Some of them bought coffee and sandwiches "to go" and repaired to the nearest automobile running board where they munched away.

Police, the War Hospitality Committee, information booths at Union Station, and even the Library of Congress get calls from strangers who want to know where to go in the search for food.

The Texas Chili Parlor, 1900 block Pennsylvania Avenue NW., which is fighting the midnight closing, had to turn hundreds away yesterday morning, according to Mrs. Barbara Abbott, night manager.

White Towers, Blue Bell, and other chain shops were jammed. Long lines formed outside the California Kitchen and the one or two other all-night spots where the menu is slightly more elaborate than hamburger, doughnuts, and coffee.

Under the Byrnes curfew order, only eating places which customarily remained open all night may stay open past midnight.

The Lamplighters Club, an after-hours entertainment spot which opens at 12:02 a. m., is a second place which is fighting the curfew. Owners of the establishment point to the fact that they're closed at the hour the curfew takes effect, but open later in the day—2 minutes later.

Mr. Speaker, on March 5 I introduced H. R. 162, which was referred to the House Rules Committee, calling for an investigation into the facts which prompted the so-called curfew order.

I ascertained first that no written order actually had gone out from Mr. Byrnes.

Secondly, I questioned the constitutionality of the order as the War Manpower Commission proposed to enforce it.

If it was to save light and coal, as the press implied, rationing was the method to use as it is used to conserve tires, gasoline, sugar, and other products.

If it was to save manpower—we have the draft and Congress is already at work on the manpower problem.

In the same edition in which the aforementioned column appeared, there is a seven-column picture showing long lines of servicemen and swingshifters waiting after midnight to get into one of the few Washington restaurants which do not serve liquor. The hardship imposed upon these patriotic people is obvious. There are millions like them in every big city.

Further studied consideration of the curfew order makes it appear to me more and more like another dictatorial decree intended to condition our people for the very kind of despotism against which our boys and girls are fighting.

I am informed that the Manpower Commissioner is considering certain revisions in this order. I am awaiting an announcement anxiously. Unless these revisions are in line with constitutional mandates, I shall continue to press vigorously for investigation or legislation, if necessary, to correct this situation.

District of Columbia Population Up 35 Percent in 4 Years; 48 Percent Rise in Food Prices

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. PLUMLEY. Mr. Speaker, as Will Rogers was accustomed to say, all I know about it is what I read in the papers, from which it appears that there has been a 35-percent increase in the population of the District between April 1940 and July 1, 1944, or a population of 926,260 as of last July.

Incidentally, despite the fact that six or seven, perhaps more, millions of men have been sent overseas, the total continental population has increased from 131,669,175 to 132,563,271 in the 4-year period.

As against this population increase in the District, the man responsible for purchases for the city's public hospitals and institutions reveals the fact that food prices were 48 percent higher than in the pre-Pearl Harbor period. This was within the O. P. A.'s province to try to control.

I suppose you know that:

The municipal government has discontinued clam and oyster dishes on its institutions' menus because clams have advanced 159 percent in price between September 1941 and September 1944, while oyster prices increased 130 percent in the same period, Brennan said.

Fresh fruit and vegetable costs have risen all the way from 21 percent for celery to 239 percent for apples, his report added. White potatoes rose 173 percent in price over the 3-year period, while corn jumped 181 percent and carrots 169 percent.

FISH UP 120 PERCENT, MEAT, 34 PERCENT

Fish products were 120 percent more expensive and meat averaged a 34-percent increase. No fair comparison on the relative prices of fresh meat can be made, however, Brennan insisted, since the "quality of meats now being ordered is inferior to quality received in 1941" and "contractors have the right to supply only what is available to them under Government quotas."

The purchasing officer said Government agricultural price supports and subsidies have made it difficult to reconcile some of the increases.

FLOUR UP MORE THAN BREAD

Unless subsidies keep the prices of bakery products down, he explained, there is no apparent reason for hard and soft wheat flour costs increasing 72 percent in the last 3 years while Procurement Division contractors supply bread and rolls at prices only 10 percent higher than in 1941.

Average increases as reported in percentages by Brennan for 15 major foodstuffs are: Fresh fruits and vegetables, 93; butter, 20; poultry, 60; fish, 120; eggs, 34½; milk, 10; cream, 45; flour, 72; sugar, 20; oleomargarine, 32; coffee, 33; bread and rolls, 10; canned fruits and vegetables and juices, 65; meat and meat products, 34; and lard, 57.

So the question arises country-wide, Why spend so much money to support the Office of Price Administration to protect us against the inevitable because of the unworkable set-up, legislatively and administratively?

Prices are not being controlled. That is evident. They cannot be controlled under the law as written. That is obvious.

The proof of the pudding is found in the facts the people have to swallow. Why do they choke themselves to death?

Address by Hon. Jose Castillo Torre Welcoming Delegates to a Meeting of the Permanent Commission of the Congress of Mexico

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, March 12, 1945

Mr. AUSTIN. Mr. President, on February 28 there was held a session of the Permanent Commission of the Congress of Parliament of Mexico, in the Chamber of Deputies, at which delegates from the American republics were welcomed. In welcoming the delegates Hon. Jose Castillo Torre, a Senator from Yucatan, delivered an address which to me appears to be so important from a historic point of view, giving the background of the amicable relationships among the American republics, that I caused the address to be translated into English, and I now ask unanimous consent to have the English translation of it printed in the Appendix of the RECORD.

There being no objection, the translation of the address was ordered to be printed in the RECORD, as follows:

[Translation]

Honorable representatives of the United States and Hispanic America, I realize that my weak voice does not possess the eloquence called for by this magnificent occasion, on which the Permanent Commission of the Mexican Congress welcomes you as legislators in the service of democracy and the ideal of solidarity of the American nations. Destiny has charged me with a great honor, a rare opportunity, that of speaking before those who are masters of the art of expression and who so thoroughly know the secrets of eloquence.

Since it is not from temerity that I speak, but rather in faithful discharge of an honorable duty, I ask your indulgence, honorable representatives. Counting upon it as a good omen, may I begin this greeting by stating that the friendship of Mexico for her sister republics of America has always been unblemished and complete, generous and gallant, disinterested and wholly noble, like that which impelled the famous Baron von Humboldt to journey 40 days up the Magdalena River to show his affection for the learned José Celestino Mutis.

It is fitting to add that Mexico considers her friendship equally reciprocated by your own. Have you not come from afar, so that under the blue transparency of our mountain-rimmed sky—a clear and limpid crystal of historic perfection—we may cut the moral diamond of a more just, a more human, concept of the world and of life? In this spirit did Emerson, his imagination caught by the splendor of a star, cross the Atlantic to meet Carlyle.

The root of our common destiny, honorable representatives, go far back into the world of the captaincies general and the viceroyships, of mendicant missionaries and soldiers of fortune. The same many-hued tradition is woven into the fabric of the history of our peoples, and colors that fabric with the development of political and social institutions. The same high wind of adventure and danger on the Atlantic seaways blew upon the caravels which carried our forefathers beyond the Sea of Darkness, that superstition invented by Egyptian high priests of Isis around the mythical and opulent palace of Poseidon, the city of Atlantis with its golden gates. Our kindship, therefore, dates back many centuries, and our friendship springs from the mutual enjoyment of the glorious inheritance carved by our forefathers along the mountain chains extending from the highlands of Nebraska to the southern confines of Chile. These forebears still bring us together around the family hearth to listen to tales of their deeds. The memory of these deeds vivifies the past and illumines it with the brilliant procession of explorers of the Amazon, the seekers of Cibola and Quivira, wayfarers to the Spice Islands, and caballeros bewitched by the enchantment of El Dorado.

Memory bows to these iron-willed ancestors who journeyed from one tropic clime to another, from Cancer to Capricorn and back again, who daringly explored the mouths of great rivers, and fearlessly lost themselves in the depths of great forests. And this took place, honorable representatives, in the Homeric age of the Conquest, in time of Hernán Cortés, and Pedro de Alvarado, of Pizarro and Valdivia; a time when Alvar Núñez de Vaca covered 700 leagues in a few days, and when the extraordinary Vasco Núñez de Balboa discovered the magnificence of the Pacific Ocean; an epoch in which our Indian forebears replied to our white forebears with the massacre of the Bay of Mala Pelea, the fire of Tenoxtitlán, the heroism of Cuauhtémoc, the stoic grandeur of the bronze-haired Inca, and the indomitable bravery of the Aracuanian. [Loud applause.]

Then, honorable representatives, came the forefathers of colonial times, of the days of independence, of the difficult forging of our Nation. All those ancestors now protect us with their name, guide us with their invisible hands, wise and hallowed, and point out to our countries their direction and destiny.

It is impossible to think of the destiny of our America without turning our eyes to the past and meditating on the heights which dominate the panorama of history and light it with an unending procession of torches. Each hero is like a pinnacle in the mountain chain of that history, and each heroic deed is like a torch on the summit of that pinnacle.

Let us pause and gaze upon those heights, which have been the Mount Sinai of American solidarity. And what do we behold? A great sunlight which bathes the peak in colors reminiscent of the insignia of Great Colombia. The landscape is filled with deafening noise, wherein may be heard a blare of trumpets and clang of armor in the mad gallop of a thousand horses. The wind which blows is the same wind that opened its shining red fan over the fields of Boyacá and

Carabobo, of Junín and Pichincha. On high appears the face of the hero surrounded by his captains and soldiers. The southwest wind blowing from cold heights tanned their skins and the love of liberty inflamed their souls. The vigor of life gives movement to the picture and lends imposing majesty to the voice which proclaims the unity of America.

What sound is that which rings on the mountainside and echoes over rushing streams? It is the voice of Simon Bolivar.

One hundred and thirty years have passed, honorable representatives, since the day when the liberator announced, in his famous letter from Jamaica, that the hour would strike when the peoples of America would unite in an august congress to consider the problems of war and peace with peoples of other parts of the world. Through the years, at quickened pace in recent times, American solidarity has perfected its beautiful rhythm. The declaration which ended the Chaco war and demonstrated the effectiveness of the solidarity of the Continent; the Conference for the Maintenance of Peace, held at Buenos Aires; the Eighth Pan American Conference of Lima; the Consultative Meetings of Panama, Habana, and Rio de Janeiro; the Inter-American Conference on Problems of War and Peace now taking place in Mexico City; all these things unmistakably proclaim that the transmuting power of time, the father of history, has brought into living reality the dream of Simon Bolivar. [Applause.]

We should acknowledge here, honorable representatives, that continental solidarity is indebted to the United States for the marvelous binding power of democracy, and that our Hispanic American nations found in it the republican creed which meant to them, as the famous Chilean thinker, Jose Victoriano Lastarria realize, the possibility of regenerating their European political heritage based on the Roman principle of force, on the imperium unum, chief inspiration of the despotism of ancient kings and modern Caesars.

Community of political ideas—the democracy of the North is already an accepted dogma for our America—represents a human factor of solidarity as profound as that of language and race.

If the United States of America has influenced the regeneration of the political customs of our continent, it is because that Nation was born of the most enlightened republican thought of England. It is because North American democracy was born, not in 1776 in Virginia, but in the long and bloody battles fought in defense of liberty and justice by the indomitable English barons against their early kings. The emigrants who landed during the seventeenth and eighteenth centuries on the coasts of Virginia and New England were descendants of those English barons. The Puritans of Plymouth, the Mayflower Pilgrims who came to Cape Cod, as well as later colonists who were to become the founders of the greatest and most flourishing Republic in the world, were heirs of the men who forced the Magna Carta upon King John, defended the prerogatives of Parliament, won the right of habeas corpus from the Stuarts, and obtained the Bill of Rights from William of Orange.

The Republic was already conceived, as the honorable Representatives are all well aware, in the English Puritan doctrines of the eighteenth century. This is why American colonial documents or charters abounded in the purest democratic principles, as befitted the men who proclaimed them and who were equal in station and fortune, men who knew how to share their faith and their sufferings. That is why the King of England could remark that the Charter of Massachusetts was based on freedom of conscience.

Freedom of conscience, the cornerstone of democracy, brings to memory one of the most generous and notable men in the history of the United States. I refer to Roger Williams, the young Protestant pastor of Salem. The memory of Roger Williams is a symbol of the eternal battle waged by the defenders of liberty against the standard-bearers of despotism. It rises in glorious splendor, shining in the annals of America at the zenith of its historic sky, as if to lure a thunderbolt at the tyrants who, fighting against the eternal principles of the justice of life, stubbornly worship hatred and death at the bloody altar of our iron age. [Long applause.]

Roger Williams was a victim of political despotism and endured the bitterness of religious intolerance like so many other unfortunates of yesterday, today, and tomorrow; but far from being dismayed by misfortune, and obeying one of those voices of eternity which inspire and guide the immortals, he resolved to found the city of Providence that it might serve as a refuge for all those who were oppressed.

How brightly shines the name of Roger Williams, honorable representatives, through the shadows which darken our world with the cruelest suffering; and how firm must be the faith in a system of democratic liberty that enables a country to give to the world the high example of virtue of the founder of Providence. [Applause.]

We believe that the good-neighbor policy is a further expression of the love of liberty, respect for justice and moral teaching of men like the founder of Providence; we have faith that each day will increase the influence of George Washington, Alexander Hamilton, Jefferson, Franklin, Lincoln, and Franklin Delano Roosevelt; we believe that the good-neighbor policy will rest upon foundations of concrete and eloquent deeds; that it will not operate in a vacuum, but be able to achieve, through vigorous and common effort, true solidarity in the field of material progress and in the mighty realm of the spirit. We believe that the tragic countenance of the filibuster Walker will disappear forever from the horizon, and that this time it will not be Aaron Burr's criminal rashness which will murder Alexander Hamilton, but rather will it be Hamilton who will punish Aaron Burr.

We shall not conclude this brief and modest greeting, honorable representatives of the United States and of Spanish America, without first paying heartfelt and grateful tribute to the millions of men who are fighting for democracy and for world freedom. We know that their sacrifice is the price of the life of tomorrow.

On the vast altar of war, the United States is placing the incalculable wealth of the blood of its finest and most generous youth. On the same pyre Hispanic American youths are offering the tribute of their simple and unstinting lives. There is no circle more sublime than the sacred one of heriosm and death, nor is there one in which the destinies of the two Americas could more rightly be fused.

Tinged with the blood of heroes, the America of the future can already be perceived—an America, one and indivisable.

Soon, honorable representatives, you will be returning to your homes. When you do and whenever you pluck a petal from the flower of nostalgia, remember that Mexico is a vibrant arrow in the quiver of America; remember that with good reason history called the greatest Mexican warrior by the symbolic and celestial name of Ilhuicamina: "the hunter of heaven."

This is the time for action and for remembrance and for a united course. And, according to the words of Marti, the bleeding hero of Dos Rios, we must march in "closed ranks, like the silver in the heart of the Andes"; we must mark, I make bold to say, in a compact group, like the arrows in the quiver of Ilhuicamina. [Long and hearty applause.]

Unanswered Questions

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, March 12, 1945

Mr. BUTLER. Mr. President, I should like to have printed in the Appendix of the RECORD an editorial entitled "Unanswered Questions," by David Lawrence, which appeared in the United States News for March 9, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNANSWERED QUESTIONS

(By David Lawrence)

AMERICAN PEOPLE HAVE RIGHT TO KNOW ALL THE FACTS BEFORE THEY ARE COMMITTED TO PARTICIPATION IN EUROPEAN AFFAIRS—LASTING PEACE CANNOT COME FROM BROKEN PLEDGES OR COMPROMISES BY HEADS OF STATES IN PERSONAL CONFERENCES

Decisions of far-reaching importance affecting all of us have been made. The American people face a new role in world affairs. They have been committed by their President to intimate participation in European affairs, European controversies and European politics. But we are told that this cannot be helped, that there is no middle ground, that we must accept our full measure of responsibility if we want peace.

But what shall be the method of our participation, the process by which we exercise our influence as well as our power in the stages leading up to the emergency? Shall it be a game of chance in which we do not know the cards till the show-down comes or shall it be a partnership of free peoples in which we and other peoples have access to all the facts before commitments or decisions are reached?

Clearly we may all agree with the objective—world peace—and yet disagree with the system of personal and private conferences whereby three men carve up European territory without allowing the corrective influences of public opinion to be operative and without, indeed, taking the people into their confidence on the reasons why pledges solemnly given already during this war are casually, if not flagrantly, disregarded by our allies. If we are to build a peace, we cannot do so by condoning the aggressive behavior of the head of a state who is not responsible to any Parliament or Congress, nor can we look with pride on the two other heads of state who now defend their "compromises" and destruction of principle on the ground that expediency and "give-an-take" left no alternative.

Is this the new order in the world—the reign of law and justice? Are we to establish a set of councils and boards in the United Nations organization which are to go through the motions of handling international problems while actually three men, sitting down in secrecy and seclusion, trade with one another? And are we then to be confronted with an accomplished fact and told there is nothing else we can do but accept what has been agreed upon?

Let us, therefore, insist through our legislative body that frank and full answers be given to pertinent questions. Let our people go into Europe at least with their eyes wide open and their facts before them. Here are some of the questions that should be answered satisfactorily by our own Government

if the American people are wholeheartedly to commit themselves to compulsory military service, burdensome taxes, and a big standing army in order to police Europe or at least to prevent it from breaking out in a third world war:

1. Why was no verbatim record kept of what each of the "Big Three" said at the Yalta Conference? If the Prime Minister had a record kept of what he said, why have we no record of what Marshal Stalin or our President also said?

2. What are "some of the other arrangements made at Yalta" which the President, in his prepared text given to the press before he spoke to Congress, said would require ratification by a two-thirds vote of the Senate?

3. Why does the President say now that at Teheran in December 1943 long-range military plans were laid but "no political arrangements were made and none attempted," when Prime Minister Churchill in his speech to the House of Commons on December 15, 1944, and again last week, told how he raised the question of the Polish boundary at Teheran and agreed with Marshal Stalin on the Curzon line? Why was this information withheld from the American people during 1944?

4. If, as the President now says, the 14 months between Teheran and Yalta made too long a lapse "without conferences of civilian representatives of the three major powers," why didn't the Secretaries of State meet and why is the idea of "periodic meetings of the Foreign Secretaries of Great Britain, Russia, and the United States at intervals of 3 or 4 months" offered suddenly now as a new discovery in diplomatic intercourse and as a great accomplishment of the Yalta Conference? Didn't Secretary Hull go to Moscow in November 1943 and meet there with the Foreign Secretaries of Britain and Russia?

5. Supposing we grant that there was comradeship and good feeling when President Roosevelt yielded to Marshal Stalin and made possible unanimous agreement, does this augur well for the affairs of the United States in the next 25 or 50 years when these same three men may be subtracted by fate from sitting together as the heads of state? What access have we to Russian public opinion and can we be sure that decisions as to war or peace will be made by the Russian people and not by their totalitarian executive, and isn't this the crux of the whole problem however much we want to camouflage our concessions to the "might makes right" doctrine which really won out at Yalta?

6. Why didn't the European Advisory Commission, created at Teheran and sitting in London ever since, deal with the questions that arose in Italy and Greece and Poland? What assurance has the world that if joint action was discarded when publicly pledged once, it will not be discarded again when it suits the convenience of any state to take unilateral action?

7. Why was the military coordination announced so enthusiastically at Yalta not achieved before Yalta? Why was there an announcement at Teheran telling the people that military coordination had been agreed upon between Russia, Britain, and the United States? Who violated that pledge, and what were the circumstances of the default on a public pledge?

8. Why does the President say that "by compelling reparations in kind—in plants, in machinery, in rolling stock, and raw materials—we shall avoid the mistake that we and other people made after the last war—the demanding of reparations in the form of money which Germany could never pay"? Doesn't he recall that the Versailles Treaty set forth in detail the reparations that Germany did pay in kind till her materials and money were depleted and she finally went bankrupt in 1923, only to make her economic recovery later in a spirit of revenge which gave Hitler his chance to put over national socialism on the bitter and distraught German people?

9. Does the President think that because he says "we do not want the German people to starve or to become a burden on the rest of the world," he can prevent this from happening if he lets Russia handle reparations from Moscow, drafting forced labor in Germany, and if Germany is divided up in such a way that it has no chance for economic sustenance? Will not the German people in desperation find guerrilla warfare and underground sniping their only alternative, so that American forces will be kept there indefinitely or so that Russia may ultimately communize Germany and the Balkans and keep Europe in a turmoil to settle the consequences of which we must now pledge the use of our might in a third World War?

10. What reply can the President make to the American people who took the words of the Atlantic Charter as seriously as he now asks them to take the words of the Yalta communique or the words of his address to Congress? What explanation has he to make of the "territorial aggrandizement" whereby Russia grabbed Latvia, Estonia, and Lithuania and refuses even to discuss their future status? What has he to say about creation of a puppet government by Russia at Lublin and of a proposed expulsion of millions of Poles from their homes?

Maybe the answer to all of this lies in the simple phrase interpolated almost wistfully by the President as he was concluding his address to Congress. He was saying: "The Crimean Conference was a successful effort by the three leading nations to find again a common ground of peace. It spells"—here Mr. Roosevelt almost whispered the next four words—"it ought to spell—the end of the system of unilateral action and exclusive alliances and spheres of influence and balances of power and all the other expedients that have been tried for centuries, and have always failed."

Yes, it ought to spell the end of power politics and of the grab method. But will it? And must we guarantee these border settlements and pay the bill for the economic upheavals and bitterness of resistance that flows therefrom—pay with the lives of our sons and grandsons as well as with our treasure? Or are we to be told by the guilty minds of the sinners that what we ask is but impertinent perfectionism and that in this practical world we must give up ideals and principles and give way to opportunism and the makeshifts of expediency, ignoring our responsibility to innocent men, women, and children who are all creatures of God and deserve justice irrespective of any punishment that must necessarily be meted out to the criminal or the lawless?

Where is the international morality we have striven for so long?

Where is the courage to challenge the compromises and the appeasements that mean not yet the unconditional surrender of our enemies but already the unconditional surrender of our souls and our consciences to the old, old doctrine that might makes right?

Shall we—in Congress, in the press, and in the gatherings of freemen everywhere—acquiesce because it is the easiest course to follow? Shall we exchange the comfort of a craven acquiescence for the courage to speak out against the mistakes that mean more bloodshed tomorrow and for years to come? That is the unanswered question on which hinges the great decision that faces the American people today.

Tribute to Andrew Furuseth

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, March 12, 1945

Mr. BURTON. Mr. President, recently as a member of the Board of Visitors on the part of the Senate I visited the United States Merchant Marine Academy at Kings Point, N. Y., and I noticed among those especially honored was Andrew Furuseth, who during his lifetime has contributed greatly to improvement in labor conditions of seamen of the United States.

I have been advised today that this is the ninety-first anniversary of the birthday of Andrew Furuseth, and I ask unanimous consent that there be printed in the Appendix of the RECORD a memorandum with regard to his career, which has been obtained from the library of the American Federation of Labor.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

Andrew Furuseth, president of the International Seamen's Union, was born in Romedal, Norway, on March 12, 1854, the son of Andreas Nielsen Furuseth and Martha Jensdatter. He was the fourth child of eight born to them. The family was very poor, according to Mr. Furuseth, and at the age of 8 he was fostered away from his parents until confirmed.

Mr. Furuseth went to sea in 1873 and sailed successively on Norwegian, Swedish, English, French, German, and American ships. He came to the United States in 1880 and almost immediately began his agitation for a change in the status of seamen. In 1887 he was elected secretary of the Pacific Coast Seamen's Union, subsequently named the Sailors' Union of the Pacific, and at that time an organized struggle was initiated to change the status of seamen from what approximated serfdom to a standard of comparative freedom.

As early as 1890, when Mr. Furuseth was a delegate to an international seamen's conference at Glasgow, he championed his views on the freedom of the sailor.

A detailed story of the life accomplishment of Mr. Furuseth is told in a book called The Sailors' Union of the Pacific by Dr. Paul S. Taylor, of the University of California, published in 1923.

Mr. Furuseth began his work in Washington in 1893 and successive sessions of Congress by a series of legislative enactments responded to his seemingly irresistible pleas for freedom for seamen.

It should be noted that until success crowned Mr. Furuseth's legislative campaign American seamen could not strike after signing of shipping articles. The penalties for striking or quitting the ship had been unchanged for centuries, and it was Mr. Furuseth's self-selected task to abolish these penalties.

The principal laws passed by Congress to bring about these changes are:

1. The Maguire Act of 1895.
2. The White Act of 1898.
3. The La Follette Act of 1915.

By the passage of these measures American seamen were by degrees made freemen and now have the legal right to quit their jobs in any safe harbor anywhere on earth.

It is significant that although 22 years have passed since the enactment of the La Follette law no other nation has to date granted the same rights to seamen.

Probably the principal episode in Mr. Furuseth's life was the preparation and passage of the La Follette Seamen's Act of March 4, 1915, which virtually completed his life work of making the American seaman a free man.

Mr. Furuseth prepared most of the data for the committees of the House and the Senate and submitted numerous pamphlets, of which he was the sole author, in support of this measure. At that time, this legislation was criticized as being inimical to American shipping but since the passage of the act it has been recognized even by shipowners that it was a much needed reform.

For many years past Mr. Furuseth has been president of the International Seamen's Union, with headquarters at Washington, D. C., where, until recently, he has been in constant attendance at congressional committees on behalf of seamen. He was largely responsible for that portion of the Jones Act of March 5, 1920, which gave added benefits to seamen, and never until sickness compelled him to retire did he fail to raise his voice for those who go down to the sea in ships.

The principal accomplishment of Mr. Furuseth can be said to be that in an entirely unselfish manner he has, almost single handed, been responsible for changing the legal status of seamen in the United States from that of a comparative serf or peon to that of a free-born American citizen. This reform he has accomplished in a lawful manner. He has addressed himself to the agencies of law and order that are in existence in the United States. He has convinced Members of the House and Senate of the justice of the seamen's cause and, accordingly, the statutes of the United States have been amended so as to provide for the freedom which the seaman of today has.

While having only an elementary education, Mr. Furuseth, by self study, became a learned and cultured student of the law and of economics. He is the author of innumerable pamphlets which have been submitted to the respective bodies of Congress in support of seamen's bills, as well as articles in technical, professional, and trade magazines.

Mr. Furuseth attended numerous international conferences and was a respected and beloved delegate to the conventions of the American Federation of Labor ever since the International Seamen's Union became a part of the American Federation of Labor in 1892.

During his long period of association with the seamen's union, Mr. Furuseth consistently refused to accept more than an absolute minimum salary to enable him to keep body and soul together. His labor has been entirely unselfish, and for nearly a half a century his every effort has been a disinterested one to elevate the status of those who man our ships.

Mr. Furuseth often told his intimate friends that the only person who was really independent was one who had nothing and wanted nothing—for himself. He, himself, lived that sort of a life.

Service of United Press to India

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from United Press Associations and my reply thereto:

UNITED PRESS ASSOCIATIONS,
New York City, March 7, 1945.

The Honorable EMANUEL CELLER,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN CELLER: I was very much interested in your remarks to the House on March 6, commenting favorably upon the recent inauguration of a service to newspapers in India by our friends of the Associated Press. Now here is some more good news which you and your colleagues of the House undoubtedly will be glad to hear:

The United Press, which established direct telegraphic service to newspapers in India during August of 1942 (being the first American press association to do so), has grown steadily there, and has expanded further within the last week. United Press has continued until this year to supply the only American news service in that vast and important area.

Incidentally, United Press is the only American press association sending telegraph news direct to China, South Africa, Egypt, Portugal, Switzerland, and other overseas countries. We have been pioneers in the foreign-news field for more than a generation.

Sincerely yours,

JOSEPH L. JONES.

MARCH 9, 1945.

Mr. JOSEPH L. JONES,
United Press Associations,
New York, N. Y.

DEAR MR. JONES: I have your letter of March 7, and I am glad to have the information concerning your telegraphic service to newspapers in India.

I shall make it my business to put same in the CONGRESSIONAL RECORD.

Sincerely yours,

EMANUEL CELLER.

Special Stamp Commemorating Valor of United States Marines on Iwo Jima

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, March 12, 1945

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from today's Washington Star entitled "Flag Raising Stamp." This editorial comments upon the suggestion I have made to the Postmaster General that the remarkable photograph, taken on Iwo Jima by Associated Press photograph Joe Rosenthal, of the raising of the flag on Mount Suribachi be used as the central design of a special stamp honoring the valor and sacrifice of the United States Marine Corps.

I also ask unanimous consent that there may be printed in the RECORD an article by James Waldo Fawcett from the Washington Star of Sunday, March 11, 1945, with reference to the same subject.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Washington Star, March 12, 1945]

FLAG-RAISING STAMP

Senator JOSEPH C. O'MAHONEY, of Wyoming, formerly was First Assistant Postmaster General, and he therefore knows from experience the importance of the designs of postage stamps as media for the widest possible democratization of ideas. More than a century ago, Sir Rowland Hill, sponsoring the famous Penny Back, of Great Britain, employed a profile portrait of Queen Victoria as the central motif of the composition reproduced thereon—and thus started the procedure which rendered his sovereign the most widely known woman in the world. The same principle was followed in 1849 when the first postal labels of the United States were produced, one showing Benjamin Franklin and another George Washington. It also motivated Napoleon III when he substituted his own effigy for the symbolic likeness of the Goddess Ceres on the adhesives of France in 1852.

What Senator O'MAHONEY currently suggests is that the photograph of the raising of the Stars and Stripes on Mount Suribachi on the island of Iwo, published in the Star for February 24 and 25, be adapted for use as the main feature of a 3-cent stamp as "a memorial to (the) valor and sacrifice" of the Marine Corps. Concerning the picture, he has declared to Kent Cooper, executive director of the Associated Press: "No war report or communiqué, no speech or statement that has been written or spoken since Pearl Harbor, and certainly no news picture is to be compared with it in dramatic appeal." A large public undoubtedly shares this opinion. The photograph is so truly a "natural" that it requires no explanation, needs no argument. Part of its power of attraction is its simplicity. It could not have been posed. The story it tells is the story of the whole tremendous effort of the double war. It represents men—four striving marines—in the act of affirming the basic ideal of their lives in battle on a mountain top. They are putting the Star-Spangled Banner against an enemy sky, where it will fly as a promise of still other victories.

Senator O'MAHONEY has proposed the stamp in especial homage to the Marine Corps, but his letter to Postmaster General Frank C. Walker also carries the suggestion that similar labels be issued for all other branches of the national service.

[From the Washington Sunday Star of March 11, 1945]

STAMPS

(By James Waldo Fawcett)

Senator JOSEPH C. O'MAHONEY, of Wyoming, former First Assistant Postmaster General, has proposed that the photograph of the raising of the Star-Spangled Banner on Mount Suribachi, Iwo Jima, reproduced in the Star for February 24 and 25, be adapted for use as a design for a 3-cent postage stamp.

Concerning the photograph as such, the Senator wrote to Kent Cooper, executive director of the Associated Press:

"The raising of the flag on Mount Suribachi is a photograph that should never be forgotten. No war report or communique, no speech or statement that has been written or spoken since Pearl Harbor, and certainly no news picture is to be compared with it in dramatic appeal. It is a memorial to the men in whose blood our victory is being written. It is a reminder of the ideals for which we fight.

"Old Glory is floating from the summit of Mount Suribachi, where it was planted by the marines. May it be a prophesy that the freedom and justice for which it stands shall speedily be extended to all peoples and all nations.

"I feel that the Associated Press is to be congratulated for having given this photograph to the world. I write to thank you and the photographer who made it to ask if I may have an original print and to suggest that the Associated Press formally dedicate it to the United States Marines who won the victory that made the photograph possible."

Mr. O'MAHONEY next addressed Postmaster General Frank C. Walker in a letter reading:

"I am sure, like everybody else in the country, you were mightily impressed by the Associated Press photograph of the raising of the flag on Mount Suribachi. This was not only a great news picture but a moving appeal to the patriotic instincts of every citizen.

"I am enclosing a copy of a letter I have written to Kent Cooper of the Associated Press in New York and a copy of the story of the photographer who made the picture, the latter having been furnished me by Paul Miller of the A. P. bureau here in Washington. My purpose in writing to you now is to suggest that out of recognition of the heroic performance of the marines in the Pacific war and as a memorial to their valor and sacrifice, the Post Office Department issue a commemorative stamp, with this photograph as the central design.

"I have long thought that a special stamp should be issued to honor each branch of the service. Now that the opportunity is presented to portray in such dramatic manner the victory on Iwo Jima, I hope that you may feel inclined to sponsor the issue."

The Senator likewise sent to Lt. Gen. Alexander A. Vandegrift, Commandant of the Marine Corps, the following communication:

"The dramatic and deeply moving Associated Press photograph of the raising of the flag on Suribachi has prompted me to write to the Associated Press suggesting that the photograph be formally dedicated to the United States marines, and to the Postmaster General suggesting that it be used as the central design of a special stamp commemorating the achievements and sacrifices of the gallant soldiers under your command.

"I can add nothing to what I have said in these two letters except to assure you that I know the whole country is inexpressibly proud of the United States Marine Corps."

All three letters were dated yesterday. They are published in this space because they are authentic footnotes to the philatelic history of present times.

Joe Rosenthal, an Associated Press photographer working for the phtographic pool on Iwo Jima, was the camera artist who made the original picture, radioed by the Navy from Guam to San Francisco. The men shown in the act of raising the flag on the crest of the extinct volcano are marines of Company E, Second Battalion, Twenty-eighth Regiment, Fifth Division, one of whom has been identified as Platoon Sgt. Ernest Ivy Thomas, of Tallahassee, Fla.

Food for Thought

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. HOFFMAN. Mr. Speaker, on the theory that sometimes a word of criticism is helpful, I am inserting herein, under permission granted, an editorial from the Westmoreland Observer, published at Greensburg, Pa., on March 1, of this year.

Apparently the editor is dissatisfied, as apparently, if you read the public press, many of our people are dissatisfied, because of the lack of a vigorous opposition to the New Deal, the internationalists, and all those who think that it is our duty as a Nation not only to fight and win the war brought on by other nations, but to repair the damage suffered by other nations during the war.

Some internationalists not only want to rebuild the cities, the harbors, the docks, the warehouses, which were destroyed during the war, but they wish to use our taxpayers' money to establish and build in other lands industrial facilities which will put those countries into competition, not only with our manufacturers, but with the workers of this country who are engaged in industrial production.

In brief, they wish to establish in other countries, through the use of United States funds, business enterprises which will come into direct competition with domestic production.

That appears to be the New Deal program and because of a lack of opposition to that program comes the editorial to which I have referred and which reads as follows:

"ME TOO" PARTY BECOMES RIDICULOUS—DECADENT G. O. P. FAILS NATION IN TIME OF CRISIS, LEADERSHIP BANKRUPT

While the American people cry out for relief from the oppression and tyranny of the alien New Deal-Communist plunder bund, the Republican Party presents a spectacle of inertia unparallel in the political history of this Republic. The mouselike sneaks of "me too, but" to every fresh assault by the Roosevelt administration upon the Constitution and the Bill of Rights is convincing citizens all over the country that they can expect nothing from the Republican Party.

In its blind and weasel-worded acceptance of the Dumbarton "Hoax" taking the party lock, stock, and barrel into the internationalist camp, its trailing along with the administration in the slave bill, its burst of timorous applause at the recent Yalta Conference in which Mr. Roosevelt came home in a barrel, the Republican Party has forfeited the respect and confidence of the more than twenty-three million American citizens who voted for its candidates last November.

Even the principles espoused by the party in the recent campaign seems to have had no substance than the evanescent campaign oratory of the late unlamented Wendell Willkie. One Republican plank in particular that could at least serve to annoy the new dealers was that proposing an amendment to the Constitution limiting the Presidential tenure to office to two terms.

But no such resolution has been introduced in this Congress. Unquestionably a great deal of congressional support could be secured for a resolution of this nature if the Republican Party was solidly behind it. There are many Southern Democrats who would be only too happy to support the movement.

Undoubtedly public opinion would overwhelmingly endorse an amendment to the Constitution limiting Presidential office holding. The people everywhere have become alarmed at the menace of perpetual occupancy of the White House by one man, they realize now how difficult it is to dislodge an ambitious politician who has been left in office too long, and decides to hold on for life.

What more popular issue could be presented in Congress, in these days when totalitarianism is sweeping the world, and which has brought destruction of liberty, war, carnage, poverty, and chaos in its wake? But nary a chirp out of the Republican Party on this vital issue. We find many Republican Congressmen and Senators too busy trying to appease Sidney Hillman and Mr. Roosevelt, believing that they can get the support of the P. A. C. in their campaigns for reelection next year.

The good of the country, the liberty of the people and the security of the Nation are all given secondary, if any, consideration in the councils of both major political parties. In this respect the Republicans are not one whit better than the lying, thieving, predatory New Deal.

Millions of working people who have been herded into labor unions against their will and exploited for the personal profit of racketeering and Communist labor leaders by the connivance of the Roosevelt administration are crying out for release from this galling yoke of semislavery. But did the Republican Party and candidate Dewey hold out one particle of hope for relief from this un-American oppression of the common people? No, the G. O. P. endorsed the Wagner Labor Relations Act and promised to continue it.

What relief from the arrogant, foolish, and unnecessary regulations and regimentations perpetrated upon all American citizens did the party of Lincoln—shame on the metaphor—offer the harassed people in last year's campaign? None; only we can do it better—maybe, a little less painfully.

What had the Republican Party to offer, what has it to offer today, to millions of thrifty-class citizens who see their savings being filched away from them, their businesses ruined, their investments destroyed by taxes and pernicious regulations, and their homes, farms, and real-estate holdings ruined by arbitrary rules and destructive taxation? What opposition, what resistance, does the Republican Party give to the diabolically clever conspiracy of the New Deal-Communist cabal to destroy and impoverish the great American middle class, which constitutes 75 percent of American citizens and is the backbone of the Nation?

None. The Republican Party and its present leadership has nothing to offer the American voter but cringing, fawning subservience to the alien collectivist philosophy of the New Deal. With 23,000,000 American citizens voting their militant opposition to the rotten, corrupt, deceitful, lying New Deal-Communist gang, the Republican Party stands trembling and craven, a spectacle of cowardice unparalleled, afraid to take a stand, afraid to fight for the rights of the people under the Constitution—afraid to strike a blow for our great Republic.

America needs a new political party; not a third party, but a real red-blooded, fighting American Party, organized in every city, town, village, hamlet, and township to supplant the defunct Republican Party so "that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth."

Latvian History

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the

RECORD. I include the following article from the Washington Post of March 11, 1945:

LATVIAN HISTORY

A COMMUNICATION

It is to be regretted that the chapter on Latvia of an Intelligent American's Guide to the Peace, with all due respect for the good intentions of the general editor, Mr. Sumner Welles, contains many inaccuracies.

As is known, the Baltic States were not originally parts of Russia. For instance, the core of Latvia, the Ducky of Kurland, was annexed only in 1795. The nonnumerous German landed nobles and the invading Russians combined to dominate and exploit the Latvians constituting more than absolute majority of the population. The Latvian autonomous movement, which culminated in a revolution in 1905, was mercilessly suppressed by Russian punitive troops led by German landed noblemen disguised as honorary police officers.

However, in 1914 the Latvians did not rise against Russia but voluntarily took up arms against the German invader. Only a few of these Latvian rifles, referred to by the author, turned bolshevistic in 1917. The majority followed the Latvian national committee, which on November 18, 1917, proclaimed Latvia's secession from bolshevik Russia.

This Latvian National Army, formed not by Germans but by the Latvians themselves, and commanded not by a British officer but by a Latvian, Gen. J. Balodis, who was knighted by the King of England, jointly with the Estonian Army defeated the German von der Goltz corps in June 1919, the Eermondt Russian interventionist group in November 1919.

Not the "German-backed" (in April 1919) puppet government in Libau of the stooge, A. Niedra, generally despised by Latvians, but the legally elected democratic Latvian government of K. Ulmanis, a graduate of Nebraska State University, was recognized by the Allies already in 1918. Also the Soviet Government in 1920 signed a basic peace treaty with K. Ulmanis. The frontier was agreed upon on an ethnographic basis. Thus there are no "Russian districts" in Latvia, and the Russian minority forms only 10 percent of the entire population.

Contrary to the Guide, independence was not disastrous for Latvia, as may be seen from the following: Latvia, a country with a population one eighty-fifth as large and an area one three-hundred-and-twentieth as great as that of Russia, used 19 times more artificial fertilizers and had more cattle per hectare of agricultural land than Soviet Russia. In 1938 Latvia produced per capita 50 times more butter, 5 times more milk, and 4 times more meat than Soviet Russia. The yields of Latvian crops do not have to be compared with the Balkans, for they were certainly larger than those of Soviet Russia. Also the standard of living, social insurance, and the purchasing power of a laborer's wages or of a bushel of rye flour were far higher in Latvia than in Russia. Latvia had no unemployment, was economically self-supporting, had accumulated national wealth of $1,500,000,000, and had a national income of $400,000,000 and a favorable balance of payments. Russia's part in Latvia's foreign trade amounted to only 3 percent. In 1939 Latvia redeemed its 6-percent bonds in the United States.

Latvia's constitutional reform to introduce strong national unity is called "fascist" by the Guide. Actually all "isms" were forbidden in Latvia: Nazism, fascism, and communism. No such thing existed as a Latvian foreign policy controlled by a German minority which formed only 2.96 percent of the population. Latvia was never offered an Anglo-Russian guarantee in 1939, which is one of the reasons why it signed a nonagression treaty on June 7, 1939, with Germany. Another was that it had become known that Soviet Russia had reached a secret understanding with Germany. This was disclosed in August 1939 and let loose the present war. As in the Brest-Litovsk Treaty of 1918, both these great powers conspired against the Baltic States and Poland, which fact the author of the Guide does not mention at all.

The Guide makes a very mean insinuation in stating that the Latvian Government in 1940 fled with many German noblemen to the Reich. All Germans had voluntarily left Latvia by 1939. President Ulmanis, who accepted the armed ultimatum to allow the Red Army to enter Latvia freely and to form a "Latvian government friendly to Soviet Russia," was deported to the U. S. S. R. together with his deposed cabinet ministers even before the annexation of Latvia.

The author of the Guide continuously speaks of some mysterious plebiscites in the Baltic which, as he states, were held to ratify the new status. However, he advisedly ignores the declaration of the United States Government of July 23, 1940, condemning the devious processes and predatory acts of Soviet Russia in the Baltic. He also fails to mention the Baltic peoples' struggles against both occupations—Bolshevik and Nazi. Most ridiculous of all, he invents certain violently pro-Nazi Latvian noblemen. For his information, the Latvians have no aristocracy.

Not a word is said in the Guide of the fact that instead of an inter-Allied committee, the liberated Baltic states in the fall of 1944 were taken over by the Bolshevik puppet regimes of 1940. The author complacently excuses himself for discussing the Baltic states separately because their new position has not as yet been internationally ratified. I firmly hope that no really democratic state will ever recognize the annexation of the Baltic states.

DR. ALFRED BILMANIS,
Latvian Minister.

WASHINGTON, *March 5, 1945.*

Nurses for the Wounded

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. HOFFMAN. Mr. Speaker, with more than 2,000,000 men actually fighting a cruel, efficient, and desperate foe, we know that, until the victory has been won, an ever-increasing number of wounded will need the care of nurses. We know that, long after this war is over, hundreds of thousands of veterans will, for years, need expert nursing.

Knowing this, the House tried to meet the need by enacting, in compliance with the administration's demand, legislation drafting all graduate, registered nurses, age 21 to 45, who belong to the Nurses Association, who were not married prior to June 15, 1945, who do not have dependent children.

The armed service is in a measure at fault; for it overestimated in one instance by 10,000 the number of nurses needed. It has refused to accept qualified male nurses and many qualified female volunteers.

If nurses are to be drafted into the military service, soon the number available will be exhausted. Young women who would ordinarily take up nursing as their life work will refuse to enter training when they realize they will have no opportunity for civilian nursing; that, taken into the service, they may be sent abroad and, like our troops, in the postwar period, be assigned to work under the command of British or Russian officers or the officers of our allies. If nurses are drafted, logically a law must be enacted drafting young women for training as nurses.

There is another angle to the situation. The average baby girl is born with the nursing instinct. This is shown soon after she as able to walk or talk by her desire for a doll, be it made of nothing more than a stick and rags. Upon it she lavishes her affection; to its care she devotes hours of her time. The sisters and the mothers are the ones who bind up and treat the stubbed toe, the blackened eye, the sprained limb, of the son, the brother, the husband.

THERE IS A REMEDY

Every woman is a potential nurse and never a slacker. If the nursing course is shortened, as well as it might be; if hospitals with less than 100 beds are permitted to train nurses; if more nursing schools are established, nurses by the thousands—sisters, wives, and mothers—will insist upon entering the service in order to be near and care for the wounded.

It has been the custom of the armed service to refuse many a nurse because she was not a member of the nurses association, because she was not a certain age, or did not possess certain physical qualifications—this I know.

While it is a fact that our sick and wounded in the service need more nurses, it is also a fact that this administration does not propose to use them unless they come in through the administration's door and submit to being used and ordered into service everywhere in the world.

That the nurses—the Angels of Mercy—are treated unfairly is shown by the fact that, while the House, at the administration's demand, passed a bill to draft nurses, the Senate, under control of the administration, defeated by a vote of 60 to 23 a proposition to draft men from 18 to 45 for essential war work and then, by a vote of 54 to 27, turned down the so-called loafer amendment, which would have compelled induction of men up to 45 into the Army unless they were employed in a war-supporting occupation or profession.

Later, the Senate voted to give the W. M. C. authority to determine the number of workers who should be employed in any particular plant or industry, but did not provide for the punishment of those who refused to accept a job in a war plant.

Nursing is an exacting, arduous, and many times an extremely disagreeable profession. Nevertheless, volunteer nurses have, to a large extent, met, and if all qualified be taken, will meet the needs of the service. Yet the administration insists that they be drafted. They would not have been drafted had the C. I. O. and the A. F. of L. opposed drafting them as it opposed drafting workers.

You and I also know that the Congress has refused to force the administration to put an end to the strikes which are limiting the production of B–29 bombers and other war implements and materials which, if supplied in sufficient numbers, would lessen the number, not only of the wounded, but of those who must die.

The answer to the need of the armed services for nurses is, (a) the acceptance of those nurses who are qualified, even though they do not belong to a particular organization; (b) a shortened course of instruction; (c) the establishment of more schools for nurses; (d) the voluntary system coupled with (e) adequate pay—pay similar to that given workers in war plants; and (f) a change from a 12-hour tour of duty to an 8-hour shift, wherever possible.

Poland After Yalta

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Andre Visson, from the Washington Post of March 11, 1945:

POLAND AFTER YALTA

(By Andre Visson)

UNITED NATIONS' INSIDE FRONT

Washington, London, and Moscow discovered that they were not in complete agreement as to the part which the Lublin Government is called on to play in the establishment of the Polish Provisional Government of National Unity, on the creation of which the Big Three agreed at Yalta.

Both Washington and London took the view that the Lublin Government should disappear completely as a political entity. Its members were, of course, expected to enter the new government and the possibility was not excluded that they might find themselves the majority, should it not prove possible to gather a sufficiently important number of Polish democratic leaders from Poland itself and from abroad. But the Lublin Government in Washington's and London't interpretation of the Yalta declaration, should not form the basis for the new Polish Government of National Unity.

Moscow, on the other hand, takes the view that the Lublin Government does constitute the logical and legal basis for the new Polish Government. The Soviet diplomats justify this view by referring to the text of the Yalta declaration.

This text reads, indeed, that "the provisional government which is now functioning in Poland should therefore be reorganized on a broader democratic basis with the inclusion of democratic leaders from Poland itself and from Poles abroad."

Question of interpretation

Moscow's interpretation of that passage is that the Lublin government must be the original basis, to be broadened by the inclusion of additional elements, of the new Polish Government. Moscow's emphasis is put on the words "should * * * be reorganized." It appears, indeed, that if the Big Three agreed on the principle of "reorganization of the Lublin government, they have implicitly recognized the Lublin government as the starting point of the establishment of the new government.

Washington and London must realize that the wording used at Yalta was not very happy (the Lublin government should rather be replaced and not reorganized), but they insist on their interpretation of the passage on Poland, and put the emphasis on the words "broader democratic basis," and especially on the "inclusion of democratic leaders from Poland itself and from Poles abroad."

This discussion, which developed during the last 10 days between the diplomatic chancelleries of the Big Three capitals, is not a quarrel of casuistic diplomats. It is of immediate—and most important—political significance. Should Washington and London accept Moscow's viewpoint, the Lublin Poles, who, incidentally, have already moved to Warsaw and refuse to be described as Lublin Poles, would have the initiative and also the decisive word in the consultations with the Polish democratic leaders who may be added to their team.

Anglo-American view

In the opinion of Washington and London, the initiative of consultation, according to the Yalta agreement, should rest with the three-man commission in Moscow—Foreign Commissar Viacheslav Molotov, United States Ambassador Averell Harriman, and British Ambassador Sir Archibald Clark Kerr.

Those three men have, indeed, been invested with the authority "to consult in first instance in Moscow with members of the present provisional government and with other Polish democratic leaders from within Poland and from abroad, with a view to the reorganization of the present government along the above lines."

The above-quoted passage from the Yalta declaration reinforces the American and British viewpoint on the Lublin Poles as one of the elements in the new government. But the repeated use of the word "reorganization," appears to support the Soviet thesis of the Lublin Poles as the basis of the new provisional government.

The efforts of Allied diplomats have been devoted to the indispensable harmonization of those different interpretations of the Yalta formula. As long as this harmonization is in doubt it is, indeed, impossible to proceed with the consultations. There is, however, an earnest desire in Washington, London, and in Moscow to have agreement in time for Poland to be represented at the San Francisco Conference by a Polish government recognized by all the Big Three Powers.

Durbrow's mission

In his efforts to achieve this indispensable agreement in Moscow Ambassador Harriman will be assisted by Elbridge Durbrow, the State Department's Chief of the Eastern European Division, who left Washington last week for Moscow, and plans to stay there 4 to 6 weeks. Mr. Durbrow, who was stationed both in Moscow and in Warsaw, is especially familiar with Polish problems, on which he worked during the last 3 years in Washington.

The divergencies in the interpretation of the Yalta formula for the solution of the Polish problem explain the irritation with which Mr. Eden spoke this week before the Parliament of the Lublin Poles.

The Lublin Poles are reported to consider themselves as the decisive factor in the Polish situation. They would like to decide which of the Polish leaders should be invited to Moscow for consulation, and they have already exercised their veto against Andrei Vitos of the Polish Peasant Party, who was a member of the Lublin committee but resigned because of disagreement over the technical application of the land distribution reforms.

While no Polish leaders, either from Poland or from abroad, can be invited to Moscow for consultation as long as the Big Three are not agreed among themselves on the interpretation of the Yalta formula, a number of names have been unofficially discussed in Moscow.

Possible leaders

Both Washington and London would welcome the adherence of such Polish leaders as Stanislaw Mikolajczyk or Stanislaw Grabski who enjoyed the confidence of Polish democrats in pre-war Poland. Of the names of Poles from Poland suggested as possible members of the new government, most are unknown in political circles. The resistance brought to the fore new men, who are not as yet known to the masses. As to the 74-year-old Archbishop Prince Sapieha mentioned as a possible leader, his adherence will probably be conditioned by the turn which the relations between the Vatican and the Kremlin may take within the coming weeks.

Mikolajczyk is known to be willing to answer the call from Moscow. But he is reported to have made known to the British his conditions. He wants to see all deportations cease and all those in concentration camps released. He wants no influence exerted at the elections by Soviet groups; that freedom of speech and of the press should be restored, and foreign correspondents be admitted into Poland. He desires that only persons of Polish nationality should be allowed to vote. Polish soldiers, serving outside Poland, should be entitled to vote either directly or by postal ballot. The elections should be conducted under the supervision of a neutral or inter-Allied commission.

A veteran Allied diplomatic observer in Washington remarked that the sincerity of the Polish elections is, indeed, infinitely more important than the composition of a provisional Polish Government. But the best possible composition of the provisional government is nevertheless a guaranty of the sincerity of the elections to be conducted by this government.

Mason City Newspaper Applauds Mundt's Proposal for International Peace Patrol of the Air to Protect a Permanent Peace

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. MUNDT. Mr. Speaker, under leave granted me by the House I am inserting herewith a radio commentary appearing on the front page of the March 5 issue of the Mason City (Iowa) Globe-Gazette over the name of its managing editor, W. Earl Hall. It contains a discussion and evaluation of the proposal which I made on the floor of the House January 30 outlining the reasons why, in my opinion, an appropriately organized peace patrol of the air can successfully eliminate the scourge of war from ever again stalking its bloody path over the face of the earth.

Mr. Hall is an experienced and able world observer who has traveled in many countries and lectured widely on international problems. Like all other Americans of good repute, he abhors war. Like the rest of us he is tussling with the problem of effectuating a pro-

gram which will prevent future wars. Unlike too many counselors on the problem of preserving permanent peace, moreover, Mr. Hall recognizes the necessity of getting down to specifications and details and realizes that good intentions and euphonious rhetoric will never outlaw war.

Resounding resolutions and delightful declarations are commendable expressions of good intention, but what is desperately needed today is greater attention to the details and mechanics of a program appropriately devised to make the recurrence of great wars a complete impossibility. This can be achieved. But it can only be achieved if and when great nations as well as small are willing to dedicate an effective portion of their armed might to preventing war rather than simply and only engaging in rival armament races with the pious hope that the arms they build will never be used for anything more significant than museum pieces.

If the world will agree to utilize military air power solely for patrolling the peace in this modern universe it will have found at long last an effective method of using force to prevent any nation, great or small, from waging aggressive war against its neighbors. It is a challenge to the good intentions of the world and to the willingness of all of us to set military air power apart as an instrument of peace rather than adding it to the other weapons of war with which nations in the future will equip themselves for another global conflict waged by total populations in which casualties among women and children may well outrun the casualties among the fighting forces.

Today's most devastating falcons of war can become the world's most effective harbinger of peace, if we exercise sufficient moral courage now to dedicate military air power to the task of preventing future wars.

ONE MAN'S OPINION

(A radio commentary by W. Earl Hall, managing editor)

Broadcast schedule

KGLO, Mason City, Sunday, 1:45 p. m.
WOI, Ames, Wednesday, 5:30 p. m.
WSUI, Iowa City, Wednesday, 7:45 p. m.
WTAD, Quincy, Ill., Thursday, 6:30 p. m.
KSCJ, Sioux City, Saturday, 6 p. m.

YES, WE'VE GOT TO ACCENT THE POSITIVE

There's a song on the air these days called Accentuate the Positive. I hear it just about every time I turn on my radio. It made its appearance in a movie. Then the radio bands took it up.

Considered as a song, it would be all right with me if the crooners quit crooning it. After its first rendition or two I got the point of it. No further repetition is needed so far as I am concerned.

But, believe it or not, there's a moral in it that has real and pointed application to our thinking on future international affairs. Here's what I mean:

Talk to the average man on the street and he'll readily agree that some measures should be taken to insure against another war—to make the peace last. But ask him specifically how this is to be done and 99 times out of 100, he'll shrug his shoulders. He doesn't know—and neither do I.

In other words, all of us—and I mean that, all of us—are for the idea of preserving the peace—in the abstract. But we aren't getting down to cases. In a way, I suppose, we're minimizing the negative but we aren't up to this time doing a very good job of accentuating the positive.

One day before very long, however, we're going to have to snap out of our reverie. While we may not be called upon to draw the blueprints for that peace to come, we are going to have to pass on it. And by we, I mean America.

In our generalized, somewhat fuzzy thinking, most of us are agreed that some kind of agency is going to have to be created for enforcing peace against those nations which aren't committed to the idea. If we have an eye in our head and a brain cell working, we must recognize that the lack of such an agency was the fundamental shortcoming of the old League of Nations.

All right, we're agreed on the necessity for some kind of peace-enforcing machinery. But what kind shall it be? There are many, many kinds. There are numerous ways in which the post-war world organization might proceed.

We might, for example, have one vast, super-super army, navy, and air force operating on orders out of a world capital. Minnesota's young Governor, Harold Stassen, once suggested in a magazine article that Panama City be that world capital.

This approach presupposes the establishment of a closely knit United States of the World. Critics of this course condemn it as a world superstate. While there are some good, valid arguments for such an approach, events of the past 2 years have made it clear that it isn't going to come to pass. Britain doesn't want it; Russia doesn't want it; United States may or may not want it—I don't know.

What is ever so much more likely is a revival of the League of Nations, perhaps with a new name. A step toward that goal is going to be taken at the world conference of foreign ministers in San Francisco in April. Steps have been taken toward it at Moscow, Casablanca, Cairo, Teheran, and, most recently, at Yalta.

But no decision has yet been reached, or even seriously considered, so far as I know, with respect to the actual machinery for enforcing the peace. That, incidentally, is the one greatest problem facing the world today, next, of course, to bringing the war to a victorious conclusion.

The big question yet to be answered is, To what extent shall the world organization have control over the military might of the world? Shall power and authority be left with the constituent nations, or shall power and authority be taken over by the world organization itself?

Or, putting it another way—as a matter of accentuating the positive—what would happen if at some future time Germany got out of bounds again and threatened the peace of the world? Would quelling her be the job of the world organization—or would the task be left to Russia and France or Russia alone?

At this time, of course, this world question is more or less academic. But the time is coming when the issue involved is going to have to be met head-on and in specific terms. And that's just what KARL MUNDT, Representative from South Dakota, did the other day in an address in the lower House of Congress on the subject, "Peace—If We Want It."

I found a very special interest in the address, above and beyond the fact that it was a thought-stimulating effort. Mr. MUNDT is my good personal friend. I was with him and his congressional colleague, JAMES RICHARDS, of South Carolina, in the European war theater last fall. I know that he knows whereof he speaks.

In an able way Mr. MUNDT laid the foundation for his specific proposal for enforcing the peace. He pointed out that wanting peace and having peace are two quite different things. He foresaw the real possibility that the nations now united in war may not continue united in peace. In this observation, history is distinctly on his side—even contemporary history. Italy and Japan were both our allies in the last war.

"While we in the United States," he observed, "are of one mind that imperialism and aggression shall never form a part of our national policy, we must realize that no matter how sacred our own good intentions are, the citizens of other lands need more than that to induce them to accept for themselves restrictions and regulations which we in this republic might prefer to see applied only to others, not to ourselves. Self-interest is still a prime rule of survival for all nations, great or small."

To this, however, the South Dakota Congressman added:

"While the problems that must yet be solved are prodigious in the matter of developing an international organization which we can all support, I am not one of those who hold the pessimistic view that it cannot be done. We shall and we must continue trying."

"No recital of pious platitudes and glittering principles," Mr. MUNDT continued, "no matter how long or eloquent, will assure the world of lasting peace. It is the method and machinery for putting those pretty phrases into actual operation which puts reality into our rhetoric. * * * It's the specific proposals, the concrete plans, the devilish little details that make or mar the achievements of idealism."

All of this, of course, in better and stronger language than I've used, is what I've been trying to say thus far in this commentary. I think, therefore we are ready now to look at Mr. MUNDT's specific plan—his "path to permanent peace."

His proposal, boiled down, is the organization of an international peace patrol of the air which would dedicate the airplane in the post-war world, primarily, to the job of patrolling the world's armament factories and to bombing into oblivion at the very outset the armies and navies of any country which might in the future move its military establishments beyond its own borders or away from its own shores in aggressive warfare.

At the start—and this was by way of suggestion—Mr. MUNDT would have 5,000 military planes selected from the best now being operated by the armed services of the United Nations, with 1,000 planes being home-based on each of 5 strategically situated air bases in the world. This number could be reduced or expanded as future developments dictated. So also could the number of bases.

"Due consideration," Mr. MUNDT suggested, "should be given to selecting a proper ratio of fighter and bomber planes, of superbombers and of transports, of photographic observation planes, of amphibious and land based planes and of all modern types of military planes.

"Quotas for volunteers to man these planes and officer their operation might well follow the general percentages of men whom the respective members of the United Nations now have engaged in the aviation services."

Control under the Mundt plan would reside in the international peace patrol of the air in the hands of the joint Chiefs of Staff of United States, England, Russia, China, and France after the pattern of the supreme headquarters of Allied forces now operating under General Eisenhower in Europe.

General policy would be determined by the individual countries, but there would always be full authority for the air patrol to strike at once when necessary "in conformity with clearly defined policies governing the extent

of its activities and determined upon in advance by the governments thus cooperating."

Mr. MUNDT suggests the utilization of strategically located air bases already in existence, as follows: Stephensville, Newfoundland; Preswick, Scotland; Cairo, Egypt; Natal, Brazil; and one of the great air bases in China which American Army units have built. Commercial use of the bases would not be barred. Financing would be on an equitable contributing basis by the nations.

In a 10-point argument supporting his plan, Mr. MUNDT—

Praises the effectiveness of aviation.

Urges divesting enemy nations of their war-making potential, proposes a check on the world's preparations for war.

Suggests a distinctive coloring for air patrol planes and a distinctive uniform for air patrol members.

Recommends a limitation on armaments with an emphasis on planes.

Stresses the need for early action.

Offers a plan for including other nations in the patrol.

Outlines a program under which the ranks of the air patrol could be filled by volunteer enlistment by American lads desirous of making aviation a career.

"Members of this peace patrol," Mr. MUNDT explained, "would function not as Americans or as Russians or as Britons but members of an international police force, directed by an international control board, striking down wars virtually before they have had a day in which to get under way.

"This force would strike not as a war commitment by any of the participating powers but as an avenging force for peace, representing the convictions of all countries that war is never again to be used as a means of aggrandizement or as a device for seeking justice against real or imaginary wrongs."

Mr. MUNDT has discussed his program with many people, both in this country and in Europe, one of them his good friend, Col. Roscoe Turner, of Indianapolis.

"They have assured me," he declared, "that by reserving to air power the missions of peace, we can prevent nations from acquiring the essential machinery for war."

This, in outline, at least, is the peace-enforcing agency which KARL MUNDT in his introductory summation characterized in these words:

"I believe the establishment of an international peace patrol of the air can successfully, definitely, and permanently avert another major war. I say this categorically and without reservation. I believe the time is here when the world can have permanent peace if it wants permanent peace.

"It can have permanent peace without nations seriously sacrificing their sovereignty, without their foregoing their cultural or political ideals and without the expenditure of such enormous sums for national armaments that economic progress and human happiness are denied to common citizens."

My purpose in presenting the plan thus fully in this commentary is to stimulate some thinking on the specific and tangibles involved in insuring the world's peace. It's this rather than a desire to sell a bill of goods.

I don't know for sure that this scheme would work. Neither does KARL MUNDT. But it's obvious that he has been giving the subject a lot of sound sober thought. That's what all our other national leaders need to do. That's what you and I need to do.

We're for peace. Oh, sure. But are we willing to accept the responsibilities and pay the price of maintaining peace? Mr. MUNDT is everlastingly right in his observation that "no recital of pious platitudes and glittering principles, no matter how eloquent" will do the job.

Returning to my starting premise, we need to "accentuate the positive."

International Aviation's New Charter

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 12, 1945

Mr. BAILEY. Mr. President, I ask leave to have printed in the Appendix of the RECORD an address entitled "International Aviation's New Charter," delivered by Mr. L. Welch Pogue, Chairman of the Civil Aeronautics Board, before a meeting of the Council on World Affairs, at Kansas City, Mo., February 10, 1945.

I have asked the Public Printer for an estimate of the cost of printing the address and have a letter from him stating that it will cost $114.40.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INTERNATIONAL AVIATION'S NEW CHARTER

(By L. Welch Pogue, Chairman, Civil Aeronautics Board, delivered before a meeting of the Council on World Affairs at Kansas City, Mo., on February 10, 1945)

When your invitation to speak came to me it was an honor and a privilege which I accepted promptly. I want to take this opportunity to enlist your support in a great cause, important to you, to Kansas City, to our Nation, to the world.

The Chicago International Civil Aviation Conference raised that curtain upon new and exciting scenes in the play of international cooperation. The interest of every delegate seemed world-wide. The evidence was clear that our political thinking was expanding with a shrinking world.

A century ago our ancestors here in the Middle West did not concern themselves about a Europe or an Asia safely anchored to the other side of the world. But the airplane has brought us within a few hours of every man everywhere. We have learned—and are still learning—that we must concern ourselves constantly with the other side of the globe. Our horizons have been pushed back. Once strange and distant peoples are now our neighbors. An emerging planetary economy is making for a world interdependence. These developments in modern life demand a new era in international cooperation. The airplane is at once a principal cause of this new world and a principal means of attaining the new and richer world civilization which it promises.

As men gain perspective by the passage of time, they will be increasingly impressed by the magnificent achievements of the Chicago conference. I intend to tell you about three of the most vital of those achievements—all in the realm of international cooperation. They are, first, the creation of a world-wide aviation organization having broad and important functions in both safety and economic matters; second, the opening[1] of the ocean of air for transit purposes and of airports for refueling and other nontraffic purposes to peaceful navigation by international air lines; and, third, the offering to the world of the principle of freedom to establish international air lines between contracting states without special agreements much as ships are free to sail the seas.

The creation of a world aviation organization is a milestone of progress in the cause of aviation and of international cooperation. Its only predecessor (established under the Paris Convention of 1919) did not have adequate functions or world coverage to meet future needs. The new international civil aviation organization has been vitally needed, and its structure and functions give it a scope equal to the task before it. Of course, the performance of the organization is still to be tested, but the start of its existence is bright with promise.

This world organization is established under the new Convention on International Civil Aviation offered by the Chicago conference.[2] It provides for an assembly in which each country is to have one vote, thus providing for the juridical equality of sovereign nations. Twenty-one nations are to be represented on the international council—the "board of directors" of this world organization. Of these, eight are to be nations constituting those of chief importance in air transport, five constituting those not otherwise included which make the largest contribution to the provision of facilities for international civil air navigaton, and eight not otherwse included whose election will insure that all major geographic areas of the world are represented.[3]

The functions of the council include the responsibility of adopting and keeping up-to-date many technical rules and regulations (as annexes to the convention) relating to international aviation safety matters, including, for example, communications, procedures, and systems, rules of the air, and air

[1] Subject to ratification or confirmation of the signatures of those signing the basic documents to be described later.

[2] Up to January 31, 1945, it had been signed by 39 nations out of the 54 represented at the Chicago conference.

[3] The countries elected to the interim council at the Chicago conference in the different categories are as follows: (1) Countries of chief importance in air transport: United States, United Kingdom, Netherlands, France, Brazil, Mexico, Belgium; (2) Countries not otherwise included which make the largest contribution to the provision of facilities for international civil air navigation: Canada, India, Norway, Iraq, Peru; (3) Countries not otherwise included whose election will insure that all major geographical areas of the world are represented: China, Australia, Egypt, Czechoslovagia, Turkey, El Salvador, Chile, Colombia.

One place was left vacant in the first category so that in case Russia should adhere to the convention she can fill that vacancy. In the original election Cuba was included in the second category but at the final session of the conference Norway first and then Cuba magnanimously, and in one of the most outstanding gestures of international cooperation that could possibly be witnessed, offered to withdraw in favor of India. This was done in recognition of the admittedly great contribution to the provision of facilities for international civil air navigation accorded by India and of the fact that over 400,000,000 people are surely entitled to representation. The Conference spontaneously gave prolonged applause to these grand acts. Cuba's offer was accepted. The conference thus closed on a note of international cooperation which should serve as the basic motif for the International Council's deliberations for years to come. Certainly those at the Chicago conference will not forget these splendid acts on the part of Norway and Cuba.

traffic control practices; [4] acting as a sounding board for world public opinion on international aviation matters; recording and publishing information regarding air-line operation; investigating and reporting in the field of air navigation and air transportation; assisting with the provision of airports and other air navigation facilities; recording and making public agreements between nations and between nations and air lines relating to international air transportation; and acting as an agency for hearing certain complaints, making recommendations, and in some cases deciding disputes.

Here we have a design for international collaboration in a field where the self-interest of all demands that it be a success. Let us see that it is. It will be a tragedy if it is not put into force as promptly as possible.

The opening of the ocean of air to peaceful international air-line transit-use is another milestone of progress. That result alone would have justified the Conference.

Before you can discharge and take on passengers and cargo at a foreign point you must first get there. In most cases intervening countries, many of which may be adequately served by other services, must be crossed. The question of the right to get there is the first problem we meet in the international air riddle.[5] Thus, even though the ocean of air flows over every large city of the world, if the international air lines of the world do not have the right to get to them, they will not be on the great air trade and travel routes of the future. Only if the intervening countries are willing to permit their air space to be used by such air lines will these cities be adequately served. To meet this need the Conference produced and opened for signature the international air services transit agreement, sometimes called the two freedoms agreement. Actually these freedoms are privileges mutually exchanged between nations for their mutual advantage.[6]

The first of these freedoms is the privilege accorded by each signing nation to the aircraft operated in civil air transportation by each other signing nation to fly in transit through its air space. The second of these freedoms is the privilege accorded by each signing nation to the aircraft operated in civil air transportation of each other signing nation to make nontraffic stops within its territory in order to take on gasoline and oil, to make repairs, to take refuge from storm, or to meet an emergency.[6] This means, in effect, that even if, as in the past, bilateral arrangements for the establishment of commercial outlets—that is, the right to discharge and take on passengers and cargo—are to be required in the future, any nation can deal directly with any other nation anywhere in the world for a commercial outlet without having to worry about its ability to get there insofar as the use of the air space over intervening countries is concerned. In this respect the exchange of these two privileges puts landlocked countries and cities on a basis as favorable as countries located on the borders of the oceans insofar as transoceanic air operations are concerned. The historic importance of opening this great door to international air transportation cannot be overemphasized.

If nations generally accept the principles of commercial air transit and nontraffic stop, will they go further and open their public airports for use by international air lines as their ports are open to steamship lines? The Chicago Conference opened the door here, again, to freedom. It offered to the world the International Air Transport Agreement.[7] While it has not yet been accepted as widely as the transit agreement, it will open skyways in the world which many will want to get on. Peoples, particularly those in smaller countries, are going to want air service and the advantages of being on the great air trade and travel routes of the future.

The Chicago conference transport agreement, in addition to incluring the right of commercial air transit and of nontraffic stop includes the right to conduct international air-line service on any route constituting a reasonably direct line out from and back to the homeland and to discharge and take on passengers, mail, and cargo in any of the contracting states over whose territory such route passes. Of course, no international air line is to have the right, unless it is specifically given, to carry traffic originating and terminating within the territory of any foreign state. This transport agreement does not undertake to control rates, routes, operators of routes, frequencies, or other competitive or political problems. To the extent that this multilateral agreement is accepted by nations of the world [8] it opens up the world to the free establishment of international routes, the principal limitation being that they must be reasonably direct out from and back to the homeland.[9]

This transport agreement was presented to the conference near its close. Before that time, the United Kingdom, Canada, and the United States had negotiated at length but unsuccessfully to reach such an agreement on the establishment of interational air-line service as would permit the inclusion of the agreed provisions in the main convention itself. Earnest efforts were made to work out provisions for economic regulatory control over international air transportation services. If such provisions could have been included in the convention, the subjects they would have dealt with would have included the determination of routes to be operated and who is to operate them, the regulation of rates, the amount of aircraft capacity to be operated on the international routes, and other economic and political matters.

One of the chief difficulties related to the method of determining the amount of service to be allowed each international operator, i. e., pay-load capacity which in layman's language means what you can carry and charge for. There seemed to be general agreement on the point that the service operated should not unreasonably exceed the traffic offering. In meeting this objective what method should be used in determining the amount of service which could be operated? One view was that service along an international route, however long it might be, should be based upon the traffic embarking in the home state for each of the different points along the route. In other words, no traffic picked up anywhere outside of the home state, could serve as the basis for increasing the service offered anywhere on the route. The other view was that service along such an international route should be based upon all the international traffic offered to the operator along the route whether embarked in the home state or at other points on the route. It would be almost impossible for any of the smaller nations to develop an international air-line business of any volume except as between the homeland the immediate neighboring states if the services operated should be based solely upon the traffic embarked in the home state; and, according to American experience, it would make it extremely difficult for any long-range international operation to be operated even by the larger nations free from heavy subsidy. This is because, generally speaking, the terminal-to-terminal traffic will be so light as to make the line inefficient and uneconomical.

The fundamental issue in this respect could be stated in terms of whether the nations of the world, whether large or small, should have an open opportunity to participate in international business wherever it can be developed.

After long effort to work out provisions for economic regulatory control, it was finally clear that no suitable formula could be found upon which agreement could be reached at this time. These unsettled questions were referred by unanimous resolution developed at Chicago and unanimously recommended by the conference to all nations for use in any bilateral agreements authorizing such routes. The most important provisions of these standard clauses are: First, that discrimination in certain fields against any country or its air lines is forbidden; second, the building up of air blocs by the use of express contractual clauses providing for the exclusive use of air space by any nation or its air lines in any part of the world is outlawed; and third, the making of international air transport agreements whether between countries or between a country and an air line is required to be filed with the international body and made public. The conference thus unanimously voted to eliminate the era of secret agreements in the field of international air transportation.

---

[4] These technical annexes to the convention currently cover the following subjects: Airways systems, communications procedures and systems, rules of the air, air traffic control practices, standards governing the licensing of operating and mechanical personnel, log book requirements, airworthiness requirements for civil aircraft engaging in international air navigation, aircraft registration and identification marks, meteorological protection of international aeronautics, aeronautical maps and charts, customs procedures and manifests, search and rescue, and investigation of accidents.

[5] See Common Sense in Aviation Thinking, an address which I delivered before the Aviation Day meeting of the Greater Twin Cities Chapter, National Aeronautics Association at Minneapolis-St. Paul, Minn., on April 9, 1943.

[6] Up to January 31, 1945, this two-freedoms agreement had been signed by 32 of the 54 nations represented at Chicago.

[7] Up to January 31, 1945, this transport agreement had been signed by 21 of the 54 nations represented at the Chicago conference.

[8] Only states which are members of the International Civil Aviation Organization can become parties to the transit agreement or to the transport agreement. The International Civil Aviation Organization, established by the Convention on International Civil Aviation, provides that it shall be open for adherence by members of the United Nations and states associated with them and states which remain neutral during the present world conflict (art. 92 (a)). It further provides (art. 9) that "states other than those provided for in article 91" (in which it is stated that the convention shall be subject to ratification by the signatory states), "and 92 (a) may, subject to approval by any general international organization set up by the nations of the world to preserve peace, be admitted to participation in this convention by means of a four-fifths vote of the assembly and on such conditions as the assembly may prescribe; provided that in each case the assent of each state invaded or attacked during the present war by the state seeking admission shall be necessary." The minutes of the conference show that it was generally understood that the present war extends back to the time when Italy attacked Ethiopia.

[9] Realizing that, of course, not all countries will adhere to the Five Freedoms Document and that even with respect to those that do so there may well be an interim period during which international air lines must be operated, some standard clauses for bilateral agreements providing for air routes were

of the conference to the interim council with instructions to give them continuing study and to submit a report thereon with recommendations to the interim assembly as soon as practicable.

I am not one of those who feels sad because all of these problems were not settled at Chicago. The failure to decide them erroneously was a much greater success than would have been agreement on any unsound basis.

The attitude of many countries today with respect to the air trade and travel routes of the future is in marked contrast to what it was when international air transportation was not a business but was primarily an instrument of national policy. In the early days of its development, as history shows, every nation was very jealous of its position and inclined to exact the highest price possible for the use of its airspace by any international air line desiring the privilege of flying through it. However, now that the world is becoming really air-minded and that international air transportation holds such promise of developing rich trade and travel routes, perhaps as great or greater than any we have known in the past, a new attitude is appearing. At the Chicago conference there was a succession of calls at the Civil Aeronautics Board's office by delegates from smaller nations. Uniformly they desired to be on the air trade and travel routes of the future. They were concerned about the possibility of being left off those routes. They seemed to be acutely conscious of the lesson taught by history that cities and nations have grown great by being on the world's trade and travel routes. These representatives often insisted upon presenting their whole case even though agreement with the principles which they stood for was instantly forthcoming. Any dog-in-the-manger attitude with respect to the reservation of airspace which might have existed 10 years ago seemed to have disappeared.

When it became clear that agreement on economic regulatory controls could not be reached at this time, the United States, in line with this very marked desire on the part of smaller nations of the world to secure adequate service, and a distinct lack of interest on their part in rigid economic controls over this service, proposed to the conference the transport agreement which I have already discussed.

At this point you may ask what has been the history of trade and travel upon the sea. In the first place, all agree that peoples have from the dawn of history desired to trade with other peoples. Indeed, this has been the means in many instances of building great cities and nations. Phoenicia, Carthage, Amsterdam, New York—these giants fed and grew great on trade and travel. It may be stated as a basic principle of the law of nations that, with only a few exceptions, the citizens of every nation are free in peacetime to travel to every other nation and to trade with its citizens.[10]

In the case of the sea, history proved the folly of the attempts of some nations, powerful though they were at the time, to get and keep possession of the water highways of the world. Time tests all men and their schemes. Only sound principles endure. And so it was that over a substantial period of time, particularly within the past century and a half, the principle of the freedom of the seas became well established; the right to engage in international trade and travel in peacetime on the water and into every port is unquestioned. In fact, the violation of the principle constitutes an unfriendly act. The vessels of any nation, large or small, generally speaking, can call freely at any port in the world in peacetime and render the service required for international trade and travel by sea, subject only to the customs, immigration, public health, and other regulations applying generally.[11] The sea and all ports of call are, in general, now free to all who render the service of sea transportation. Is the air space above the sea equally free? All admit that it is.[12] Why then are not airports adjacent to the oceans open to the service of international air transportation as ports of call are to shipping? There seems to be no good answer. There never has been. You then ask, "Is history to repeat itself? Are we to go through the bloody business of opening up the air to international air services as our ancestors did for the sea? Can we not learn a lesson from history? Can we not here, with a few strokes of the pen, save centuries of struggle?" The Chicago conference said we can.

Like the sea, the air started as a closed sky, blind to history's lessons. For 25 years it fretted under restrictions and barriers. The Chicago conference gave the key with which the world can open the door to freedom.

International air transportation is not in the sunny afternoon of its life. It is not even in the midmorning. In fact, the sun of its day is only at the dawning. It needs your help to start its day right. These three great achievements for aviation of the Chicago conference require the support of our public opinion. The world organization, the transit agreement, and the air-transport agreement are three chapters in international aviation's new charter for this great boon to mankind. I urge you to support them.

---

[10] See a statement similar to this and an exposition of its meaning and justification by Hugo Grotius in Magoffin, Grotius on the Freedom of the Seas (1916), p. 7. This is a translation by Magoffin of the brief prepared by Grotius about 1602. This brief was a landmark in the development of the principle of the freedom of the seas.

[11] G. H. Hackworth, legal adviser of the Department of State, in his well-known work entitled "Digest of International Law" [Green Haywood Hackworth, "Digest of International Law" (1941), vol. II, p. 653] outlines briefly pertinent portions of the history of the development of the principle of freedom of the seas. He points out that Venice at one time levied tribute on all vessels navigating the Adriatic; and that in 1493 Pope Alexander VI conferred on Spain and Portugal "the whole undiscovered regions of the world." All undiscovered regions of the world west of a line from pole to pole 100 miles west of the Azores were given to Spain and everything east of that line to Portugal. These Nations promptly declared themselves sovereigns over sea as well as land with respect to those grants respectively; whereupon Queen Elizabeth asserted claim to the North Sea, the English Channel, and the Bay of Biscay as far south as the coast of Spain. Naturally, the Netherlands Government disagreed with this whole arrangement. All of these Nations except Spain were interested in the East India trade. Mr. Hackworth then quotes approvingly from the author, Thomas Callander Wade, in stating: "Throughout the writings of the later jurists of all countries we find a steady progress toward the principle of the absolute freedom of the sea. By the nineteenth century this freedom had become axiomatic. The controversy had come to be of only historical interest, as an illustration of an obsolete theory and an example of the evolution of legal thought and international practice. The high sea, therefore, is now free to all. Even though a state were powerful enough to possess it, the claim to exercise rights of sovereignty over it would not now be recognized as just, not so much by reason of the difficulty of effective possession, as because no good reason for its possession could be put forward."

[12] See Oliver J. Lissitzyn, "International Air Transport and National Policy" (1942), p. 402.

America was opened up by men seeking freedom and an open opportunity in a fair field. We are the sons and daughters of those men. As we open up the air, let us emulate their illustrious example

Where Are We Going To Get the Money?

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. GRANT of Indiana. Mr. Speaker, under legislation which has passed the House and moved over to the Senate, the national-debt ceiling will be increased from $260,000,000,000 to $300,000,000,000. The administration anticipates that the public debt will reach $292,000,000,000 by June 30, 1946. This is the seventh time since 1934 that Congress has been asked to raise the limit on the national debt. During that same period, 11 major revenue bills were enacted, each one increasing the tax burden carried by the American people.

When the New Deal came into power in 1933, the national debt was under $21,000,000,000. Today it is $233,000,000,000. Prior to our entrance into the war, the debt limit had been increased by stages to $65,000,000,000. Subsequent years the increases have been as follows:

Nineteen hundred and forty-two to $125,000,000,000.

Nineteen hundred and forty-three to $210,000,000,000.

Nineteen hundred and forty-four to $260,000,000,000.

The contemplated Federal debt of $300,000,000,000 will be a charge of nearly $10,000 on each of the estimated 30,000,000 families in the United States, which means a share of the debt for every citizen—man, woman and newborn babe—of considerably over $2,000.

The exigencies of war, as well as the necessity of protecting our people who have responded so patriotically to the bond-buying program, compelled many of us, but reluctantly, to acquiesce in the increase of the debt limit. We have done it reluctantly because we have been unable to prevent the administration's continued waste in nonwar expenditures.

The House Committee on Banking and Currency has commenced hearings on the Bretton Woods plan. This plan calls for a $9,000,000,000 world bank to make reconstruction loans in the post-war period and further calls for a monetary fund of approximately the same size to stabilize national currencies. The Bretton Woods plan was the result of the work of representatives of 44 nations in session last summer. Not one of the other nations has as yet approved the plan, but Secretary of the Treasury Morgenthau is attempting to rush United States approval through before the Conference at San Francisco, April 25. It is asking the impossible for both branches of Congress to digest and to give thoughtful consideration to this gigantic proposal in so short a time.

The House Foreign Affairs Committee has reported out legislation extending lend-lease for another year, or until June 30, 1946. A fight on the House floor is expected to develop on proposals to prohibit the use of lend-lease for post-war rehabilitation or reconstruction. For, with U. N. R. R. A., the Export-Import Bank, Bretton Woods, lend-lease, and so forth, the New Deal would have several agencies competing in the matter of spreading Uncle Sam's treasure over the world.

I have no doubt but what America will recognize and discharge her humanitarian and sensible responsibilities in the post-war world, but if some of these schemes cannot be checked, we will see the same confusion and muddle which the New Deal has created on the domestic scene.

We now have lend-lease agreements with 47 countries of the world. Lend-lease aid up to the end of December exceeded $35,000,000,000. In addition to direct lend-lease, we have also consigned supplies to American commanding generals in the total sum of $788,000,000 to be transferred by them to our allies—mostly to the French in north Africa and to China. The principal recipients of our lend-lease aid have been:

United Kingdom	$11,300,000,000
Russia	7,400,000,000
China and India	1,700,000,000
Australia and New Zealand	1,100,000,000

As against the lend-lease totals of upward of $35,000,000,000, we have received reverse lend-lease aid from four nations, United Kingdom, Australia, New Zealand, and India for a total of less than $4,000,000,000.

The State Department recently announced a new kind of lend-lease agreement, a contract to supply the French Government with two and a half billion dollars in various kinds of military and civilian supplies. Testimony given the House committee fixed a year as the time required to prepare some of these supplies.

Newspaper reports refer to negotiations with Russia involving six billions for post-war purposes and a similar figure for Great Britan.

One point seems plain: the appropriations for Uncle Sam's part in the post-war world should follow, rather than precede, a congressional determination of just what are to be our post-war plans and policies. After that, Congress can be relied upon to carry out those plans and policies by any needed appropriations.

The President's budget message for the fiscal year which begins July 1 estimates expenditures of eighty-two and one-half billion and estimates receipts at forty-one and two-tenths billion, leaving an estimated Federal deficit for the next fiscal year of $41,300,000,000. The most significant figures in the new budget program are the nonwar costs. For the coming year, they are estimated at more than $13,000,000,000—twice what they were just before the war and five times as high as the average of the 1920's.

Interest on the public debt alone is fixed at $4,500,000,000 with veterans' pensions and benefits exceeding $2,500,000,000, and neither of these figures has reached its peak.

The item of interest on the public debt alone is considerably greater than the total expenses of the Federal Government in the 1920's.

WHERE ARE WE GOING TO GET THE MONEY?

It is well enough to be thinking about U. N. R. R. A., Bretton Woods, lend-lease, the Export-Import Bank, and so forth, and we will be thinking about them. What is more, America will be doing something about them, but at the same time, this Government must give some thought to the solvency of this Republic and the burden of the American taxpayer, both present and future.

On the 1st day of February, the House passed the so-called work-or-go-to-jail bill. We were told that it was a matter of great urgency—that it had to be done with great haste—that no amendment should be added to the administration's bill—not even the dotting of an "i" or the crossing of a "t." As this is written, more than 5 weeks have passed and the measure is still under discussion. And so many changes have been written into the bill that it does not look like its former self.

Trouble is that there are too many people in this administration whose chief solution for every problem is to further regiment the American people, or to appropriate another billion dollars.

Statement of Hon. Chester Bowles

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

OFFICE OF PRICE ADMINISTRATION,
Washington, D. C., March 10, 1945.

To All Members of Congress:

I have made it a fundamental part of our O. P. A. policy during the 20 months I have been in Washington to work closely with the Members of Congress, and to see that they receive at all times any information which they may wish on any subject connected with our operation. Each week our staff holds numerous meetings with Senators and Members of the House. Our weekly congressional mail averages some 300 letters—all of which we try to answer as promptly and as fully as possible.

For this reason I am very much disturbed by an incident involving three Members of Congress which occurred last week in connection with one of our industry advisory committee meetings. Although many thousands of meetings with industry advisory groups have been held with O. P. A. during the last year, this is the first problem of this kind which has arisen.

I have investigated it thoroughly, and I feel the situation was largely due to a misunderstanding. I am anxious that this misunderstanding be corrected promptly and completely.

Let me first describe the system of industry consultation which O. P. A. has set up. As you will remember, in the Price Control Act the Administrator was required to consult "insofar as practicable" with representative groups before the issuance of a regulation. After a regulation is issued, the Administrator must appoint an industry advisory committee upon the request of "a substantial portion of an industry." Actually, we have gone much further than the wording or even the intent of this language in seeking the advice and counsel of industry in the development of our regulations. There are now established 536 formal industry advisory committees, in addition to 824 informal trade cooperating committees. During the last 12 months I am told that over 15,000 meetings have been held with industry and trade groups in the national office alone.

The membership of our 536 formal industry advisory committees are selected with considerable care. First the make-up of the industry itself is analyzed from a standpoint of large, small, and medium size firms, geographical distribution, members and nonmembers of trade associations, etc. In other words, we go to considerable lengths to see that the membership of each committee reflects the actual make-up of the industry itself.

Moreover, we carefully specify that the members of these committees should not, in any sense, "represent" the firms by whom they are employed. We have asked them to divorce themselves, insofar as possible, from their individual problems and come to us as representatives of the industry as a whole. These committees, as we see them, are working groups, and each member must have actual first-hand, day-to-day experience in the industry which he represents. They bring to our O. P. A. operations precise information on the business practices of their industry or trade, its structure, merchandising, and pricing methods, its pricing differentials and classifications, and other special features.

Of course, these committees do not establish prices. Price levels and individual price adjustments are made in accordance with the law passed by Congress, interpreted by standards developed by O. P. A. and explained to Congress, and approved in the courts. But these committees perform an invaluable service in advising the O. P. A. organization on how effective price control can be established in their industry with the least possible disruption of business practices and procedures.

We are frequently pressed to invite outsiders to meetings of these industry advisory committees. These requests come from trade association representatives, labor leaders who have a specific interest in the industry under consideration. Members of the trade which distribute the products manufactured or grown by a particular industry, representatives of the trade press, representatives of consumer organizations, etc., also make such requests.

We have coisistently maintained, however, that if these committees are to carry out the expressed purposes laid down by Congress, they should be small working groups thoroughly familiar with the specific industry problems and, as far as possible, an actual cross section of the industry itself. We have also felt that the membership of each committee in general should be restricted to no more than 15 individuals, for purposes of working efficiency.

It seemed clear that (and this opinion has been concurred in by members of the industry advisory committees themselves) any other procedure would quickly turn these committee meetings into time-consuming

forums, where special pressures would be applied, and special cases pleaded to the detriment of other interests. Under such circumstances, the balance of various group interests which we have tried carefully to reflect in each committee would be destroyed or rendered ineffectual.

On relatively few occasions have Members of Congress asked to attend these Industry Advisory Committee meetings. Until the incident of 10 days ago, in each case when such a request has been received, we have explained the purposes and the general makeup of these committees, and the Congressman has promptly withdrawn his request.

After carefully considering the policy which would best serve the purpose of these Industry Advisory Committees as laid down by Congress, it seems to me that we have been right in maintaining our meetings on a closed basis. However, I am anxious to modify this policy promptly if Members of Congress feel, in view of the circumstances which I have described, that they should attend.

I will appreciate it if you will give me your own views as to whether or not you feel that our policy in respect to these meetings should be modified. If it is your feeling and the feeling of a sizeable group in Congress that we have been wrong, we shall promptly change the policy which we have been following for the last 2 years.

In any event we will, of course, continue to welcome frank and open discussion with Members of Congress on any problem which affects them or their constituents. We are anxious to have Members of Congress use to the fullest extent the facilities which we have established to help them secure prompt and complete information on our operations in all its details.

Very sincerely,

CHESTER BOWLES,
Administrator.

Crossing of the Rhine

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. SPRINGER. Mr. Speaker, probably there has been no achievement which has been received with such great acclaim, since D-day, as has the crossing of the River Rhine. From the meager reports received our forces have completely surprised the enemy and they have established, not alone a bridgehead, but they have established their offensive, across the Rhine, in Germany, and much nearer Berlin, and the heart of Germany, than they have been before. It is reported that this great thrust forward will result in the end of this war much sooner than it was contemplated, and information has been received from captured Germans, of that fast fading army of the Nazis, that their Army will be unable to hold out long. From some sources it has been stated, by German prisoners of war, that the German Army will be unable to hold out longer than 10 days.

Every American hopes that the end of the war in Europe is near at hand. Our troops have waged an unceasing war; they have gone forward without any thought of fear; they have exemplified the true American traditions in war; and they have given an account of themselves such as will be written in the pages of our future history. It is the fervent wish of every American that this European war will soon be over, that victory will be ours, and that we may, then, win the peace as a lasting and a permanent peace for our country and our people. And, too, when this war ends in Europe we will buckle on the armor just a little tighter, and with our forces concentrated in the South Pacific, with all of our allies, we will quite soon defeat Japan, and this war will end. What a happy day we will witness when that end comes. Then, that is not all, because it is the wish, the will, and the hope that our boys who have fought so gallantly throughout this terrible war will be sent back to their homes as quickly as possible so they may again establish themselves in the arts and trades of civil life, with the aid of every American. We have many important days ahead—we have some tragic days ahead—because we must win the peace. The treaties of peace must be sound, they must be definite, and they must preserve throughout the future years the peace of the world.

Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a short editorial appearing in the Washington Daily News, of recent date, which follows:

THIS IS IT

This is the biggest thing since D-day. And a greater surprise. Everybody knew the invasion was coming, including the enemy. But this caught them off guard—completely. The rule books says that when an army breaks through strong fortified positions and races miles across prepared defenses and takes great cities, then it must stop to consolidate. Especially if there is a water obstacle to cross, much less the biggest river barrier in all Europe. That barrier had not been breached since Napoleon.

But Eisenhower threw away the rule book. So did Lieutenants Timmerman and Burroughs and their infantry company that made the miracle crossing of the Rhine, Lieutenant Colonel Engemann, Maj. Murray Seevers and the commanders all the way up to SHEAF.

The unexpected did it.

Though daring—and luck—got the troops across, more was required to hold the precious bridgehead those first critical 30 hours. That is where the preparedness came in. Though the first company came upon this opportunity by chance, when headed in another direction, it was under orders to be on the watch for any such break.

And the high command was ready to take full advantage of the break when it came. Otherwise there would not have been enough troops and armor to take the dominating height beyond, and expand the bridgehead. This, at least, is the way the amazing story is pieced together from those stirring front-line dispatches.

That the enemy is now wheeling into position for counterattack as soon as possible must be taken for granted. That he will fight as he never has fought before must be expected. For the heart of Germany can be pierced from that bridgehead east of the Rhine, and it is now or never for Hitler's crack legions.

But at the beginning of this mighty battle, American daring has won the initial advantage—a momentous advantage, which might have cost months of bloody sacrifice. And thanks to the heroism of our Canadian and British allies in the north, Patton's breakthrough around Coblenz, and the Americans and French in the south—all covered by a victorious air force—Eisenhower's whole line moves.

A proud and grateful America salutes the gallant Allied armies.

The Coming Economic World Pattern

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. REED of New York. Mr. Speaker, throughout this Nation schools are being set up, in fact many of them are now in operation, with paid teachers to educate the citizens with reference to the Bretton Woods proposal. These internationalists who are promoting the exploitation of the American taxpayers look upon the taxpayers as weak kindergarten children, sufficiently gullible to be imposed upon by this attempted international swindle. I believe that if sufficient time is permitted for the people to digest what is being offered by these promoters, this Bretton Woods proposal will be rejected. The methods by which internationalists, aided by our own quislings, are attempting to cram this proposal down the throats of the American people, is one of the most arrogant of any foreign attempt so far brought to light. If the American people permit these alien raiders of our treasury to succeed in their plan, then there is little left for the American taxpayers to do other than to become the tax slaves of impecunious and defaulting foreign nations. Under leave to extend I am inserting an article which appeared in the American Scholar during the winter of 1944 and 1945 entitled "The Coming Economic World Pattern," by Henry Hazlitt:

THE COMING ECONOMIC WORLD PATTERN
(By Henry Hazlitt)

FREE TRADE OR STATE DOMINATION?

Freedom of trade, in the eyes of Adam Smith and his nineteenth-century successors in the liberal tradition, meant freedom from government interference. All that the "classical" economists asked of governments in the field of international trade was that they should permit it to occur. They wanted a removal of prohibitions and of nearly all tariffs. But they did not ask for positive "encouragement" or artificial stimulants. They were as much opposed to bounties as they were to barriers.

What the older liberals meant by freedom, in short, was freedom of the individual citizen. They asked that he be free to sell his goods to whatever country and whatever market would pay him the best price for them. They asked that he be free to buy whatever he wanted wherever he could get it cheapest. They argued that these freedoms were not only good in themselves but that they represented by far the best means to bring about the most efficient division of labor and to maximize world production and world consumption. All they asked of government was that it enforce the laws against fraud,

force, and theft, and that it refrain from debasing the currency.

The world barriers to international trade in the 1930's, for which every large nation was in part responsible, but in the erection of which the totalitarian governments went to the greatest lengths, brought about such chaos that few responsible persons now undertake to defend them. High tariffs, import quotas, export subsidies, competitive currency depreciation, blocked currencies, bilateral arrangements, forced barter—all these are today deplored by lip in all respectable circles. The demand now is for international cooperation.

I

But when the concrete proposals for this international cooperation are examined, it turns out to be something radically different from the international cooperation hoped for by the older liberals. It is not the freedom of the private citizens of any country to trade with the private citizens of any other. It is not primarily the cooperation among private citizens of different countries at all. It is primarily cooperation among governments. As in the thirties, it is governments that are going to take the matter in hand. But instead, as in the wicked thirties, of restricting trade and making economic war upon each other, this time, we are told, the governments are going to direct and stimulate trade in the interests of peace.

It is a pleasant fantasy but there are the gravest reasons for doubting that it will ever be realized. There are the strongest reasons, on the other hand, for fearing that this kind of intergovernmental cooperation will break down, and that when it does the resulting chaos in international trade and economic relations will be greater than ever.

For Government officials, even when they really understand (which is very rarely) the basic economic forces that they are trying to control, are almost never disinterested. They are almost certain to reflect the special interests of some political pressure group. The interests of the pressure groups represented by the bureaucrats of one nation are certain to clash with those of the pressure groups represented by the bureaucrats of another. And these conflicting interests, precisely because they are represented by their respective governments, are far more likely to clash openly, directly, and politically than in a world of genuine free trade.

But perhaps, before we come back to these larger issues, it would be well to examine in detail the leading proposals so far put forward for the post-war economic world.

The agreements reached by the experts at Bretton Woods seem to typify the intended shape of things to come. The proposed international monetary fund has as one of its ostensible purposes the promotion of "exchange stability." Now the way to secure exchange stability, as worked out before the First World War, was clear. A nation kept its own currency sound. It made it convertible on demand into a definite and fixed quantity of gold. To make sure that the promise to pay that fixed quantity of gold would be kept, it saw to it that there was not an excessive expansion of bank credit. It saw to it also that the central government did not issue such a volume of debt that its ability to maintain interest on that debt and to retire it would come into question. A nation saw to it that the government's bonds were sold to the public, so that they were paid for out of real savings and not merely out of the creation of additional bank credit. If a government were to meet all these requirements it had to balance its burget, or at least make certain that its budget was not too long or too heavily out of balance.

When the public was confident, as a result of these conditions, that the promise of gold convertibility would be kept, a nation's currency in the foreign exchange market was stabilized (with comparatively minute fluctuations) in terms of this fixed gold value. The currencies of other countries were likewise fixed in terms of definite gold values. As each currency was held, by each country's own policy, to the value of a fixed quantity of gold, it followed that each gold currency was necessarily fixed in terms of every other. General exchange stability was preserved.

This was the international gold standard. It was a form of international cooperation worked out and perfected through the centuries. It reached its highest development in the latter part of the nineteenth century and in the present century before the First World War.

II

One will look in vain through the articles of agreement on the International Monetary Fund for any reference to balanced budgets, to limitations on internal credit expansion, or to any definite requirement for gold convertibility. How, then, does the fund propose to maintain international currency stability? Instead of contemplating that each currency shall be separately anchored to gold, and that each nation shall be responsible for maintaining that link so far as its own currency is concerned, the fund proposes that every currency be tied directly to every other. This is to be done by forcing the strong currencies automatically to support the weaker.

Suppose, to take a fictitious example, that the Ruritanian rurita has a par value of 20 cents in terms of American dollars. Suppose it has a sinking spell, or that everybody shows a sudden desire to get rid of ruritas and to acquire dollars instead. It becomes the duty of the fund to supply these dollars, at least up to an amount stipulated in advance in the articles of agreement. The fund must keep buying the ruritas at 20 cents. It must do this regardless of whether the rurita is sinking because the Ruritanians are buying more goods from the outside world than they have the exports or credit to pay for, or because Ruritania is having a revolution, or because it has a Fascist government that has just announced that it is expropriating the property of some minority group, or because it has a budget deficit brought about by a heavy armament program, or simply because it is grinding out too much paper money on its printing presses.

Now the real value of the rurita, left to the natural play of supply and demand, may be only 2 cents. Nevertheless, it must continue to be bought by the fund at 20 cents. But if, as is most probable, it is being bought by dollars, this means that American taxpayers are buying 2-cent ruritas for 20 cents, thereby immediately losing 90 percent of their investment on each purchase, while they pay for Ruritania's luxury imports, her armament program, or her Fascist experiment.

But does the International Monetary Fund, though it explicitly lists that objective among its purposes, even contemplate exchange stability? On the contrary, it clearly contemplates a great deal of exchange instability. It provides, first of all, that any nation may at any time devalue its currency 10 percent. It is explicitly stipulated that "the fund shall raise no objection." Any nation may propose a devaluation of its currency by another 10 percent, and the fund must either concur or object within 72 hours. The practical effect of this pressure for a quick answer will be to give the benefit of the doubt to the nation that wants to devaluate. If a nation wishes to devalue its currency even further, it must consult the fund. But if the fund refuses its request the member can simply withdraw, without advance notice, if it prefers further devaluation to whatever additional automatic credit it might still be entitled to in the fund.

But the most ominous provision of the fund, from an inflationary standpoint, is that which permits it by a majority of the total voting power to make "uniform proportionate changes in the par values of the currencies of all members." Each such change must be approved also by every member that has 10 percent or more of the total of the quotas. It is true that an individual member of the fund, if it decides within 72 hours, may be allowed to keep the par value of its currency unchanged; but as devaluation of all other currencies would be certain to cause a prompt drop of commodity prices within a nondevaluing nation, all nations would be virtually forced to participate in the devaluation.

Now this provision of the fund is a provision for periodic world inflation. The historic instances in which the par value of the monetary unit has been increased are so rare as to be negligible. The practical political pressures are always in the other direction. So we are safe in assuming that the uniform proportionate changes referred to by the fund mean uniform proportionate devaluations. Devaluation is the modern euphemism for debasement of the coinage. It always means repudiation. It means that the promise to pay a certain definite weight of gold has been broken, and that the devaluing government, for its bonds or currency notes, will pay a smaller weight of gold.

III

When a nation devalues by acting alone, all this is plain enough. Foreigners who hold bank deposits in that nation, or exchange bills drawn on that nation, or any obligation of that nation stated in terms of its own currency, know that they have been cheated. The value of their claims in terms of their own currency immediately drops by the percentage of the devaluation. They will be paid only 90 or 80 or 50 cents on the dollar. All this makes devaluation morally embarrassing to the devaluing nation.

There are other embarrassing effects. Devaluation seldom comes out of a clear sky. It follows an overexpansion of the Government's debt or currency notes on an overexpansion of internal bank credit. Foreigners, reading these signs, begin to withdraw their deposits. The nation's own citizens, seeking to protect their own position, begin to transfer their deposits to other countries that look safer. This is called the flight of capital. The politicians in power, and economic writers who reflect their point of view, seek to put the blame, not on the government that has made its credit and intentions questionable, but on the creditors who question them. They call the money of these creditors hot money—though it is, of course, merely money that is trying to leave hot places. In spite of this modern vocabulary, nations are still embarrassed by this flight of capital and this public evidence of distrust. Moreover, it is a blow to national pride and prestige for a nation's currency to sell at a discount in the foreign exchange markets.

It is obvious that a uniform depreciation of all currencies would either remove or conceal most of these embarrassing results to a single government. Though the dollar, say, would go to a discount of 25 or 50 percent, the man in the street would hardly suspect it at first because all the external measuring rods would have shrunk in exact proportion. A hundred dollars would still be worth the same number of pounds, francs, marks, lire, rubles, and so on, as before, and vice versa, because they would be different pounds, francs, and rubles as well as dollars. Relative foreign exchange rates would remain unchanged. There would be no flight of capital, because every place to which it could go would be equally disadvantageous. The provision in the fund for world inflation, in brief, is a provision to make resort to inflation easy, smooth, and above all respectable.

But the real harm that inflation would do would be no less under world-wide inflation than under national inflation. Commodity prices would rise. Everybody's cost of living would go up. Those who lived on pensions, either private or part of government social security systems, would find them buying

less than before. The holders of government securities would find the real value of their securities greatly cut. All those with fixed incomes would find themselves subjected to an invisible but real and ungraduated income tax (in addition to the government's acknowledged graduate income tax). All those with savings accounts and insurance policies would find them cut by an invisible but real and uniform capital levy. In short, private citizens, as before, would be cheated by their governments; but the government propaganda agencies would assure them that the latest inflation had merely ushered in a new paradise.

The proposed International Monetary Fund is bad from so many aspects that it is difficult to know in advance which danger will prove the most serious. By keeping up exchange rates by artificial means, buying currencies at par regardless of their real market value, and making devaluation easy and respectable, the way will be celared for encouraging every government in power to follow the easy political path. It can continue to pay heavy subsidies to all sorts of pressure groups, to embark on public works and patronage on a grand scale, and to tax lightly, thus continuing chronic budget deficits and financing them by added debt.

But all this will not give us free exchange markets. The fund agreement does not say in so many words whether there will be a free foreign exchange market or not. But it provides for the continuance of controls during an indefinite transition period, and it encourages permanent controls over capital movements. To control international capital movements would in practice require supervision and policing of all exchange transactions. In practice, therefore, people could not buy or sell abroad, or travel, without going through a great maze of red tape to get permission from their government to do so. They would lose the power to dispose of their property as they wished to, or to emigrate and take their money with them. Government power over the lives and actions of its citizens would be extended in yet further directions. Still more former freedoms would be abridged or circumscribed.

IV

Let us turn from the proposed international monetary fund to the proposed international bank for reconstruction and development. Here at least is an institution in which, with proper safeguards, the possibilities for good might outweigh the possibilities for harm. The bank, apart from its unnecessarily large subscribed capital—$9,100,000,000—is set up on a comparatively conservative basis. It is not to lend or guarantee loans for more than the full amount of its unimpaired subscribed capital, reserves, and surplus. It is not to make loans on an automatic basis, like the fund. It can exercise discretion. A project, for example, for which funds are being asked must be deemed meritorious by a committee selected by the bank. The borrower must be "in position to meet its obligations."

Such a bank, in the decade immediately following the war, could perform a useful service. In particular, it could make loans to stabilize their currency to those nations that show a genuine will and capacity to do so. Whether the proposed international bank would provide a better medium for this purpose than the existing American Export-Import Bank is a question of practical judgment. The international bank would have the advantage of symbolizing international cooperation. There would be psychological and political advantages in making individual nations responsible for payment of their debts to a bank representing 45 different nations rather than to a bank merely representing 1. On the other hand, while the United States would supply the lion's share of the lendable funds of such a bank, and probably assume an even greater share of the risks, and while most of the loans would doubtless be floated in this market, our Government would have much less to say about the loans and the conditions attached to them than it it were making them alone. While it is true that the American representative on the bank would be technically free to veto a proposed loan made in dollars in this market, it might be made very embarrassing for him to do this.

It is not necessary here to weigh the relative merits of the proposed international bank and our existing Export-Import Bank as a medium for making international stabilization loans. But it is important to point out that there are only two sound reasons why governments, either individually or jointly, should engage at this time in the business of international lending at all. The first is the whole record of default and repudiation of foreign loans in the inter-war period. This was brought about to some extent by real embarrassment on the part of debtors, but even more by the prevailing antiforeign and anticapitalistic ideology which regards the foreign lender, not as a man who takes risks and supplies essential aid, but as an exploiter, who throttles the native economy. This record of default and repudiation has led to at least a temporary reluctance of private investors to make further foreign loans. The second reason why government intervention is now needed is that the terrific disruption brought about by war will make it extremely difficult for some nations to stabilize their currencies without outside help.

But whatever governmental institutions are used to make such loans should be temporary in nature. They should confine themselves to currency-stabilization loans only. Where help is needed for humanitarian reasons it should be granted freely and generously as a pure gift. The United Nations Relief and Rehabilitation Administration already exists for this purpose. Its scope may need to be expanded. But everything above this should be placed on a strictly business basis. It will never be placed on such a basis if it is managed by governments. Where loans are made by private groups, risking their own funds, they will be made, in the overwhelming main, where the risks seem smallest and the chance of profit greatest. Under these conditions world resources are likely to be utilized in the most efficient manner. But where loans are made by Government officials who risk other peoples' funds and not their own, they are bound to be made primarily for political reasons and will often be wasteful from an economic point of view.

It is contemplated that the loans guaranteed by the proposed international bank will be guaranteed first of all by some Government. If the project for which the loan is made is located in Ruritania, for example, the Ruritanian Government or central bank would have to guarantee the loan before the international bank would do so. This would, of course, reduce the risk assumed by the international bank. On the other hand, it would enable it to make loans only to projects that had home government support. The home government, by this power to give or refuse guaranties, would exercise a great influence on the development and direction of home industry. It would be in a stronger position than otherwise to grant or withhold political favors. It is important to keep in mind that a government would be less likely to think of the broad economic effects of such loans than of their effects in increasing the potential armament program or the economic self-sufficiency of their country in time of war. These considerations, however, would not be the same as those that would lead to the most efficient utilization of world resources. Quite the contrary.

V

I have dwelt at length upon the proposed international fund and bank because these are specific proposals that have already been presented in detail. Space unfortunately does not permit an adequate analysis of the proposals for international commodity controls in the post-war period. At the moment of writing only one of these—the Anglo-American oil agreement—has reached the stage of presentation to the public. But indications from many sides have already made it clear that what is being contemplated is a revival and extension on a far greater scale of the type of international commodity controls of the thirties. This seems likely to apply, if the planners have their way, to cotton, wheat, sugar, coffee, tin, beef, tea, rubber, wool, copper, nitrates, cocoa, and quinine. Controls for some of these existed before the war. Many of these peacetime controls have merely allowed to remain dormant.

The chief controls have proved disastrous failures. Almost invariably they follow the same general pattern. Ostensibly the effort always is merely to stabilize the price of the commodity. But in every instance (except in one or two where a temporary control has been imposed by some single powerful governmental buyer) the interests of the producers have been put first. The result in every such instance is that the price is fixed above the level that market conditions justify. To compensate for this, a proportional restriction of output is usually placed on each producer subject to the control. This has several immediately bad effects. It means that total world production is cut. The world's consumers are able to enjoy less of that product than they would have enjoyed without restriction. The world is just that much poorer. Consumers are forced to pay higher prices than otherwise for that product. They have just that much less to spend on other products.

A uniform proportional restriction means, on the one hand, that the efficient low-cost producers are not permitted to turn out all of the output that they can at a low price. It means, on the other hand, that the inefficient high-cost producers are artificially kept in business. This increases the average cost of producing the product. It is being produced less efficiently than otherwise. The inefficient marginal producer thus artificially kept in that line of production continues to tie up land, labor, and capital that could much more profitably and efficiently be devoted to other uses.

If this artificial restriction of output does not take place, unsold surpluses of the overpriced commodity continue to pile up until the market for that product finally collapses to a far greater extent than if the control program had never been put into effect. Or producers outside the restriction program, stimulated by the artificial rise in price, expand their own production enormously. This is what happened to the British rubber restriction and the American cotton restriction programs. In either case the collapse of prices finally goes to catastrophic lengths that would never have been reached without the restriction scheme. The plan that started out so bravely to "stabilize" prices and conditions brings incomparably greater instability than the free forces of the market could possibly have brought.

Of course, the international commodity controls after the war, we are told, are going to avoid all these errors. This time prices are going to be fixed that are "fair," not only for producers but for consumers. Producing and consuming nations are going to agree on just what these fair prices are, because no one will be unreasonable. Fixed prices will necessarily involve "just" allotments and allocations for production and consumption as among nations, but only cynics will anticipate any unseemly international disputes regarding these. Finally, by the greatest miracle of all, this post-war world of superinternational controls and coercions is also going to be a world of "free" international trade.

Just what the planners mean by free trade in this connection I am not sure, but we can

be sure of some of the things they do not mean. They do not mean the freedom of ordinary people to buy and sell, lend and borrow, at whatever prices or rates they like and wherever they find it most profitable to do so. They do not mean the freedom of the plain citizen to raise as much of a given crop as he wishes, to come and go at will, to settle where he pleases, to take his capital and other belongings with him. They mean, I suspect, the freedom of bureaucrats to settle these matters for him. And they tell him that if he docilely obeys the bureaucrats he will be rewarded by a rise in his living standards. But if the planners succeed in tying up the idea of international cooperation with the idea of increased State domination and control over economic life, the international controls of the future seem only too likely to follow the pattern of the past, in which case the plain man's living standards will decline with his liberties.

Main Versus Wall Street

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes, from the Washington Daily News of March 12, 1945:

MAIN VERSUS WALL STREET

(By Thomas L. Stokes)

The fight which big international banking houses are beginning to stir up against the Bretton Woods agreements for an international bank and a fund to stabilize currencies is similar to the recurrent battle of Wall Street against Main Street ever since the New Deal began.

In the background, operating behind the cover of opposition raised by the American Bankers Association, are the same big New York City banking interests which fought through the years against numerous domestic reforms, banking and otherwise, created by the New Deal.

Gradually they have lost the power they once wielded in Washington with removal of the financial capital from New York to this city. But they don't give up easily. They have had a big stake in international finance. They fear that the Bretton Woods proposals, just beginning to be considered in Congress, will bring their international operations too much under control of this and other governments, just as the banking, stock exchange, and other New Deal regulatory measures curbed the control they once exercised domestically.

Make no mistake about it. This is a basic fight. The stakes are high. It is a battle for power.

It represents, on the one hand, an effort by the people of the world, in keeping with the issues of this war, to have some control through agencies created by their governments of those financial interests which hitherto have operated beyond the pale of government. On the other hand, it represents the fight of those international financial interests to retain control.

The Bretton Woods proposals would give governments more control over credit needed to rebuild the devastated areas and promote trade, though they represent nothing in any way revolutionary, since private bankers still would have a vast field of operation, probably larger than ever before.

The committees of the American Bankers Association, in which the big international bankers were very influential, would accept the international bank with some modification but are for elimination entirely of the monetary fund for stabilization of currencies.

They say, wait; wait 5 years perhaps before setting up such a stabilization fund. Their argument is that things in war-torn countries are too unsettled. The purpose of those representatives of 44 nations at Bretton Woods was to be ready to move in promptly, else there will be virtual chaos. This was well put by a private banker, Edward E. Brown, chairman of the board, First National Bank of Chicago, who has endorsed Bretton Woods:

"If the nations of Europe are to get on their feet and are not to fall into chaos, it is necessary that at the earliest possible date they have currencies with some degree of stability and which can be recognized and used as a basis for international trade. • • • Reconstruction and currency confidence go together. To say that one must precede the other is like saying the egg must precede the hen. To say that currency stabilization must be preceded by economic reconstruction, balanced foreign trade and balanced budgets is to put off the possibility of all these for at least a generation."

The bankers fighting Bretton Woods make a point of the mistakes after the last war, both by governments and by private bankers. Their mistakes are a matter of voluminous record in documents of public hearings by the Senate Banking Committee in 1933 and 1934—the German bonds, Peruvian bonds, Cuban bonds, City of Rio de Janeiro bonds, which filled bank vaults in this country and, when they went sour, contributed to the banking collapse.

On behalf of the Bretton Woods agreements, it is argued that an international bank, on which are represented all the nations, would check such improvident and reckless loans.

Castle Point Veterans' Hospital

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. LEFEVRE. Mr. Speaker, a telegram from Mr. William R. Cleary, commander, Disabled American Veterans, United States Veterans' Hospital, at Castle Point, N. Y., reads as follows:

Respectfully request that you read article in March issue Cosmopolitan magazine concerning conditions here at this hospital. Situation here is as described in article. Food situation very bad on infirmary ward. Will you follow this through for us.

Mr. Speaker, the Castle Point Veterans' Hospital is in my district. I sincerely hope every Member of this body will take the time to read the Cosmopolitan article referred to. This is the first time that my attention has been called to the deplorable conditions that apparently exist in this Veterans' Facility. Then to think that those in authority in the Veterans' Administration have had these conditions brought to their attention over and over again, with apparently nothing being done to correct this disgraceful situation, does make one fighting mad.

I heartily endorse the resolution introduced by Congressman PHILBIN, and I urge the Rules Committee to report the resolution back to the House for immediate action. A thorough investigation of all of our veterans' hospitals must be made and I sincerely hope the Committee on World War Veterans' Legislation will welcome this proposal. Even the Veterans' Administration should welcome it in order that these accusations may be proven false or true.

We hear so much today about the wonderful medical care our soldiers received. We can honestly believe these statements. I have personally visited several patients at Walter Reed Hospital and they all have praised the doctors and nurses and have repeatedly stated that they did not want for a thing. That is fine. That is the way it should be. But why this apparent change, after receiving an honorable discharge, and why should these same heroes suffer from lack of care in our veterans' hospitals?

I have served in the Congress for a period of a little over 2 years, and never have I seen the Congress refuse to appropriate funds for our veterans. It certainly is not the lack of money. The records show that our Federal veterans' hospitals spend much more per patient than any of our State and county hospitals.

To return again to the Castle Point situation. It is not only the care and treatment of the patients that is being criticized but also the food. Mr. Maisel in his article states that last September a petition signed by over 400 patients begging for better food had been filed.

Three weeks after this petition was filed, he visited the hospital to find on the trays of a dozen patients for the day's main meal: one small pot of cold tea; two thin slices of white bread; a tiny pat of butter; a few thin slices of broken-down stewed peaches; and a beef stew containing six or seven tiny chunks of greasy meat swimming in fast congealing gravy, "all cold as the grave," he says.

Now, my colleagues, I know you will agree with me that it is not a very enticing meal. That is not the way we Members of the Congress expect our disabled veterans to eat. Good wholesome food with plenty of rest are two of the most necessary requisites for tubercular cases no matter where they are being cared for.

Since this hospital was built to care for 479 patients and there were 582 patients listed on October 3, 1944, the hospital was already overcrowded and the colonel in charge told Mr. Maisel that by taking advantage of day rooms, diet kitchens, and so forth, they had made room for 625 beds. We simply cannot overcrowd tuberculosis patients. This type of disease calls for airy and sunny rooms with ample space to offset all possible chances of further infection.

No wonder these hospitals are having high death rates and numerous runaways. These hospitals must be enlarged and other facilities must be built. These men and women offered their lives for us and I know the American people would prefer to see their money spent to take

care of our disabled veterans rather than to see their tax dollars floating away on some of the other silly Federal projects we all have heard about.

We need men and women to look after these hospitals who have some of the milk of human kindness left in them. Men and women who are sympathetic. If we cannot get them with the present rate of pay, then let us correct that. Let us have enough doctors and nurses in order that these veterans may have all the necessary care required to lift this deplorable record of "cured" and "arrested cases."

We must have a change that will attract first-rate doctors and nurses so that these unfortunate victims of the war will have abundant facilities to assure them the best of care and treatment and as a result we Americans can feel proud of our Government hospitals.

Bretton Woods Agreements

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Star:

ON THE OTHER HAND—CHANGES SUGGESTED BY BANKERS TO BRETTON WOODS PACT QUESTIONED

(By Lowell Mellett)

At Bretton Woods representatives of the 44 United Nations reached complete agreement on a plan for world-wide monetary stabilization. Ratification of this plan by each of the governments is necessary to put it into effect, and Congress is now studying its terms. Congress can either ratify or reject or modify. Rejection appears to be unlikely, since nearly everybody approves or professes to approve of the general purpose, but the agreement is in danger, nevertheless.

Some of the country's largest bankers, speaking through the American Bankers' Association, are proposing that the agreement be changed in a number of ways. Since any such changes would have to be accepted by all the 44 countries and since each of the governments would be free to follow our example and offer further modifications, which in turn would have to be considered by all countries and accepted or rejected, the process of getting together might become endless. There are those who believe that some of the bankers, at least, are not unmindful of all this. The same process was used in the Senate to prevent our adherence to the League of Nations.

RAISES QUESTION

This brings up the question of whether Congress should look to the bankers for wisdom on this subject.

It is hard to recall any improvement in the American banking system which was not opposed to the country's important bankers when first proposed. Even the Federal Reserve System met with vigorous opposition. Nelson Aldrich, a great name in financial circles back in 1913, said: "It threatens to upset business and to produce the evil results it was projected to cure." H. Barton Hepburn, of Chase National, said the bill "as it stands would sound the death knell of the national banks."

An editorial in the American Banker called the measure "unconstitutional, socialistic, and revolutionary."

Following the banking collapse of 1933, one of the steps taken by Congress to strengthen our financial system was the separation of investment banking from commercial banking. The effect has been beneficial, but the legislation was opposed by men like W. C. Potter, head of the Guaranty Trust Co., who called the proposal "the most disastrous I have ever heard." His fears were shared by the great J. P. Morgan, who predicted that the legislation would cripple the underwriting business.

One of the greatest measures ever enacted by Congress for the benefit of depositors—and bankers—was the Federal Deposit Insurance Act. Yet here is what Francis H. Sisson, vice president of the American Bankers' Association, said in a telegram to members of the association in 1933:

"The American Bankers' Association fights to the last ditch against the guaranty provision of the Glass-Steagall bill as unsound, unscientific, unjust, and dangerous."

In a telegram to President Roosevelt the association declared that "putting into effect the deposit insurance provisions would involve genuine and serious danger."

FOUGHT SECURITIES ACT

That same year the Nation's big bankers lined up in the same way against the Securities Act. The bill was condemned as a measure which would hinder legitimate business without accomplishing any essential purpose. Leonard P. Ayres, vice president, Cleveland Trust Co., blamed the "act as an important factor in contributing to the stoppage of the flow of new capital into enterprise."

The Banking Act of 1935 increasing the authority of the Federal Reserve Board over the policies of member banks seems to have worked out pretty well, but at the time of its passage James J. Warburg, vice chairman of the Bank of Manhattan, suffered an acute case of jitters. He testified as follows: "I shall confine myself to a discussion of title 2 which deals with the proposed amendments to the Federal Reserve Act. I shall do this for the same reason that if some one were to say to me, 'I am going to do three things to you: Buy you a dinner, buy you a drink, and cut your throat.' I would not waste much time choosing my drink or ordering my dinner. Let me state that I am unequivocally opposed."

In the light of the record the bankers have made in the field of national legislation, it is likely that Congress will not be too greatly moved by their opposition to the Bretton Woods agreement. Obviously the bankers could be wrong.

California and United Nations Peace Conference, April 25

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. DOYLE. Mr. Speaker, under leave heretofore granted by unanimous consent, I desire to make a few remarks about the strategic geographical importance and significance of the San Francisco United Nations Peace Conference on April 25; and to include in my remarks a significant editorial by Elithe C. Brunton, editor of the Long Beach Pacific News, published in my home city in California. Mrs. Brunton is the editorial genius of this busy paper, and her husband, William J. Brunton, is a member of the Long Beach City Council. Her editorial pen is recognized as one of the most accurate, penetrating, and constructive of the women writers of our coast.

This editorial is significant of the thinking and appreciation of the people of California generally. The fact that it is written and published in a newspaper in the Eighteenth Congressional District, just about 500 miles from San Francisco, indicates that California is a geographical unit, regardless of the distance from the site of the United Nations Peace Conference. It shows that there is thinking, working, and praying for an era, as this splendid editorial says, of "Peace on earth, good will toward men."

As Congressman from the great Eighteenth Congressional District of California, and all of which congressional district is outside of the great Pacific coast metropolis, Los Angeles, and yet still all in Los Angeles County, I have sent back to community and group leaders, regardless of political party, the following written communication:

Wars must cease. I urge utmost study Dumbarton Oaks, also Allied Nations Conference, San Francisco, April 25, by everybody, regardless of political affiliation. Unlimited emphasis, work, cooperation, prayers by individuals and groups. That result of Conference shall be beginning of enduring world peace. Work and pray unceasingly.

Mr. Speaker, I feel that not only in California but all over the Nation we Congressmen from every State should do nothing less than to do our full duty to activate and encourage everyone in our respective congressional districts to work and pray unceasingly that the mental and spiritual forces of our Nation shall constructively contribute to the thinking and spirit of this United Nations Peace Conference in my native State at San Francisco. I believe no Member of this great legislative body, regardless of party or political attitude, will desire anything less for this great Peace Conference than that it shall result triumphantly in establishing secure, sincere foundations for the working machinery for an enduring world peace. Cynicism, criticism, the lack of faith, the lack of hope—these weaknesses have no place in the thinking and prayers of any American who sincerely desires that there be peace on earth and good will toward all men.

While California is conscious, as it has a right to be, of its geographic and strategic industrial, commercial, and economic significance, California citizens are increasingly placing their heads, their hearts, and their prayers in an attitude and objective of an enduring world peace.

The thought-provoking editorial which I refer to follows:

UNITED NATIONS PEACE MEETING

The designation of San Francisco as the meeting place for the momentous United Nations Peace Conference on April 25 is not only a unique tribute for the city by the

Golden Gate, but it is also a recognition of the growing importance of the State of California and the Pacific Basin.

Every community in our State should feel that it has a share in the honor which the historic gathering will bring to the west coast. This conference may prove to be the most important in all history. Here the representatives of 39 nations will gather to lay the foundation of a lasting peace. If they succeed in building a sound foundation—and the world must pray that they will—the name of San Francisco will be synonymous with a new era of "peace on earth, good will toward men."

The geographical importance of California as the gateway to the Orient has already been brought into sharp focus by the announcement of the meeting. Primarily, however, the selection of a California city for an event of such world importance emphasizes the fact that the Golden State has become a world center in the business, finance, farming, and trade.

California farm products are sold round the world; California's multi-billion dollar movie industry is world-wide in scope; California's biggest bank with resources of approximately four and a half billion dollars is the world's second largest bank; ships from California ports sail the seven seas. Our yards and factories have turned out many hundreds of vessels, many thousands of planes.

Years ago it was predicted that the Pacific Coast would eventually become the center of American population, business, and industry. We Californians have always had faith in the greatness of our State.

The choice of San Francisco as the meeting place for the peace conference confirms that faith.

Meeting of White-Collar Workers

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the Baltimore Sun:

[From the Baltimore Sun of March 10, 1945]

D'ALESANDRO REPUDIATES MEETING HERE—SESSION CALLED FOR TOMORROW BY WHITE-COLLAR COMMITTEE

Representatives D'ALESANDRO and FALLON, of Baltimore, and BALDWIN, a part of whose district is in the city, yesterday announced they would not attend a meeting called by the committee of white-collar and fixed-income workers for tomorrow at the Young Women's Christian Association, on the ground that political views of some of the sponsors are absolutely abhorrent to the Congressmen.

After a conference in the Capitol, Mr. FALLON and Mr. BALDWIN sent Mr. D'ALESANDRO to the radio to make the announcement. The committee sponsoring the affair had announced the Congressmen would attend.

Mr. D'ALESANDRO, in his broadcast from a station in the Capitol Building, asserted some of the sponsors are "practically known as communistic sympathizers and supporters."

INVITED LAST AUGUST

In explanation of the broadcast, Mr. D'ALESANDRO said last night that last August he and other congressional candidates received an invitation from the Provisional Committee of White-Collar and Fixed Income Workers to attend a conference at a later date on pending congressional legislation relating to wages of white-collar workers.

The invitation, he said, carried the names of Governor O'Conor, Senators Radcliffe and Tydings, Dr. David E. Weglein, superintendent of public instruction; Mrs. William Bauernschmidt, executive secretary of the Public School Association, and other personages in Baltimore and Maryland "who are known to be solid, conservative, true, loyal American citizens."

GIVEN HANDBILL

Mr. D'ALESANDRO said the first knowledge he had of tomorrow's meeting was a handbill given him yesterday by one of his constituents. None of the sponsoring committees, he said, had discussed the meeting either with him or with other members of the Baltimore congressional delegation.

NAMED AS SPONSORS

He asserted the names of Governor O'Conor, Senator Tydings and Radcliffe, Dr. Weglein, Mrs. Bauernschmidt and others on the original list did not appear on the notice for tomorrow's meeting. Representatives FALLON, BALDWIN and himself were named among the sponsors of the meeting on the notice, Mr. D'ALESANDRO said.

Others named on the notice as sponsors, Mr. D'ALESANDRO added, were Miss Angela Bambace, chairman of the Baltimore branch, International Ladies Garment Workers Union (A. F. of L.); Walter McManamon, president of the Industrial Union Council (C. I. O.); Sidney Katz, State secretary of the C. I. O.; Carl Murphy, publisher of the Afro-American; Miss Elisabeth Gilman, Socialist party leader; Mrs. Lillian M. Jackson, president Baltimore branch, National Association for the Advancement of Colored People; Mrs. Juanita Jackson Mitchell, director of the Citizens' Committee for Justice.

Mrs. Violet Hill Whyte, first Negro policewoman in Baltimore; Dr. Herman Seidel, leader of Histadruth, labor party of the Zionist movement; Dr. Eleanor Pancoast, professor of economics, Goucher College; Mrs. Leon Ginsberg, a leader in the Child Study Association; Dr. Hans Froelicher, headmaster of the Park School; the Reverend Dr. Don Frank Fenn, rector of St. Michael and All Angels' Protestant Episcopal Church; Duke Avnet, leader of the Baltimore branch, National Lawyers' Guild; the Reverend Dr. Morris Lazaron, rabbi of Madison Avenue Congregation; Rabbi Morris Rosenblatt, Frank T. Rhoad, Jr., and Miss Dorthea Novius.

KILGORE LISTED AS SPEAKER

Senator KILGORE, of West Virigina, was listed as the principal speaker. A registration fee of 50 cents would be charged for the afternoon session, but the evening meeting, at which Senator KILGORE will speak, will be free to the public, the announcement said.

"Under any other set of circumstances, Congressmen FALLON, BALDWIN and myself would be only too happy to sit on the same platform with the esteemed Senator from West Virginia," Mr. D'ALESANDRO said in his broadcast. "However, when we find that a certain group has taken advantage of this opportunity to push themselves in along with my fellow Congressmen and myself, we are forced to make this statement at this time—that we do not plan to be present at this meeting. Why?

"ABSOLUTELY ABHORRENT"

"Because on this circular that I have in my hand there are listed persons whose political views are absolutely abhorrent to my fellow-Congressmen and myself, as well as to practically 100 percent of our fellow-Americans. These people of whom I speak are practically known as communistic sympathizers and supporters.

"Under these circumstances, we feel certain that Senator KILGORE, as well as others who understand and sympathize with the purpose of this meeting, recognize the fact that my fellow Congressmen and myself are entirely in accord and wish to give our support toward a better deal for the white-collar and fixed-income workers.

"However, these sympathies on our part do not force us to publicly sit with those who espouse a philosophy which advocated the teachings of Karl Marx."

[From the Baltimore Sun of March 12, 1945]

SENATOR CHAVEZ FAILS TO APPEAR—DECLINES TO ADDRESS WHITE-COLLAR WORKERS

A conference on problems of white collar and fixed income workers was thrown into confusion yesterday afternoon at the Young Women's Christian Association when Senator DENNIS CHAVEZ, of New Mexico, declined to address an evening meeting unless Senator GEORGE L. RADCLIFFE, who could not be found, sat on the platform with him.

Gabriel Stickle, conference committee chairman and a member of the United Federal Workers of America (C. I. O.), announced that Senator CHAVEZ primarily was motivated by an announcement late last week by Representatives THOMAS D'ALESANDRO, Jr., GEORGE H. FALLON, and H. STREETT BALDWIN that, although listed as sponsors of the meeting, they would not attend.

D'ALESANDRO ISSUES STATEMENT

Mr. D'ALESANDRO, in a broadcast, explained that some of the listed sponsors were "absolutely abhorrent" to the Congressmen and that some of them "are practically known as Communistic sympathizers and supporters."

While leaders held a sudden meeting following an afternoon panel discussion on the subject of the conference to determine what to do about the night session, Representative D'ALESANDRO issued a statement asserting he and his colleagues are intensely interested in the status of white collar and fixed income workers and pending legislation affecting them. He referred to a telegram received by one of his constituents and signed by a sponsor of the white-collar group which, Mr. D'ALESANDRO said, referred to him and his colleagues as Red baiters.

"IF—SHOE FITS ANYONE"

"If our alleged Red baiting shoe fits anyone at the meeting, let it stay on that foot," Mr. D'ALESANDRO's statement said. "Is it not strange that the telegram indicates a very special consciousness of Red baiting? Our failure to cooperate in this conference is based on the make-up of the so-called sponsors of the conference."

CANCELED ADDRESS

Meanwhile, on the floor of the conference a speaker charged Mr. D'ALESANDRO with attempting to sabotage the meeting at which Senator HARLEY M. KILGORE, of West Virginia, originally was scheduled to be the principal speaker at the night session. He was forced to cancel the engagement because of an important engagement in his home State. Senator CHAVEZ was then named as a substitute.

Mr. Strickle disclosed that those in charge of the program had tried to persuade Senator CHAVEZ throughout Saturday afternoon and yesterday to keep the engagement, but he adamantly refused unless Senator RADCLIFFE was present. Vain efforts were made to find Senator RADCLIFFE, whose telephone, it was said, was out of order.

DESIRED MARYLANDERS PRESENT

In Washington last night Senator CHAVEZ said, "I would have been delighted to take the place of Senator KILGORE, but when I read in the Baltimore Sun that their local representatives in Congress objected to being present and the two Senators from Maryland were not going to be there, I did not feel justified in attending. If any representative from Maryland or any Senator from

Maryland had been present, I would have been glad to go."

There were some in the conference corridors who suggested that the three Congressmen tried to torpedo the meeting at the instigation of William Curran, Democratic leader.

LAST-MINUTE SPEAKERS URGED

When it was apparent that Senator CHAVEZ would not come to Baltimore from Washington, it was suggested at the suddenly called meeting of conference leaders that former Representative Daniel Ellison or the Rev. Dr. Morris Lazaron, rabbi of the Madison Avenue Congregation, or Dr. Florence Bamberger, director of Teachers College, Johns Hopkins University, be invited as last-minute pinch-hitter speakers.

However, it was finally agreed that the night session take the form of a round-table discussion without a principal speaker.

A. J. Allen, executive of the local Urban League branch, ironically asked, "Is it necessary to have Senator RADCLIFFE on the stage to give a tone of respectability to this conference?" Senator RADCLIFFE, listed as a sponsor, did not remove his name from the sponsor list, it was announced, and nothing had been heard from him.

MEETING SLATED APRIL 5

It was decided to hold another meeting on April 5 after Joseph H. Levy, vice president of the United Office and Professional Workers of America; Dr. Alvin Schlinder, professor of education at the University of Maryland, and Miss Olivia Israeli, director of negotiation of the United Federal Workers of America, had summed up at the evening round-table panel discussions of the afternoon.

Besides the U. O. P. W. A. and the U. F. W. A., the other program sponsors were the State, County, and Municipal Workers of America, all C. I. O. affiliates, and the business and professional women's department of the Young Women's Christian Association.

H. O. L. C. in Rhode Island

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I offer for the RECORD a letter I received from John H. Fahey, Commissioner of the Federal Home Loan Bank Administration, reporting on the progress of liquidation of the Home Owners' Loan Corporation in my home State. The letter follows:

NATIONAL HOUSING AGENCY,
FEDERAL HOME LOAN
BANK ADMINISTRATION,
Washington, D. C., February 28, 1945.

Hon. AIME J. FORAND,
House of Representatives,
Washington, D. C.

MY DEAR MR. FORAND: On January 24, 1944, I wrote you giving you some current facts concerning the progress of liquidation of the Home Owners' Loan Corporation, particularly the record of its accomplishment in your State. The figures which I gave you then were as of the close of business December 31, 1943. Since that time even greater progress has been made and I now present to you figures as of December 31, 1944, which reflect the progress made during this 12-month period.

You will recall that out of a total of nearly 2,000,000 applications filed throughout the United States and its possessions during the period from June 13, 1933 through June 12, 1936, 1,017,821 loans were closed having a dollar value including subsequent advances, chiefly for taxes, repairs, and other necessary expenses, of nearly three and a half billion dollars.

Since June 12, 1936, at which time the Corporation's lending activities ceased, it has been engaged in a rapid yet orderly liquidation of its assets. As of December 31, 1943, a total of $2,051,677,951 had been liquidated, or 53.9 percent. As of December 31, 1944, 1 year later, a total of $2,385,938,826, or over 68.4 percent, had been liquidated. In other words, during the 12-month period from December 31, 1943, to December 31, 1944, the Corporation liquidated a total of $334,260,875. Out of a cumulative total of 197,945 properties which the Corporation was forced to acquire, there remained on hand as of December 31, 1944, a total of but 1,935 properties and compares with 12,744 properties on hand as of December 31, 1943.

Out of the total number of loans made, 6,118 were closed in the State of Rhode Island representing an aggregate amount of $27,390,954. In this connection you will be interested in knowing that, according to the 1940 housing census, 58.7 percent of all owner-occupied, nonfarm dwelling units in the State of Rhode Island were under mortgage, and 16.2 percent of these mortgages were refinanced by the Home Owners' Loan Corporation.

As of December 31, 1943, the total amount of outstanding loans of the Corporation in Rhode Island, together with the value of the properties acquired, had been reduced through collections and the sale of its properties to a balance of $12,530,253, a liquidation equivalent to 54.2 percent. As of December 31, 1944, the amount of the outstanding loans and the value of the properties acquired had been reduced to a balance of $9,977,118, equivalent to 63.6 percent, or a liquidation of $2,553,135 during the 12-month period.

A total of 1,994 borrowers have paid their accounts in full as of December 31, 1944. This represents an increase of 624 over the figure reported to you as of December 31, 1943. A total of 768 borrowers in the State of Rhode Island are now making monthly payments in excess of the amount required under their contracts. This represents an increase of 297 over the figure previously reported to you.

The Corporation was obliged to take over through foreclosure in the State of Rhode Island a cumulative total of 1,455 properties. As of December 31, 1944, 1,447 properties have been sold, representing a liquidation of acquired properties in your State equivalent to 99.5 percent.

According to the present trends of the Home Owners' Loan Corporation's income and expense and the projection of these into the future, if the present loan balances are liquidated in accordance with amortization schedules, the Corporation should not only be able to cover all future expenses but also be able to wipe out its present deficit and thus make possible the return to the Federal Government of the entire original $200,000,000 capital of the Corporation advanced in 1933 by the Secretary of the Treasury.

We believe that the Corporation's record will be a source of pride to you and to the Congress which passed the original Home Owners' Loan Corporation legislation which has proven to be one of the most advanced measures ever undertaken in any country for the encouragement and maintenance of home ownership.

Sincerely yours,

JOHN H. FAHEY,
Commissioner.

Should the Veteran's Family Favor Bretton Woods?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio address delivered by myself over N. B. C. Friday evening, March 9, 1945:

Fellow Americans, before I talk about the Bretton Woods scheme let me ask you, How many times lately have you seen a notice in your local paper reading about like this?

"Pvt. Larry Mitchell was killed in action in Germany on January 25. In addition to his widow, Betty, he leaves two small children, Jack, aged 3 years, and a daughter whom he had never seen, Jane, 7 months."

The foregoing notice is imaginary, but there is nothing imaginary about that heartbreaking message now coming to thousands and thousands of American homes. No glamorous victory communiqués should remove from my mind or yours the haunting tragedy of that dread message. You and I know that broken homes and blasted lives are the inevitable cost of war—part of the price of victory. We cannot change that situation.

But when the young wife receives that message there is created for you and me a sacred obligation. We have a solemn duty to the humble fireside of that widow and her orphaned children. We have a responsibility to that 7-month-old daughter, Jane, whose life will never be brightened by a hug from the strong and loving arms of her father. He died a hero's death obeying the commands of his Government.

We who stayed at home have a duty toward those children and their mother in the long, lonesome years ahead. Fellow Americans, will we fulfill that trust?

Today the answer of all of us is "Yes; by all means." But keeping that faith will not be easy. Already we have ignored many warning signals.

GOVERNMENT AND ATLANTIC CHARTER

The keeping of that faith is in the hands of the Government. But government everywhere in late years, including our own, has found it easier to make promises than to keep them. Most of us believed in the Atlantic Charter. But those of us who are honest with ourselves, and most Americans are, know that the Atlantic Charter has been broken and betrayed, as Poland, Finland, and other small countries have learned so bitterly in being cut up. That charter evidenced a great purpose. But while governments still talk about it, by their deeds and actions they have destroyed the charter.

You may ask, what has the abandonment of the Atlantic Charter got to do with the widow of Private Mitchell and her small children? It has a vital connection.

The future of the widows and orphans of this war depend on the modest pension payments which the Government has promised them.

You and I are in favor of paying those pensions, aren't we? You want those pensions to be paid on time, paid fairly, and in honest dollars. That's what the American people expect to do for those who have sacrificed. That is the least we can do in simple justice.

But here is the significant point. If the American people become beaten and bankrupt from reckless spending all over the

world, they would not be able to make those payments in honest dollars. That is a simple statement of fact.

Right here you may interrupt and say, "There is no danger of that. Our Government in Washington would not allow that to happen." You might add, "You folks in Washington must protect us from reckless spending and from inflation." And you are right—that is our job.

HIGH PRESSURE USED ON BRETTON WOODS

But the skids are now being greased to high-pressure Congress into approving a scheme hatched up last summer at Bretton Woods. It is called the Bretton Woods Stabilization Fund and International Bank. On the radio, through the press, and by other propaganda means, they are ballyhooing this Bretton Woods scheme just as they did with the Atlantic Charter.

And, as in the case of the charter, they give you a very appealing sales talk. They claim this scheme will make 60,000,000 jobs for Americans. They claim it is necessary to insure world peace. They claim it will enable Europe to rebuild itself. They claim it will guarantee good feeling and prosperity for the world. They make all these claims and more too. And everything claimed is a noble purpose that you and I would like to see come about—just as we all would like to go to Heaven some day.

To try this global holding company scheme, they want to risk more billions of our fast-disappearing assets. They demand that Congress O. K. this experiment. The result would be that America would largely guarantee the paper money and debts of the rest of the world, a few countries excepted. That is the speculative venture they want to try with the trust funds of America's war victims.

Many well-meaning folks honestly believe in this experiment, just as they believed in the Atlantic Charter. Other promoters of this scheme are of a different breed. They are the cunning people who know this hand-out pours gasoline on the smoldering fires of inflation. They are now getting rich by trading real estate, buying property, and speculating in a riotous stock market while patriots are buying bonds. These shrewd manipulators welcome this raid on the Treasury of the United States. Why? Because they know that as our gold and other assets are sent abroad, inflation will speed up. Their opportunities for black market gains and bootleg profits will multiply.

On the other hand, I understand the fond hopes of the "global do-gooders" who worship the Bretton Woods schemes because they believe it will bring peace and prosperity. But I solemnly question the wisdom of any experiment that will put tremendous amounts of our assets into a speculative pool to create artificial values for foreign currencies. And that is what the Bretton Woods fund does, no matter how they dress it up.

Moreover, the Bretton Woods schemes are in addition to many others now in operation, and which are scoop-shoveling our savings, our goods, and resources into Europe, Asia, Africa, South America, Australia, and the islands of the seven seas.

OUR RESOURCES ARE NOT UNLIMITED

Should we approve of more schemes of this kind now?

Not until America has clearly demonstrated its ability to make good on its promises to the widows and orphans of this war; its promises to the wounded veterans of this conflict; its promises to the millions of youngsters who are relying on the pledges of the G. I. bill. Against our Government, these Americans hold a claim which must have priority over global experiments. Bretton Woods would put our own patriots at the end of the pay-check line at our Treasury.

These patriots have the first claim against the Treasury of the United States. Their claim has been written in tears and blood in the foxholes of a hundred battlefields, and on the shifting currents of the seven seas.

These heroic dead are gone. They cannot plead for their loved ones. They left no propaganda machine like that of the promoters of Bretton Woods. The claims of these heroes have only begun to be presented. They must be paid. But they cannot, and will not, be paid if the United States Treasury cupboard becomes bare. The Treasury of the United States has no unlimited power to make payments. The Treasury does not create the goods to pay these claims.

The American housewife had a lesson along this line last Christmas on ration stamps. You remember how the Government promised you that ration stamps were to be good indefinitely. Then one fine morning you awoke and the Government had repudiated and canceled those ration stamps. Why? Because they had issued too many stamps compared with the amount of food available. With all their experts, they had made a colossal mistake—so gigantic that the great Government of the United States was forced to break its promises to its citizens. What did we learn from that failure? There were several lessons, but here is the most important:

When a Government promises too much, it breaks its pledges.

We found the Government can issue food ration stamps, but it cannot create the food to make good on those stamps. They simply issued too many promises. That is exactly what will happen if America sets out to insure the debts and currencies of the world. The Government would mean well, of course, just as Mr. Bowles did on the ration stamps. But we will be unable to make good on our sacred obligations at home if we are first bled white by fantastic handouts abroad.

ONLY A REALISTIC APPROACH IS CONSTRUCTIVE

So we must work out these problems realistically and constructively. In measuring our ability to help other peoples, the warning of the canceled ration stamps is plain. When a Government promises too much, it fails to keep its pledges. We, the American people, have now had this lesson twice. We have had it on the ration stamps at home and the Atlantic Charter abroad. We have had our fingers burned two times, not because of our mistakes as citizens, but because our Government officials promised too much.

Only a vigorous protest by the people can stop this scheme. Will you do your part to protect the young patriots who are counting on the G. I. bill?

Then, you must let your Congressman and your Senator know that you expect them to protect our war victims first. Only by your voices can this scheme be stopped.

The fate of the widow of Private Mitchell, the future of his fatherless son and daughter, largely rest in your hands. The lonely fireside of these little families must not be haunted either by the poverty of inflation or the tyranny of a perpetual O. P. A. gestapo.

No nation can repudiate the sacred pledges made to its fighting heroes and remain a land of righteousness and justice. The G. I. bill must never go into the ashcan like the Atlantic Charter. The widows and orphans and wounded must never see their claims treated like the carefully saved ration stamps. You and I must save them from this Bretton Woods danger. That is our duty as forward-looking and constructive citizens.

In measuring this and every hand-out experiment, we may well be guided by the words of one of the great humanitarians of all times, St. Paul, who, in the First Epistle to Timothy, admonished him in these solemn words, "But if any provide not for his own, and specially not for those of his own house, he hath denied the faith, and is worse than an infidel."

Only an America that plays square with its own war victims can help constructively and effectively the suffering people of other lands. Accordingly, our first financial job is to put our own house in order.

In your personal affairs, the only permanent way to prosperity is a balanced budget. Likewise, in the Nation the only permanent way to prosperity is a balanced budget. Unless that goal is achieved all post-war plans for ourselves and for the world will collapse like Hitler's conquests.

F. H. A. in Rhode Island

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. FORAND. Mr. Speaker, under leave granted me to extend my remarks, I include therein a letter which I have received from Abner H. Ferguson, Commissioner of the Federal Housing Administration, giving an up-to-date picture of the fine record of that agency in my home State:

NATIONAL HOUSING AGENCY,
FEDERAL HOUSING ADMINISTRATION,
Washington, D. C., March 6, 1945.

Hon. AIME J. FORAND,
House of Representatives,
Washington, D. C.

DEAR MR. FORAND: Although for obvious reasons during the war emergency the F. H. A. has not made its customary periodical reports to Congressmen and Senators on F. H. A. operations in their States, I feel this practice should now be resumed.

The F. H. A., as you know, operates entirely through the private capital of local financial institutions. It insures the loans these institutions make for property repair and mortgages for the purchase of homes and the construction of new homes.

At the end of June 1944, a total of $12,595,589 lent by these institutions has enabled 29,559 Rhode Island families to maintain or improve their properties, while 3,364 families have been able to buy or build homes through mortgage loans in the original face amount of $15,334,520.

In addition, 926 families of war workers, newly arrived in war congested areas in Rhode Island, have been provided with homes through mortgage loans amounting to $4,612,350.

These same figures for any specific county or counties are available and I shall be glad to send them to you if you so desire.

The F. H. A. has for over 5 years been paying all operating expenses and losses of its mortgage-insurance programs, at the same time adding substantially to its insurance reserves, which now total more than $97,000,000. Losses have been only a fraction of 1 percent. Likewise, the property repair program is currently paying its own way from revenues derived from insurance premiums and for nearly a year collections on defaulted loans have shown a substantial margin over claims paid.

I am particularly happy to advise you that within 60 to 90 days the F. H. A. will start distribution of mortgage-prepayment dividends to 13,000 home buyers who paid off their mortgages in full during the calendar

year 1944. These mortgages were in group accounts which had developed credit balances by January 1, 1944. These dividends will range from a few dollars to nearly $200 each.

I am sure you will agree this is a gratifying record.

Sincerely yours,

ABNER H. FERGUSON,
Commissioner.

Rehabilitation of Veterans

EXTENSION OF REMARKS
OF
HON. ROBERT K. HENRY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. HENRY. Mr. Speaker, every Member of this body appreciates, from the volume of mail received at his office from bewildered veterans of this war returning to civilian life, that a small percentage of them realize how to go about securing the benefits provided for them under the G. I. bill of rights.

The veteran who comes back is not the same boy who went away, and although the Federal Government can furnish the money for helping him, his family and his local community must do the work of rehabilitating him so that he can take his place in work and in society.

I have the plan for organization of Wisconsin's Waukesha County Veterans' Rehabilitation Committee, which I want to bring to the attention of this Congress. Waukesha County has pioneered in the field of veterans' rehabilitation and has set up a plan in which complete coordination and cooperation have been obtained.

In many cities throughout the Nation the home folks are sitting back and letting the returned veterans shift for themselves, perhaps because they have heard so much about the wonderful benefits that the Federal Government has provided for them. They believe that all a veteran has to do is go home and wait for the benefits to be delivered to him.

How well we know this is not true. We remember what followed the last war. The discharged veterans, entirely out of this world because of their experiences and bewildered by a return to civilian life and the complex problems that they had not known when they enlisted or were drafted, didn't know how, didn't seem to care, or were wholly incapable of obtaining the benefits that were provided for them by the Government. The veterans' organizations, the Red Cross, and the other agencies did their best to help, and did a fine job, but nevertheless, many of the boys went along for years without obtaining their just rewards. This is borne out by the fact that 25 years after the last war many ex-service men are being paid disability compensations in lump sums or their widows and children are just being apprised of what is due them.

The following excerpt is taken from Willard Wallar's Veteran Comes Back and is a part of the Waukesha County Committee's printed plan:

With admirable efficiency the armed forces which took our boys away will return them to our doorsteps, in reasonably good physical condition, a little spending money in their pockets, some words of counsel ringing in their ears.

Then the Army's job is done and ours begins. This veteran, this boy next door whom today we know as G. I. Joe, is our responsibility.

What we need is a complete program—a set of coordinated activities to restore the veteran to his place in society. In such a program, which must go far beyond what already has been set up, every branch of Government, Federal, State, and local, would have its proper part, and every private organization, every citizen, would find a job to do. Even the utmost wisdom and generosity on the part of the Federal and State Governments will be of no avail unless the local communities do their part. The G. I. bill of rights will be worse than useless if the veteran's neighbors, friends, and relatives lack the energy and sense to make it work.

Every citizen in Waukesha County has decided that all information available relating to a discharged veteran's problems should be taken to the veteran rather than to force him to seek out the information from different Government agencies; that war does something to people, and that veterans separated from their homes and loved ones, whether subjected to actual combat or not, are entitled to everything a grateful people can do for them in order to assist them to take up their position in civilian life again. The following is an example of the certificate handed the newly returned veteran by the Waukesha County citizens who call upon him:

WELCOME HOME, JOHN DOE

You have been away from your friends and loved ones serving your beloved country in the armed services of the United States of America in the Second World War.

We, the people of your home community, welcome you home and express to you the sincere appreciation and gratitude of your community, State, and Nation for services well rendered.

You have made great sacrifices for us during your period of service and we in return humbly offer our services to you in order to assist you to regain your place in the civilian life of your community.

You have worked hard in order to help save a free and liberty-loving America. Let us now work together to preserve that freedom and liberty for the generations to come.

The Waukesha County Veterans' Rehabilitation Committee gets the names and addresses of all veterans from the draft boards as soon as they register their discharge from service. They send a trained visiting committee to each veteran's home to welcome him back, inform him of his rights, and learn what help he would like. They arrange interviews with expert committees to find the veteran a job, help him get a pension, assist him to medical or hospital care, arrange for his education, advise him on a loan, inquire into his religious preference, and aid in vocational training. Each veteran's case is continued until he is completely settled and getting along all right.

This remarkable plan is in printed form, setting out in detail the job of each citizen and showing how each civic organization is coordinated in a complete working unit. I commend the citizens of Waukesha County, and especially those persons who had the foresight and determination back in 1943 to formulate this workable plan, which has been so effectively operating since February of 1944.

Five hundred and thirty-two veterans who returned to the community before the plan was working were not overlooked. The committee ferreted out these men, and responsible citizens called upon them and aided in setting them right.

If you are interested in becoming a part of an organization in your local community and desirous of studying the successful plan to which I have referred, I am sure you will find the committee, which has taken such a preeminent place in local rehabilitation, ready to lend assistance by furnishing every detail of the plan.

Naturally, I am proud that Waukesha County is in my congressional district, and I shall be happy to have you contact me for additional information.

Propaganda and Half Truths by Government Agencies

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. MILLER of Nebraska. Mr. Speaker, the grave threat to our freedom that is now coming from the clever use of propaganda methods by hundreds of writers in Government agencies is well described in the editorial that follows.

This editorial, written by Glenn E. Bunnell, editor of the Stuart (Nebr.) Advocate, appeared in that newspaper on March 8, 1945. Mr. Bunnell is far enough removed from the turmoil in Washington to have a clear picture of the dangers in Government propaganda and half truths.

We have long ago learned to discount news stories from Germany and Japan because it has been proven that they color these reports with progaganda for the purpose of deceiving us or their own people. However, many people are not aware that in a measure, we are faced with the same thing here at home.

No; our Government does not publish wild reports of unwon victories, such as is the custom of enemy propagandists, the American people are too enlightened for that. They use a more subtle method to sell the people on a proposed Government project, or method in which an old program is being administered.

When the need arises the Government blankets the press and radio with statements by a score of high officials, supporting the administration policy. Here newsmen are made the unwilling tools of Government propagandists. For statements by high Government officials make news, whether they make sense or not. News reels and the stage and screen are also propaganda mediums used by the Government. In addition to the

actual propaganda pictures issued, we will note that in no picture do you find anything that opposes Government policy and often support of Government programs. Every gob in our Navy and every G. I. in our Army will agree that their branch of the service is not nearly as glamorous as it is pictured on the silver screen.

In recent months the Government has used a lot of high powered propaganda in attempting to put over the Federal ballot, the food subsidy program, the work, fight, or jail legislation, and many other similar administration programs.

Is the propaganda put out by our Government bad, you ask? No; not all of it. If it is truthful, and is put out for the purpose of education it is fine; but when untruths, half truths, and personal opinion are published as facts, then it is very apt to be bad.

So effective has Government propaganda been that youngsters of 12 or 14 look askance at their parents if they find fault with New Deal policy.

It is time we stopped to think. To think for ourselves. Don't let the secretary of some bureau do it for you. Even if all elected officials and the appointed heads of departments and bureaus were honest (and unfortunately all of them are not), they can and do make mistakes. Examine their statements and apply the rules of reason and logic, in short think for yourself. Don't be lulled to sleep in the belief that we have to take it as it comes. We don't. This is still "the land of the free and the home of the brave," where all men were created equal; the New Deal, notwithstanding.

The foregoing charges and suggestions might seem to be revolutionary, unless we remember that in America we have a government of the people, by the people, and for the people; and that the men who run the Government are servants of the people and should be kept subservient to the will of the great majority. If to some it may seem unpatriotic to oppose certain actions of the Government in time of war, it must be called to mind that this war is being fought to insure a way of life in which people are the masters of their Government and not the servants of it, as is the case in Germany and Japan. There would be no object in winning our freedom from foreign dictators only to lose that freedom here at home. We must see to it that the extraordinary powers granted to our elected servants as a war measure, are not abused, we must see to it that such powers are used only to win the war, and not to subject us to the control of our servants in Washington.

We must always remain alert, and not allow high wages, good prices, and propaganda to lull us to sleep. An alert, aggressive citizenry can never be enslaved by government. We are free now and we should fight both at home and abroad to maintain that freedom we in America have always enjoyed.

A Boy Beneath a Cross

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. SPRINGER. Mr. Speaker, recently I received a poem which was written by Mr. Frank M. Crawford, of Connersville, Ind., after the death of his fine grandson, Crawford E. Handley, in combat in this war. This young soldier was universally loved and respected by all who knew him. He has given up his all for his country, and his name is now recorded in the list of our Nation's heroes. The words coming from the grandfather of this boy came truly from his soul—pleading for the better things of life to come because his grandson and all other boys who die in this war have made the supreme sacrifice for us.

Mr. Speaker, I know this devoted and distressed grandfather, the author of this poem. He is one of our finest citizens. It was my pleasure to have known his grandson, Crawford E. Handley—one of the finest lads it has been my privilege to know. This boy has gone—but the message contained in the following verse will live forever.

Under unanimous consent, Mr. Speaker, to extend my own remarks in the Appendix of the RECORD, I include the poem, written by the grandfather of this boy, which follows:

A BOY BENEATH A CROSS

He asked for no reward
  This boy beneath the cross,
He only answered duty's call
  And reckoned not his loss.

He braved the desert's burning sand,
  The mountains bitter cold;
He gave his life for native land,
  He did not ask for gold.

He fought where freedom's flag unfurled,
  This boy with life to give;
He fought and died that you might live
  To build a better world.

What will you do, who here remain,
  For him who lies below,
In word or deed that he may know
  He did not die in vain?

Search deep your soul; make solemn vow
  To him beneath the cross—
That what you have, you give it now
  To recompense his loss.

If you will give and not complain,
  This boy who cannot see—
Will know he did not die in vain,
  To keep a nation free.

You should, like him, think not of gold
  Nor should you reckon loss;
Work, give, nor naught withhold—
  From him beneath the cross.

—*Frank M. Crawford.*

CONNERSVILLE, IND.

Development of the Arkansas River

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. CRAVENS. Mr. Speaker, under leave to extend my remarks in the RECORD I am including a concurrent resolution adopted recently by the General Assembly of Arkansas and signed on March 6, 1945, by Hon. Ben Laney, Governor of that State. The resolution deals with the policy to be followed in the future development of the Arkansas River Valley in the interest of flood control, navigation, irrigation, and incidental power development and is as follows:

Concurrent resolution endorsing the flood-control program planned by the United States engineers and authorized by Congress for and within the several river basins of Arkansas; opposing the establishment of an Arkansas Valley Authority and requesting that the river basins of Arkansas be developed by the Corps of Engineers, United States Army

Whereas Arkansas is a State of many rivers, some having their source within and flowing through the States, others having their source outside and beyond State boundaries but flowing through or alongside of the State, and floods upon these streams constitute a menace to the lives, lands, and properties of our citizens; and

Whereas in 1936 based upon reports made and filed by the United States engineers, Congress enacted into public law the omnibus Flood Control Act, authorizing the construction of certain public works for flood control, and for other purposes, on the rivers of the Nation, and said law established a "declaration of policy"; and

Whereas said declaration of policy, among other things, states in part, "that it is the sense of Congress that flood control on navigable waters and their tributaries is a proper activity of the Federal Government in cooperation with States, their political subdivisions and localities," and that "Federal investigations and imprisonments of rivers and other waterway for flood control and allied purposes shall be under the direction of the Secretary of War and supervision of the Chief of Engineers"; and

Whereas in conformance with the declared policy of Congress the Chief of Engineers ordered and directed the United States engineer districts of Vicksburg, Memphis, Little Rock, and Tulsa to investigate, study, and report upon definite flood-control projects upon the Mississippi, Arkansas, White, Black, St. Francis, and Ouachita Rivers for the purpose of ascertaining what flood-control works, such as dams, reservoirs, levees, sea walls, revetments, and channel clearances, should be constructed in the watersheds of the aforementioned rivers for the benefit and protection of the people; and

Whereas based upon the findings and reports of the engineers Congress—prior to the war—authorized to be appropriated $363,445,000 for flood-control work and structures in the basins of the Arkansas, White, St. Francis, and Ouachita Rivers. The engineers had completed, in whole or in part, approximately $109,470,000 of the authorized projects when, owing to the war, further work on our rivers was suspended, and there remains approximately $253,975,000 of authorizations for flood-control structures for these basins; and

Whereas a thorough investigation of the water resources of the Arkansas River Basin in Arkansas and Oklahoma has been made and a report thereon set forth, a comprehensive plan of development has been prepared by a special board of engineers, including the division engineer, southwestern division, which, if approved and authorized, will involve the expenditure of additional Federal funds in the amount of $446,118,000 upon the Arkansas River and tributaries in Arkansas and Oklahoma; and

Whereas in order that interested parties may express their views and present additional statements and argumets concerning the advisability of the United States undertaking these vast improvements, the board of engineers for rivers and harbors will hold a hearing beginning at 9 a. m., May 7, 1945, in Little Rock, Ark., in the exhibition hall, Robinson Memorial Auditorium, Garland Street entrance, and all interested parties are invited to be present or represented at the hearing: Now, therefore, be it

Resolved by the Senate and the House of Representatives of the Fifty-fifth General Assembly of Arkansas, That we favor the democratic method of development, construction,

and operation of the river basins' projects in the State of Arkansas by the Corps of Engineers, United States Army, and we are opposed to the creation of a valley authority; be it further

Resolved, That the Congress of the United States make available to the United States Army engineers sufficient funds to construct and operate all the projects necessary and incident to a comprehensive plan of flood control, including the attendant benefits of navigation, irrigation, and incidental power, whenever economically sound, and that such construction and operation be expedited in the aid of the past-war effort; and be it further

Resolved, That copies of this resolution be forwarded to the President of the United States, to the Congress of the United States, to the United States Senators and Congressmen of this and neighboring States having a direct interest in the river basins aforementioned.

A New Kind of Tribute to a Fallen Hero

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. GATHINGS. Mr. Speaker, war is not glamorous as it is sometimes portrayed. War is not an exciting adventure. We read of victories, citations, and awards to our troops for gallantry in action. We are prone to accept the bright and reject that which pictures the dark side of world conflict. There is an overemphasis placed on advances made by our armies and little is said of the price paid which made those advances possible. We should come to realize that when our men gain small ground of a few hundred yards the fighting is hardest and the casualties are greatest.

It is frightening to realize that, in a large measure, there exists on the home front an attitude of complacency, a feeling that the war is about over and the boys will soon be marching down Broadway with a proud and victorious tread. We seem to think we have done all required of us if we buy a few 3-percent War bonds, pay taxes, and conserve food and gasoline. Such an attitude is a result of not knowing the realities of modern warfare with all its destructiveness and horrors.

There are thousands of families who know what war really means. I have in mind those who have received heartrending telegrams from The Adjutant General at Washington: "I regret to inform you"——

Such a telegram was received by Mrs. J. C. Privett, of Blytheville, Ark., announcing that her husband, Pvt. (1st cl.) Privett, had paid the supreme price in battle at Luxembourg. In a recent edition of the Memphis Commercial Appeal is a photograph of Mrs. Privett and her 8 children, 4 sons and 4 daughters, taken on the porch of their rented home at Blytheville. It is believed that Private Privett was the first father of 8, all of whom are under 13, to fall in battle during the war.

A memorial is being planned by a group of Blytheville citizens in his honor. A memorial, not of marble, stone, or granite, but a lasting tribute emblematic of what he died to preserve and defend—a home. No more fitting monument could be erected than a home to house and shelter the helpmate and children of one who laid down his life for the safety and well-being of his loved ones as well as all of us.

This shrine will be built only a few miles distant from the life-size statue to Arkansas' most distinguished soldier of World War I, Herman Davis, which stands in Davis Park at Manila, Ark.

It is a great and alluring thing for the Blytheville people and those from over Arkansas and nearby States to contribute a home in memory of this soldier. Although he cannot enjoy it, the home is a symbol of peace, contentment, and American ideals.

Home's not merely four square walls,
Though with pictures hung and gilded;
Home is where affection calls,
Filled with shrines the heart has builded.
Home—go watch the faithful dove,
Sailing 'neath the heaven above us;
Home is where there's one to love.

Home is where there's one to love us.
Home's not merely roof and room—
It needs something to endear it;
Home is where the heart can bloom,
Where there's some kind lip to cheer it.
What is home with none to meet,
None to welcome, none to greet us?
Home is sweet—and only sweet—
Where there's one we love to meet us.

Repeal of Use Tax on Automobiles and Boats

EXTENSION OF REMARKS

OF

HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials, one of which appeared in the Ocala Star-Banner on February 4, 1945, and one which appeared in the Lake Worth Herald, March 1, 1945:

[From the Ocala (Fla.) Star-Banner of February 4, 1945]

ROGERS HEARD FROM

Congressman DWIGHT ROGERS, who was elected in the November balloting to represent the new Sixth Florida District in Congress, has been heard from. He has introduced a bill to abolish the annual Federal use tax on automobiles and motorboats.

"With conditions as they are, so that car and boat owners are allowed only partial use of their vehicles, I believe it is unfair to require payment of this tax," ROGERS told a newspaper reporter.

Representative ROGERS has something there; and he would have something even though there was no gasoline and tire shortage to curtail use of autos and boats. The Federal Government, which extracts enormous sums from the pockets of everybody with its income, excess-profits, internal-revenue, and other forms of taxes, never should have gone out after a $5 use tax from auto and boat owners. The $5 tax is chickenfeed so far as the Government is concerned, and a nuisance to those who have to pay it. The auto owner has to pay plenty of taxes without having this $5 stamp tax added.

Sentiment outside Congress is decidedly in favor of abolishing the tax, and several attempts have been made by Members of Congress to put through a repeal bill, with no success. Having started this early in the session, it may be that our freshman Congressman will have better success than others who have tried it. He should have the active support of auto and boat owners who have been unjustly penalized by the Federal stamp tax.

[From the Lake Worth (Fla.) Herald of March 1, 1945]

OUT WITH USELESS TAX

Getting rid of the $5 useless automobile tax saddled annually by the Federal Government is purposed by Congressman DWIGHT L. ROGERS, first Representative from the new Sixth Florida District, most concisely.

The whole bill is but nine lines long, with the kick in the seventh, eighth, and ninth lines, which read:

"Repeal of the tax: The tax imposed by this section is hereby repealed to become effective June 30, 1945."

The measure likewise affects boats.

The Herald greatly favors repeal of this tax on the grounds of its inapplication to the day it is levied. In other words, it is not enforceable; or if it be enforceable, it is not enforced.

Some slight attention is paid to it for a few days after it is due in July by a few revenue agents who catch the downtown folk. But from the 1st of August to the 1st of next July nothing is done about it. Nobody is arrested as an example.

If the money be needed, then let the Federal Government make it mandatory on States, before they issue automobile licenses, to be certain that the useless tax is paid, thus making it in truth a use tax.

The Herald commends Representative ROGERS for his introduction of the bill, which not only is sour because of the shoddy manner of enforcement but for the further reason that it is levied on the "use" of the costliest necessity man can own. What with nylons and all, it still is cheaper to maintain the wife.

Moreover America is not a land where folks are in favor of paying taxes for use of something they pay, and pay, and pay for.

The White Flowering Dogwood—A Memorial to War Veterans

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. ROBERTSON of Virginia. Mr. Speaker, last year I introduced H. R. 4740, to designate the white flowering American dogwood as the national flower of the United States, to honor the memory of the veterans who fell in this war. It was not acted upon during the Seventy-eighth Congress and has been reintroduced as H. R. 2358. Last year I called attention to the fact that in May of each year in normal times 500,000 tourists visit the national cemetery at Valley Forge to see the dogwoods in bloom, planted there by loving hands to honor the mem-

ory of Revolutionary heroes. I called attention to the plan of our Government to establish at least one national cemetery in every State as the last resting place of the heroes of this war, and expressed the hope that those cemeteries would be beautified and adorned by the planting of white flowering dogwoods, which each year would symbolize a rebirth, whose white petals would symbolize purity, and whose flowering cross would symbolize vicarious sacrifice.

The following letter from a friend in Oregon indicates that the Pacific coast, as well as the Atlantic coast, is interested in this memorial project. Under leave to extend my remarks in the RECORD, I include the letter from Mrs. Mary T. Roberts, of Portland, Oreg., and copy of the poem enclosed with it, as follows:

PORTLAND, OREG., *March 9, 1945.*

Hon. A. WILLIS ROBERTSON,
Washington, D. C.

DEAR SIR: Your proposal of the naming of the dogwood flower as the flower to honor our men lost in this war has the approval of many here. It also inspired me to write a poem last spring, as it may have done several others.

My mother had loved her dogwood so very much and left notes on the subject which mentioned the falling of the petals upon the soldier's graves. I tried to keep her thought when I wrote my poem. It really is more hers than mine. She left us in June 1932 and her notes were written in October the fall before.

The poem was printed here in the Oregon Journal, May 29, 1944. If you care to use it in any way you may. My sister receives the CONGRESSIONAL RECORD each time and we see poems that have been read by the Members.

I have had many poems in local papers and the National Historical Magazine (D. A. R.), published there in your city, had two of mine, one in December 1940 and in September 1941. I am a member of the Verseweavers Society.

We have a son in the Coast Guard and like all good Americans have a deep interest in the servicemen. Any honor we can give them is but a part of what they are worthy of.

The dogwood blooms here are different from the ones we had in Indiana (my birthplace) as many have five leaves. We have two trees and they are very beautiful. I enclose one bloom which has the four petals, the cross-like form, but without the indented leaf edge of the eastern flowers.

Sincerely yours,

Mrs. MARY T. ROBERTS.

MEMORIAL FLOWER

The sleeping trees awaken under springtime's warming sun,
And quickly life is surging—a miracle has begun.
The dogwood on the hill has tucked white flowers in her hair;
The wind, in playful mood, has scattered petals everywhere.

In fall, when frost has turned the dogwood leaves to gold and red,
They shower earthward, where lie our honored soldier dead,
To weave a warm and leafy blanket, softly, gently laid,
As if a loving tribute to our soldiers thus is paid.

Each spring there's resurrection, even of the smallest things;
If God can make the flowers bloom, can't He give souls their wings?

—*Mary T. Roberts.*

Report of Judicial Council of California to California State Legislature on Problems of Administrative Law Agrees With Views of Smith Committee Minority Report on Same Subject

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. VOORHIS of California. Mr. Speaker, the Smith Committee to Investigate Executive Agencies issued on August 25, 1944, a report on the problem of administrative law. In connection with this report, a minority of the committee, consisting of the gentleman from New York, Mr. JOHN J. DELANEY, and myself, filed what we termed an "additional report on administration law." In this report we agreed with the basic contentions of the majority about the need for the setting up of definite standards of administrative procedure and definite protection of the citizen against arbitrary action by administrative agencies. We concluded as follows:

The objective of securing at one and the same time the necessary contribution of administrative agencies to the efficient functioning of government in a modern nation and, on the other hand, protection for all citizens from arbitrary action by such agencies cannot be achieved, in our opinion, by the application of any one method or the passage of one piece of legislation. All four of the causes of the problem recited above must be dealt with. But one method which must, we believe, be used is the setting up of an orderly code of procedure or administrative law to govern the action of administrative agencies. We are not prepared as yet to endorse any particular one of the variety of bills which have been introduced on this subject. We do believe, however, that any legislation proposed to be adopted by the Congress on this subject should include the following points:

1. The requirement that adequate public information be published by all agencies so that every interested citizen in the United States can have full knowledge of what its rules and regulations and method of procedure are.

2. The requirement that agencies must give due consideration to substantial proposals for the adoption of rules by such agencies which in the judgment of citizens or groups of citizens would be salutary to the orderly functioning of the agencies.

3. There should be effective separation of the judicial function of any administrative agency from its prosecuting functions.

4. Substantive rules should not be adopted by agencies without opportunity for comment by those affected thereby.

5. Whereas it is probably impossible to require declaratory judgments by administrative agencies in every case where any citizen may have reason, justifiable or otherwise, for asking for such an order, nonetheless there are certain types of cases where a requirement that a declaratory order be issued would seem to be justified. Among such cases are those where an individual requests a declaratory judgment as to whether practices which he has followed customarily in the past are or are not lawful ones.

6. Finally, judicial review should be provided as to every order or rule which is in the nature of an order—at least, at the point where action is taken to enforce such an order or rule.

It is important, however, that in adopting legislation in the field of administrative law consideration be given to the particular and specialized problems with which different agences must deal. The ideal, though admittedly difficult, solution would be the passage by Congress of a carefully devised code of administrative law especially adapted to the work of each separate agency and it may well be that this will be the ultimate solution which must be applied to the problem. Meanwhile, it is necessary that care be exercised lest, in an attempt to accomplish worth-while broad objectives, action be taken which might actually harm the general public interest by severely crippling the work of particular agencies whose activities under present-day conditions could not safely be dispensed with.

I am encouraged to find that the Judicial Council of California, which was commissioned by the State legislature to make a study of California administrative procedure within that State, came to very much the same conclusions as those reached by Mr. DELANEY and myself, and I, therefore, include herewith for the sake of comparison the concluding paragraphs from an article entitled "California's Approach to the Improvement of Administrative Procedure," which appeared in the California Law Review for December 1944. It will be clear that both the report of Mr. DELANEY and myself and the California report hold that while it is necessary to set up standards of administrative procedure, the only way in all probability in which that can be done with complete success is if each agency, or at any rate, each group of agencies whose problems are similar and whose general method of operation is alike, is dealt with in a separate statute.

The proposals offered by the Judicial Council of California do not follow the gradual educational theory of the majority of the attorney general's committee and the Benjamin Report. Nor are they based upon the proposition that a single general statute can be drafted by the legislature under which all types of administrative action and all administrative agencies can be covered. The council's proposed statute expresses the conviction that legislative standards of fair procedure can be set up, but that they must be devised with specific reference to particular problems and functions. The administrative procedure statute proposed by the judicial council is intended to cover the formal, adjudicatory proceedings of State licensing and disciplining agencies and provides definite legislative requirements for the kind of proceeding involved. It is a specific prescription for a specific ailment in the body politic. It is true, of course, that the underlying principles of the council's proposals can be adapted to the action of any administrative agency. That adaptation, however, must be founded upon a careful examination and analysis of the administrative structure rather than upon a priori conclusions. If the California Legislature pursues the policy which it has inaugurated, a detailed code of administrative procedure may result. But it will be a code framed item by item and with specific reference to each kind of administrative problem. It is the council's theory, in other words, that there is no easy legislative answer to the problems involved but that any legislative solution must be founded upon a kind of laboratory analysis and recommendation. The council's proposals, therefore, are more

modest in scope than are certain of the statutes proposed elsewhere, but they furnish the legislature with the ground work for far more detailed standards of fair administative procedure than have been offered in other States.

These differences in theory should not obscure the obligation which the council's work owes to similar studies made in other jurisdictions, though the ideas have been materially altered in adapting them to the needs of this State. For example, both the report of the attorney general's committee and the Benjamin Report emphasized the need for creating a permanent agency in State government which could exert a continuous pressure in the direction of improving administrative procedure. The former report contemplated that such an agency would also supervise the efforts of "hearing commissioners" who were to be trained and qualified persons used in the process of administrative adjudication. Such a provision for continuous improvement in California's administrative system has been incorporated in the council's proposals, and the agency entrusted with that responsibility has also been given supervision over a panel of hearing officers whose services will be required in the process of administrative adjudication if the council's proposals are adopted.

The State of California, acting through its legislature, has undertaken the improvement of administrative procedure. In this article an attempt has been made to describe the approach which has been adopted in the solution of this problem. It is an approach which involves legislation, and the legislature has wisely provided for an intensive examination of the practical considerations upon which any legislation must depend. The duty of making this investigation was assigned to the judicial council, and insofar as the council's proposals can be said to represent California's approach to the improvement of administrative procedure, it is an approach based upon the premises that any workable solution requires careful and precise legislative action, action which concentrates upon limited objectives and proceeds one step at a time.

Text of Fort Gibson Resolution Adopted by Arkansas Valley Authority Association of Oklahoma

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. STIGLER. Mr. Speaker, on January 26, 1945, a group met at Fort Gibson, Muskogee County, Okla., which is in my congressional district, and formed an Arkansas Valley Authority Association of Oklahoma. After the association was formed, a resolution was adopted petitioning the Congress of the United States to create by law an Arkansas Valley Authority for the development of the Arkansas River watershed from the Mississippi River all the way up to its source in Colorado.

Under leave given me to extend my remarks in the RECORD, I desire to include copy of the text of the resolution adopted by the Arkansas Valley Authority Association of Oklahoma:

Whereas President Roosevelt has for many years advocated the establishment of separate authorities to deal with the development of certain river basins where several States are involved—the general functions and purposes of the Tennessee Valley Authority to serve as a pattern for similar developments—and has recommended to Congress the creation of an Authority for the development of the Arkansas River watershed from the Mississippi all the way up to its source in Colorado; and

Whereas the citizens of the Arkansas River Basin have long sensed the possibilities for the development of the natural resources of the Arkansas River and its tributaries and have sought to bring it about without result; and

Whereas we have been witnessing and suffering from repeated floods; idle and wasted water power; clogged river channels. We are victims of the repeated paradox of too much or too little water, in the wrong places at the wrong times; and

Whereas piecemeal efforts at development for some purposes have been made over a period of many years. But the people know that the results fall far short of the needs of the region. Millions of dollars have been spent to improve the river and to reclaim the land. Levees have been built and rebuilt year after year in efforts to check the ravages of floods. Certain irrigation projects have been constructed and reservoirs have been built for flood control. But the people know from their own experience that something is wrong. Something is missing. They know that the over-all development, commensurate with the potential strength of the Arkansas Valley, has not beeen accomplished.

Instead, we have found the various and piecemeal developments conflicting with one another. Although they are all dealing with the same river, the interests of one section of the valley view with concern and are fearful of the effect of projects in other parts of the region. These differences of view are brought to the fore at the present time by the conflict between the proponents of two plans, both of which are claimed to be comprehensive. One is the plan of the United States Army engineers, which is aimed at providing flood control and navigation on the river. The other is that of other agencies, which proposes a system of reservoirs to provide water for power. There is a conflict between the two plans as to the reservoirs to be built and the uses to which the impounded waters shall be put.

The conflict between these two plans epitomizes the reason for failure to achieve proper development of the river. The simple fact is that the methods which have been applied to the problem of the Arkansas Basin have not been suited to the job. Each of the many agencies of the Federal Government is expected and authorized to become familiar with only a part of the river. Each agency is concerned with only a part of the many purposes to which the river can be put.

The several States comprising the Arkansas Valley have not been able to guide the development of the whole river. Each State government has a primary concern with the problems lying within its own boundaries. But our river knows no State lines. It flows where it will. Its waters pass from one State to another. The task, dictated by the nature of the river itself, is too big and too complex for a single State or a group of States to undertake.

There are also those groups having a special interest in some special part of a river valley development. Naturally they concern themselves only with that part of a valley development which they believe will satisfy their particular interest, be it a navigable channel for river commerce, a dam for hydroelectricity, a reservoir to control floods, or a reservoir to store water to irrigate the arid lands. Each special-interest group seems bent on satisfying its own needs first with little regard for the effects its proposals, if adopted, may have upon other groups.

Out of these circumstances of confusion of purpose and conflict of interest one clear fact is beginning to emerge: The Arkansas Valley—its resources of life-giving and life-destroying water, its forest, it minerals, and its soils—will not achieve its God-given destiny until we learn to see and understand the river and the valley as a whole, as a working unit, as a heritage of resources that can be developed for many purposes within the framework of a general plan.

So long as we hack the river to pieces and parcel it out to this agency and that agency, to that interest and that interest, stalemate, inaction, and a declining economy will be our reward.

We need to view the river and its valley as a whole. We need a remedy for the arbitrary division of interest and responsibility among Federal agencies to which the river has been partitioned and assigned.

We need to recognze that the differences which separate the interests must somehow be reconciled. We cannot make much progress in this reconciliation until we have an acceptable and authoritative body of facts and engineering judgments drawn together for the river resources as a whole.

At the present time those interested in water for irrigation and reclamation fear those interests on the lower river who want floods controlled and a navigable channel on the lower Arkansas, and both fear those interested in power dams. Each interest group seems assumed that these objectives are in conflict. Each seems to assume that there cannot be enough water in the Arkansas Basin to permit progress in the achievement of all four objectives, and each group is supported in that assumption by the technical and engineering judgments of agencies assigned to further one use of the river with little regard for the feasibility of its use for other purposes.

This confusion of expert advice will continue unless there is established a single agency with responsibility to all interest and for all uses of the river. This agency should be created by Congress. It should be located in the Arkansas Valley region. It should be independent of the existing Federal executive departments. It should be under a mandate to develop its plans and recommendations and to carry them out in close cooperation with the agencies of the States and the Federal Government.

This new agency should be responsible to the people of the Arkansas Valley through the Congress and the President. It should be authorized to develop and carry out a unified plan to achieve the full development and use of the river and its resources, such as—

1. The periodic floods should be measurably controlled and the damages minimized.
2. The development of navigation for cheap transportation.
3. The rivers should be harnessed and put to work to provide electric power for homes, farms, and industry.
4. The basis resources of soil fertility should be protected and built up to sustain a permanent and prosperous agriculture.
5. Industry should be developed—industry indigenous to the area and based on its raw materials, spreading its activity and the opportunities for employment widely throughout the territory and not concentrated in a few congested areas.
6. The arid and semiarid lands of the upper basin should be irrigated and made rich and productive: Be it therefore

Resolved, That we firmly and earnestly petition the President and the Congress of the United States to give force and effect to the foregoing conclusions by creating an Arkansas Valley Authority; be it further

Resolved, That a copy of this resolution be furnished to the Oklahoma congressional delegation.

Adopted by unanimous vote of the Arkansas Valley Authority Association of Oklahoma in the town hall at Fort Gibson, Okla., Friday, January 26, 1945.

Angels of Mercy Drafted

EXTENSION OF REMARKS
OF

HON. GEORGE B. SCHWABE
OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, the subject itself bespeaks a contradiction of words. We have learned to think of angels as messengers of God to man, to show man a way out of his difficulties. They seem to have supernatural wisdom and are sympathetic. Man was created a little lower than the angels. Think of these mercy messengers being drafted by men! It is a contradiction in terms to say that men are drafting the angels of mercy.

Our nurses have long been looked upon and called angels of mercy. They have come to us when we were not able to care for ourselves and have ministered unto us in the darkest hours. Next to our mothers, their mercy has transcended that of any other profession or class of people. They have always responded to the call of suffering humanity. They are still doing so. But we in Congress have been asked to draft them to perform their ministrations of mercy for our wounded and sick casualties of the battlefield. It is unthinkable that we should have to draft nurses. We do not have to draft them. They are available if and whenever given an opportunity to show mercy and minister to the needs of our boys who have fallen in line of battle. It is a reflection upon this honorable profession to talk about drafting nurses. It is a serious reflection upon the profession and those who seek to draft them to say that this group of our population has failed to respond to the call so urgently needed.

But this is a day of drafting. It is a day of conscription. Drafting and conscripting seem to be the order of the hour at Washington. There seems to be a tendency to get away from the idea of allowing people to volunteer as patriots. Someone wants to dictate, regiment, control, and arbitrarily draft everyone into some form of service for the Government.

Recently, the House of Representatives passed a bill seeking to draft labor. We were told it was imminently necessary that it be enacted immediately, that there was a shortage of manpower, that the essential war industries had to have men work in their plants and that they would not be able to get them unless they were drafted. That was approximately 2 months ago. The House passed the bill more than a month ago. The Senate refused to adopt the same bill that was passed by the House, but has just rewritten the measure to suit the ideas of its members. No law conscripting labor has yet been finally passed. It is to be hoped that none will be passed which will destroy free labor in America and will make it possible for large corporations and individuals to make a profit on the cost-plus-fee basis that so iniquitously prevails throughout this country, out of the sweat of conscripted, forced, or slave labor.

We have been told that the Army and Navy need a lot of nurses. No one seems to know just how many they need. Figures vary, depending upon the source from which they come and the time the estimates are made. Everyone thought we had all the nurses we needed until sometime in December when we were suddenly told we were far short of the requirements. Apparently, those in authority were not willing to approach the problem on the basis that members of this noble profession might volunteer their services. Some have even said that all people should be drafted, all men and all women. Some go so far as to say that capital and property should be conscripted. Of course, there are those who would make us all cogs in the machinery of the state and subject to a dictator or the regimentation of those in actual or assumed authority.

The question of drafting nurses has come as a shock to the finer sensibilities of the people. It is interesting to observe the provisions of H. R. 2277, as the same was reported out by the House Committee on Military Affairs and was passed with numerous amendments by the House last week. An analysis of this bill as originally presented is illuminating. It was first sought to have Congress declare "that to provide adequate nursing care for the armed forces of the United States it is imperative to secure immediately the services of additional trained and qualified nurses."

Then section 2 of the bill provided that every female residing in the United States who on the day of registration fixed by the act was between 20 and 45 years of age and was a registered nurse anywhere in the United States or a graduate of a school of nursing and eligible for examination to become a registered nurse, should become subject to registration and selection for and induction into the land and naval forces of the United States under the Selective Training and Service Act of 1940, as amended, with certain exceptions. The bill then specifically provided that no such registrant under the act should be ordered to report for induction "until after all qualified graduates of the United States Cadet Nurse Corps registered with such board, who are not deferred pursuant to the provisions of this act, have been ordered to report for induction." After certain provisions were made requiring the registrants to meet the requirements of the land or naval forces before induction, the bill provides the President shall prescribe such regulations as may be necessary to carry the act into effect and that the "regulations may provide for the classification, selection for induction, and induction of females pursuant to this act under procedures and quotas different from those governing men." Section 5 makes the act applicable "to unmarried women only, but shall not affect the voluntary recruitment of any qualified women for the Army Nurse Corps, the Navy Nurse Corps, or the Nurse Corps of Naval Reserve, or the appointment of members of such corps as commissioned officers as now provided by law."

In an effort to stress the importance and urgency of the prompt passage of the bill, the chairman of the Military Affairs Committee of the House stated "that we have today in hospitals throughout the world more than 520,000 wounded men and that they are coming back from field installations to hospitals at the rate of 16,000 per day and that the number is on the increase." No one stated how many of these are American boys.

In the arguments and discussions in the House, the following facts were brought out: In 1940 there were less than 1,000 in the Army Nurse Corps. On December 31, 1944, there were 42,000. As of that date 81,000 nurses had volunteered. Every quota was met until May 1944. The Surgeon General submitted a request for 50,000 nurses to the General Staff. Plans were under way for a recruitment program and for a complete registration of the nurses of the country between the ages of 20 and 65 years when the War Department, on December 5, 1943, announced that only 40,000 nurses would be needed. Already 36,000 or 37,000 had been secured. Hence the O. W. I. did not go forward with its recruitment program when only 3,500 nurses were involved. Less than 4 months later the War Department found it necessary to increase the number to 50,000, the number originally requested by the Surgeon General. Now they say they want 60,000. Who knows? Whom shall we believe?

The let-down in the effort was a felt factor. The success of our forces in France further retarded the voluntary enlistment. Naturally the nurses felt they would not be needed and ceased to come in voluntarily. In the fall the Surgeon General sent out a recruitment letter for 27,000 nurses. Organized advertising methods were employed. Apparently no further word was received from the Army until December 20. Large sums of money were contributed by advertisers to stimulate the patriotic interest for nurses to volunteer. Many believe that if the country, and particularly the nursing profession, had been thoroughly aware of the needs as fast as they appeared and if there had not been such strictness in the requirements for eligibility, all nursing quotas would have been filled rapidly.

Last fall we were told that victory was just around the corner and the European war would soon be over. Labor, nurses, everyone began to look out for themselves a little. They sought new lines of employment. They began to leave the defense industries in great numbers. From what we were told, all had a right to believe it was using good judgment to find permanent employment in some industry that would continue to operate after the cessation of hostilities. The nurses could not be blamed for heeding the same suggestions and following the same psychology.

There are several phases of this bill that inherently were not right. In fact, the bill was almost completely rewritten in the House of Representatives while it was under consideration there. The original draft provided for the registration and drafting of only female nurses.

Why the authors of the bill objected to the inclusion of male nurses was never explained to the satisfaction of many Members of the House. Someone said there are 2,000 registered male nurses in the United States Army, only 20 percent or approximately 400 of whom have commissions as nurses. About 1,600 are buck privates or working in some capacity other than that for which they have been prepared and so highly trained. As a matter of common sense, everyone knows there are many cases where a male nurse is preferable to a female nurse among the Army casualties. Their services certainly should be used instead of drawing so heavily upon the female nurses. Likewise, there are estimated to be some 5,000 or 6,000 other registered male nurses in the United States, not in the service, many of whom can be used to great advantage.

It was further brought out that there are some 9,000 Negro nurses, perhaps all females, and only 330 of these have been used in the various nursing corps for wounded servicemen. It is unthinkable that the services of these people are not being used. This should supply us with anywhere from 4,000 to 6,000 additional nurses, depending upon how many meet the required arbitrary tests of the Army.

The bill as it originally was presented to the House last week directed the drafting of female nurses, young girls from the United States Cadet Nurse Corps, before resorting to the older female nurses. The only explanation ever offered for this was that these cadet nurses had received a part of their training at the expense of the Federal Government. The truth of the matter seems to be that some of them had already begun their training at their own expense and that of their families, and that the Government supplemented this and finished paying for their training courses. Others who entered later have had their courses financed to date entirely by Federal aid. These girls average very young. Apparently 25 percent are under 20 years of age, 43 percent under 21 years, 15 percent under 22 years, and 7 percent under 23 years. In other words, very few are over 23 years of age. Experience has taught the Red Cross that they should not send girls into the nursing service or into any overseas branch of their service until they are at least 25 years of age. But the nurse draft bill sought to take these Cadet Nurse Corps girls, 80 percent of whom were below 23 years of age, and send them into the most trying positions for overseas duty. If the question is put directly to the father or mother of the girl of such tender years, they are almost sure to appreciate the danger that lurks ahead and suggest that the more experienced and older nurses be sent first and the younger ones sent only when it becomes absolutely necessary and the supply of older ones is exhausted. Numerous letters that have been written by the boys in overseas service in this war indicate very clearly that younger nurses should not be taken first. In many instances they have plead with their fathers and mothers not to permit their younger sisters to volunteer for such service.

The argument that the Government has paid part of the expenses in educating and training them to become nurses is very weak when all of the facts are shown. At the time these girls were persuaded to enter the nursing profession, they were asked to sign a contract which stated:

> I agree, if accepted, I will be available for military or other Federal governmental or essential civilian services for the duration of the present war.

But remember that most of these girls were only 18 or 19 years old and without any prior business experience. They did not appreciate the technical language of the contract they were required to sign. They relied upon the statements put out by the Government in pamphlets and folders to induce them to enter the service. One of these distributed by the United States Public Health Service to lure these girls into this profession and branch of the service was in the form of a small pamphlet. On the back of this pamphlet these words appear:

> Enlist today in a proud profession. The corps requires you to make but one promise, that you will remain in essential nursing, civilian or military, for the duration of the war. The choice is yours.

Our girls and their parents, many of whom are not versed in law, have a right to rely upon those apparently in power and assuming authority and the statements that they made. This literature published by our Government to induce these children to enter the service should contain only statements of fact, and the children and their parents have a moral right to rely upon the statements made therein. This should be far more binding upon the Government than the strict letter of the law when dealing with these people of immature years, some of them yet minors under the age of 18 years. Furthermore, the Government conceivably was just as much interested in providing a new group of nurses for our civilian population as for the needs of our servicemen. It is wholly conceivable that the Public Health Service had in mind at the time it issued these circulars they would use these cadet nurses for the civilians and relieve the older and more experienced nurses from home duties and enable the oldsters to nurse the wounded and sick of our armed forces.

Volunteer nurse organizations are helping most nobly to nurse the sick in our hospitals at home in order to relieve the trained nurses there and enable them to go into foreign lands or into our Army and Navy hospitals. Many, many reports were made by Members of the House that their respective districts had great numbers of nurses who had volunteered for service but had not been accepted, for reasons not explained. No one knows the total of such cases in the United States. All of these should be accepted before the young girls are drafted or before even the older ones are drafted. They are continuing to volunteer every day and the noble profession of nursing will see that this is done, if they are not drafted. Many believe that all requirements can be met without the draft.

In one hospital, 30 out of 31 nurses graduated on March 2 volunteered, took their physical and passed. Many more similar instances could be cited, running into the thousands of immediately available nurses ready to volunteer and who have volunteered their services. Some have been waiting for assignments for 30 days or more and are wondering when they will be called. Add to this the great untold volume of immediately available qualified and certified volunteers, the several thousand male nurses, and the several thousand Negro female nurses, it is reasonable to anticipate that practically the entire present alleged need of nurses between now and July 1, of 20,000 or any other required number, will be available.

The Navy has resorted to the voluntary method and has succeeded, without asking for a draft of nurses for the Navy Nurse Corps. In many newspapers there have appeared articles during the last few days stating that the Navy has successfully recruited further volunteer nurses. Why cannot the Army do the same? The Army is about three times as large as the Navy, and the Army Nurse Corps is necessarily about three times the size of the Navy Nurse Corps. But there should be no difference in principle, if the Army made the work of nursing as attractive and inviting as the Navy has and if those in charge had wanted volunteers.

Nurses' associations, clubs, hospitals, and such organizations have wired us repeatedly from our districts and States that this bill should not be passed in its original form, and that there is no need to draft nurses. It certainly is apparent that there would be no need for this draft bill if the Army had resorted to the voluntary method and was willing to accept male nurses, Negro nurses, and give the voluntary system a fair chance. Potent facts supporting these statements were brought out in the arguments and several amendments were offered, many of which passed the House, incorporating some of these provisions in the bill. What the Senate will do with the bill no one can safely predict at this time.

But the order of the hour seems to be to draft people, to coerce them. Representatives of industry, labor, and agriculture alike were almost unanimous in denying that the labor draft bill was necessary. But we were told it was necessary, and it passed under the hue and cry that the Army officials said it was necessary to sustain the war effort. The same tactics and language were used in connection with the drafting of nurses. Possibly it is only another step for the drafting of all of our American women for some form of service under bureaucratic dictation and regimentation. The draft of labor and of nurses, it may be predicted, will be followed by the drafting of women for war plant and military service.

If the American people were told the truth about what is going on and kept informed and if they could rely upon promises and information furnished by the various bureaus and other controlling

agencies of Government, it is easy to conceive that they would become more interested in carrying on this war to a speedy and successful conclusion by contributing their money, their labor, themselves, and their children, to hasten a final and conclusive victory. Slave labor or conscripted labor will not produce anything like as much in comparison as free labor. Drafted nurses will not perform the same service with as much interest and sympathy and effectiveness as nurses who volunteer their services. The same will be true with reference to conscripted people in any branch of the service. Furthermore, this will tend to demoralize the home, the basis of our civilization. The sacredness of the home will be seriously impaired and the morale of our people shocked to think that the Congress of the United States has seen fit to go from a system of obtaining volunteer nurses to that of requisitioning, conscripting, or drafting of members of this noble profession.

Shall we resort to the same tactics that were pursued by Hitler in Germany? Shall we be frightened into heeding the call to duty? Or, rather, should we not appeal to the patriotic instincts of men and women to rally to their country's call? The American people will do it if approached in the right way. They will do it if they are permitted to come into an open door with truth and confidence staring them straight in the fact. But the American people have never accepted the principle of being forced or drafted or required to do something because some higher official, be he executive or military, tells them that they must do it.

Never before in the history of the world has anyone told us that it would be necessary to draft these angels of mercy, as we so fondly call and recognize them. Never before has anyone said that our youthful and inexperienced children of the fairer sex should be sent into the horrors of war before their older sisters of more experience and judgment are sent. It is not only the effect it will have upon the people at home, but it stands to reason that more efficient service can be rendered our worthy sons if the more experienced and better trained nurses and people of more mature judgment are sent to their bedsides.

Another serious apprehension is that the drafting of nurses, as this bill originally sought to do, and perhaps as it even has been amended by the House, will discourage other girls from entering the profession. Their parents will not so readily consent and the whole program of future recruitment is likely to fail. The available statistics and the experiences of nurses' training schools and hospitals today show that this reaction has already become pronounced by the fact that fewer girls are entering the profession during the past few months.

The thousands of Negro nurses can render a valuable service, and will do so if given an opportunity. It was stated on the floor that some 2 weeks ago a Negro nurse, who had graduated as valedictorian of her class in the Central High School of Cleveland, made application to join the Army Nurse Corps. The Army official wrote her:

> The Surgeon General directs me to inform you that your application is rejected because there are no facilities for colored cadets in the Army hospitals.

Someone has said that there is not a Negro nurse in the Navy Nurse Corps, and that there are only approximately 330 Negro nurses who have received commissions in the Army out of a group of 8,000 Negro graduate nurses. The Negroes are especially fitted for this work and we have many Negroes in the service who are entitled to have nurses of their own race attend them when they are so readily available. It seems foolish to use the excuse that there are no facilities for such nurses. Likewise, it was argued by those who opposed the drafting of male nurses that they had not had training in certain special lines which had been offered in the courses of training for female nurses. Someone suggested that one of the courses not offered to male nurses which was offered to female nurses in their training course is that of obstetrics. How foolish such arguments and how inapplicable to the issue!

The Army could easily relax its rigid requirements and restrictions, admit those who lack an inch or two of the height required for nurses, or who are a few pounds underweight or overweight, and take in this vast army of volunteer nurses who are available, and let them go to the bedsides of our wounded soldiers. The American way suggests that we do not permit the drafting of this self-sacrificing element of our population, simply because somebody has misjudged, miscalculated, bungled, or otherwise failed to follow the American method and obtain the nursing quota now said to be required. It is not a question of condemning but it is a question of saying to any branch of our Government that our freedom-loving citizens insist that they be given the facts and be allowed the privilege of volunteering their services for the good of our country, rather than that they be drafted. Most of all, we should apply this to our daughters and our sisters who have dedicated their lives to the service of disease and sick humanity. We owe them that protection and we should be courageous enough to demand that those in authority respect the ideals of our Government, which will in no way impede the progress of the war nor delay the ultimate victory. No one has criticized the other branches of service for following these time-honored traditions. Why not make it universal?

The people do not want these angels of mercy drafted. They have not been convinced that it is either right or necessary. Nurses have always responded when duty called. Their lives have been pledged to sacrificial service. They are not slackers, and Congress should not so brand them by enacting a law which will besmirch the fair name of their profession. The followers of Florence Nightingale are entitled to everlasting honor and our highest esteem. They should not be drafted.

What Are We Fighting in Asia?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Norman Thomas, appearing in the March 7 issue of Human Events:

FOR WHAT ARE WE FIGHTING IN ASIA?

(By Norman Thomas)

In Europe, lack of any clear-cut American policy other than unconditional surrender of our enemies has already made us partners to perfidy in Poland.

This lack is costing the lives of thousands of our sons who perish unnecessarily from a German resistance sustained by expectation of annihilation. It is impossible to describe, or even to imagine, the devastation that will be Europe; a whole continent which will live chiefly for its hates. For the white race this second world war within a generation is an approach to suicide at the very moment when white arrogance to the awakening colored races is unabated.

Yet the cost of unlimited war in Europe may, even so, prove less than the cost in Asia. We expect prodigies of valor and endurance from our sons, in war against Japan, yet have no apparent plan for any use of victory to justify the cost.

At Cairo nothing was assured to Asia other than the destruction of Japanese power. As a byproduct, Korea was indeed promised independence. But this promise was unmatched by any pledge whatsoever to Indochina, the Dutch East Indies, Burma, and Malaya, which regions are presumably to be returned to white empires utterly incapable of regaining them save by American blood, or of holding them even for a generation save as we dedicate our children's future to their support.

For the Japanese people unconditional surrender has been interpreted, by American spokesmen, as the preliminary to the forcible destruction of the whole Japanese economy and its political order.

II

Already it must be evident to informed Japanese that Japan has lost the war. Conceivably the struggle need not progress to such annihilation as Germany faces in order to persuade some Japanese Government to accept terms adequate to peace. But if nothing is offered except destruction and the indefinite occupation of the homeland by foreign armies, the Japanese will fight in every city as they fought in Saipan, Manila and Iwo. It is difficult to overestimate the frightful cost of this unlimited victory unaccompanied by any political offensive directed toward peace.

Thousands upon thousands more of our boys will then die in a war for them more brutally cruel than the German, a war without mercy in which few prisoners are taken, a war accurately described in certain of its aspects as "an organized race riot." One scarcely dares to speculate on the consequence to American ideals of humanity, and to the hope of racial brotherhood, as a result of this orgy of destruction wherein victory requires wholesale slaughter of the foe.

We know and justly denounce Japanese cruelty; what we have not recognized is a corresponding American blood lust which makes souvenirs out of the bones of the slain and drives the saintly Kagawa to denounce "occidental" brutality. The Japanese

failure to unite Asia against the white man's empire in no small part was due to Japanese arrogance and cruelty. What the Japanese could not do, our own unlimited war with its inevitable accompaniment of devastation may yet accomplish.

And for what ends? With what motives do we wage unlimited war? For the thrill of vicarious glory, pride in brute supremacy, the material satisfactions of jobs, high wages and profits for which others pay in blood? That is to lower ourselves to the plane of our enemies.

We rationalize unlimited war by declaring that Pearl Harbor was the attack of a thug on a man intent only on minding his own business. It is no justification of Japanese militarism to accept the argument powerfully set forth in John T. Flynn's pamphlet on The Truth About Pearl Harbor that the administration's policy led logically to attack even though the President neither expected nor desired it at Pearl Harbor.

III

We further rationalize our emotions by saying that only the complete destruction of the Japanese Nation will give us peace. This is to ignore the causes of war in general, of this war in particular, and to deny the Christian doctrine of the dynamic power of intelligent good will. It is to ignore the fact that total victory of itself will not solve the problem. The Japanese cannot be totally destroyed and, if they could, there would be more war over the filling of the vacuum thus created.

China will not be strong enough to police Japan. She herself may conceivably become the Poland of the Far East before the Big Three have finished their work. Our indefinite policing of Japan will be very expensive and provocative of a racial hate which will spread through Asia.

Did we learn nothing from the tragedy of reconstruction in the South following our Civil War? Certainly there are no Japanese elements which we can use successfully under our continuing power. To their countrymen, such supporters in unconditional surrender would be worse than Quislings.

The ultimate beneficiary of total victory without a program can only be Stalin or his successor. I think it probable that at his own time, and on his own terms, Stalin will join Roosevelt in the Asiatic war. Mr. Edgar Snow, who can hardly be accused of russophobia, says in the current number of the Saturday Evening Post "Soviet diplomacy will make maximum use of the bargaining value of its strategic postion in the Far East when pressing home its case at Allied conference tables * * * Not till the moment when she can do so with the least possible risk commensurate with the great aims at stake, not till Japan is nearing collapse, will the Soviet Government call upon its people to intervene in a decisive way."

The Asiatic war will give the Kremlin as many chances to profit by Roosevelt's lack of constructive policy as Russia has had in eastern Europe. Conceivably Stalin can stay out of this war and successfully maneuver so that eventually the U. S. S. R. will reap whatever fruits there are to follow the destruction of Japanese power.

But in our own interest Stalin's support against Japan should only be sought or accepted on clear-cut terms appropriate to lasting peace. The cry is already heard that we must accept perfidy in the Polish settlement to obtain Stalin's help in the Far East. That is only the first installment of the price ideals will have to pay for our failure to proclaim to the whole world, as well as to the Japanese people, the terms on which we are willing to make peace.

IV

Those terms must include freedom for all the victims of Japanese aggression and the disarmament of Japan. They should be of a nature to stimulate whatever liberal and democratic forces there are in Japan as against the war lords. By all means they should be of a nature to bring home to the Japanese people a sense of the price they have paid for their devotion to militarism and empire.

It must, however, be apparent to all that no people can be taught to reject imperialism by those who themselves persist in practicing it. No tough and resilient people can be kept permanently disarmed in a world of competitively armed empires whose rival interests will make them seek allies. Effective collective security requires general disarmament. Organized cooperation must be among nations freed of foreign yokes. White imperialism, as well as Japanese, must be ended, and guidance for backward peoples must be under international authority. The benefits of economic and political cooperation must be open to all peoples, including our present enemies, who are willing to abide by its conditions.

A proclamation of peace terms along these lines would probably work no immediate miracle; it might fall on deaf ears. But so great would be the reward of success to us and all mankind that this sort of peace offensive is imperative. The time to undertake it is now. To delay is to sacrifice more young Americans whose lives may still be spared; it is to magnify every difficulty of the eventual settlement.

Tribute to Henry A. Wallace by Hon. Claude Pepper, of Florida

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 13 (legislative day of Monday, March 12), 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I broadcast over the Blue Network on January 26, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I never more heartily wished for the perfection of television and the broadcasting of the proceedings of the Congress by radio than when a quiet, assured, simple-mannered and simply dressed man yesterday morning in a crowded committee room came alone, facing a hostile committee, and spoke little about his own future but movingly about the future of America. If the people could have seen and heard Henry A. Wallace as we in that room saw him and heard him, seeing and hearing as they would, not through the prejudice of partisanship, or self-interest, or class interest, but only as the people, who wanted the office of Secretary of Commerce and of Loan Administrator run for the benefit of all of the people, there is no doubt about Mr. Wallace's confirmation by the Senate.

If you could have seen and heard Mr. Wallace and felt the earnestness with which he pleaded the case of all the people of America, not just the favored few, you would have understood why something unusual in American politics is happening—that is, the prayer meetings for the confirmation of Henry A. Wallace which are being held about over the country.

I am not surprised that Mr. David Stern, of the Philadelphia Record, states that Mr. Wallace's address to the committee was the greatest document in statesmanship in this generation.

Let me quote some of the stirring things Mr. Wallace said. He began as follows:

"Obviously, I am deeply concerned with any proposal that has for its purpose the stripping of the Department of Commerce of its present lending functions. I would be less than frank if I were to give you the impression that my concern springs solely from the fact that important functions are being carved out from under the jurisdiction of the Department of Commerce. You know and I know, that even greater significance is the fact that my nomination as Secretary of Commerce was the occasion for this particular proposal.

"There are some who have suggested—perhaps in an effort to save my feelings or face—that this separation of the lending functions from the Commerce Department is desirable of my alleged 'lack of experience' in such field. Let me say that this talk does not fool me or the American public. You know and I know that it is not a question of my 'lack of experience.' Rather it is a case of not liking the experience I have.

"Let me be specific. For 8 years I was Secretary of Agriculture. During that period Commodity Credit Corporation, the Farm Security Administration, the Farm Credit Administration, and the Rural Electrification Administration were under my supervision. During that period these agencies loaned over $6,000,000,000. We made 11,500,000 separate commodity credit loans and 1,208,000 rural rehabilitation loans. We arranged the financing to permit 20,184 tenant farmers to buy their own farms.

"The real motive underlying these suggestions for stripping the Department of Commerce of its vast financial power has, of course, nothing to do with my competence to administer these powers. The real issue is whether or not the powers of the Reconstruction Finance Corporation and its giant subsidiaries are be used only to help big business or whether these powers are also to be used to help little business to help carry out the President's commitment of 60,000,000 jobs.

"In other words the question is really one of whether this committee, the Congress and the American public want these enormous financial powers utilized and invested in a free America—in a prosperous America."

Mr. Wallace asked the following question:

"Shall we approach the problems of peace with the same boldness of conception, the same courage and determination as we have approached the problems of war?"

He gives the answer:

"In the answer to these questions lies the future of America. To anyone who has faith in America the answer is clear. The American people are prepared to meet the problems of peace in the same inspiring way that they have met the problems of war. The American people are resolved that we shall insure that the youth of this Nation will never again be called upon to fight in another war.

"And the American people are equally resolved that when our boys return home from this war they shall come back to the brightest possible, the freest possible, the finest possible place on the face of this earth—to a place where all persons, regardless of race, color, creed or place of birth, shall live in peace, honor and dignity—free from want and free from fear."

Mr. Wallace next gave allegiance to the economic bill of rights employed in the President's message not long ago to Congress.

ECONOMIC "BILL OF RIGHTS"

"The economic bill of rights as embodied in the President's message to Congress last January is:

"The right to a useful and remunerative job in the industries or shops or farms or mines of the Nation;

"The right to earn enough to provide adequate food and clothing and recreation;

"The right of every farmer to raise and sell his products at a return which will give him and his family a decent living;

"The right of every businessman, large and small, to trade in an atmosphere of freedom from unfair competition and domination by monopolies at home or abroad;

"The right of every family to a decent home;

"The right to adequate medical care and the opportunity to achieve and enjoy good health;

"The right to adequate protection from the economic fears of old age, sickness, accident and unemployment;

"The right to a good education.

"We need more hospitals and doctors. We should make sure that such facilities are available and that we build hospitals in every community, rural and urban, that does not now have such facilities for all of its people.

"But this health program must be achieved in the American way. Every person should have the right to go to the doctor and hospital of their own choosing.

"If the Congress does not feel that the powers of the R. F. C. should be exercised in such a way as to further the objectives which I have set forth here, then I respectfully urge the Congress to take the R. F. C. out from under the control of the Commerce Department. For I can tell you here and now that if the R. F. C. is left in the Commerce Department, I will use its powers in the interests of all the American people."

Mr. Wallace emphasizes the war:

"We must now devote all our efforts, and when I say all I mean all, to winning the war. I propose to leave no stone unturned, if confirmed as Secretary of Commerce, to see that every branch, every activity of the Department of Commerce and the agencies under its control, is directed toward the sole purpose of helping to bring the war to a successful and speedy close and of returning our boys home as soon as possible.

"If the R. F. C. and its subsidiaries will remain within the Department of Commerce, I pledge myself to utilize all its powers and resources directly toward speeding up the war effort. But there is one thing that I would like to say in closing: If we are to win this war speedily, we on the home front must all coordinate our efforts to that goal. We must all stick together and work together, as the boys are doing over there. We must bury whatever personal differences stand in the way of attaining that No. 1 goal before us. This is no time for personal and petty controversy.

"Whether the R. F. C. and its subsidiaries are included in the Department of Commerce or not, I will concentrate all of my efforts and the efforts of the Department under me to the winning of the war. I want to make it clear that if it is decided that the R. F. C. should not remain with the Commerce Department, I will carry on the job of Secretary of Commerce until the war ends.

"No soldier on the battlefields can do less than carry out his assignment. Certainly, we on the home front cannot hesitate to do anything less. Both must give their all to the common cause."

One of Mr. Wallace's critics charged that he believed in the dangercus doctrine of wanting to build a better world. To that charge Henry A. Wallace pleads guilty, for he knows that it is for a better world that boys and girls who have not yet got to live are giving their lives, their faces, their future, in every part of the world. He knows that it is for a better world that millions one day held the tears out of their eyes as they said good-bye to many who will never come back. It is for a better world that many an infant gave a father she will never see. Yes, Henry Wallace's fight is your fight and mine. If you believe in having a man in the President's Cabinet to help the President and all those who are fighting for that better world, you will, no doubt, if you do not add your own to the prayers of those who are praying, hope that their prayers will be answered. Your message should reach the Senate by Tuesday.

White Americans Betrayed

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. RANKIN. Mr. Speaker, on yesterday Gov. Thomas E. Dewey, "using 22 pens," signed the so-called Fair Employment Practice law, passed by the legislature of that State, which will go down in history as the greatest betrayal of the white Americans of New York that State has ever known.

The approval of this measure seems to have been the "hand of Esau and the voice of Jacob."

The object of it is the persecution of white Americans and to finally drive them from the business world.

The people of New York had reason to expect something better from this Charlie McCarthy who now presides over that great Commonwealth, but after his silly performances in the campaign last year, I am sure that many of them were not surprised.

In that campaign he reminded me of Mark Twain's Jumping Frog. His left-wing advisers began rolling super New Deal pellets at him. He swallowed them as they came, until he got so heavy he could hardly get his feet off the platform. He rapidly diminished in stature, like a receding picture, until the night of his final fireside chatter all one could see was a little bemustached midget saying "Now I lay me down to sleep."

As I said on this floor some time ago, the white gentiles of this country still have some rights left, and should be protected from the persecutions they are now compelled to endure. If this drive continues unabated they will be driven entirely from the business world and from the professions, as well as from public life.

Remember that something like 98 percent of the men who are dying on the high seas and the battle fronts of the world to protect American institutions in this war are white gentiles. Yet when one speaks up in their behalf on this floor, in the press, on the radio, or elsewhere, we hear the whine of "anti-Semitism" or the cry of "race prejudice."

The Communist Daily Worker, as well as PM, its uptown edition, and Earl Browder, the head of the Communist Party, are now gloating over Governor Dewey's capitulation. They are saying, in the words of Holy Writ, "He came to us a stranger, and we took him in."

Now the Congress of the United States is being asked to support this persecution of American businessmen throughout the country by the passage of the bill to make permanent the so-called F. E. P. C., which has been set up here in Washington without any legal authority whatsoever, and which is devoting its time to harassing white Americans throughout the country who are trying to carry on their business affairs while their sons are fighting and dying to save this Republic.

If this is the kind of stuff that is going to be forced on the American people at home, I submit we had better look into all these international compacts before we adopt something that might injure, if not destroy, the very freedom for which these boys are now offering up their lives.

Now let us look into this F. E. P. C. that this bill would legalize and make permanent. Remember they want to make it permanent because the appropriations for it are now made without authority of law, and are subject to points of order on the floor of the House.

For the information of the Congress I am going to give you the personnel of this supergovernment that is assuming the power to destroy business enterprise throughout the country, and which probably will soon be invading the schools of the land.

Read it carefully and see how many white gentile Americans you find on the list: only about 1 out of 10. I am taking this list from the records of the central office here in Washington. Here it is:

COMMITTEE ON FAIR EMPLOYMENT PRACTICE,
WASHINGTON, D. C.

Office of the Chairman

Incumbent	Title	Race	Salary
Ross, Malcolm	Chairman	White	$8,000
Johnson, George M.	Deputy chairman.	Colored	8,000
Hubbard, Macco	Hearings examiner.	Colored	5,600
Bloch, Emanuel	Hearings examiner.	White	5,600
Cooper, Evelyn	Hearings examiner.	White	5,600
Berking, Max	Assistant to chairman.	White	3,800
Alexander, Dorothy	Secretary to chairman.	Colored	2,600
Clifton, J. Jeanne	Secretary to deputy.	Colored	2,000
Brooks, Mary	Clerk-stenographer.	Colored	1,800
Banting, Myra	Clerk-stenographer.	White	1,800

You will note that in this office of the chairman, consisting of 10 people, there are 5 Negroes, and 5 white people, most of whom have foreign names. One of the whites is a stenographer who receives the smallest salary of anyone on the list.

Remember that the members of this group preside over the destiny of every business enterprise in America, and are using their assumed powers to harass white Americans out of business.

This is the organization Members of Congress are now being asked to perpetuate by the passage of this bill.

FIELD OPERATIONS

Here is the Division of Field Operations:

Field operations

Incumbent	Title	Race	Salary
Maslow, Will	Chief	White	$6,500
Mitchell, Clarence	Principal fair-practice examiner.	Colored	5,600
Davidson, Eugene	Principal fair-practice examiner.	Colored	5,600
Feall, W. Hayes	Senior fair-practice examiner.	White	4,600
Mercer, Inez	Fair-practice examiner.	White	3,800
Rogers, Eleanor	Clerk-stenographer.	Colored	1,800
Saito, Clome	Clerk-stenographer.	Japanese-American.	1,800
Thompson, Mildred	Clerk-stenographer.	Colored	1,800
Cornick, Emma	Clerk-stenographer.	Colored	1,620

You will note it consists of nine people—five Negroes, one Japanese, and three others—two of whom have records of affiliations with Communist-front organizations, according to the reports of the Dies committee.

Imagine this group going about over the country riding herd on the white American businessmen of the Nation, telling them whom they shall employ, whom they shall promote and with whom they may associate.

By the way, it would be interesting to check up on these people and see how many of them are native-born Americans.

Members of Congress had better do this now before they get caught in this trap because this question of un-American activities is going to be made an issue in every congressional district next year; beginning with the primaries.

The people are not going to wait until the general election for someone who holds a commission as a result of the pernicious activities of Sidney Hillman and his gang to wrap the party cloak about him, and shout to the people of his district that "I am a Republican," or "I am a Democrat."

More than a million young men have already been discharged in this war, and they are organizing now to try to save America for Americans. They are going to read your records, and they are likely to ask you some very embarrassing questions when you get home.

REVIEW AND ANALYSIS DIVISION

Now, as the old farmer said, take a squint at this list and see who reviews all these records of racial discrimination when they come to Washington, and you will understand how the editor of the Dallas News felt, and how dozens of white gentiles feel, including Cecil B. DeMille, the great American movie producer.

Here is the list:

Review and Analysis Division

Incumbent	Title	Race	Salary
Davis, John A	Chief	Colored	$5,600
Lawson, Marjorie	Research analyst.	Colored	3,800
Colightly, Cornelius	Compliance analyst.	Colored	3,200
Hemphill, India	Compliance analyst.	Colored	2,600
Coan, Carol	Compliance analyst.	White	2,600
Davis, Joy P	Compliance analyst.	Colored	2,600
Hoffman, Celia	Clerk-stenographer.	White	1,800
Spaulding, Joan	Clerk-stenographer.	Colored	1,800

You will note it consists of six Negroes and two white people, one of whom is named Carol Coan and the other Celia Hoffman, a white stenographer receiving the lowest salary on the list.

Now if you sign this petition to bring out this bill, or vote for this monstrosity, do not forget that when you get home those white American businessmen who help to sustain this Nation in time of peace and whose sons are fighting its battles in time of war, are going to want to ask you some questions that you may not be able to answer.

LEGAL DIVISION

But if you want a real laugh, look at this Legal Division:

Legal Division

Incumbent	Title	Race	Salary
Reeves, Frank D	Attorney	Colored	$4,600
Stickgold, Simon	Attorney	White	4,600
Gordon, Jenevive	Clerk-stenographer.	Colored	1,800

You will note it consists of two Negroes and a Simon Stickgold. If you want to know who Simon Stickgold is, probably Sidney Hillman can give you the information.

INFORMATION DIVISION

Now we come to the Information Division. If you want information about this outfit you write to this Division.

Information Division

Incumbent	Title	Race	Salary
Bourne, St. Clair	Information specialist.	Colored	$3,800
Whiting, Margaret	Clerk-stenographer.	Colored	1,800

You will note that it consists of two Negroes, one registered as an information specialist and the other as a clerk-stenographer.

BUDGET AND ADMINISTRATION

Now we come to the Budget and Administration Division. This Division not only makes up the budget but administers the regulations. Here is the list:

Budget and Administration

Incumbent	Title	Race	Salary
Jones, Theodore	Chief	Colored	$5,600
Jeter, Sinclair	Assistant administrative officer.	Colored	3,200
Baker, Vivian D	Clerk-stenographer.	Colored	2,000
Jackson, Bosales A	Clerk-typist	Colored	1,620
Paynter, Minnie A	Clerk-typist	Colored	1,620
Hollomon, Irving	Clerk	Colored	1,440
Selby, Ralph R	Chief, fiscal	Colored	2,600
Ross, Sylvia B	Voucher auditor	Colored	2,000
Nelson, Otelia	Accounting clerk	Colored	1,620
Carpenter, Elizabeth.	Accounting clerk	Colored	1,620
Brent, Pearl T	Accounting clerk	Colored	1,620

This outfit, which is composed of 11 Negroes, not only makes up the budget for financing this aggregation, but it seems to have the power of administration. I hope you will read this list to your white businessmen at home when you get back and ask for renomination in the primaries next year.

MAIL AND FILES DIVISION

Now, here are the ones that have control of the mails and filing system:

Mail and files

Incumbent	Title	Race	Salary
Douglas, Lela	Chief, Mail and Files.	Colored	$2,000
Welch, Selena	Docket clerk	Colored	1,800
Gamble, Jessie	File clerk	Colored	1,620
Phillips, Rose	File clerk	Colored	1,440
Reed, Charles	Messenger	Colored	1,380
Mitchell, Regina	File clerk	Colored	1,440

You will note that this Division is composed entirely of Negroes—no whites at all. I wonder why they discriminated against the white race in setting up these two powerful branches of this most dangerous agency?

REGIONAL OFFICE, NEW YORK

Now let us turn to the regional offices and see who is going to harass the business people back in the States. Here is the list for the State of New York:

Regional office, New York

Incumbent	Title	Race	Salary
Lawson, Edward H.	Regional director.	Colored	$5,600
Jones, Madison S	Fair-practice examiner.	Colored	3,800
Jones, Robert G	Fair-practice examiner.	Colored	3,800
Donovan, Daniel R	Fair-practice examiner.	White	3,800
Irish, Miriam	Clerk-stenographer.	Colored	2,000
Asepha, Tillie	Clerk-stenographer.	White	1,620
Schwartz, Sonia	Clerk-stenographer.	White	1,620

This is the list that is going to help Governor Dewey harass the white American businessmen of the Empire State. You will note that it is composed of four Negroes and three white people. Please read the names of the three white people and see if you can figure out their antecedents.

Businessmen of New York are going to have a hard time after this war without having all this communistic conglomeration to deal with, to say nothing of the one which Governor Dewey and his political henchmen have now heaped upon them.

REGIONAL OFFICE, PHILADELPHIA

Now, let us turn to Philadelphia, the birthplace of the Constitution, the City of Brotherly Love. At the risk of causing glorious old Benjamin Franklin to turn over in his grave, I read you the list:

Regional office, Philadelphia

Incumbent	Title	Race	Salary
Fleming, G. James	Regional director.	Colored	$5,600
Greenblatt, Mildred	Fair-practice examiner.	White	3,800
Manly, Milo A	Fair-practice examiner.	Colored	3,800
Risk, Samuel R	Fair-practice examiner.	White	3,800
Grinnage, Willard	Fair-practice examiner.	Colored	3,200
Gorgas, Helen	Clerk-stenographer.	Colored	1,800
Klinger, Karyl	Clerk-stenographer.	White	1,800
Brown, Grayce	Clerk-stenographer.	Colored	1,440

You will note that it is composed of 8 individuals—5 Negroes and 3 whites, Mildred Greenblatt, Samuel R. Risk, and Karyl Klinger.

Don't you know there will be some brotherly love when that crowd gets going on the businessmen of the Philadelphia area.

REGIONAL OFFICE, WASHINGTON, D. C.

Now, here is the regional office in Washington, D. C., the Nation's Capital, where there has been so much persecution of white gentiles in the last few years. Here is the list:

Regional office, Washington, D. C.

Incumbent	Title	Race	Salary
Evans, Joseph	Regional director.	Colored	$5,600
Houston, Theophilus.	Fair-practice examiner.	Colored	3,200
Kahn, Alice	Fair-practice examiner.	White	2,600
Chisolm, Ruby	Clerk-stenographer.	Colored	1,800
Urback, Dorothy	Clerk-stenographer.	Colored	1,620

You will note it consists of four Negroes and Alice Kahn. Just what chance a white gentile will have with this group is entirely problematical, to say the least of it.

REGIONAL OFFICE, CLEVELAND

Now let us move out where the West begins and take a look. Here is the list in the Cleveland regional office:

Regional office, Cleveland

Incumbent	Title	Race	Salary
McKnight, William.	Regional director.	Colored	$4,600
Abbott, Olcott R.	Fair-practice examiner.	White	3,800
Glore, Lethia	Fair-practice examiner.	Colored	3,200
Kelley, Berniza	Clerk-stenographer.	Colored	1,620
Wasem, Edna	Clerk-stenographer.	White	1,800

You will note that it is composed of three Negroes and two whites, Olcott R. Abbott and Edna Wasem.

Don't you know the white people of Cleveland will enjoy being dominated by this group?

CINCINNATI REGIONAL OFFICE

Cincinnati seems to be largely under the jurisdiction of the Cleveland office since it only has two people:

Cincinnati

Incumbent	Title	Race	Salary
James, Harold	Fair-practice examiner.	White	$4,600
----------	Clerk-stenographer.	----------	1,800

DETROIT REGIONAL OFFICE

Now let us move on to Detroit, Mich. Here is the regional office for Detroit:

Detroit

Incumbent	Title	Race	Salary
Swan, Edward	Examiner in charge.	Colored	$4,600
Sase, Doris K	Clerk-stenographer.	Japanese-American.	1,620

You will note that it is composed of one Negro and one Japanese. I know the businessmen of Detroit are grateful for this consideration.

I should like to hear some of the comments they will make to you gentlemen from Detroit when you get home next summer if you support this vicious measure.

REGIONAL OFFICE, CHICAGO

Here is the list of the regional office in the Windy City:

Regional office, Chicago

Incumbent	Title	Race	Salary
Henderson, Elner	Regional director.	Colored	$5,600
Gibson Harry H. C.	Fair-practice examiner.	Colored	3,800
Schultz, Joy	Fair-practice examiner.	White	3,800
Williams, Le Roy	Fair-practice examiner.	Colored	3,200
Zeidman, Penny	Clerk-stenographer.	White	1,800
Ingram, Marguerite S.	Clerk-stenographer.	Colored	1,620

You will note it is composed of five Negroes, two whites, Joy Schultz and Penny Zeidman. I am told that a representative of this group went into the office of Swift & Co. and asked how many Negro members they had on their board of directors. The answer was, "We have no Negro members on our board of directors." Then the question came back, "Why haven't you?" This just shows what this supergovernmental set-up is driving at. They want to communize America and destroy everything which our glorious ancestors have left us, and for which our boys are now fighting and dying all over the world.

REGIONAL OFFICE, ATLANTA

Here is a list of the Atlanta office:

Regional office, Atlanta

Incumbent	Title	Race	Salary
Dodge, Witherspoon.	Regional director.	White	$4,600
Hope, John	Fair-practice examiner.	Colored	3,800
McKay, George D.	Fair-practice examiner.	White	3,200
Chubb, Sally	Clerk-stenographer.	White	2,000
Ingram, Thelma	Clerk-stenographer.	Colored	1,800

You will note that it consists of two Negroes and three whites. I wonder how the people of Georgia enjoy the domination of this group. I may have more to say about them later.

REGIONAL OFFICE, KANSAS CITY

Here is the list of the Kansas City office:

Regional office, Kansas City

Incumbent	Title	Race	Salary
Heglund, Roy A	Regional director.	White	$5,600
Ormabee, Eugene	Fair-practice examiner.	White	3,800
Jones, Mildred	Clerk-stenographer.	Colored	1,620
Schilen, Helene G.	Clerk-stenographer.	White	1,620

You will note that this office force consists of three whites and one Negro. You can read the list of whites yourself and then judge how many of them really represent the people of that area.

ST. LOUIS REGIONAL OFFICE

Here is the list of the regional office at St. Louis:

St. Louis

Incumbent	Title	Race	Salary
Theodore Brown	Examiner in charge.	Colored	$3,800
Morris Levine	Examiner	White	3,200
Armatha Jackson	Clerk-stenographer.	Colored	1,620

You will note that it consists of two Negroes and one white. Just how they came to select these particular individuals to preside over the destiny of the white businessmen of the great State of Missouri I cannot understand.

REGIONAL OFFICE, DALLAS, TEX.

The members of the regional office at Dallas are as follows:

Regional office, Dallas

Incumbent	Title	Race	Salary
Castenada, Carlos	Regional director.	White	$4,600
(Vacancy)	Fair-practice examiner.	----------	3,200
Gutleben, Willetta	Clerk-stenographer.	White	1,800

You will note there is one vacancy. Last year that position was held by a Negro, namely, Roy V. Williams. The other two members, Carlos Castenada, the regional director, and Willetta Cutleben, seems to be in charge of the office at the present time. This is the regional office that attacked the Dallas News last year for carrying an advertisement for a Negro janitor. This fellow Castenada, director, held the same postion he holds now. If this set-up is made permanent, then I presume the rest of the white American businessmen in Texas may expect to be harassed just as the Dallas News was.

REGIONAL OFFICE, NEW ORLEANS

The regional office at New Orleans consists of the following members:

Regional office, New Orleans

Incumbent	Title	Race	Salary
Ellinger, W. Don	Regional director.	White	$3,800
Morton, James H.	Fair-practice examiner.	Colored	3,200
Ronning, Evelyn	Clerk-stenographer.	White	1,800

You will note that there are two whites and one Negro in this office. As the Negro is the fair-practice examiner, just what the decent white people of Louisiana may expect at the hands of this outfit is something to contemplate.

REGIONAL OFFICE, SAN FRANCISCO

The San Francisco office consists of the following individuals:

Regional office, San Francisco

Incumbent	Title	Race	Salary
Kingman, Harry L.	Regional director.	White	$5,600
Rutledge, Edward	Fair-practice examiner.	White	4,600
Ross, Bernard	Fair-practice examiner.	White	3,800
Seymour, Virginia	Administrative assistant.	White	2,000
Mazen, Jewel	Clerk-stenographer.	White	1,800

This is the only office we have found yet that consists entirely of white people. Just what the background of each one of them is I am unable to say.

LOS ANGELES REGIONAL OFFICE

The Los Angeles regional office consists of the following:

Los Angeles

Incumbent	Title	Race	Salary
Hunt, A. Bruce	Hearings examiner.	White	$5,600
Brown, Robert E.	Fair-practice examiner.	Colored	3,600
Lopez, Ignacio	Fair-practice examiner.	White	3,800
Vetter, Vera G.	Clerk-stenographer.	White	1,800
Lerna, Marie	Clerk-stenographer.	White	1,620

You will note that there are four whites and one Negro in this office, the Negro being the fair-practice examiner. I do not know what consideration the white businessmen of the Los Angeles area are receiving at the hands of this group; but from what I can hear it is not pleasant to contemplate, to say the least of it.

Mr. Speaker, large numbers of these people have been reported by the Dies committee as being affiliated with subversive front organizations. I shall not go into that record here; but as a member of the Committee on Un-American Activities I favor the passage of legislation that will bar any individual from holding any official position in this Government who is now or has at any time been affiliated with subversive activities or subversive organizations of any kind.

This F. E. P. C. is a supergovernment, with more power for evil than any other agency that has ever been created in this country. If Congress should ratify it and make it the law of the land, then we will have sacrificed or destroyed that sacred freedom for which our brave men are now fighting and dying on every battle front in the world.

We have no right to pass such a drastic, revolutionary measure that literally changes our way of life, if not our form of government, while these boys are away from home in uniform, fighting to sustain American institutions.

As I said before, we are going to carry this battle against un-American activities into every congressional district in the United States next year, in the primary, so that no one can crawl behind the party cloak and claim immunity at the hands of any segment of our people.

This is a battle for the survival of free government, for the survival of the American way of life, for the survival of free enterprise, for the survival of American liberty itself.

It is a battle to save America for Americans.

Dumbarton Oaks Conference Commitments

EXTENSION OF REMARKS
OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 13 (legislative day of Monday, March 12), 1945

Mr. WHEELER. Mr. President, I ask unanimous consent to have inserted in the RECORD an article entitled "Strange Alibi Seen on Oaks Commitments," written by David Lawrence and published in a recent issue of the Washington Evening Star.

I wish to call the attention of the Senate to a statement made in the article. The statement is as follows:

It was common knowledge last autumn that Russia objected to empowering the Council to make any decision on enforcement of peace which did not give her a veto.

I do not like to say to the Senate I told you so previously, but anyone who is at all familiar with the Russian Government or the Russian psychology must know that Russia never would consent to any other government saying when she was an aggressor or that they could tell her to stop aggression if she intended to start it. After the Dumbarton Oaks Conference adjourned a great many newspapermen came to me and asked if I would agree to the action taken there. I said at all times that Russia would be the one that would object. It should be recalled that it was the so-called isolationists back in 1918, when the Versailles Treaty was before the Senate, who objected, and said that the United States should have a veto so that other nations could not involve the United States. This time it was Russia that took the position that the so-called isolationists took at that time.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"STRANGE ALIBI" SEEN ON OAKS COMMITMENTS

(By David Lawrence)

Everybody would agree that where military questions are involved there should be secrecy, but it has never been asserted by any responsible section of American public opinion that our Government had the right to make secret commitments or to fail to tell the people opportunely about decisions affecting post-war policy.

Yet one of the biggest decisions already taken by our Government toward the future international peace organization was made secretly and now the excuse is being publicized that the American Senate would not have approved if the course had been otherwise.

Last summer and autumn conferences were in progress relating to the charter of the proposed United Nations organization. The meeting at Dumbarton Oaks was participated in by representatives of Great Britain, Russia, and the United States. The press was excluded on the ground that the Conference was preliminary in nature, that the Russians insisted on secrecy, that nothing final was being decided anyway, and that whatever was drafted would be sumbitted for approval to each government and in our case, of course, the Senate is a part of the Government under the Constitution.

MANY SWALLOWED EXCUSE

Many stanch supporters of the administration swallowed that excuse and indignantly characterized persons who felt the step was a piece of trickery in diplomacy as obstructionists or perfectionists. But it turns out now that the draft of what was done at Dumbarton Oaks was not submitted to the Senate for formal consideration or for amendment at all, and that what was agreed to at Dumbarton Oaks now goes before the San Francisco Conference without change and when it comes out of the San Francisco Conference it will have to be approved or rejected by our Senate without a chance for amendment.

Why were the American people not told what their own Government stood for last October at Dumbarton Oaks on the matter of voting procedure for the security council? Did our delegates favor the giving of a veto to any one of the major powers so that each big nation would in effect sit in judgment on its own acts?

It was common knowledge last autumn that Russia objected to empowering the Council to make any decision on enforcement of peace which did not give her a veto. What was the American Government's view? This was kept from the American people and they were given no opportunity between October 1944 and February 1945, when the Yalta Conference was held, to discuss or debate the matter on the basis of authoritative information. Now they are being told that the United States Senate would never have approved of anything but a veto for the United States, anyway, but how do those who take that view know?

The truth is, The isolationists, in the 1920's, took the position that America must retain the right of veto, but, after two world wars, it was thought by some of us that the isolationists were defeated, and certainly in view of the last election, when the result was widely heralded as a defeat for isolationists, one wonders why the President suddenly veered to the isolationist argument.

SLOGAN FORGOTTEN

The record of the Senate in being unwilling to submit issues to arbitration is, of course, bad, but who ventures to say with assurance that the American Senate today would refuse to permit the Security Council to investigate any international dispute in which the United States was a party and would refuse in advance the award of a court of international justice that might adjudge us to have been in the wrong?

Certainly a Senate that was supposed to be ready to approve Senator BALL'S proposition, whereby Congress need not be asked for additional authority to use armed forces when a breach of the peace occurs, could hardly be charged now with a refusal to ratify a treaty in which all nations, large and small, would be required to submit to the majority vote of the council or at least the unanimous vote of all governments except parties to the dispute.

But why should anyone in the executive branch attempt to speak for the Senate in advance? Why shouldn't the American Government view on voting procedure have been made public last October so that the people and the Senate could have debated it? The answer probably is that the administration decided after all that secret diplomacy was best.

This certainly isn't in conformity with the slogan of the World War which promised an end to the vice of secret diplomacy and offered in its place a formula of candor and publicity epigrammatically phrased by the

late President Wilson as "open covenants openly arrived at." Dumbarton Oaks is an example of the exact opposite. And now reports are being circulated, inspired by the administration, to the effect that the voting procedure adopted at Yalta for the Security Council was not so much an appeasement of Marshal Stalin as an appeasement of the Senate and particularly the Republicans in the Senate.

It's a strange alibi.

Raising of the American Flag Over Mount Suribachi, Iwo Jima

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, March 13 (legislative day of Monday, March 12), 1945

Mr. O'MAHONEY. Mr. President, the Senate was good enough yesterday to grant unanimous consent for the insertion in the Appendix of the RECORD of a letter which I wrote to Mr. Kent Cooper, head of the Associated Press, congratulating that organization upon the memorable photograph of the raising of our flag on Mount Suribachi, Iwo Jima, taken by Associated Press photographer, Joe Rosenthal.

I am now in receipt of a letter from Mr. Paul Miller, assistant general manager of the Associated Press, sending me a copy of Mr. Rosenthal's story of how he came to make the photograph. I ask unanimous consent that Mr. Miller's letter and Mr. Rosenthal's story be printed in the Apendix of the RECORD.

There being no objection, the letter and story were ordered to be printed in the RECORD, as follows:

THE ASSOCIATED PRESS,
Washington, D. C., March 7, 1945.

The Honorable JOSEPH C. O'MAHONEY,
United States Senate,
Washington, D. C.

DEAR SENATOR O'MAHONEY: Thank you for the copy of your letter to Mr. Cooper. I want you to know how much your interest is appreciated.

It occurs to me you might like to see Joe Rosenthal's own story about that picture, just as received on our wires today. I attach a copy.

With best wishes to you,
Sincerely yours,

PAUL MILLER.

MOUNT SURIBACHI
(By Joe Rosenthal)

(EDITOR'S NOTE.—The picture of a group of United States marines raising the flag atop Mount Suribachi on the south end of Iwo Island has been acclaimed all over the Nation as one of the most dramatic pictures of the war. The photographer who took that picture is Joe Rosenthal, a short, jolly, wiry, mustached fellow who will go anywhere to record a stirring action. Here, for the first time he tells the background of that Suribachi picture.)

GUAM, March 7.—"See that spot of red on the mountainside?" the bos'n shouted above the noise of our landing craft nearing the shore at the base of Suribachi Yama.

"A group of marines is climbing up to plant our flag up there. I heard it from the radioman."

He was plenty excited—and so was I.

The fall of this 560-foot fortress in 4 days of gallant marine fighting was a great thing. A good story and we should have good pictures.

So in I went, back to more of that slogging through the deep volcanic sand, warily sidestepping the numerous Japanese mines. On, past the culverts where the Japanese dead lay among the wreckage of their gun positions and up the steep, winding, always sandy trail.

Marine Pvt. Bob Campbell, a San Francisco buddy of mine, and Sgt. Bill Janausk, of Tacoma, Wash., were with me and carried firearms for protection (which is disallowed to correspondents).

There was still an occasional sharp crack of rifle fire close by and the mountainside had a porcupine appearance of bristling all over, what with machine and antiaircraft guns peering from the dugouts, fox holes, and caves. There was little sign of life from these enemy spots, however. Our men were systematically "blowing out" these places and we had to be on our toes to keep clear of our own demolition squads.

As the trail became steeper, our panting progress slowed to a few yards at a time. I began to wonder and hope that this was worth the effort when suddenly over the brow of the topmost ridge we could spy men working with the flagpole they had so laboriously brought up about three-quarters of an hour ahead of us.

I came up and stood by a few minutes until they were ready to swing the flag-bearing pole into position.

I crowded back on the inner edge of the volcano's rim, back as far as I could, in order to include all I could into the scene within the angle covered by my camera lens.

I rolled up a couple of large stones and a Japanese sandbag to raise my short height clear of an intervening obstruction. I followed up this shot with another of a group of cheering marines and then I tried to find the four men I heard were the actual instigators of the grand adventure. But they had scattered to their units and I finally gave it up and descended the mountain to get the pictures out and on their way to possible publication.

The way down was quite a bit easier, the path becoming well worn and men were carrying ammunition, supplies, food, and rations necessary for complete occupation of this stronghold.

The marine history will record Iwo Jima as high in their many gallant actions in the Pacific war.

I have two very vivid memories: The fury of their D-day assault and the thrill of that lofty flag-raising episode.

It is hard now in the quiet atmosphere of this advance base to find words for it. The marines at Iwo Jima were magnificent.

War Plant Investigations in Detroit

REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. VURSELL. Mr. Speaker, I was interested in reading in the papers this morning the result of the investigation in the war plants in Detroit. That brought to my mind, when I read of the tremendous waste of manpower, the idleness and the loafing that some of the very able Members of the House insisted that we pass a bill which failed to provide for investigation of such instances and which would drive more men into the war plants of the Nation at the expense of the Government, without securing greater production.

Mr. Speaker, this body made a great mistake in passing the May committee bill. This body should now try to overcome, and rectify its error. The Senate bill recently passed is a distinct improvement over the House bill; however, I believe the Members of this House can and should improve it and place itself in a position to bring about such improvement.

Management and labor both this week in Detroit where a Senate committee is making an investigation, state that production can be increased from 15 to 40 percent by utilizing men already employed. The Senate committee is uncovering shocking and I might say almost a treasonable waste of manpower. The Members of this House can yet so act as to help solve the manpower problem and save our taxpayers billions of dollars. It can also help to bring about greater production. The conditions prevailing in Detroit, prevail all over the Nation.

What we need is hundreds of investigations in all plants. This rotten mess should be exposed and cleaned up everywhere. Why does not the administration step to one side, withdraw its opposition, and allow legislation to be passed that will do the job? Is the administration determined to keep the people and the press from learning how badly it has bungled in the handling of labor and production in building our war machine?

Crowding more men taken from the farms and civilian industry into these already overstaffed plants will only make matters worse and add to the national debt. Congress can and should prevent such action.

Consent by Supreme Court To Hear Argument in Hatch Act Case

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, March 13 (legislative day of Monday, March 12), 1945

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news story from yesterday's Washington Evening Star. The title of the story is "Supreme Court Agrees to Hear Argument in Hatch Act Case."

I merely wish to say in this connection, Mr. President, that I am very glad the Supreme Court has taken jurisdiction of this case, and I am hopeful that a decision will soon be rendered, because the action that was brought charges that the act violates certain constitutional rights, freedom of speech, freedom of assembly,

and other matters which are of far more importance than the political activity of Federal employees.

I, of course, have my own views as to the constitutionality of the act. Briefly I may say that every person is guaranteed freedom of speech, freedom of political activity, freedom of assembly, and every other constitutional right. I would be the last person in this body to seek to deprive any citizen of those rights, but I may add that no person has a constitutional right to work for the Federal Government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUPREME COURT AGREES TO HEAR ARGUMENTS IN HATCH ACT CASE—U. F. W. APPEAL PROVIDES FIRST MAJOR TEST OF CURB ON UNITED STATES WORKERS' POLITICAL ACTIVITY

The way was cleared today for the first Supreme Court test of the Hatch Act barring political activity by Government employees. The Court agreed to hear a case instituted by the C. I. O. United Federal Workers of America which charged the prohibition violates the constitutional rights of "freedom of speech, of the press, and of assembly."

The Court announced that the issue of jurisdiction raised by the Government would be considered when the case came up for argument on its merits. The date of argument is still to be fixed.

The union appealed to the Supreme Court after a three-judge district court here refused to enjoin the Civil Service Commission from enforcing the law.

The Government had urged that the appeal be rejected, a Justice Department brief contending that it had not been filed within the time allotted for such proceedings, and that the Court therefore could not take jurisdiction.

The act was passed in 1939, and an earlier case had given the Court an opportunity to pass on its validity, but the litigation was decided on other grounds.

The provision attacked provides for the dismissal of officers and employees of the executive agencies who "take any active part in political management or political campaigns." Exempted are the official family of the President, heads and assistant heads of agencies, and policy-making officials.

The union said this difference as between groups was discriminatory. The lower court responded that those persons exempted "are in a very large measure political. No one supposes they would not change with the changing of administrations."

The Court said the legislation "does not seek to take away from a Government employee his right to vote, nor his right to express his opinion on all political subjects." What it does do, it was added, is to regulate the conduct of nonclassified employees in the same measure as that of civil-service workers, and correspondingly to safeguard them from the insecurity of tenure attributable to political affiliation.

Fair Enough

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in Passenger Transport for February 16, 1945:

FAIR ENOUGH

The past month has seen an increasing number of sore spots in the transit map of the country. By sore spots, we mean communities that are displeased with their transit operation and are trying to do something about it.

In their approach to the problem many of these communities, the civic organizations which serve them, and their respective local newspapers have taken a shortsighted attitude toward the operating company supplying the service. Delegations have been sent to Washington; mass protest meetings have been held; resolutions have been sent to governmental authorities; mayors and councilmen have made fiery speeches and given equally fiery interviews; newspapers have editorialized and investigated.

For the most part, the weight of all these protestations has been directed at the local transit company itself or its responsible operating officials. This attitude has been taken despite the excellent wartime records of the transit industry—despite the knowledge of Federal regulatory action and the shortages in manpower, replacement and maintenance parts, and new transit vehicles.

But little has been accomplished, not because the transit industry and its operating components haven't tried, not because the riding public and their elected servants haven't fought, but because in this critical war era tanks and guns and ships come first. That is the truth of the matter.

It is refreshing therefore to find one sore spot—Brooklyn—where leadership has arisen that is both fair-minded and forward-looking. Read what Harold Arens, president of the South Brooklyn Board of Trade has to say on the subject:

"We accept the fact that the present transportation situation is critical and may get worse before the war is over, but we also feel that little can be gained by the current wave of complaints which are negative criticism.

"Therefore we plan to discuss the advisability of forming a borough-wide committee, composed of representative Brooklyn leaders to conduct a continuing survey of the borough's transit needs. Such a group will be of great value by consulting with officials charged with operating the transit system and will be in a position to keep these officials alert, not only to the general needs of the people of Brooklyn, but also to the specific needs of various neighborhoods."

That's fair enough. It is to be hoped that other communities will follow Brooklyn's lead in this matter, for any local transit company will surely welcome the active cooperation and study which such a civic enterprise makes possible.

Keeping the Agricultural Record Straight, No. I

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, several times I have heard of the profits of the Commodity Credit Corporation in connection with various activities. One of these so-called profit operations has been on peanuts.

The Commodity Credit Corporation takes over the whole crop and has a monopoly of the business. They can charge all the traffic will bear and the consumer is compelled to pay 30 cents per pound in the shell and 40 to 50 cents per pound or more when shelled.

The profits on the peanuts sold to the public is some $30 per ton as would be expected of any monopoly.

The following is a letter from the Commodity Credit Corporation as of February 26, 1945:

UNITED STATES DEPARTMENT OF AGRICULTURE,
COMMODITY CREDIT CORPORATION,
Washington, D. C., February 26, 1945.

Hon REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: Reference is made to our telephone conversation of February 23 in which you requested certain information concerning the peanut programs for the 1943 and 1944 crops.

Following is the data requested for the 1943 crop (round figures):

	Tons	Loss	Gain
Farmers' stock peanuts purchased by Commodity Credit Corporation	888,884		
Sold to shellers	644,000		$19,000,000
Sold to crushers	212,000	$11,000,000	
Sold for seed at no gain or loss	28,000		
Fire and shrinkage loss	4,000	180,000	
Peanut butter subsidy payments		8,250,000	
Loss on crushing of No. 2 shelled peanuts	8,000	780,000	
Interest payments		145,000	
Administrative and other expenses of the cooperative producer associations acting as designated agencies of Commodity Credit Corporation		280,000	
Grading expenses paid to the Fruit and Vegetable Branch, U. S. Department of Agriculture		190,000	
Total		20,825,000	19,000,000
Approximate net loss		1,825,000	

These figures show the picture to January 1, 1945. After January 1, there has been additional loss resulting from the crushing of No. 2 shelled peanuts and from subsidy payments on peanut butter manufactured from 1943-crop peanuts.

As to the 1944 crop, our best estimates indicate that the loss will not exceed $10,000,000. You realize, of course, that this greater loss is partly due to the fact that the prices paid producers were approximately $20 per ton higher than those paid under the 1943-crop program.

Sincerely yours,

W. T. PARKER,
Chief, Peanut Section, Oilseeds Division.

It is evident that when $160 is paid for a ton of peanuts yielding 600 pounds of oil the oil costs the Government some 26 cents per pound or twice the O. P. A. ceiling of 13 cents per pound. A 100-percent subsidy for the oil is a rather large subsidy for a vegetable oil or any other product.

This letter shows the true picture. It shows that the Commodity Credit Corporation has not make any profit and in fact is taking a loss on the crop. I am not discussing the wisdom of the program—I am proving that loose statements of new dealers in connection with profits are of little value.

This is just one more of the many examples.

The National Debt and Income Taxes

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1945

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I wish to include a letter which I received from Mr. Arthur G. Sherman, of Detroit, Mich. Mr. Sherman is a friend and a constituent. Although he has been devoted to the war effort and has saved the Government vast sums of money, nevertheless he has found time to delve into the economic problems of our country. In this letter he discusses one aspect which is worthy of consideration:

DETROIT, MICH., *February 24, 1945.*
The Honorable LOUIS C. RABAUT,
House of Representatives,
Washington, D. C.

DEAR MR. RABAUT: Here is the reason why we will never be able to pay off the national debt through income-tax collections.

The national debt represents the accumulated savings of those who had income in excess of their current living needs before or during the war which made it possible for them to invest their surplus income (amounting to $300,000,000,000) in Government bonds.

If we have good business after the war, this same group will continue to have income in excess of their current requirements and will not need to cash their bonds for living or business expenses. In fact, they will continue to accumulate additional surplus funds with which they will desire to buy additional Government securities.

Now, if under these conditions we try to pay off the national debt through the collection of income taxes, we will be confronted with the following facts:

To pay income taxes we must produce and sell goods and services so that the goods and services can be converted into dollars which can be paid to the United States Treasury. The Treasury can then pay the bondholders the dollars so collected to retire the bonds. Now the bondholders must step into the market and buy the goods and services their bond dollars represented or these goods and services will not be consumed and it will be impossible for the people to sell more goods or services to raise more tax dollars. Such a surplus of unconsumed products will force a shut-down of business and precipitate a panic.

The fact that the bondholders represent that portion of our population which had income in excess of their need to the tune of $300,000,000,000, and current income in times of prosperity in continuing excess of current requirements, should show the folly of trying to convert their bonds into goods and services which they don't want and cannot consume.

To present this problem in just a little different manner, let us assume that the $300,000,000,000 national debt is owned by the richest 10 percent of the population. (Most likely within a few years after the end of the war, most of the E bonds in the hands of the workingman will have been cashed and replaced by bonds purchased by the banks and the wealthy.) On the basis of our 1930 to 1939 standard of living, 10 percent of the population would normally consume some $6,000,000,000 worth of goods and services. As the bondholders we are speaking of comprise the richest 10 percent of the population, we could allow them a better than average standard of living and assume that this 10 percent of the population would consume one and one-half times the average share, giving them nine billions of income and consumption power.

Now, if we propose to pay off the national debt at the rate of $9,000,000,000 per year, this 10 percent of the population which has a normal income of $9,000,000,000 would at once be forced to consume another $9,000,000,000 worth of goods and services. Instead of eating three meals daily, they would have to eat six meals per day, sleep in two beds every day, wear two suits of clothes, etc. If, in addition to the principal payment on the bond, we include the interest payment due this group on the national debt, we must add another six to nine billions of dollars to the sum they must consume, making this group eat (on the average) nine meals per day, etc. This is of course impossible due to the human limitation of one stomach per person.

It is equally absurd to expect this group to find suitable source of investment opportunity for these excess dollars. In the pre-war period this same group could not find investment opportunity for a far smaller surplus, which caused the worst depression in our history. To consider exporting this surplus would amount to giving away products our own people need.

Careful study cannot fail to convince the thoughtful that we dare not collect income taxes to pay either the interest or principal on the national debt unless we want to precipiate an immediae post-war panic which will make our last depression look like good times.

Respectfully,
ARTHUR G. SHERMAN.

Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1945

Mr. HOPE. Mr. Speaker, the matter of Federal aid for education is a subject which is being widely discussed at this time, both in and out of Congress. This matter is one of great importance and up to date at least it has been very controversial.

Perhaps the most serious objection which has been advanced to Federal aid is based upon the fear that this will mean Federal control of education. This question is discussed in a letter which I have recently received from Dr. Bryan S. Stoffer, president of Washburn Municipal University, Topeka, Kans. It seems to me that the suggestions which Dr. Stoffer makes with respect to this matter should be thoroughly discussed and considered, and for that reason, under permission granted me to extend my remarks in the RECORD, I am submitting Dr. Stoffer's letter herewith:

WASHBURN MUNICIPAL UNIVERSITY,
Topeka, Kans., March 5, 1945.
Congressman CLIFFORD R. HOPE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HOPE: For some time bills have been introduced into the Congress of the United States providing for Federal aid for teachers' salaries. There are two major reasons advanced for such an appropriation. First, there is gross inequality in the amount of money available for the support of the schools in the various sections of the United States. Second, teachers' salaries in many areas are unduly low, resulting in a very serious school situation. Both of the above reasons are sound and deserve very serious consideration.

Unfortunately, there are implications involved in such appropriations other than the raising of salaries for village teachers. While the bills in question indicate that the appropriation is to be made directly to States concerned without restrictions, it is evident that there is a very real danger of the possibility of Federal control either directly or indirectly, not only of the teacher's position, but also of his ideology. I recognize that there is a similar danger to local autonomy if and when the States of the Union make contributions to local units for educational purposes. However, in the latter case any political danger involved would be limited strictly to one State area and probably would be checked before any very serious results could follow.

On the other hand, if Federal control of education should become a reality, it would be a very long step toward totalitarianism, both in the form of control and in ideology. We have seen enough of this type of control in other parts of the world to force us to scrutinize very carefully any proposal which has the slightest possibility in this direction.

I have served abroad for 12 years in south India under an educational system which had government grants both for teachers' salaries and for buildings. Again and again I was reminded by members of the faculty that it would be unwise for the institution and the teachers of the institution to express themselves forcibly upon certain very critical public issues. Such an expression might result in the loss of the grant from the provincial government. Not only was this the result when certain specific issues came before the province, but also members of the faculty were very hesitant to make their opinions known, fearing that it might result in the loss of salary. In such situations, freedom of thought and expression was very decidedly limited.

Having had this experience over a period of 12 years, I am convinced that any program in the United States which might eventually lead to such a situation would be decidedly unwise. I realize fully that the present bills expressly forbid any dictation by the Federal Government. However, if and when grants are made over long periods of time, it is only natural and normal that the organizations making the grants will tend to insist upon more and more control and direction.

I appreciate the force of the argument that a great deal of wealth migrates from the hinterland into the great cities. Much of this wealth is taxed not in the hinterland, but in the States where these cities are located. As in the case of Federal grants for highways, so also, I believe, a compromise measure might be adopted wherein Federal grants might be made available for buildings and equipment in local areas. Such grants would tend to return to the hinterlands some of the wealth which in reality they have produced and which ought to be used for the education of the children who live in those hinterlands. Furthermore, many of these children will later migrate to the great centers, and unless they are given equal opportunity in the field of education, even the cities themselves will suffer serious handicaps therefrom. Grants for building purposes need not and cannot very well result in Federal dictation except possibly in the standards necessary in construction of the buildings. As far as I can see this would not be a handicap, but probably should be done in any case. The danger of Federal control would be practically eliminated, even as it is in the case of the public highways. The local areas being

relieved of a part of the burden in the construction of the buildings would be able, with their more limited resources, to use all of their funds for the payment of teachers' salaries and current expenses.

I am making this suggestion at the present time, believing that it may be one way of solving the problem which is before the Nation. Such Federal grants to institutions under public control should not be limited to elementary and secondary schools, but should also be made available to institutions of higher education.

In case there should be a real problem of unemployment following the war, a Federal program of this type would help to meet the unemployment situation and would be decidedly constructive and for the permanent benefit of the young people of America. Since the payment of the current huge Federal debt will very largely devolve upon the young of the oncoming generations, it seems to me that as much as possible should be done to provide for their welfare in a constructive fashion.

If this suggestion should meet with your approval, I shall be very glad to have you make any use of it that you desire. I am sending copies of this same letter to other Congressmen and Senators in our area.

With appreciation of the splendid service which you are now rendering, and with every personal good wish, I am,

Sincerely yours,

BRYAN S. STOFFER.

Lower Taxes?

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial on the subject of lower taxes, which appeared recently in the Chelsea Evening Record, Chelsea, Mass.:

LOWER TAXES?

The other day the House Appropriations Committee took a significant step when it earmarked four and a half billion dollars for payment of interest on the national debt. Two years hence the charges will be near the $6,000,000,000 mark, judging from anticipated costs of the war.

Add to that heavy expenditures toward rehabilitating and caring for our disabled veterans, carrying the cost of everyday Federal government with its record load of Government employees (some call them bureaucrats), and maintaining adequate national defense—and it may be seen at a glance that Uncle Sam's post-war financial burden is going to be a heavy one. What is left will go toward amortization of the huge public debt.

What then may we expect in the way of tax deduction—individual and corporate?

The answer seems to be: Comparatively little.

The thought of reduced taxes is, of course, a popular one. Wage earners, and those of Chelsea are no exception, look with increasing interest toward the day when payroll deductions will be a thing of the past, when the tax rate will have been cut drastically and when March 15 will hold no terrors. That is, for the nonce, wishful thinking. It is only natural that our legislators—who are basically politicians with an ear to the ground—will be thinking in terms of tax relief for their constituents. Faced with the tremendous task of raising enormous sums for National Government, there is little they can do.

At the moment tax planners are trying to work out some means of reducing taxes for the low-income group, and of cutting corporation taxes so that more money may be attracted to the investment field, thus assuring more industries and more jobs.

There is little likelihood that there will be any change whatsoever in 1945 rates. They will apply throughout the year. There is a chance that 1946 rates may be cut for the last 6 months if Japan is defeated by midyear. The broader outlook is that 1947 will be the first year in which any major tax adjustments may be expected.

Off to a Good Start

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of March 7, 1945:

OFF TO A GOOD START

The outlook for comprehensive reorganization of Congress appears brighter today than at any time since a handful of determined legislators and political scientists began working on the problem several years ago. For a time it appeared that the tragic death of Senator Maloney, head of the Senate-House Committee on Congress, might disrupt the plans for a penetrating survey of our National Legislature. Now, however, the committee has made a remarkable come-back. It has named Senator ROBERT M. LA FOLLETTE, Jr., as its new chairman, reappointed Representative MIKE MONRONEY vice chairman and chosen Dr. George B. Galloway to head its research staff.

Senator LA FOLLETTE is as closely identified with the move to strengthen Congress as Senator Maloney was. His elevation to the chairmanship not only assures the committee of vigorous leadership but also emphasizes its nonpartisan character. The Wisconsin Progressive was obviously given this assignment solely because of his long experience in the Senate and his interest in the subject. Indeed, he has already made studies of his own and on the basis of those studies has sought to improve the workings of the Senate. A year and a half ago he proposed that the rules of the Senate be modified to reduce the number of standing committees from 33 to 13. He has persistently sought to relieve Members of Congress of trivial chores and center their attention on major issues of national policy.

Like many other thoughtful legislators, Senator LA FOLLETTE also knows that Congress has little chance of maintaining its role as the chief policy-making agency of a great Nation if its Members are able to devote an average of only about 10 percent of their time to legislation. "No person familiar with the situation in the Senate today," he said in discussing his resolution, "can deny that there is a pressing need for committee reorganization and for the streamlining of the legislative branch of the Government if it is to survive in the struggle for power which is bound to continue."

Further guaranty that the study now actually launched will be no superficial cloak for the granting of new congressional privileges may be found in the appointment of Dr. Galloway. As head of the American Political Science Association's Committee on Congress, Dr. Galloway has made the most thorough exploration of this subject that we know of. Nor has he peered into it from an ivory tower. He has worked actively with Members of Congress, understands their viewpoints and has their confidence. Like Senator LA FOLLETTE, he sees the problem not as the inauguration of a series of pin-point reforms but as a major task of adjusting our legislative machinery to the exacting demands of this complicated and turbulent age.

At bottom it is a question of preserving democracy. In this country Congress is the body that speaks for the people in the shaping of domestic policy and in approving much of our foreign policy. It must be equal to its enlarged responsibilities or we shall have to resign ourselves to some form of executive control. The reorganization of congressional committees, the granting of adequate staffs, the establishment of a pensions system, the centralization of leadership and improvement of relations with the Executive are only means to the end of strengthening our representative system. This major objective appears to be the point of take-off for the special committee's study, as it was for Dr. Galloway's report to the A. P. S. A. If Congress follows through in this important undertaking, it may well prove to be a landmark in the history of self-government in the United States.

Commodity Credit Corporation

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I insert a letter which I have received from Mr. Edward A. O'Neal, president of the American Farm Bureau Federation:

AMERICAN FARM BUREAU FEDERATION,
Washington, D. C., March 7, 1945.

Hon. BRENT SPENCE,
Chairman, Banking and Currency Committee,
House of Representatives,
Washington, D. C.

MY DEAR CHAIRMAN SPENCE: I am writing to advise you of the support of the American Farm Bureau Federation of pending legislation to continue the Commodity Credit Corporation, and provide an increase in its maximum borrowing limit, so as to enable it to carry on its functions. We also favor a proposed amendment to H. R. 2023, now pending before the House, which would include the so-called Taft amendment, now contained in S. 298, but with certain changes.

One proposed change would provide an increase of $68,000,000 in the funds for dairy production payments, in addition to the amount permitted under the bill as passed by the Senate. Another proposed change would make available the subsidy funds on a yearly basis instead of a 6-month basis.

As you know, we have consistently opposed subsidies in lieu of price adjustments, but until the present policy of subsidy payments is discontinued, it is vitally necessary to provide adequate funds to enable farmers to offset their increased costs and meet their production goals.

If these increased funds are provided, it will make it possible to avert the reduction

in dairy production payments to milk producers, which was recently announced. Unless this situation is corrected, it may result in a serious reduction in milk production.

It is vitally important that Congress act speedily in this legislation, so that farmers, before completing their production plans for this year, may be assured that adequate authority and funds will be available to enable the Commodity Credit Corporation to carry out its price-support programs.

You are at liberty to use this letter in any manner you see fit in behalf of this legislation.

Sincerely yours,

EDW. A. O'NEAL, *President.*

Delegation of Power by Congress

EXTENSION OF REMARKS

OF

HON. HAROLD H. EARTHMAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. EARTHMAN. Mr. Speaker, while at this point I do not subscribe wholly to the contentions of the writer of the following editorial, which I wish to insert, realizing the necessity in time of war of unusual power being given to our President in order to expedite victory, however I feel that the following editorial is worthy of our careful consideration that we, as Members of Congress, might not be unmindful of the reaction of the general public toward our responsibility for their protection from error in government:

[From the Fort Lauderdale (Fla.) Daily News of March 10, 1945]

WHAT FOOLS THESE CONGRESSMEN BE

Never in the history of the Constitution of the United States has the people's governing body—the Congress—been so grossly insulted as it was the other afternoon by a Rooseveltian stooge by the name of Mrs. Ethel Gilbert, head of the O. P. A. Office of Industry Advisory Committee, when she ordered Representatives "JIMMY" MORRISON, HAROLD EARTHMAN, and JOHN JENNINGS, Jr., to leave a meeting between O. P. A. heads and strawberry growers of the South. The growers had requested the presence of MORRISON, a Democrat from Louisiana; EARTHMAN, Democrat, and JENNINGS, Republican, both of Tennessee, at the meeting for their own protection.

The three Congressmen, acting the roles of chastised school children, accepted this woman's directive to leave the room while members of the Office of Price Administration's price panel "fixed" prices on strawberries.

What fools these two Democrats and one Republican were to permit themselves to be pushed around by a woman who wastes her time and our money sitting around Washington thinking up little rules that exclude Representatives of the people at meetings where she enacts the role of a czarina.

What fools our Congressmen have made of themselves in permitting Franklin Delano Roosevelt to set himself up as lord and master of the O. P. A., which in turn has permitted him to hand down this kind of advice to a woman, who flaunts Congress' mistake of giving her and F. D. R. such far-reaching powers.

When Congressman MORRISON demanded the reasons for his exclusion from the meeting he was told in no kindly tones by Mrs. Gilbert that she controlled the policy for these industry advisory meetings and that she would not let Senators and Representatives attend. When the gentleman from Louisiana demanded to know by what authority she exercised this power he was immediately informed by Mrs. Gilbert:

"The authority you Congressmen gave me—believe me, I use it."

Right here is the initial warning to all Congressmen that unless they immediately strip the President of many of his dictatorial powers the Constitution of the United States will find itself classified with the Atlantic Charter—a piece of paper that's not worth the words written on it.

Such things as the chasing of three of our Congressmen from an O. P. A. meeting by a power-crazed skirted dictator must be stamped out the way we would a rattlesnake before it had a chance to strike the second time. Certainly, if she is permitted to get away with barring Congressmen from her secret meetings there is no reason for us to believe otherwise than she will take advantage of the millions of innocents who are forced to abide by the O. P. A. rules.

The Congress of the United States has been made to appear very foolish in the eyes of the American people, and unless it corrects its policy of blind obedience of all Presidential directives it will go down in history as having been inhabited by more fools than any other law-making body in the world.

I, too, feel, with all there is within me, that it is the responsibility of the Congress of the United States to use its authority in behalf of the people, lest we become weak, blind fools in their estimation.

If conditions are not right with the agencies of our Government, then let us admit it, face it, and fix it. This applies to O. P. A. also.

Resolutions Urging Immediate Relief to Farmers

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein resolutions memorializing the War Food Administration for immediate relief to farmers in the existing emergency pertaining to the hay situation.

Resolutions memorializing the War Food Administration for immediate relief to farmers in the existing emergency pertaining to the hay situation

Whereas the present critical conditions pertaining to the supply of feed for livestock are causing enormous loss to Massachusetts dairy farmers who are faced with the problem of purchasing hay at $50 per ton which causes their costs for said feed to exceed their income from dairying operations; and

Whereas hundreds of farmers have gone into debt by reason of said feed situation and find that their credit has been greatly impaired; and

Whereas said farmers by reason of said conditions, and also due to their inability to better their financial status because of the governmental regulation of prices, are faced with impoverishment, and unless immediate relief from their serious financial predicament is provided, they will be forced to sell their cows for slaughter: Therefore be it

Resolved, That the general court of Massachusetts respectfully urges the War Food Administration to immediately take such action as may be necessary to put into effect the following proposals:

1. The extension of the 90 cents per hundred milk subsidy, so called, to July 1 in the current year;

2. The immediate payment of the present subsidy for the months of January and February in the current year;

3. Monthly payments of the subsidy until July in the current year;

4. Continuance of efforts to provide adequate facilities for shipping and transporting feed for livestock;

5. An investigation of the entire problem of such feed supply, particularly with a view to determining whether there is any so-called holding back of hay for the purpose of influencing the price thereof; and be it further

Resolved, That copies of these resolutions be forthwith transmitted by the State secretary to the War Food Administrator and to the Members of Congress from this Commonwealth.

In House of Representatives, adopted, March 8, 1945.

LAWRENCE R. GROVE, *Clerk.*

In Senate, adopted, in concurrence, March 8, 1945.

IRVING N. HAYDEN, *Clerk.*

Bretton Woods Means 5,000,000 Jobs

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. DE LACY. Mr. Speaker, under leave extended me, I would like to include the following discussion of the Bretton Woods agreements, published in pamphlet form by the Congress of Industrial Organizations. I know that Members of the House are vitally interested in the position of organized labor on so important an issue as Bretton Woods. The full text of the pamphlet follows:

FIVE MILLION JOBS FOR UNITED STATES

Jobs for 5,000,000 American workers from foreign trade are in sight—when Congress passes a law ratifying an agreement made in a little New Hampshire resort town in the summer of 1944.

The agreement, which went under a long official title, "United Nations Monetary and Financial Conference," was signed by the United States and by 43 other countries. It aims to do four basic things:

1. Guarantee jobs and prosperity for all countries through free international trade.

2. Prevent financial and economic aggression of the kind that helped Germany and Japan prepare for this war.

3. Make it impossible for financial interests in this and other countries to help foreign aggressors, the way Germany and Japan were helped before this war.

4. Raise the standard of living in backward countries to the point where they can buy the things we make.

JOBS FIRST

First, the question of jobs for American workers. President Roosevelt and C. I. O. president Murray have set the goal at 60,000,000 jobs to keep America secure and prosperous after the war.

A big slice of these jobs must come from foreign trade. As President Murray has pointed out in his C. I. O. reemployment plan:

"The continued prosperity of Americans is directly tied to the prosperity of people of all other nations. In addition to a domestic program for full production in the United States, there must be a vigorous long-term program of international commerce."

Now, foreign trade doesn't just happen. People in other countries have to have something more than just the desire for American goods. They have to have the money to buy them with.

In the days before this war, people who wanted to buy goods from other countries got the money only when and if private banking interests were pleased to let them have it.

REMEMBER THE THIRTIES?

Frequently these private banking interests took advantage of weaker or more backward nations to exploit them and their people by keeping them backward.

Those who remember the thirties will recall how some countries deliberately drove down the value of their own money in order to undercut other countries on exports.

The other countries then, of course, tried the same thing. This destroyed world trade. And with that destruction of world trade came, also, in the thirties, the most terrible depression in history and the preparation for World War No. 2.

The only countries that profited out of this world-trade chaos were the Fascist countries preparing for war. They used their superior economic strength to force weaker countries to give them valuable raw materials in exchange for worthless goods. This was done by the Nazis, who paid for imports in blocked marks, spendable only in Germany. For these blocked marks the exporting country usually got nothing better than harmonicas or aspirin.

HOW IT WORKS

Foreign trade is a two-way street. To sell goods to a country, you have to buy things in return. One country cannot expect to go indefinitely selling to its neighbors unless its neighbors can sell to it.

For steady payment you need steady currencies. A United States exporter must be sure of getting his price for his exports in dollars. A Frenchman buying United States goods must be sure of a steady price that he pays for them in francs. If the rate of exchange—that is, the number of francs it takes to equal a United States dollar, changes sharply against the franc, the deal is off because it will take many more francs to buy the same amount of United States goods.

Neither the United States exporter nor his European customer control the rate of exchange. All they know is that suddenly the cost of the United States product to the European customer has been jerked up—and the customer for United States goods is jerked away.

All the United States exporter can do is to try to cut his price, which usually means an attempt at a wage cut, or stop exporting, which means lay-offs.

THE FUND

This is where the international monetary fund proposed at Bretton Woods comes in. Countries whose currencies may be threatened with a deep cut in exchange value can come to the fund and borrow either gold or dollars or some other exchange medium to restore their own currency to health.

Thus they will not be forced to drive their own currencies down in order to stimulate exports and cut down on imports. Weaker countries will be protected against the "harmonica and aspirin" kind of deal that helped Germany arm for World War No. 2.

THE BANK

But stable currencies are not enough. Countries wasted by war and undeveloped countries will need loans to rebuild and to develop. They will need money to help them get started on buying American products.

This is where the Bank for International Reconstruction and Development proposed at Bretton Woods comes in. Long-term loans will be guaranteed by the bank, after investigation to make sure the borrowing country plans to use the money in a productive way and, therefore, will be able to repay the loan.

Control of these loans will not be with one banker or with a group of bankers. Control will be with the United Nations, which will see to it that loans do not mean exploitation and imperialism as they used to mean.

PROFIT FOR ALL

As United States Treasury Secretary Morgenthau has said of Bretton Woods, loans will be made "to promote sound industry and increase industrial and agricultural production in nations whose economic potentialities have not yet been developed."

Our hope for 5,000,000 jobs through foreign trade lies in the industrialization of nations and continents such as China, Africa, Latin America, India, and a big expansion of industry in the Soviet Union.

This means profit for all. We do not have to be afraid of competition from these countries. On the contrary, the more they are built up, the more they can buy from us. Canada is a highly industrialized country and has always been one of our best customers.

In a peaceful and stable world, made possible by the Bretton Woods kind of planning, the fact that millions of people have well-paid jobs in other countries will mean millions of well-paid jobs for us.

WHAT'S ITS COST?

What is the cost of Bretton Woods? The new bank and the new fund will, of course, take money to set up and run. It will be a pretty big investment to start with, $10,000,000,000 for the bank and $8,800,0000,000 for the fund.

The United States' share of this investment in world stability will be $3,200,000,000 for the bank and $2,800,000,000 for the fund. The United States is the world's richest country, and will have the largest say in controlling both bank and fund.

This money is invested, not spent. Countries that borrow from both the bank and the fund will repay the loans. The fact that loans will be made only for productive purposes is the guaranty of that.

WHO'S AGAINST IT?

You might think that there would be no opposition to such a sound and sensible plan as Bretton Woods. At the time the agreement was worked out in the summer of 1944, there was very little—and it wasn't vocal.

Only a handful of die-hard Republicans, led by Senator TAFT in Congress, opposed Bretton Woods then. TAFT's criticism was the false one that it would cost United States taxpayers a lot of money. He ignored the fact that our share of the total—$6,000,000,000—is an investment, not an expenditure.

But since the agreement was signed a small section of big bankers in this country and in England has decided to oppose Bretton Woods. Not too publicly, of course, but the decision has been made to fight it.

This decision is based on a professed fear that Bretton Woods will wipe out private banking. This is not so, since banks will continue to make loans—supervised by the Bank for Reconstruction and Development.

THE REAL REASON

The real reason behind this minority opposition is a hankering for the "good old days" of uncontrolled currency manipulation, uncontrolled lending, and speculative profits for the few.

The big banks didn't lose anything when countries such as Germany defaulted on loans. That loss was taken by the suckers who bought German bonds from the banks. In the same way, a handful of banks made big profits on loans to "backward" countries that were used, not for production, but solely for the purpose of extracting high interest rates.

UP TO CONGRESS

The Bretton Woods agreement is up to Congress, which will have to pass a law authorizing the United States to join in the bank and the fund and appropriating the money for the original investment.

Congress thus has to decide whether or not we will have those 5,000,000 jobs in foreign trade. A bill to do this is being prepared, will be offered early in 1945.

Start writing your Congressman and your two Senators now. Urge them to make Bretton Woods a reality by voting the full amount needed from the United States to start it working. Urge them to reject all limiting or crippling amendments.

Five million jobs isn't hay.

The Insurance Act

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. SUMNERS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement with reference to the merchant marine moratorium bill recently enacted:

The effect of this act is to establish as far as can be done a moratorium until January 1, 1948, insofar as the effect of the Supreme Court decision in the Southeastern Underwriters Association case is concerned, except that boycott, coercion, and intimidation are not included in that moratorium. This moratorium or suspension is for the purpose of giving an opportunity for the States, the insurance companies, Congress, and the people of the country to determine what ought to be done. First, to adjust the confused situation in which we find ourselves as a result of the Supreme Court decision referred to; and second, to determine where the control of the insurance business should lie.

It seems clear that in order for the States to have a chance to retain that control, they must demonstrate their ability properly to govern the business of insurance. Insurance companies should do their best to remove from their practices anything which may be detrimental to the public interest. In my mind there is something far more important involved than insurance. This shifting of governmental power away from the States to the Federal organization is an increasing threat against our democratic system of Government. Federal organization cannot handle all of this business except by bureaucratic control. It is fortunate for us that there is considerable sentiment developing in this country that if we are to preserve free government, responsibilities of general government must be established and remain in the States. If that is done, and only if it is done, will there be a chance to reduce the Federal business

sufficiently to bring it within human comprehension and make it possible for the Federal organization to be governed by laws enacted by the Congress rather than by directive eminating from an appointed personnel.

Needed Workers Being Turned Away Because of Lack of Housing

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. DE LACY. Mr. Speaker, under leave extended me, I wish to call the attention of the House to the continued plight of workers in the vast war production centers of Seattle and Bremerton, and their desperate need for housing. Eighty-eight percent of all our war production there is going into the Pacific for the defeat of Japan.

Earlier, I appealed to this House, informing Members of the great increase in our population, of the heroic efforts of our citizens on the war-production lines, of the plight of workers, sleeping in cars, in tents, in lean-to's, and even in caves in the hills. I told of the tremendous ever-growing production records of our aircraft and shipbuilding industries, and of the War Manpower Commission's declaration that 26,000 more workers are needed in this already crowded area.

Listening to this and similar pleas of representatives of like localities, the House passed a deficiency appropriation to provide us with $84,000,000 in temporary public housing.

This was most welcome but still small relief, for Seattle and Bremerton could have used the entire appropriation and still be without adequate housing for our loyal war workers. Of the $84,000,000, the Federal Housing Agency did allocate some $9,000,000 to this area to construct about 2,200 family units and 2,000 dormitory units.

Yet when I had the privilege of speaking to the House on this subject previously, we needed some 30,000 additional housing units.

I have just been informed that in the past 54 days, 1,187 desperately needed workers have migrated to Seattle—come to this section voluntarily because of their own desires to be of help in our great war effort—and all of them have had to leave, to return to their former homes, to migrate elsewhere in their search of a job in the war effort. This, because, now as ever in our history, men cannot work where they cannot live.

Within the next few days, the House Banking and Currency Committee will have before it a request for $100,000,000 Federal Housing Agency Title VI insurance, to insure the building by private industry of private housing.

In my district, private builders are willing and ready to erect housing, if we can only provide them with the insurance. This is not spending of public funds, this is simple investment. It is the Government's own recoverable investment of $100,000,000 in the war effort and in the future of the Nation.

Private industry will erect these homes. Private industry will manage them. From the rentals, our Government will be repaid. And for this investment, we shall receive as a bonus, production and more production for the winning of the war.

I am informed that private builders in my district are ready and willing to erect $10,800,000 in new homes for our war workers. I have today received the following telegrams, which I would like to call to the attention of the House:

The first is from the Seattle Master Builders. It reads:

> We respectfully urge immediate consideration and action on $100,000,000 title VI insurance with favorable report for the full amount because of serious housing shortage in this area which is curtailing maximum war production.
>
> Boeing alone reports 1,187 workers arriving here voluntarily in the past 54 days, unable to remain for employment because no housing accommodations available. Statistics from War Housing Center reveal that 81 percent of title VI housing has been occupied by in-migrant war workers and 100 percent of all title VI housing has been occupied by certified war workers.
>
> War production officials state 88 percent of all war production in this area now going to Pacific theater with program calling for constant increasing production and amplification after victory in Europe.
>
> F. H. A. title VI funds have been exhausted since February 1, resulting in production standstill. If legislation, authorizing immediate title VI authority, is made available this program can commence immediately. Anything that can be done to expedite passage of this authority will speed housing for these essential war workers.

The second telegram is from the Aeronautical District Lodge, No. 751, of the International Association of Machinists, A. F. of L., the organization of which every one of the devoted war workers at Boeing's great plants in our area is a member, and which speaks for them. It reads:

> We are advised that $100,000,000 F. H. A. title VI authorization bill has been referred to House Banking and Currency Committee. Will appreciate your efforts to obtain favorable action through the committee and obtain cooperation of the congressional delegation. Serious housing shortage this area curtailing maximum war production. Boeing reports 1,187 workers arrived here voluntarily in the past 54 days, but were unable to remain for employment because no housing accommodations are available.

These messages speak eloquently of the desire of both labor and industry to speed our war production and to do their full share toward providing for the housing needs of workers who will contribute to this tremendous effort. I am confident that the House will again hear the plea that comes from all the war centers. I hope that this Congress will speedily act so that private builders, too, can get the backing they should have to help them construct further needed war housing.

Easier Than Lend-Lease

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. WEICHEL. Mr. Speaker, up to now one executive agency was evidently giving away America fast enough. With reference to post-war ships, the State Department, by so-called post-war lend-lease, was doing its level best to give away to France under the so-called agreement of February 28, 1945, deep-water ships to the tune of one hundred and forty millions; harbor watercraft, thirty-two millions; fishing fleets, eight millions; inland watercraft, fifty millions; and two hundred and twenty millions for boat charters and freight costs.

While this was going merrily on the Maritime Commission, since the fall of 1944, was busy and is now busily engaged in trying to push through quickly a so-called ship sales bill, being H. R. 1425, for the disposition of our merchant fleet now built, being built, and built after the war.

The terms of disposition are especially favorable to foreign buyers over domestic buyers for giving away our merchant fleet.

But the State Department evidently just heard about it on Friday last. It is possibly much better for giving away our merchant marine than lend-lease, that the State Department is dropping its so-called post-war lend-lease as to giving France deep-water ships for $140,000,000 and relying on Maritime Commission-sponsored ship-disposal bill. Mr. Speaker, I want you to know that there are probably plans of giving away, even more favorable than lend-lease.

Four Years of Lend-Lease

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Chelsea Record of Saturday, March 10, 1945, entitled "Four Years of Lend-Lease."

This editorial is most appropriate at this particular time in view of the fact that we have under discussion in the House today H. R. 2013, a bill to extend for 1 year the provision of an act to promote the defense of the United States, approved March 11, 1941, as amended, which is commonly known as the lend-lease bill.

As one who has consistently supported this measure in the past and will vote

for final passage of this bill this year, I wish to commend the editorial staff of the Chelsea Record for their timely article:

FOUR YEARS OF LEND-LEASE

It was 4 years ago tomorrow that President Roosevelt signed the lend-lease bill, thus placing America's gigantic industrial potential in opposition to the aggressors.

Lend-lease was a step which has been costly to the American taxpayer and succeeding generations of the species, but it was action which bolstered the cause of those defending the world against tyranny in coarser and more horrible forms. Likewise it was the indirect means of saving the lives of many Americans. It saved the lives of fighting men; it saved the lives of civilians.

It was a courageous step which America took—coming as it did at a time when Axis power was in the ascendency—but it was a move without which we would have ultimately been lost. Without lend-lease armaments and foods Britain and Russia and China must surely have gone to the wall. They lived on to fight other and more victorious battles. Lend-lease gave us time to prepare, to equip our soldiers and sailors for the job ahead. It kept the war from our own shores. It is even possible that, without lend-lease, America itself might by this time be hanging on the ropes.

America has proved not only its humanitarian tendencies and its fearlessness of the oppressors, it likewise has given the world an example of practical cooperation.

Four Figures of Jesus

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. BENDER. Mr. Speaker, on Wednesday evening, February 21, Dr. Frederick K. Stamm, pastor of the First Congregational Church of Chicago, was a Lenten speaker at the Church of the Savior, in Cleveland Heights, Ohio, as the guest of Dr. Verner S. Mumbulo, pastor of the church. Dr. Stamm's sermon, The Four Figures of Jesus, was most inspiring.

Mr. Speaker, with permission of Dr. Stamm, and by unanimous consent of the House, I include this sermon:

Dr. Marcus Dods, the great British theologian of the past century, said near the close of his life: "I do not envy those who have to fight the battle of Christianity in the twentieth century. And yet perhaps I do, but it will be a stiff fight." Just how he was able to make such an accurate prophecy I do not know, but it is quite evident that to keep Christian ideals uppermost in the minds of people in this year of our Lord 1945, is not an easy task. Values which we thought were pretty deeply rooted in the minds and hearts of people everywhere, seem to have taken wings and flown away before a situation with which we hardly know how to deal, except on the basis of the old principle of "an eye for an eye and a tooth for a tooth."

Of one thing we may be sure, whether we like it or not, and that is, many old things have passed away. Traditions which we so tenaciously held must now be severely scrutinized. We must now ask ourselves whether the things we held dear are after all very important, and whether some other things which we lightly regarded must now be looked upon as decidedly necessary. We sometimes hear it said that our generation does not have the faith of the former generation. We are not as good as our fathers, do not have the same faith, and are not as honest as were they. But can this be true? I prefer to believe that we are as good as any generation which has preceded ours. But we are not good enough. We are trying to face a world on fire with a faith that was adequate for a day when the world moved along smoothly, when our economic structure provided a living for anyone who was willing to work, when democracies were taken for granted, and when wars were fought with popguns instead of fire-spitting planes and steel tanks. We have a minimum of faith for a maximum complex situation.

Desdemona in Shakespeare's play said to Othello, "I do love thee! And when I love thee not, chaos comes back again." And that word may be applied to us as we ask once again, "Where does Jesus fit into the picture of the world as we see it spread out before us?" Chaos is surely here. We are chaotic in our thinking individually and collectively. If reports are anywhere near correct, Europe is a shambles, and the worst is not yet. In the midst of it all, the only way we seem to have of keeping the other side of the world from burning up completely, is to burn ourselves up. There can be only one reason for it, and that is, our minds have not been directed and controlled by the mind of Jesus. Nations have gone on their way unmindful of His place in the world, and individuals have scouted the idea that His teachings have anything to do with international relationships. When we do not love Him and His teachings, chaos comes back again.

Looking at Jesus it is not difficult to discover that He tortured men's minds and disturbed them. I wish I had time to give you the many instances when He caused men to grind their teeth at Him because He condemned their false religion, their lack of human brotherhood, their aloofness from the sinner, their unjust dealings with their neighbors, their lack of knowledge and vision as to what makes a nation great. They crucified Him not because He was evil but because He was too great for their small hearts.

Not only did He disturb them but He pursued them, and has been pursuing men ever since. You can never get away from the judgment of Jesus Christ. If you do wrong, He doesn't leave. If the world crucifies Him, He breaks the door of His tomb and confronts it with His goodness. Francis Thompson was right when he said:

"I hid * * *
From those strong feet that followed, followed after.
But with unhurrying chase
And unperturbed pace,
Deliberate speed, majestic instancy
They beat—and a voice beat
More instant than the feet—
'All things betray thee, who betrayest Me.'"

Then, too, Jesus was a searcher of men's hearts. If you watch the crowds following in the wake of His footsteps, you'll understand how some of them held out their hands to Him, waited for His blessing, and how many of them turned up their noses, left off following Him, and went their own way. It is said of old Samuel Butler that he came down to breakfast one Christmas morning, stretched himself and seated himself at the breakfast table, and said, "Well, this is the birthday of the hook-nosed Nazarene." That was the expression of a self-contented man. In contrast to this year hear the words of a redeemed sinner in John Masefield's The Everlasting Mercy:

"O truth, O strength, O gleaming share,
O patient eyes that watch the goal,
O ploughman of the sinner's soul,
O Jesus, drive the coulter deep
To plough this living man from sleep."

And now as Jesus moves across the pages of the world's history, I'd like to have you see four figures of Him. I don't know all the answers about Jesus, but if He is going to stand up at all in the midst of our perplexed world, we've got to see Him as He presents Himself in such vivid outline before us. First of all He was a fisherman. I don't know that He ever cast a net into the Sea of Galilee, and I can understand how dubious the disciples were that day when they had caught nothing, and heard Him say, "Cast the net on the right side." But He was a fisherman, nevertheless. "As He walked by the sea, and saw men casting their nets, He said, 'Follow Me.'" That is not an exhaustive picture of Jesus, but it has its place. Something was happening in the hearts of people, some readiness to respond to a great truth, and He needed a few men who would follow Him, who had the ability to catch His spirit and proclaim His message. There was a divine urgency about Him as He stood alone and said, "Follow Me." Charles, the craven king in the story of St. Joan, said to the maid of Orleans, "You people with your heads in the sky spend all your time turning the world upside down." That's exactly what Jesus had come to do, to turn the world upside down. He saw what the world needed, and He couldn't let it alone, even though it was perfectly content with its manner of living.

We've got to say that Jesus was bent on saving whatever was of value in the world. And the world is not all bad. There are values which have been covered up and lost, just as the coin which dropped from the woman's hand and rolled off into a corner or underneath the rug, was lost for the time. (Just as the one sheep in its stupidity wandered away from the flock and got caught in the thicket, and needed to be brought back to the sheepfold.) There is more in this figure of Jesus as a fisherman than I am able to give you today, but it ought to mean at least to you what it meant to Mr. and Mrs. William E. Gladstone in a day when poor creatures wandered in the streets of London seeking rest and finding none. Sometimes they would go out at night and wait in Picadilly Square to bring love and shelter to the flotsam and jetsam of society.

And on many an occasion Mrs. Gladstone threw her cloak over some bedraggled Magdalene. It ought to mean at least as much as it did to John Wesley when he felt constrained to go out and rescue drunkards and murderers. "It was our constant theme," he said. "But in doing this we were assaulted and abused on every side. We were represented as mad dogs. We were stoned in the streets, and several times narrowly escaped with our lives. * * * But this moved us not." A fisherman was John Wesley, for the values that still were present in men and society. And when you see Jesus, you must account for Him first of all on the basis that He too was a fisherman, a being who moved steadily through life under the compulsion of divine insistence and compassion.

The second figure that we have of Jesus is that of a teacher. See how men came to Him. They heard Him pray, and said "Teach us to pray." They heard Him talk about first things in life, and asked, "What is the first commandment?" They heard Him talk about salvation and asked, "Who can be saved?" They asked about their social obligations, about their relation to God, and how they could find life. Not a day passed without His being asked to explain this or that. He told them that if they wanted to be right they would have to do right to their fellows. If they wanted to

overcome evil they could do it only by doing good. If their prayers would amount to anything their lives would have to go out in love, not only to their own class, but to all classes.

And so the world, in order to explain Him calls Him Emmanuel, God with us. He walks with men as their companion, pointing out this truth of life, and that teaching men life's deepest and most lasting lessons, and opening up a highway to God. How desperately during His lifetime did He try to make people understand the nature of God. So concerned was He about drawing a true picture of God that men sneeringly asked, "Art thou the Son of God?"

Down through these ages Jesus has stood as a teacher. But the world hasn't always been a good pupil. It gets tangled up in its own philosophies, ruins itself by its own wisdom, and then wonders why God doesn't do something about it. We want peace in the world, but we won't pursue the ways of peace. We want brotherhood, but our little prejudices and selfish methods get in the way of brotherhood. (The parable of the good Samaritan is a lovely story, but it is one thing to read it and weep over it, but quite a difficult task to live it.) The world will never follow the teachings of Jesus until the causes for which He lived and died rest as heavily upon the world's conscience as they rested upon His heart and mind.

The third figure of Jesus is that of a healer. The lepers which lined the roadside held up their fleshless hands and cried, "Have mercy upon us." The blind pleaded for sight. Fathers of sick little children urged Him, "Come down ere my child die". Indeed He was constantly stooping beside this bed of pain, going through that door of sorrow, and restoring self-respect to this man and to that woman. The word "compassion" shines on every page of the gospels and lights up Jesus as a healer, so that even today sufferers can believe that—

"The healing of His seamless dress
Is by our beds of pain,
We touch Him in life's throng and press
And we are whole again."

Our hospitals grew out of the tender compassion of Jesus for the ills of mankind. And after years of sacrifice on the part of doctors and surgeons, psychologists and psychiatrists, other laws of healing are being discovered. Streams of energy are being tapped to preserve and restore health. We are learning not only the laws of physical health, but likewise the laws of mental and spiritual health. Get a man to have the right mental outlook, enable him to lay hold upon the great spiritual laws of the universe, and at once you have him emancipated from his fears, his phobias, his defeatism. I wonder sometimes how often Jesus is standing by sick beds, alongside of people whose life is a miserable existence, and whispering into their ears, "If only you knew the laws which are here for your use; if only you knew how life could change if you would find your life in God's universal laws."

But there is one other figure of Jesus which we would not dare to leave out of this characterization. It is the figure of a shepherd. "I am the Good Shepheard." And when you hear Him referring to Himself as that, you have the picture of a sheep entangled in the thicket, lost, and almost dead. It got lost through its stupidity and needs someone to direct it toward home.

If ever this world needed shepherding it needs it now. Since war was declared hysteria has gripped the minds of people all over the world, making them say things and do things which we thought impossible. One day I went from the radio studio to hear another preacher. And how he preached. When I went from that service I said to myself, "Now I can think straight again, for the preacher with true spiritual insight has directed my thinking Godward. I've heard a true voice in the midst of a babel of voices." That was the voice of one pulpit, and I'm sure there are hundreds of other heaven-born prophecies being proclaimed in this land. And as I went from that service I had another thought. I wished that alongside of that voice in the church there would be equally significant prophecies uttered by men who sit in places of influence in the Government. Men who are not gripped by hysteria themselves, but who can speak forth words of truth and soberness in a day when other men's minds are confused and tangled in a maze of conflicting emotions.

Of one thing we can be sure, and that is, that Jesus would never have referred to Himself as the Good Shepherd unless He was prepared to defend with His life the values wrapped up in redemptive love. And the only defense He had was a cruel cross upon which He gave His life in order that men might be brought back to the bosom and mind of God. "The Good Shepherd giveth His life for the sheep."

I can wish for no less than this at the close of these years of mental and spiritual degeneracy that people everywhere should begin to hear the voice of the fisherman, "Follow Me" to listen to Him as He sits before us as the Great Teacher; to feel Him as the Healer of our diseases, and to say with the Psalmist, "The Lord is my Shepherd," who rescues me from stupidiy being caught in other paths than the paths that lead to peace.

High Tribute Paid to Lynn Hero

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following letter written by William J. Kenealy, S. J., chaplain, U. S. N. R., January 28, 1945, to Mr. and Mrs. William H. Murphy, 216 Walnut Street, West Lynn, Mass., parents of William H. Murphy, Jr., seaman (1st cl.), U. S. N. R., who gave his life in his country's service:

CHAPLAIN IN GLOWING TRIBUTE TO LYNN HERO

The following tribute is of interest in connection with a visit paid by Navy Chaplain William J. Kenealy, S. J., United States Naval Reserve, to the family of William H. Murphy, Jr., 216 Walnut Street.

Chaplain Jeremiah F. Gearan, former curate at the Sacred Heart, who has served in the same area with Father Kenealy and who is mentioned in the letter was paying his last visit to the rectory on the same evening and thus an unexpected overnight reunion of the two chaplains made a memorable occasion for all concerned.

Both concurred in the opinion that Billy Murphy was one of those rare souls which God sprinkles here and there among us from time to time—a soul of such outstanding inspiration to all who knew him, including the priests themselves—inspiration coupled with retiring modesty, genuine piety, and even a desire for suffering, that praise of him takes on the form of wondering whether he was not truly a person bordering upon sainthood.

The Lynn Telegram-News prints in full this extraordinary letter of sympathy to stricken parents, feeling that its words of comfort and reassurance are not confined merely to its actual recipients but overflow to console the grief of all gold-star mothers and fathers.

JANUARY 28, 1945.

Mr. and Mrs. WILLIAM H. MURPHY,
West Lynn, Massachusetts.

DEAR MR. AND MRS. MURPHY: By this time you have received the official notification, from the Secretary of the Navy, of the heroic death of your beloved son, William Henry Murphy, seaman (1st. cl.), U. S. N. R. Kindly allow me as the Catholic Chaplain of the U. S. S. ——— to extend to you, and through you to Billy's other loved ones, my heartfelt sympathy in your hour of bereavement. The heaviest burden of sorrow is indeed yours, yet please be assured that you do not mourn alone. You grieve for a good and devoted son, all hands aboard the ——— sorrow for a loyal and respected shipmate; and I am greatly saddened by the loss of one of the best he'pers—by word and example—any Catholic priest ever had aboard a battleship.

Billy spent a great deal of his free time with me and with my yeoman, Johnnie Shovlin, who was one of his closest friends. He helped us with arrangements for Mass and other Catholic activities. I believe that Billy went to Mass and received Holy Communion every single day aboard the ——— unless actual watch prevented. He was one of the most outstanding Catholic boys on the ship. And he was very popular with everybody.

As you know, military censorship will not allow me to give you many details of Billy's death. However this much I can say: Billy died at his battle station, in action with the enemy, in Lingayen Gulf, Luzon, P. I., on the 6th of January, about 20 minutes past 5 in the afternoon. We had gone to our battle stations quite some time before this. As is customary when we go to battle stations on the ———, I had recited the Our Father, the Hail Mary, the Act of Contrition and had given general absolution over the ship's public-address system.

Death was almost instantaneous for Billy. I arrived on the scene immediately after he was injured and I can assure you that he did not suffer any long or severe pain. He received the last sacraments and the plenary indulgence at the hour of death. You need have no fear for Billy. God will reward you in His own way for bringing into the world and training such a wonderful, wholesome, clean, and inspiring boy. I am sure that he is with God this moment.

Because of battle conditions and the imminence of renewed enemy attack, it was necessary for me to bury Billy at sea early the following morning, in fact before dawn on the 7th of January. However, at the first opportunity, when combat conditions made it safe to have the greater part of the crew topside, a formal military mass and memorial service was conducted for Billy and his shipmates who had made the supreme sacrifice for the country and the homes they loved. The military mass was celebrated this morning, Sunday, January 28. Many hundreds of the officers and men crowded the huge quarterdeck and overflowed to the top of the gun turrets and the superstructure to pray for the souls and to honor the memory of our honored dead. It was a beautiful and inspiring scene. If you could have been present, I know you would have been comforted. But the best I can do is to enclose a program of the mass in this letter.

Do not think for one moment that Billy died or was buried among strangers. Our sailors in the Pacific, despite the grimness of war, perhaps even because of it, have an affection and devotion for their shipmates which is wonderful to behold. It is really a tenderness and love for one another which blooms stronger and more beautiful as the danger increases and the going gets tougher. It comes to full flower when we nurse our injured, attend our dying and bury our dead. All pretense is gone. We weep without shame. We pray, in private and in public,

that the almighty and merciful God will receive and cherish for all eternity the beloved shipmates whom He created and whom He has recalled to Himself.

Yes; Billy died for those he loved. And he died among those he loved and was buried with great tenderness by those who loved him. Nevertheless, your greatest consolation must come from the good God who from all eternity has loved both Billy and you. It was He who said to us: "I am the Resurrection and the Life. He who believes in Me, even if he die shall live and whoever lives and believe in Me shall never die." Billy did believe in Him. He had the faith. And he lived the faith fully, courageously, and inspiringly.

All of us at a time like this need to remind ourselves that death, as sad as it is, is not a permanent but only a temporary separation from those we love. Death is not the end. It is in reality only the beginning of that unspeakably glorious life which knows no disappointment or pain or sorrow or death, but which is everlasting life with the God of Infinite Love. It should make the thought of our own passing more easy, to realize that our loved ones who have gone before, will be waiting to greet us in a reunion of unending joy, through the Love and Mercy of our Lord and Saviour Jesus Christ.

Some few months ago, when the ——— anchored for a short time near a Pacific island, I met Father Jerry Gearan, of West Lynn. He asked for Billy and tried to get out to the ship to see him but was unable to make the trip. But from what he told me about Billy, I gather that Billy was the same marvelous lad at home in the States as he was out here in the Pacific. Coxswain Russell Brennan, Billy's friend on another battleship, was able to visit him a few times and I was able to visit Russell's ship to tell him personally about Billy's death. Unfortunately, I was on my way to a destroyer to say mass and I had to make my talk with Russell extremely brief. He was terribly affected by the news and I think a little note from you would help him considerably. I know that you have his address and I cannot mention the name of his ship.

This is about all that I can tell you by mail. There is just a possibility that I may be home on leave before many months. If so, since I live at Boston College, I will be sure to visit you. In the meantime, please accept my deepest sympathy. I will not forget Billy or yourselves at the Holy Sacrific of the mass. May our Divine Lord and His Blessed Mother give to Billy eternal happiness and to his good parents the reward and consolation of leading an immortal soul straight to the Heart of God.

Devotedly yours in Christ,
(Rev.) WILLIAM J. KENEALY, S. J.,
Chaplain, U. S. N. R.

Father Kenealy is on leave of absence from his duties as dean of Boston College Law School.

The Nurses' Draft Bill

EXTENSION OF REMARKS
OF

HON. SAMUEL K. McCONNELL, JR.

OF PENNSYLVANIA

Wednesday, March 7, 1945

Mr. McCONNELL. Mr. Speaker, in the consideration of H. R. 2277, a bill to provide adequate nurses for our wounded in the military services, there can be no just criticism of the earnest desire of every Member of the House to provide adequate medical nursing care for our men and women in the armed forces. There is, however, an honest difference of opinion as to the best method to be employed in order to achieve that worthy objective. Should it be by the voluntary system or by compulsion?

Let us examine briefly some of the background of this vital problem. Immediately after our entrance into the war estimates were made of the number of nurses needed. As the war progressed the quotas were increased. The magnificent response can be shown by mentioning some figures. In 1940 there were less than 1,000 in the Army Nurse Corps. By December 31, 1944, there were 44,000. Over 52,000 were in the various services, and approximately 81,000 had volunteered. It is a significant fact that until May 1944 every quota was met.

Some additional facts will make it apparent why results have not been more favorable since that date. Plans for a recruitment program were drawn up in the fall of 1943, and were ready to be put into effect when the War Department, on December 5, 1943, announced that only 40,000 nurses would be needed. Nearly 37,000 were then in the service. Later, however, the Department changed its estimates and decided to increase the number to 50,000, and then to 60,000, but the tempo had bogged down. A wave of optimism was sweeping the country, fanned by the favorable progress of our armed forces, and the predictions of victory in Europe during 1944 by many of the leaders in military and civilian life. A natural let-down occurred which affected all the people, including the nurses. We had been progressing satisfactorily under the voluntary method up to the time when a rejuvenated recruiting program was abandoned, and thereafter due to a further let-down caused chiefly, as Surgeon General Parran said, by a false peace psychology.

The important requirement, therefore, would be to re-create a war psychology The President's speech on January 8 would have been the ideal time to have launched a Nation-wide drive, organized like a bond drive, in every community throughout the United States. Prior to that time, the War Advertising Council, realizing the need for a dramatic appeal, had drawn up plans for a national advertising campaign. On October 12, 1944, one of the members of the J. Walter Thompson Co. accepted the responsibility for the drive. For some unknown reason, no further word was heard from the Army until December 20, after which the advertisers got busy and raised $10,000,000 for their campaign. Again, more delay until March 5, 1945, when the drive finally got started.

In the meantime, this bill was introduced in the House which proposes for the first time in the history of this country and, I am told, for the first time in the history of the world, to draft nurses; to conscript and thereby to discriminate against a special group who have throughout the years demonstrated their sincere and conscientious devotion to duty. We are saying, in effect, that they would not assume their duty voluntarily so they must be forced to go.

Since January 8, when the President announced the urgent need for 18,000 nurses, until February 24, 13,848 had volunteered. Of this number the Red Cross reported on March 4 that 9,641 had already been certified to the Army and Navy. Despite this result and regardless of the fact that the recruitment drive mentioned previously did not start until last week, March 5, we now propose to draft this particular group from among the women. A fair appraisal of the matter indicates that a reasonable trial of the recruitment campaign has not been given. I believe that nurses can and will be secured more quickly and in adequate numbers by the voluntary system, if properly organized, than by the compulsion method proposed in this bill.

Because of this belief and the other reasons stated, I am voting against this bill.

Statements have been made during the discussions on the floor of the House concerning the attitude of the nurses themselves. Two letters written by nurses in the Army Nurse Corps, on duty overseas, were sent to me by a constituent, which I now make a part of the RECORD:

FROM OVERSEAS, *February 27, 1945.*

NURSE SHORTAGE

DEAR YANK: We have been recently informed that there is a good possibility of drafting nurses for the service. It really makes us think. How can a just government designate one particular organization of women to be the victims without a mass conscription of all? After all, this is a democracy that we're wading through and for, or at least that was our assumption when we volunteered.

Are we any more essential than women in industry? No—and we'll tell you why. It's not the shortage of nurses, but rotten administration, poor distribution, and improper use of our professional abilities that put us on the high-priority list.

Nursing itself is more than a full-time job, but we are forced to enact the dual role of both nurse and company clerk. Most of our time is wasted on filling out endless numbers of forms, and other clerical work that could easily be performed by any eighth-grade student.

What little leisure time we have is wasted on classes, which being repetitious in themselves are an insult to any nurses's intelligence.

Furthermore, after a tedious 12-hour night stretch, we are compelled to awaken at an early hour, and perform an hour of close-order drill, calisthenics, and other stupid antics.

Can you blame nurses for refusing to join, when they can work in Army hospitals, and still retain their civilian status, without being encumbered by the vast number of rules, regulations, and restrictions that put us more on the level of a wayward child than a professional woman?

Yes—the need for nurses, and nursing care is acute, but we cannot adequately perform the role of nurse, secretary, and basic trainee.

We can assure you that this is not the petty complaining of a disgruntled few, but constitutes a widespread grievance within our organization.

TWO LIEUTENANTS, A. N. C.

Copy of V-mail letter received at district No. 1 headquarters February 27, 1945:

SOMEWHERE IN FRANCE,
February 17, 1945.

DEAR MISS ———: As you see, I have arrived in France. At this time I am anxious to express my views on the nurses' conscription bill and would also like your views on it.

Therefore I shan't tell you much about myself at this writing.

I have been in the Army 10 months. Have been activating since October 10, 1944. Since that time have only done 3 weeks of actual nursing. Since coming to the continent we have had continuous silly training programs on calisthenics, road hikes, drills, and lectures which are constantly repeated. Our living conditions are horrid and rugged—that is a mild word for it. All this would compensate if we were doing nursing, which is what we came into the service to do. Where we are located there are hundreds of nurses. I understand there are thousands of nurses in the E. T. U. alone. We are getting stagnant from lack of nursing duties. The nurses conscription bill as a whole we feel is a farce, not needed and a political push. This would put nursing back to the dark ages of Florence Nightingale's time when nursing was not an honorable profession.

We hate to think that from now on the Government will control all nurses and nursing, body, soul, and mind. We hope something will be done to avert this before it is too late.

Pardon this odd letter, but please honor me with an answer and your feelings and reactions to this bill.

I shall promise to write more about what I am doing and my whereabouts in a later letter. Give my regards to my friends. How have you been of late and what is going on at district 1 headquarters these days?

Sincerely,

Lt. ———, A. N. C.

Address by Strickland Gillilan

EXTENSION OF REMARKS

OF

HON. EARL R. LEWIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. LEWIS. Mr. Speaker, today, March 13, is the forty-eighth anniversary of the appearance in Life magazine—the oldtime humor standard of that day—of a dialectic poem written by that dean of American humorists, Strickland Gillilan. The poem was Off Agin, On Agin, Gone Agin, Finnigin. The humor of Strickland Gillilan has entertained, as well as enlightened, millions of people in America during the last half century. He was born in my State of Ohio and still looks upon Ohio as his home although for many years he has "temporarily resided," as he puts it, in Washington.

Strickland Gillilan recently made a luncheon address to the Rotary Club of Cincinnati, Ohio, in which he took occasion, in his humorous manner, to say a few words concerning the governmental bureaus in Washington and, incidentally, concerning the Congress. His statement was, in part, as follows:

I like to get out of Washington now and then because of green-eyed jealousy. I am merely a professional humorist myself and I can't stand the competition from Government. Those who are doing their stuff and spending yours are so much funnier without turning a hair than I am when I "bust the britchin" that I burn up with envy. I can't even start a laugh down there. Why there are those who eat pie with a knife. If any of those boys are ever found with their throats slit from ear to ear, Edgar Hoover's G-boys will call it an inside job. And there are others who risk the sight of at least one eye from a protruding spoon handle everytime they drink their coffee, I refer, of course, to those who drink it out of the cup. But not all of those who drink it out of the saucer blow it. The more refined ones fan it with their hats.

Now you know that I know that you know that not all are of that type. There have been—perhaps still are—and will be some Congressman of that kind, but they are by no means numerous. To apply such statements to Congress is merely our loose, unfair and unjustified manner of speaking of Congress. There are statesmen in both branches of our national legislature who, if Webster and Clay and Calhoun and Blaine and those other congressional giants of other days were still living—men who, because they have been dead so long, are bigger now than they were while alive—there are men in Congress today that measure right up to those old colossi of patriotism and wisdom. You remember when a few years ago an attempt was made to expand the Supreme Court to the numerical strength of the standing Army a lot of the boys got up on their hind legs and fairly yelled "You can't do that to our Constitution and to us" and it was not done.

But there are some of the lower type there and those are the ones who should command our immediate and concentrated attention. First, I'd like to know if any of you folks have ever complained about what you considered the low standard of public servants. If you did, don't do it any more. No misfit in an elective office should be blamed for being there. It isn't his fault. He didn't put himself there. He didn't hide his weaknesses and he didn't elect himself. For every crackpot or incompetent noodlehead in Congress—either branch—there are from 10,000 to 50,000 crackpots, incompetent noodleheaded voters in his electorate who put him there with full knowledge of what they were doing to themselves and to the rest of the country. When you find a belt buckle or a side comb in the soup, you don't cuss that belt buckle or side comb do you? No. You say, "How come that fool cook uses the soup pot for a trash basket?" The thing out of place isn't to be censured. Whoever put it there is the miscreant and shoul' bear the blame and the punishment. They are the ones to be turned over the punitive knee of the parental public.

No stream of legislation or other public service can rise higher than its source—the voters. So you voters quit cussing Congress and start using something north of your ears in selecting its Members.

Pay of Military Personnel in the Philippines

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

TULSA, OKLA., *March 8, 1945.*

Hon. GEORGE B. SCHWABE,
House Office Building,
Washington, D. C.

DEAR GEORGE: One of my sons in the Army Air Forces is now in the Philippines and is paid in Philippine currency, notwithstanding, as I understand, the law provides for payment in United States currency. Several days ago he ran out of air mail stamps and the Army post office at his station did not have any stamps. However, he found stamps at a Navy post office at or near his station, but Philippine money was refused in payment for such stamps. He was thus forced to hunt around and find someone with United States money before he could purchase such stamps.

It is possible that this is one way the Army uses to encourage the use of V-mail, but it is our experience that V-mail takes from 16 to 26 days to get through. Such a matter as this cannot be entirely excused by lack of airplane space when planes are used for attendance at gangster politicians' funerals and transportation of dogs.

The reason I am addressing you is that I notice that matters pertaining to the currency with which military personnel is paid has been mentioned a number of times in Congress and you will note that I am sending a copy of this letter to the Secretary of War.

I am sorry that my first letter to you is of this nature, but we do not like to have our boys kicked around, notwithstanding we have to put up with a lot of it unnecessarily at home.

With my kindest regards and best wishes, I am,

Sincerely yours,

TED H. HAMMETT.

A Union Man's Suggestions

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. HOFFMAN. Mr. Speaker, from a man who says that he a member of a local union at Bronson, Mich., comes a mimeographed letter which reads as follows:

BRONSON, MICH., *March 7, 1945.*

DEAR SIR: For the past several years I have been connected with our local union as an officer and member, and have followed the trend and problems rather closely, hence my opinion to you.

Today there is an unhealthy trend in the assessing of special dues upon employers as the Petrillo assessments upon recordings, and the restriction of nonprofessional use of amateur organizations on radio stations.

In my opinion, union dues should be limited to 12 monthly payments, in no case to exceed $1.50 per month and one special assessment of not to exceed 1 month's dues.

Today we are faced with the Lewis royalty plan which in my estimation is a vicious attempt to tax without legally constituted law by a State or national branch of Government, and unless these practices are stopped, once and for all, God only knows where it may end. Too much money in union treasuries to me is a very dangerous thing to union membership as a whole. It tends to make the national leaders too arrogant and inconsiderate of the members' welfare.

The trend in unions today toward closed shops to me seems very un-American, directly contrary to the constituted rights of United States citizens. Union membership should be entirely voluntary in order to force leadership to give its membership value received or lose their position.

Coercion and intimidation are dangerously prevalent against anyone who chooses to differ with the leaders of today. The fear

of these throttles the assertion of opinion by, in many cases, majority of members who have absolutely no protection from the radical and hoodlum elements who will stop at no ends to continue their control.

If the union movement is to survive; and it must—we must have laws regulating union activity sufficiently severe, and justly enforced, to give union membership protection from coercion and intimidation.

Every union member must be made legally responsible for damage to individual's property and persons also for damage to employer's properties and persons, applied to union officers and members alike whether of local, State, or national importance and authority.

Such law shall be made equally severe against employers who commit offenses against unions or members directly or through their hired representatives.

All cases must be fairly and justly prosecuted by established court procedure.

I believe that labor disturbances should be policed by the armed services of the United States as local police have neither the numerical strength nor moral inclination to do a fair job of preserving order, hence the deplorable conditions of the past at such times.

I express these opinions in a sincere and friendly spirit towards both labor and management, as each cannot survive without the other, therefore are intimately dependent upon each other.

I think the Little Steel Formula has been generally successful, but could be worked out to allow some of the unfortunate cases, to have reviews to allow them to reach the level of the high levels which are granted within areas and have been in effect during the war. This I do not think dangerous as I am acquainted with many cases which are unjustly low.

I regret the lack of education to make this message as intelligible and expressive as I would choose, but hope you can understand my feeling regarding the importance of it.

Strikes should be outlawed for the duration of war.

Respectfully,

ALTO FAIR.

P. S.—I would appreciate if you could use your influence upon other Michigan Representatives and Senators if this finds favor with you.

The foregoing was addressed to the Hon. PAUL W. SHAFER, and was referred by him to me.

On the assumption that the writer wanted the Congressmen to know his views, I am inserting it in the RECORD.

Cigarettes and Meat Plentiful Within Canada

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Tulsa (Okla.) Tribune of March 8, 1945:

CIGARETTES AND MEAT PLENTIFUL WITHIN CANADA

(By Earl Banner)

MONTREAL, March 8.—Canada may be having its troubles with military conscription, but no one can find fault with its method of taking care of civilian needs in wartime.

If Americans could awaken tomorrow to find themselves similarly blessed, here are the things they would notice first:

1. A plentiful supply of all types of meat at reasonable prices.
2. Plenty of butter and milk.
3. No cigarette or liquor shortage.
4. No fuel shortage.
5. No scarcity of women's or children's clothing.

You find out about the plentiful supply of cigarettes first. As you walk through Windsor Station from the train you are impressed by the stacks of cigarettes at all the newsstands and the absence of lines of would-be purchasers.

Cigarette smokers here are not furtive. They name right out loud the brand they want—and two of the biggest sellers are brands once sold in American tobacco stores.

There's one draw-back to this otherwise pleasant situation, however. The price Canadians pay for their smokes is exorbitant, by American standards. For 18 cigarettes you are charged 33 cents. It's a great help for a man who wants to cut down.

But the most astounding difference is in the meat supply. Canada has been off meat rationing for 1 year.

Even small neighborhood markets display a complete line of meats and you rub your eyes in astonishment the first time you see such a display, but the scene quickly becomes commonplace. Shop windows contain temptingly arranged platters of choice beef, pork, and lamb cuts against a background of hanging beef quarters.

Most Canadians are aware that the meat supply in the States is slim and getting slimmer. Most of them wonder why.

A waiter in one large restaurant put it this way: "Why can't we share, eh? We have so much and you have so little. It rotted in our warehouses just before rationing was taken off. It just doesn't make sense."

According to the statistics branch of the wartime price and trade board here, the cost of living in Canada has risen but 1.9 percent since November 1941. The cost of food has gone up 3.9 percent, rent up 7 percent; fuel and lighting down 4.1 percent; clothing up 1.3 percent; home furnishings and services up 0.4 percent.

Canadians are quick to point out, however, that this index does not include taxes. They are among the heaviest-taxed free peoples of the world. Income taxes take a big chunk out of the individual's pay check. A bachelor earning $2,000 a year pays a tax of $433; childless couples on the same salary pay $232, with one dependent $162, two dependents $108. Childless couples with an income of $3,000 pay $582, with one dependent $445, with two dependents $333, and $279 if they have three dependents.

News From Poland

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

ELECTIONS IN KRAKÓW

Mr. O'KONSKI. Mr. Speaker, on January 27, 1945, the so-called provisional government in Lublin held elections in the city and Province of Kraków (Cracow). The result was that a certain Mr. Saruk, sent from Lublin under a false name of Michalski, is the mayor of the city of Kraków. Mr. Walas, allegedly representative of the Democratic Party, is assistant to the mayor. The city council, county council (Rada Powiatowa) were elected the same way—representing all political parties. Engineer Mitera is Governor of Kraków. The system of organizing the administration and self-government by the provisional government has the known and old pattern: First of all, there is sent to the locality the so-called operation group which comprises a group of entrusted, specially trained in the U. S. S. R., Communists. They organize the administration and self-government according to the instructions received from the Communist Party, the N. K. V. D. and the Russian commanders of the armies.

ECONOMIC SITUATION

The economic situation and food supply are in a critical stage. The Polish population was especially affected by the order practically canceling the value of all currencies. According to the new regulations, the exchange is 500 zlotys emitted by the German occupation equal to 1 zloty emitted by the provisional government in Lublin. For 1 zloty of the present currency, it is not possible to purchase enough food for 1 day for one family.

On February 1, the provisional government issued new ration points for food. Only those who can prove that they are working are entitled to receive points.

In country places the food situation is almost as critical as in the towns because of requisitions made by the Red Army. In most parts of Poland starvation prevails. The soldiers of the Red Army received permission to send food packages weighing no more than 5 kilograms—about 10 pounds—from Poland to U. S. S. R.

POLISH HOME ARMY

One of the Polish Home Army regiments, cooperating with the Red Army in the region of Nisko and Sandomierz, and after having mopped up the defending German soldiers, was surrounded and fired upon by the Red Army. The result was that the regiment had killed about 200 Germans and lost about 30 percent of its soldiers killed by the Red Army. The Polish Home Army, before its dissolution, was cooperating everywhere with the Red Army in the common fight with the Germans.

The Seventy-second Brigade of Infantry was fighting in the region of Kozienice, helping the Red army. In the region of Radom, other Polish Home Army units helped the Red army, saving all military objectives—bridges, and so forth. In spite of that, on the "liberated territories," the new authorities started immediately to methodically exterminate the Polish Home Army. In the region of Radom, hundreds of soldiers and officers were arrested, including two officers of the Paratroop Brigade, from the Polish Army stationed in Great Britain. Those two officers were arrested under suspicion of collaboration with Great Britain. They participated with the British forces on the western front.

In the region of Sandomierz, during several months of the Russian occupation, according to the opinion of the resi-

dents, the arrests outnumbered those under 5 years of German occupation. Judges and lawyers are being arrested in the first place.

Frequent changes of high ranking people in the administration add to the general chaos. The city of Kielce has its fourth governor since the liberation and its sixth mayor. According to the news obtained from Poland, the population is not working with the authorities enforced by the occupant.

In the region of Bialystok and Grodno, immediately after the expulsion of Germans, mass arrests followed. From November 8 to November 15, 1944—within 2 weeks—143 cattle cars were loaded with Poles and sent eastward. Up to January 1, 1945, the number of arrests in Grodno reached 5,000 and in Bialystok they reached 10,000 Poles. Arrests of soldiers and officers of the home army are being executed with all the brutality. During the questioning, it is revealed, the victims are beaten with barbed wire and bones are broken.

ARMY

Drafting to the Polish Army under the occupation was officially postponed until March 1, 1945, but actually it is being executed by force and by rounding up people in the streets and threatening them with punishment.

SOUTHEAST POLAND

From January 3 to 16 mass arrests were executed in southeastern Poland. Sixty percent of the victims were Poles, and among them 21 professors of universities, priests, and professionals, as well as workers and socialists. In certain localities arrests made among the Polish peasants are three times larger than during the German occupation. Furthermore, there is violence and rape of women.

Of those arrested between August 1944 and January 1945 about 2,000 persons were sent to labor camps near Voroshilovgrad.

It should be emphasized that most of the arrests were made under the accusation of collaboration with Germany because of possession of postal stamps with the effigy of Hitler. These stamps were used by the post office under German occupation.

UNIVERSITIES

The Catholic University in Lublin has been changed to a state university and the faculty of theology has been closed. The text of the vow of the Lublin "government" completely eliminates all phrases pertaining to religion.

HOW THE COMMITTEE OF LIBERATION WAS CHANGED TO THE PROVISIONAL GOVERNMENT

According to plans prepared in advance, the Russian commanding officers organized meetings in different localities. The presiding committees were composed of representatives of the P. P. R.—Polish Worker Party, Communist Party supported by Moscow. There were present as overseers members of the N. K. V. D. in uniforms and civilian clothes to observe the public. Thus all motions were unanimously carried out and voted upon.

The provisional government is introducing total social reform, based on compulsory organization or monopoly.

For the country and rural districts there is the "Peasant Self-help"—"Samopomoc chłopska"—compulsory membership. This organization covers the entire country and all groups of peasants. All the farmers and landless population receive compulsory membership. The enforcement is based on the fact that Peasant Self-help is the owner of all the grains and seeds. All key positions in Peasant Self-help are occupied by members of P. P. R. with only few exceptions for the peasant party at Lublin. The existence of any other organization is forbidden.

"Społem"—"Common"—in the same way is a cooperative organization.

Movie theaters and moving pictures are to remain the property of a monopolistic corporation taken over from the Germans.

Publishing and distribution of newspapers, books, and magazines is to be centralized in one institution which allegedly shall be a cooperative of readers. The basis for this institution shall be Ruch—pre-war distributing agency in Poland.

AGRICULTURE

Mr. Bertold has announced at the Peasant Congress, on December 30, 1944, the results of the agrarian reform. From his reports, it follows that 204,508 hectares have been distributed among 17,321 families of farm workers, 16,736 landless families, 69,328 small farm families, 1,934 families of invalids of this war, 4,349 large families.

KATYN

Among the executed persons in Sophia was Professor Markow, professor of criminology. For his participation in the German commission which investigated the graves of Polish officers murdered in Katyn, he was executed by the Russians. In another group of the executed persons can be found the names of several newspapermen who published the German version of this murder.

INDUSTRY

The Germans have evacuated the machinery and installations from the C. O. P.—central industrial region—in Poland, into Germany.

ADMINISTRATION

The provisional government in Lublin is sending to all the cities in Poland, groups of specially trained men to organize the administration starting from the top. In these groups the leading party is the Polish Workers' Party—P. P. R.—Communists.

In Warsaw the administration is organized by two Communists—Gomólka and Minc. In Kielce, Colonel Ochab is the chief of administration. Colonel Ochab was in the rank of a second lieutenant until February 1944. At present he is a colonel and a vice minister of interior. Ochab was sentenced in Poland for Communistic activities in the army. He has been bestowed with the order of the Red Star, and his wife is an officer in the Communist N. K. V. D.

The main activity of the administration at the present time is to organize special tribunals for the purpose of sentencing spies, Fascists, and reactionaries, which, in practice, means soldiers of the Polish home army and members of the underground administration.

ARMY

Radio Lublin announced on February 21, 1945, a special program for the Polish Army abroad entitled "Victors and Midgets"—ridiculing the participation of the Polish armed forces in the British Army. Quoting some of the sentences, they are:

You were cheated when you were sent from the Union of Soviet Socialist Republics to Iran and you are still shedding your blood on foreign soils alongside with the heroic Englishmen, brave Australians, fearless New Zealanders, and very courageous Indians. You have lost the most magnificent opportunity to secure victory on your own soil.

TWENTY-FIRST ANNIVERSARY OF LENIN

In Lublin the Polish Soviet Society organized the ceremony to commemorate the twenty-first anniversary of the death of Lenin. All prominent personalities of the Provisional Government in Lublin participated. Mr. Jozef Wassowski was the first speaker. In his speech he emphasized Lenin's friendship for Poland and announced that they will erect a monument to Lenin in Warsaw, with the following inscription: "To the outstanding apostle of freedom—grateful Polish Nation."

ADMINISTRATION

As in 1939, the Russians are widening the railroad tracks in Poland. All railroad service is militarized and the court-martial is applied to its service. Throughout Poland the Central European time has been changed to Moscow time, which is 2 hours earlier.

NEWS RECEIVED FROM KRAKOW JANUARY 6, 1945

First. The extermination of churches, clergy, and so forth, by N. K. V. D. in full swing.

Second. Four hundred and seventeen Roman Catholic priests from the Lublin dioceses expatriated.

Third. Twelve priests—professors at the Lublin Catholic University—shot.

Fourth. The Capuchin Order in Lublin liquidated.

Fifth. Beginning of a mass exportation of Polish children, from the Tarnow region alone—800 children were sent in the eastern direction.

Colloquy by Hon. Edwin Arthur Hall, of New York, With Bob Evans, C. B. S. News Analyst, Over Station WFBL, Syracuse, N. Y., March 9, 1945

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast:

Mr. EVANS. Yes; Congressman HALL, who represents Broome, Chenango, and Madison Counties, is with us again this evening. Several weeks ago Mr. HALL discussed veterans and veterans' legislation. Since then he has been keeping an eye on these measures, making his contribution to see that the G. I. bill of rights is enforced to the letter, and, for that matter, enhanced, when the time comes to extend and amplify the G. I. bill. However, we are not going to go into the ramifications of the G. I. bill this evening. Mr. HALL is here to talk about subsidies and their effect on the American farmer.

Representative HALL. That's my subject, Bob. But now that I'm an old experienced hand on your broadcasts, suppose we follow procedure. You tell first what's been happening in Washington this week, and afterward we'll talk about subsidies.

Mr. EVANS. All right, Ed, and thank you.

1. And now Congressman EDWIN ARTHUR HALL on subsidies.

Representative HALL. Well, Bob, the big-city consumer has been given to believe in the past few years that the lot of the dairy farmer has been made consistently better. From her sources of information the city housewife concludes that dairymen are reaping the benefits of the high prices she is paying for milk and that they are in a position to really make money.

Mr. EVANS. 2. Well, Ed, is it your contention that the farmer is not making money?

Representative HALL. Oh, no, I do not for a minute, dispute the truth of the statement that income to the producer from milk and other dairy products has increased considerably during the past decade. If income alone had increased, there would be no dispute today about the true economic position of the dairy farmer.

Mr. EVANS. 3. But the dairy farmer's cost have gone up too.

Representative HALL. Unfortunately, yes; the cost of production of milk has risen by such leaps and bounds that it has left income far behind. Indeed, according to letters I have received from the rural sections of my district, in the Counties of Broome, Chenango, and Madison, it is well-nigh impossible to meet production costs with revenue from present milk prices.

Mr. EVANS. 4. But it seems to me, Ed, that the administration took some section action on this—if I remember correctly.

Representative HALL. The Federal Government recognized this situation a couple of years ago when the milk subsidy proposal was first made. In vain did the Representatives in Congress from upstate New York and other northeastern districts protest against the milk subsidy as a method of meeting the problem of the farmers' increased costs.

Mr. EVANS. 5. In other words, it's your contention that the milk subsidy doesn't solve the problem.

Representative HALL. In my opinion, Bob, the only satisfactory way, in a nation of free economy for any group, whether it be the farmer or workingman or industrialist, to pay his own way and realize the fruits of his labors, is for him to be guaranteed a fair price for his product or his hire. But for any government to subsidize that group and to carry them along while they would otherwise be losing money, making up the amount to them that they would be running in the red, is sure folly. It does not permanently remedy the trouble, nor does it increase the self-respect of that group.

Mr. EVANS. 6. You suggest another procedure, Ed?

Representative HALL. The dairy farmer of the Northeast has always been a self-respecting citizen. He has worked hard, but he has been able to make his own way and has depended upon no man or government for his honest living. I believe it is imperative that he be guaranteed his cost of production, but I do not believe a satisfactory solution will ever be gained by continuing indefinitely the payment, on the part of the Government, of milk subsidies.

Ever since Pearl Harbor the farmers of the country have been called upon to extend their efforts to increase production of vital food items. In 1944 the dairy farmers of the country, in line with the general program of all farmers, increased their milk production by a substantial percentage.

They would have done even better had there not been untold handicaps placed in their way.

Mr. EVANS. 7. Handicaps?

Representative HALL. In the first place, their failure to obtain the price on milk they felt should be paid them in the general market placed a natural barrier upon too great an increase. Then, in the recent order which went out from the War Manpower Commission, to take the farm youth of the country into the armed forces, many skilled and valuable farm workers, as well as entrepreneurs were lost to agriculture in general. This loss was felt even more acutely by the dairy industry because this is a year-round business and requires more trained and experienced helpers than any other branch of farming.

Yet, in spite of these handicaps, the dairy farmer has continued to increase his production. Unfortunately, he is rapidly approaching a crisis because, on every side, the cost of operation is carrying him farther and farther into the red.

Mr. EVANS. 8. A crisis, Ed?

Representative HALL. Yes, Bob; I refer to the owner of the family size farm. It is necessary for him to obtain the services of a hired man and his wages are running as high as $150 a month. Everyone knows the terrific cost of dairy feed, with hay $35 a ton in some instances and straw $20. When one takes into consideration the additional money which must be put into upkeep, repairs, and machinery, it is astounding to understand how the dairy farmer can make ends meet.

Mr. EVANS. 9. Well, do you contend that the subsidies do not help the situation?

Representative HALL. Bob, all this time there seems to be so little conception of or sympthy with this dire state of affairs—at least from those in authority in Washington. The best example of this was the recent order which came from War Food Administration to cut the 80-cent subsidy now being paid to dairy farmers for each 100 pounds of milk to 35 cents per 100 pounds. This, to me, is the worst blunder which could possibly be made at the very time when even subsidies have become a blessing to the effort the farmer is making in producing food for victory.

Mr. EVANS. 10. Well, Ed, what's to be done? You say you are opposed to subsidies; yet now when a subsidy is reduced, you object.

Representative HALL. No man in Congress fought harder than I did against the original subsidy proposal. No man deplores the present method of the Government making up the cost of production to the dairy farmer by the payment of subsidies more than I do. But, it is certainly no time to discontinue the program, no matter how unsatisfactory it may prove in the long run, without the substitution of some other method that will work better. Therefore, I protest the reduction of the present subsidy to dairy farmers which is scheduled to take place on April 1 for a 3-month period, and frankly state that I believe the 80 cents should be increased to $1.

Mr. EVANS. 11. But this would increase the whole general over-all cost. Presumably to to the consumer, the housewife, as well.

Representative HALL. Bear in mind that this was not my idea in the first place, and that I will gladly vote to discontinue the whole subsidy program any time the War Food Administration wants to guarantee the farmer his cost of production by a more logical method. It is no time, however, to "clip" the farmer because he has responded to the war effort as much as any other part of our society. He is doing a magnificent job in the face of obstacles which would discourage the most patient and persevering citizen. I am for giving him a hand—not for taking away even a crude prop with which the Government has consented to furnish him. Let us hope, therefore, that the dairy farmer will have encouragement on April 1 to continue his vital work in the Nation's food program by changing on the part of the War Food Administration of this subsidy reduction with the result of an increase to $1.

Mr. EVANS. 12. There's something coming up in Congress on this, isn't there, Ed?

Representative HALL. Today, the House started debating the bill to continue Commodity Credit Corporation for another year. There is a section of that bill which outlines the future policy of the Government toward the whole subsidy program.

It is my understanding that several amendments will be presented to the subsidy section to improve the whole picture. I, myself, am thinking about offering an amendment which will make milk subsidies uniform all over the country.

I am doing this because I believe the dairymen of the New York milkshed are being discriminated against by less subsidy amounts than some other States are receiving. The dairy business is uniform all over the country, and I see no reason why the Government should not regard all sections uniformly.

It is my intention, also, if no member of the Banking and Currency Committee does so, to present an amendment providing for an increase to $1 per hundred pounds after April 1, instead of the reduction to 35 cents which the War Food Administration now proposes.

After all, Bob, the dairy farmer is doing a great patriotic job of producing vital food for our Nation, and we must encourage his effort rather than hinder him.

Mr. EVANS. All right, Congressman EDWIN ARTHUR HALL, and we are grateful to you for presenting your views on the subject of subsidies at this time.

Address of Assistant Secretary of the Navy H. Struve Hensel

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Assistant Secretary of the Navy H. Struve Hensel before the Navy Industries Association dinner, Hotel Waldorf-Astoria, New York, N. Y., March 8, 1945:

I wish that tonight our positions could be reversed. I wish that I were sitting in your places listening to you talk to me. I would not only be more comfortable but I am sure that the Navy would benefit greatly.

While mechanically that feat of combining many voices into one is still beyond us, I like to think that such is the aim of this association. Your charter, it seems to me, is both a license and a mandate for you collectively to familiarize yourself with the Navy and to convey to the Navy the thoughts and suggestions of industry. The statement of your purposes emphasizes the importance of mutual understanding and the need of as-

sistance to the Navy. Association of industrial concerns may not be novel but this one is definitely embarked on a new course—the establishment of closer day-to-day working relations between Government and industry. Our success will depend on our determination and our application.

It is most important that Government receive the full benefit of industrial experience. Government of today is vastly different from government at the turn of this century. It involves much more than a knowledge of parliamentary procedure and statute law. It depends on much more than political philosophies. In many respects it is the apotheosis of big business. And in the term "big business" I include all of the facets of business—labor and management—production and distribution.

The men in Government today are involved with almost every problem which besets you. Government is concerned almost more with economics and trade relations than with politics. The intricacies of labor and industrial relationships, banking principles and transportation practices compete for the attention of Government with health programs, plans for soil reclamation, and studies on the conservation of national resources. I do not go as far as the cynics who argue that democracy depends on the maintenance of a high standard of living. At the same time there is a small germ of truth there. The economic well-being of the country as a whole is most important.

The future decisions of Government will affect your private life and commerce as never before. We must establish firmly the basic foundations of life—food, clothing, shelter, and security for our people. All other nations will be struggling with the same question. Our solutions must be related to their solutions. The hope of peace will be found, in my opinion, in the successful determination of the bases of sound economic life. If our economy is not firmly established, peace will have to be imposed on the world. I do not see how it can flourish by itself.

In a sense the problems of the individual in Government are much worse than in business. The men in Government are expected to be experts on everything. Specialization so prevalent now in the commercial world is creeping but slowly into the executive departments. For obvious practical reasons, it has made little headway in Congress. Legislators and administrators are faced with staggering problems of factual research and analysis. They do their best. They undertake their tasks with the greatest sincerity and with a strong desire to achieve the right result. They would be the first to admit the appalling breadth of their jobs and their inability to cover the whole field as they would wish. The full background of this country's experience must be made available to them.

The expansion of Government has also resulted in a multiplication of its mechanical problems. The mere administration of an executive department would be a challenge to any industrial manager. Administration has become almost as important as general policies. The correlation of bureaus and subsidiary divisions and the proper separation of functions are subjects for long study and continuous readjustment. We, too, wrestle with inventory control, usage factors, and obsolescence. In many respects our problems are surprisingly similar to yours and your experience can be extremely helpful to us.

The future presents a real challenge. If we are to benefit from the Nation's collective skills and knowledge, you must make yourselves felt. You must take an active and continuous interest in Government at all times. You should not wait for Government to take the lead. I look forward to the day when you no longer ask, "What is Government going to do?" but come forward with plans and the statement, "This is what Government should do." Business should anticipate the difficulties and should come forward with ideas of its own fashioning. I know of no better source for the programs of the future. I can guarantee that your views on all subjects will be most welcome. That does not mean that your ideas will always be accepted. On the contrary, there will be disappointments. Your ideas will at times be rejected. That is inevitable in a democracy. I am sure, however, that in a short time you can develop a standing that will make consultation of your group almost imperative.

I can assure you that, during the 4 years I have spent in Government constructive ideas have always been extremely welcome. The need for new ideas is continuously expanding. It will expand further. We can no more return to the world of the twenties or thirties than the chicken can return to the egg.

I am not suggesting that you enter party politics. There has been too much reliance, I think, on that approach. It has confined our interest in government to the occasional financial contribution and some feverish excitement at widely separated intervals. It has obscured the need for study and knowledge. Seemingly bound to that approach, we have forgotten that on many problems there can be no split into parties. The conduct of the war and the establishment of peace on a sound basis are obviously beyond party politics. We have all agreed on that and have gained in effectiveness. I could list many other problems which I think are in the same category. Such list would range from new credit vehicles and sound labor relations to taxes and tariffs. I could also mention the problems of interstate commerce and of foreign cartels. The field for joint and nonpartisan effort is enormous. The need for special knowledge—an application of the combined experience of all—is just as great.

These future problems cannot be avoided. They are with us now. If government is forced to act on its own, it will act. It has no alternative. But the appropriateness of the action will be another question. To my mind, our success as a Nation will be greatly affected by the extent to which you play your part—by the extent to which you suggest ways and means of proceeding. It seems to me this is not only your responsibility. It is a part of intelligent self help. Your very future is intertwined with the success or failure of our Nation.

Government cannot longer be permitted to exist as an organization centered in Washington apart from our day to day life. Government belongs to each of us. It is a personal function. The strangeness which has existed between government and industry must be swept away. We must become much more aware of our need for internal unity. We must all understand that to be free we must be strong and that to be strong we must be unified in purposes and effort. We must think, feel, and act much more as a nation. Special interests will have to be subordinated to the general good.

There remains the question of how and where.

You have made two forward steps. You have formed this Association and you have started to acquire a familiarity with the Navy. Through orientation courses, the Navy, its purposes and needs, are becoming known to you. But that is only a start. It is intended only to stimulate your interest. We hope you will probe and examine further.

The same approach could be extended to other fields. There is much to be learned about all Departments. You need to know more about Congress and its manner of operation—about the theory back of the Bureau of the Budget—about the day-to-day operations of the Comptroller General. You must become more aware of how things are done. The aura of mystery which now seems to surround government must be swept away.

The final step is to make your ideas and comments known. In the case of this association, I expect to have direct and continuous contact with your representatives. In addition, I hope everyone wanting to make a suggestion will feel free to make it directly to my office. The front door will always be open and that approach will be always available. As a matter of fact, the front door approach is practicable in every department and at the office of every Congressman. I can assure you that, in spite of the popular belief to the contrary, special go-between agents are not necessary. Furthermore, if your ideas are not accepted and you believe in them, go to the people. Washington is very sensitive to popular will. You must make every effort to sell the ideas you generate.

The development of this new association with government cannot be left to chance. You cannot count on knowledge and ideas springing up like weeds of the field. Success will take a conscious effort—hard work. I know you are busy. But it is absolutely essential for this additional work to be done.

Insofar as the Navy is concerned, I feel that I have your pledge of partnership. I feel that you are already committed to the extra work involved.

When I assumed my present duties and was assigned the procurement problems of the Navy, I resolved to press you into consulting service and to seek your views on our difficult problems. I would like to start tonight. In the balance of my statement I want to lay before you the serious problem of maintaining the necessary volume of war production under present circumstances. The country needs your thoughts and suggestions.

Today we face a matériel crisis. For some months over-all war production has failed to fulfill our planned programs. Some special programs have been pushed ahead as "must programs" but other programs not so designated have suffered. Today even the must programs are threatened. Furthermore, the conclusion is inescapable that, if nothing effective is done, the decline will continue and grow. A substantial number of shipyards are behind in scheduled ship construction. The ammunition program is not up to planned requirements. Tanks, trucks, and textiles are not being produced in desired volumes.

Let me give you some specific examples from Navy experience. In the Charleston Navy Yard six high-speed transports were delayed from 99 to 119 days. At the Bethlehem yard at San Francisco, 12 destroyers were delayed from 98 to 151 days. At the same yard, a light cruiser was delayed a month. The aircraft carrier, *Tarawa*, will not be completed for several months after the scheduled date. Six desperately needed hospital ships were delayed 3 to 6 months in 1944. The cruiser, *New Orleans*, docked not long ago after having been at sea since mid-1943. She had fought through 9 engagements. Many of her complement, however, had to miss shore leave because there were not sufficient on-shore electricians to complete necessary electrical work. The carrier and cruiser programs which we tried so hard to advance are not meeting our desires or our anticipations of last fall.

As I see it—we cannot permit any decline in production which will weaken our war effort. The men fighting and dying at the front must have everything they need. I see no other alternative for us. American lives cannot be gambled on the hope that maybe the scheduled production is unnecessary. We cannot take the chance that perhaps conditions will improve by themselves.

Our first steps, therefore, should be to try to discover the sources of the falling off of production. We can identify quickly some

of the fields in which we know there are no deficiencies. Except for some very special programs, we can state with assurance that there is no lack of productive capacity. There are no real shortages of machines or plants or raw materials in the ground.

The other major ingredient is manpower. What do we know about that? Out of the welter of conflicting opinions, two facts are clear. First, there are less men and women on the job in critical industries than there were a year ago. Second, the labor turn-over, always bad, has become most inordinate.

Being realists, we can quickly narrow the possible solutions to two. Either the reduced manpower can with our improved mechanical efficiency be speeded up to produce enough, or we need more manpower. The one place where there can be no compromise is in respect of the quality and quantity of war production.

The argument that in some localities there are manpower surpluses does not lead us anywhere unless we can do something to utilize those surpluses. The existence of such individual surpluses does not contradict any of the basic facts; i. e., that there are less war workers over all than there were a year ago or that war production has declined. Furthermore, we must remember that all surpluses are not usable. Shortages usually cumulate and are not always offset by surpluses. A surplus of unskilled laborers does not help a shortage of electricians. Electricians in Seattle are not much help in Houston. The work cannot always be brought to the men. And our Mohamets are not so willing to go to the mountain.

Nevertheless, we are doing our best to beat the problem of unused surpluses of manpower. As soon as a surplus is discovered, a complete study is begun. Work for all present surpluses of manpower is definitely our goal. Perhaps we are not accomplishing all that we should, but we are doing our best. The job is not an easy one. I must admit that I become disheartened when workers refuse to move to the areas where they are needed and when workers refuse to take jobs with less pay. I think of how the draft took men away from the country and away from their homes to fight. I think of the debt we all owe to our combat troops. I think of a lot of things. But I come back to some fundamental ideas. It does not help the war to pin the blame on someone. There is no use worrying about inefficiencies and deficiencies which cannot be corrected. The only goal is increased production and the only sensible points of attack are those which offer some promise of quick improvement.

I then conclude that we have little hope of improving management during the war, and particularly during the critical next 6 months. Management is stretched very thin. In places the level of efficiency is low. It would be wonderful if some sharp words would improve everything. But they will not. The sum total of our managerial skill is at work. No replacements are available for the inefficient. Improvement in our techniques and procedures may be possible but it is too slow.

Perhaps the greatest loss of workers has occurred in our basic industries. The coal mining industry in 1944 lost 39,000 workers out of a total of 442,000 at the start of the year—a 9 percent drop. The coal mines cannot be moved to the workers and I know of no way to conjure out of the ground the coal that would have been mined by the 39,000 missing men. The steel mills and related raw material supplies lost 45,000 workers in 1944—nearly a 7 percent drop. The copper, lead, and zinc mining and manufacturing industries in 1944 lost 37,000 workers—a drop of 20 percent. Similar losses occurred in the aluminum, lumber, textile, chemical, and transportation fields. Production curves have followed the manpower curves downward. From these basic industries, the declines are spreading in ever widening circles through our entire economy.

Coal mining is perhaps the most basic industry. If it fails, I do not know where the failure will stop. In 1944 we produced approximately 620,000,000 tons of coal. In 1945 we need the same amount. With the present working force, we can hope for no more than 570,000,000 tons. I should add that the miners now at work are older on the average than before and consequently tire more easily. There is also a danger of further loss in production as a result of the threatened strike. This deficiency has not yet been felt. We cannot afford to have it felt. Somehow and some way we must mine the necessary coal.

The prospects in the steel industry are equally discouraging. Our steel production is so preempted by the war effort that it is almost impossible to support war production by cuts in civilian uses. Cuts in steel production will be reflected by equivalent cuts in war production. For the first time in some period the Navy in the coming quarter will suffer an arbitrary cut in its steel quota. What that will mean to our programs remains to be seen. Again we cannot afford to find out. Only 65 percent of the requirements for internal combustion engine blocks and heads is being met. The shortage of grey iron and malleable castings has already affected adversely the production of heavy trucks and repair parts for naval vessels. The anticipated deficit of lead for storage batteries may put several million private automobiles off the road this year. A 10 percent reduction in the 1945 aircraft program is feared because of a shortage of aluminum.

There is a sketch of the problem. I do not want to advocate particular solutions. I want you to develop the answers. But I do want to suggest that your answers must satisfy a single requirement. War production for the men at the front must be increased. There have been too many smoke screens designed solely to duck the blame for failure. I am not interested in alibis. I am interested solely in results. In the smoke screen class I put the arguments about War and Navy Department inefficiency, industrial managerial negligence, labor slavery, and any other proposition which leads to delay or inaction. Such arguments offer no solution. In the same class I put the argument that we cannot force men to work to make profits for another. The implication in that approach is that we can do nothing because liberty is more precious than life. I do not think the argument will hold water, and I would suffer quite a bit of self-imposed slavery at fair wages to save the lives of a very few marines. The worker will always be paid much more than his brother gets for fighting. Furthermore, even the fighter is in a sense helping to make a profit for the supplier. His wants create the demand for goods out of which the supplier makes a profit. That is inherent in our economic system.

In spite of my desire to leave solutions to you, I want to make one suggestion. If the excessive labor turn-over could be stopped, efficiency and production would automatically rise. That alone would not solve the whole problem but it would go a long way in the right direction. I do not, however, see how the present labor turn-over can be effectively stopped without some additional statutory authority being conferred.

In a few months we will know whether we have solved the problem. Either production will rise or we will fail to meet our quotas. Explanations will not do us any good then. Who will be blamed and what excuses will be accepted in the event of failure—I do not know. I do not really care. Failure to support our fighting men will be more than enough sorrow for me. If that should ever happen, the blame will rightly fall on all of us—on some of us for lack of vision—on others for lack of eloquence and force. In any event, none of us will escape the reproaches of conscience if we let our men down.

Address of Gen. Frank T. Hines on Treatment of Veterans in Hospitals

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting an address of Gen. Frank T. Hines, head of the Veterans' Administration, delivered over the radio here in Washington on March 11, 1945.

You will note that this address is largely in the form of answers to questions propounded to General Hines touching the hospitalization of World War veterans.

The matter referred to follows:

Commander KRUM. And now General Hines, what is your reaction to these attacks that have been directed at your administration?

General HINES. Mr. Krum, I know that you don't expect me to answer or deny every accusation that is hurled at the Veterans' Administration, and I have no intention of attempting any such thing until I have all of the facts in my hands. In this case, I intend to get the facts. But I do say now, with absolute confidence, that any charges that the Veterans' Administration is giving third-rate medicine to war veterans and following antiquated methods in their operation, is entirely unfounded. And further, the medicinal service of our hospitals is up to the highest professional and ethical standards of the medical profession, and our hospitals are on a par with any in this country. And I challenge anyone to refute that statement.

I am making a thorough investigation of every hospital. In addition, in order that all the facts may be known to the American people, I have invited the national commanders of the American Legion, the Disabled American Veterans and the Veterans of Foreign Wars to meet with me tomorrow here in Washington, and go into the whole question of veterans' hospitalization. I know, too, that millions of veterans who have been treated in veterans' facilities during the past 20 years, will also make their views known.

And I intend that the facts and all the facts developed shall be given to the public, without any attempt to embellish or belittle.

Meanwhile, I know the heart of the Nation is vitally concerned with the medical care afforded our veterans. It is my responsibility as head of the Veterans' Administration to build and operate the system of hospitals that has been established for veterans by a grateful Nation, and to see that they provide the very best care that may be had.

Articles glibly decrying the medical and professional qualifications of physicians and the principles of treatment employed in our hospitals, have, I know, created anxiety among parents, friends, and veterans themselves.

So far as I know, none of these writers is a physician and none has lived with this problem. Their investigations have occupied but little of their time.

Commander KRUM. Now, General Hines, as head of the Veterans' Administration, would you mind telling us the kind of physicians and surgeons you employ?

General HINES. They are of the finest. In fact, every Veterans' Administration physician must be a graduate of a class A school, and have completed an internship in a recognized hospital.

Before we can employ them they must be accredited by the Civil Service Commission. The quality of medical attention given by the armed services has been praised in the same articles which criticized the Veterans' Administration. Yet when this Nation went to war, 400 of our doctors left and entered the military service. So 400 of our doctors are actually among the highly qualified medical men who are praised for the service they are giving troops.

Further, because of the shortage of personnel this created, the armed services have loaned us 300 doctors to replace our losses; some of them were doctors who had formerly served with us, others were not. So we have actually lost only 100 doctors because of the war.

In view of this I believe it is reasonable to assume that patients in veterans' hospitals are receiving approximately the same quality of treatment they received when they were in active service.

Commander KRUM. General Hines, you must also have a great shortage of nurses which handicaps your operation?

General HINES. Yes, Commander Krum; I don't, however, want to imply that the service we are rendering is entirely perfect or even up to the standards I myself would like to see maintained. Shortage of personnel due to war conditions makes this impossible, and although the generosity of the armed services has done much to fill the depleted ranks of our medical staff, we are still woefully lacking in nurses, technicians, and social workers. The importance of these skilled groups cannot be overemphasized. The Veterans' Administration hospitals throughout the United States of America today are short more than 1,000 nurses alone, and this is expected to become more acute in the next few months.

Commander KRUM. I have seen criticisms of the Veterans' Administration charging the death rate in their hospitals are high. What have you got to say about this?

General HINES. Since the Veterans Administration was established we have had almost 3,000,000 admissions to our hospitals. Out of this number, of course, it isn't difficult to find someone willing or even anxious to find fault with the service he has received.

I doubt if there is a doctor in practice or a hospital in existence entirely free from criticism from former patients.

Many of our patients are old, they are the fighters of former wars and they seldom go to a hospital until they are in a very bad physical condition. It is not unusual for many of these old timers to die but I'll challenge anyone to say that the death rate among younger men and particularly veterans of this war, is any higher in a Veterans Administration facility than it would be in any other hospital in the country.

Let's remember the Spanish War was 47 years ago. The average age of veterans from that war is now 70 years. World War No. 1 was 26 years ago, and the average age of those veterans is now 52 years.

Men in these groups, and there are now about 4,000,000 of them, are encountering the diseases of middle age, diseases of the heart, the kidneys, the digestive system. They come to us ill, many of them desperately ill; we do all that is possible for them. But men of this age do not recover from sickness with the same resilience as younger men. Many of them do not come to our hospitals until their illnesses are far advanced and the chance of recovery is minimized.

I know that the death rate among these groups is higher today than it was 20 years ago, when our patients were more nearly the ages of the men who are coming from this war. These younger men now represent nearly 20 percent of all patients in our hospitals. Many of them are critically ill and have come to us directly from military hospitals. Many are heartsick and war weary and are anxious to go home.

For many, we are a haven and we try to give them the best modern medical service can provide, but those who are homesick and are able to leave the hospital, may do so. We cannot force them to stay and accept treatment, and we cannot penalize them for leaving against medical advice. What police authority we have is limited to those who are committed to our care by the courts of the Nation, and those are the only men over whom we can exercise any compulsion. It has been charged that more veterans receiving compensation die outside of hospitals than die in them. This is cited as evidence that our hospital service is poor. Many of the veterans who die outside of our hospitals, have never been in one of them and we have no authority to require that they enter them. I can't see that this statement is any more significant than it is to say more people die outside of hospitals than in them.

Commander KRUM. General Hines, what is your answer to the charge that "Only one patient in six ever leaves Veterans' Administration hospitals labeled 'cured.'"

General HINES. Let me remind you that in some diseases, particularly tuberculosis, virtually no patient is ever labeled cured. With this in mind let me give you the record of accomplishments in Veterans' Administration hospitals.

Since 1930, over 2,000,000 patients have been discharged from Veterans' Administration hospitals. Of these, 70 percent have left as "cured" or "improved," 8.5 percent have been unimproved, and less than 7 percent died. The balance were in for examination and observation only. To give you some idea of the volume of work involved in the operation of these hospitals let me say, that during the year 1944 we made over 300,000 X-ray examinations of hospital patients, and over 4,000,000 laboratory tests. And the 188,000 patients discharged last year underwent 60,000 major and minor operations.

Commander KRUM. General Hines, what do you say we localize this discussion for a moment. You have a hospital here in Washington at Mount Alto, and I would like to ask you some questions about it.

General HINES. All right, Commander.

Commander KRUM. How many patients are now in Mount Alto?

General HINES. As of midnight, March 8, 1945, there were 305 patients.

Commander KRUM. What is their average age?

General HINES. The average age of all combined is 50 years.

Commander KRUM. How many of these patients come from the different wars?

General HINES. Well, there are around 190 from World War No. 1, 73 from World War No. 2, 26 come from the Spanish-American War, 12 were in our peacetime military service and there were others with various service to their credit.

Commander KRUM. How many World War No. 2 patients have you had altogether would you say?

General HINES. The first veteran of World War No. 2 was admitted on December 15, 1942. Since then we have treated 1,788 World War No. 2 veterans.

Commander KRUM. General, how many World War No. 2 veterans would you say, have died at Mount Alto?

General HINES. The records show only 29, or less than 2 percent.

Commander KRUM. That certainly is a long way from what has been charged of one out of six patients in Veterans' Administration hospitals are dying. Now as to the food. What are the people in Mount Alto eating today? If you have it, I would like their dinner menu.

General HINES. Their dinner menu this noon consisted of: Soup and crackers, fried chicken, mashed potatoes and gravy, celery hearts, ice cream sandwiches, hot rolls and butter, and coffee.

This menu is, of course, typical of Sunday dinners served not only at Mount Alto, but in Veterans' Administration facilities all over the county.

Commander KRUM. How many of the patients in Mount Alto are actually confined to their beds?

General HINES. As of Friday noon, 69 patients ate at the main dining hall, while 236 were either in bed or in their wards.

Commander KRUM. I presume these 236 patients are fed on trays carried to their bedsides. Do they get the same food that is served in the general mess?

General HINES. Generally, but many patients require special diets. They are prepared under the special supervision of highly trained dieticians, either in the main kitchen or in the ward diet kitchen, and each patient gets the food best for his particular case as ordered by the hospital physician.

Vocational Guidance Clinics for Veterans

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. DOYLE. Mr. Speaker, under leave to extend my remarks, I am including a resolution unanimously adopted by the board of supervisors in the great county of Los Angeles, in my native State of California. Certainly, it will be recognized by all Members of this House that no county in this Nation has more reason to be presently and vitally concerned about the economic and social security and welfare of returning veterans in all phases of the problem of adjustment and readjustment to industry. The text of this resolution fully and clearly specifies the problem involved and very emphatically shows that vocational guidance clinics are most essential.

I urge that this further necessary assistance and protection to the veterans of our Nation be given by providing adequate moneys for these vocational-guidance clinics.

The resolution follows:

OFFICE OF THE BOARD
OF SUPERVISORS,
COUNTY OF LOS ANGELES,
STATE OF CALIFORNIA,
February 20, 1945.

The Board met in regular session. Present: Supervisors William A. Smith, chairman presiding, Leonard J. Roach, John Anson Ford, Raymond V. Darby, and Roger W. Jessup; and J. F. Moroney, clerk, by Alice Burks, deputy clerk.

In re return of discharged veterans: Resolution urging Congress to enact legislation to provide vocational guidance clinics.

On motion of Supervisor Jessup, unanimously carried, it is ordered that the following resolution be, and the same is hereby adopted, to wit:

"Whereas the return and discharge of thousands of veterans of the present war has created a serious social problem in this community because of the difficulty which many of them are encountering in adjusting themselves to civilian employment conditions; and

"Whereas vast numbers of these returned veterans, still distressed by the harrowing experiences which their patriotic services have entailed, are perplexed by the problem of finding jobs for which they are best fitted by reasons of training, temperament, and health; and

"Whereas officials of welfare agencies who are daily contacting these veterans emphasize the urgent need for vocational guidance clinics where trained counselors could hear the problems of these men and aid them in finding proper employment; and

"Whereas the many benefits and privilges which the Federal Government has created for the discharged veterans do not include vocational guidance service of this kind; and

"Whereas, vocational guidance clinics of this type are also needed here to serve the many war workers who have come to Los Angeles, many of whom have never before engaged in industrial employment and who are having difficulty in adjusting themselves to their altered employment status; and

"Whereas it is the responsibility of the Congress of the United States to ameliorate this situation by enacting legislation which would provide for the type of vocational guidance set forth herein; and

"Whereas it is of immediate concern to the county of Los Angeles that these veterans and these war workers be assisted in rehabilitating themselves as useful and contented citizens: Therefore be it

"*Resolved*, That Congress be urged to establish machinery for providing the type of consultation and rehabilitation service described herein; and be it further

"*Resolved*, That the Clerk of the Board be instructed to send copies of this resolution to the two California Senators and to the Members of the Los Angeles County delegation in the House of Representatives; and be it further

"*Resolved*, That the county health officer be instructed to make a survey of the conditions which are existing among socially maladjusted veterans and war workers to determine what steps can be taken by this county to alleviate the conditions herein described."

The foregoing resolution was adopted by the Board of Supervisors of the County of Los Angeles, State of California, on February 20, 1945, and is entered in the minutes of said board.

[SEAL] J. F. MORONEY,
County Clerk of the County of Los Angeles, State of California, and Ex-officio Clerk of the Board of Supervisors of Said County.
By ALICE BURKS,
Deputy.

O. P. A. Regulations Affecting Hotel Rates

EXTENSION OF REMARKS
OF
HON. HAROLD H. EARTHMAN
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 14, 1945

Mr. EARTHMAN. Mr. Speaker, I wish to include in the RECORD an article from the Nashville Banner, Nashville, Tenn., of recent date, which tells its own story.

It is not my intention, nor desire, to destroy the effectiveness of O. P. A. but instead, to call attention to such things that need correction in order that this vital agency might more successfully combat the great problem of inflation. This is our country and our Government, and O. P. A. should correct its own mistakes and if they refuse, then it is undeniably the responsibility of the Congress.

Now, of all times, every department of government should work as never before to gain and maintain the full confidence of all the people rather than to create friction and distrust.

The article follows:

ANSLEY HOTEL TO CLOSE—O. P. A. CEILINGS CITED

The Ansley Hotel, 57-room establishment at 614 Broadway, will be closed tomorrow afternoon because new rates established by the Office of Price Administration have caused an operating loss "too great to continue," Ansley A. Dickson, owner of the hotel, said today.

Dickson said that the O. P. A. had ordered the rates cut on approximately 45 rooms in both the annex, where there are 23 rooms, and in the main building, where there are 34 rooms.

"Where we have been charging $1 single and $2 double in the annex, the O. P. A. has ordered us to charge $1 and $1.50; and where we have been charging $2 single and $3 double in the main part the O. P. A. has forced us to charge $1.25 and $1.75," Dickson declared.

"We tried to operate a week under these new forced rates and the loss was too great to continue. Therefore we are closing up and the hotel will be padlocked as of 4 p. m. tomorrow."

Dickson claimed that the previous rates were the same as had always been charged at the hotel. It had not been a practice of the hotel, however, to keep a ledger on room rates and thus there was no available record of rates other than affidavits from regular patrons of the hotel, Dickson said.

O. P. A. ATTITUDE

The O. P. A. informed Dickson that "under the rent-control regulation, when the Director finds rooms in hotels renting much higher than similar rooms in comparable hotels it is his duty to reduce them to comparable values. * * * We reduced the rents on rooms ranging from $3 to $6 per day to the rates being charged by the Nash Hotel, the Bell Hotel, the Savoy Hotel, and the Tulane Hotel. If these hotels which we have used for comparables can operate at a profit, we see no reason why the Ansley cannot also operate at a profit."

In this regard Dickson contended that his overhead for a 57-room hotel is only a few dollars less than that of a 200-room hotel such as the Tulane.

Among letters which Dickson had from regular patrons expressing satisfaction with the Ansley's rates and service was one from Maj. S. F. Drew, of the Marine Corps recruiting station, with which Dickson has had a contract for the past 2½ or 3 years. Major Drew wrote that previous contracts with other hotels had not been satisfactory, but that the arrangement with the Ansley had been satisfactory.

Dickson will request a review of the orders from the Nashville area rent office in both regional and national offices.

MERCHANTS HOTEL

Also owner of the 40-room Merchants Hotel at 403 Broadway, Dickson said a rate sheet he had received from the O. P. A. for the Merchants Hotel would force him to close that establishment as well if they became effective.

Frank F. Sturm, area rent director, said the rate sheets probably will become effective next week.

Commenting on the rate reductions, Sturm explained "we reduce rates by comparability with similar rooms, and here we used the Nash, Bell, Tulane, and Savoy Hotels and adjusted rates according to those."

Sturm pointed out further that it was principally the higher priced Ansley rooms which were affected by the cut, and stated that "Dickson had some low-priced rooms we didn't cut."

Sturm affirmed that the cut was particularly aimed at rooms for which Dickson charged from $3 to $6 a day. He adds, however, that "some $2 rooms were reduced, but there was no reduction on any $1 and $1.50 single rooms."

In regard to Dickson's request for a review of the orders, Sturm explained that the local O. P. A. office will send the request, within 20 days from the time Dickson filed it, to the regional office in Atlanta for further investigation. Dickson awaits that verdict and then is permitted to request the regional office to send it to the national office for consideration.

Sturm explained further that "if Dickson still is not satisfied, he can ask that it be appealed to the Emergency Court of Appeals, where the case will be tried without fees."

The Marine Nobody Knew

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 14, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a very interesting article which has come to my attention that appeared in the March edition of the Leatherneck, magazine of the marines, written by Tech. Sgt. Pete Zurlinden, a United States Marine Corps combat correspondent, in reference to the heroism and bravery of an 18-year-old boy by the name of Pvt. Norman Arsenault, who was a resident of my home city of Lawrence, Mass. The attitude taken by Private Arsenault in a real emergency in combat on the shores of Saipan on July 8, 1944, is typical of many of our American boys who are performing so valiantly in the services of the Army, Navy, and Marine Corps in combating the enemy in all fronts throughout the world and on the seas of battle. His neighbors, friends, and associates in the city of Lawrence and the entire people of the Commonwealth of Massachusetts are extremely proud of his acts and accomplishments in fighting the fanatical and atrocious Japs. We are extremely thankful to him for the fact that before meeting his Maker that he put to death so many of the enemy so that his buddies could make a change in fighting operations which resulted in the saving of the lives of his fighting mates in the United States marines.

The article follows:

MARINE NOBODY KNEW

This is the story of the marine that nobody knew. It's the story of Pvt. Norman Arsenault, of Lawrence, Mass., who knew one moment of heroic greatness before Japanese bullets cut him down while he waded, hip-deep, in reef waters off Saipan's shores, July 8, 1944.

Private Arsenault never had known warfare before he came to the Marianas on June 15. One reason was that he didn't reach his eighteenth birthday until last May and wasn't sent overseas until shortly after Tarawa.

Young, medium-sized, Arsenault looked older than his 18 years, yet it was probably because of youthful shyness that he wasn't much of a mixer. He did not smoke nor did he curse. His buddies can recall little about him before that vivid afternoon when he gave his own life saving theirs.

Several times, they say, they had wondered whether his heart was in this grim business of carrying the fight to the Japs, because while he did his job and did it well, he seldom extended himself. Now they think he must have been saving himself for just exactly the kind of a situation that developed—a situation they'll never forget, just as they'll never forget Private Arsenault, as long as they live.

The Jap was in a corner. The marine advance up Saipan's western coast from Tanapag Harbor to Mount Marpi was moving inexorably to a conclusion. Arsenault and the Second Marine Regiment's Third Battalion suddenly executed a flanking movement; the plan—to sweep toward the sea and over the cliffs between Kaberra Pass and the ocean, then north again.

The Third Battalion drove down to the water's edge. Then it reformed its lines, but while this was being done Japanese pockets, dug in the caves abreast the shore, had to be cleaned out.

Arsenault's platoon was ordered to go to work on a length of the coast that looked like an inverted capital "L." About 6 yards of crumbled limestone boulders separated a 7-foot cliff from the sea. His platoon scrambled over the cliff-face, dropping to the boulders.

Too late they saw that a deep crevice in the face of the tiny cliff was teeming with Japs, prone on their bellies, who opened up with one of the most murderous rifle and machine gun barrages the outfit yet had met.

Arsenault was on the extreme left flank. He, too, was pinned down amongst the boulders. Jap bullets splattered limestone chunks down onto their helmets, sending up a tinny noise that sounded like somebody emptying a trash can into a wagon.

Because most of the outfit were machine gunners, who had been ordered to arm with carbines for the mop-up, there wasn't a heavy weapon in the crowd. For 15 minutes the Japs peppered every Marine who attempted to move. There apparently was nothing anybody could do about it until young Arsenault reached his decision.

From his place on the left, he bounded to his feet, carbine gripped tightly in his hands. Instead of making a dash to try for the safety atop the cliff, Private Arsenault ran speedily to the rear, striding some 20 yards into the reef-water.

When he had gone as far as he wished, he reversed himself, facing the Japs in the caves, and began to pump carbine bullets into the crevice. More than 50 enemy guns were quickly turned on him.

Nobody knows what saved him in those first few moments when hundreds of enemy bullets were zinging toward him, some rippling the water as they lashed into the surf in front of him. But he continued to fire until his ammunition was exhausted.

While the youngster was keeping the Japs so occupied, almost half of his platoon scrambled from their positions behind the boulders and dashed to safety atop the cliff. But in this position they were powerless to help Arsenault.

Out of ammunition, he sloshed through the water back to buddies still hoping to get out from under gunfire, borrowed as many ammunition clips as he could, and went back to take up where he had left off.

Again the Japs tried to pinpoint him in their murderous fire. But he kept firing his carbine almost as fast as an automatic weapon until his platoon had been completely evacuated from in front of the cliff. A sergeant ordered him to come in out of the water, to try and make it up the cliff himself.

Arsenault laughed merrily, emptied another clip into the crevice and then started back. He had just taken his fourth step when they saw him stiffen; then saw the bullet wound in his head. He slumped slowly into the water until his buddies saw him disappear beneath the surface.

That night Private Arsenault was avenged. His platoon set up a line about 100 yards from the cliff, knowing the Japs would come up rather than face dynamite and other demolition extermination the next morning. With plenty of mortar illumination, the platoon killed Japs by the handful the moment they became silhouetted against the water.

In the morning they recovered Arsenault's body. While they carried it back to the rear for burial, others in the platoon investigated the crevice into which he had poured more than 100 rounds of ammunition.

Jap bodies were sprawled throughout it. More than 20 dead were certain victims of his carbine. Others might have been. The lad none of them had ever got to really know had proved a real fighting marine, one of their own beyond the shadow of doubt.

United States Marine Corps Combat Correspondent.

Program for Education of Veterans

EXTENSION OF REMARKS
OF
HON. JOHN S. GIBSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 14, 1945

Mr. GIBSON. Mr. Speaker, I have today introduced legislation to authorize correspondence schools to participate in the program for the education of veterans as provided in Public Law No. 346 and which is commonly referred to as the G. I. bill of rights.

The Veterans' Administration has construed this law as excluding from its provisions correspondence schools and unless the amendment that I have today offered is enacted into law irrespective of the convenience and wishes of a given veteran he will not be permitted to participate in the advantages held out by many correspondence schools under the privileges of the said Public Law No. 346.

To begin with it was my understanding that it was the intent of Congress to definitely provide that the veteran may select the school of his own choice with provisions only that his choice must be exercised in favor of a school which had been certified by a State or its authority. In many cases the circumstances would be such that if a veteran is not permitted to take a correspondence course he would be precluded from taking advantage of the benefits of the said law. Furthermore, this amendment would not effect the rights of any veteran as in no case would his right of free choice be impaired. This amendment would only give him the right, if he so desired, to take the correspondence course. We should not complain if it was his wishes based on his circumstances to take this course, as it would certainly be of less cost to the Federal Government. Were it not true that this amendment gave only a privilege, and in no way takes away a right, I would not offer or support it. I hope the membership of the House may look with favor on this amendment.

To Prevent War—No News Black-out

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 14, 1945

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times Magazine of Sunday, March 11, 1945, by Kent Cooper, executive director of the Associated Press, entitled "To Prevent War—No News Black-out":

TO PREVENT WAR—NO NEWS BLACK-OUT
(By Kent Cooper, executive director of the Associated Press)

I

Nestled in a small space not far from the north bank of the Thames in battle-scarred London is Printing House Square. There—through all that has happened to the British in more than a hundred and fifty years—there is still published a newspaper called The Times. In its fifty-thousandth issue recently it reviewed the century and a half of its existence, commented on the difficulties of publication, shortage of materials and of staff, the dangers of continued effort in wartime, and concluded:

"Though, before the sixty-thousandth issue of The Times makes its appearance, science may well have revolutionized the mechanism by which the written word is reproduced and distributed, the fundamentals of journalism will not vary. It will still be the duty of a newspaper to hold fast to the distinction between fact and opinion and, whatever views it may hold and express, to furnish for the readers' judgment a supply of news as full and impartial as energy and good faith can make it."

Unfortunately, that declaration of the function of newspapers could not have defined the actualities of newspaper publication in many lands before the war. If it could, there would have been no war. And that is just how transcendently important to peace is "a supply of news as full and impartial as energy and good faith can make it." For news is the sole basis upon which men promptly learn and judge the thoughts and actions of their fellow men who are beyond their immediate local acquaintance.

If, in the news processes, there is intentional and persistent distortion of facts with the purpose of inciting prejudice, men will respond to the passions thus aroused. When the people of one nation are thus incited against the peoples of other nations, the result is war.

The part false news plays in bringing about war is as amazing in its extent as it is little understood. Malevolent-minded governments long have recognized the power of news. Tainting and distorting it, they have used it to serve their selfish purposes. Benevolent- and peace-minded governments have not concerned themselves about these distortions by others—until war has overtaken them.

Every country, even though only partly civilized, has laws to punish those who intentionally poison the food of others. Through jealousy or in revenge such crimes have been committed, but usually only one or two lives have been placed in jeopardy. No fiend has yet concocted an attempt to poison the bodies of an entire population of his own or another country. But through jealousy or in revenge there are fiends who, through the news, have successfully poisoned the minds, not of one or two persons but of a whole nation.

For an understanding of how news has come to play so important a part in the lives of civilized men let us go back to the beginning. Once the town crier spread the news. Then came the newspaper, supplemented later by the broadcasting station. The marvel known as electricity served to bring men into closer knowledge of one another. Actually, the first practical application of electricity for the benefit of the whole people was to bring the news from far and wide. The telegraph, cable, telephone, and finally the wireless annihilated the distance between nations and between individual communities.

In this country each locality was linked with all others and our whole life integrated into one homogeneous national community. And yet our conception of the importance of news dissemination and publication, for which science furnishes means of instantaneous world-wide transmission, remained provincial; or perhaps we ignored the subject altogether. The news was one of the things to which we had become so accustomed that we thought about it only when we could not get it. While we had seen, unconsciously, what it had done to unify our own country, we had never realized fully that it contributed more than anything else to synchronized thinking and action.

The news could never have served us as it did and does serve us had it not been for the freedom of the press, which made the printing of that news possible. We had our freedom, we had a press free of Government control which stood guard for that freedom. Satisfied with our own development, we did not greatly concern ourselves with the affairs of the world. Then from our provincial dreaming we were twice rudely awakened to find that science had indeed made our globe smaller. News could no longer be confined principally to our own activities. And with the coming of the Second World War we began to ask ourselves where these wars are bred.

II

The history of the European press in the years that preceded the present war reveals clearly how large a part poisoned news played in bringing on the war. That poison was of two kinds—a kind of gray poison that was doing its work almost everywhere in Europe and in Asia before the advent of Hitler, and the utterly black poison that came with the Hitler-Goebbels scourge.

Even in the years before the Nazi blackout, events had given little comfort to those who believed that freedom of information and an honest, responsible press were the surest shields of peace. In almost no country was the truth faced. Typical of the situation, and possibly in its worst form, was what was happening in France from 1919 to 1939.

Not only were Havas, the French news agency, and the French Government in effective league to prevent the full picture of world developments from reaching the French people, but the French press itself all but abdicated its proper responsibilities and functions. Long before the Second World War fell upon the bewildered French people they had been deserted by all but a small fraction of their press.

Newspapers were largely subsidized, in one fashion or another. Editors and reporters frequently were on government, party, or business pay rolls and many newspapers were directly contolled by political or financial groups. News columns were bought as a common practice. This was true particularly of the Paris press. There were some independent newspapers, but most of these were in the provinces. The character of the French press was a mighty contribution to the disunity and confusion in which France marched to her catastrophe in 1939–40. And this was the picture in a nation that was considered a democracy.

But the blackest poison was that generated in the thirties in Germany, Japan, and Italy. Then the suffocation of truth in the news was put on a totalitarian basis.

Freedom of the press died with all the other freedoms in Germany on the night of January 30, 1933, when Hitler became chancellor. Newspapers and radio became instruments of a regime with criminal purposes. Editors and reporters became functionaries of the state. Journalism was defined by law as a "public task regulated by the state." The ministry of propaganda and public enlightenment was established under Goebbels. All media of information and expression were crushed into the Nazi mold, all bent to the purpose of whipping the German people into that fanatical frenzy necessary to the savage purposes of the Nazi dictator. By 1939 it was done; the Germans were ready to assume the responsibility for plunging the world into war.

Japan's road into the darkness was similar. The press of Japan never had been free of rigorous government control, but in the late 1920's there was developing a small group of Japanese newspapermen and thinkers with an enlightened conception of the responsibilities of the press and the importance of truth in the news transmitted from one country to another. Some beginnings were made toward adaptation of the cooperative principle of news agency operations.

When the militarists on September 18, 1931, embarked on the conquest of Manchuria and seized the reins of power in Tokyo, they began a revolution of which the significance was little understood abroad. The small element of the press that valued the small measure of freedom previously enjoyed was among the first victims. Terrorism, intimidation, powerful pressures were enlisted to bring the whole press into line. Even the comparatively liberal Asahi newspapers of Tokyo and Osaka eventually had to succumb.

The story of the Italian press under Mussolini's dictatorship followed what we now recognize as the pattern for destroying all freedom of the press.

III

The deep night that blotted out the truth in Germany, Japan, and Italy need not fall on any country again, nor need there be maintained in most countries a murky twilight as far as knowledge of other peoples is concerned. Since it has been proved that poisoned news can generate a war, its antithesis, truthful news, should have a chance to prove that it can maintain the peace. Truthful news and a free press can do more than anything to avert war, but the acceptance of both must be real and sincere, not lip service paid to the ideals of a free press in countries which pride themselves on democratic institutions.

We should realize today, as we should have 25 years ago, that members of this great world family of human beings are either not well enough acquainted or not acquainted at all. Since they do not all live in physical proximity, they can come to know each other only by what they hear and what they read. An exchange of truthful international news would bring acquaintance, and the result of acquaintance would be world-wide community of interest.

If we are convinced that for an enduring peace an international community of interest should be established, we should see to it that America holds out inexorably for the two things that make world-wide community of interest possible—a world-wide free press and a communications system adapted to serve the press everywhere in a truly practical manner.

For myself, I would proclaim now that we expect to accomplish this in the peace. I would not wait until the war ends, would not leave these vital elements to be tossed around upon the sea of indecision and intrigue which always prevail in peace negotiations.

The establishment of a free press involves no expenditures, though it does involve a great deal of practical enlightenment on how newspapers through advertising and subscription rates can maintain themselves independent of political or private subsidy. On the other hand, an international communications system would cost a great deal of money, but it would not cost more than a fraction of 1 percent of the cost of world armament.

With these two instruments available for the establishment of an international community of interest, we shall have at least a groundwork for what might seem now to be utopian.

The blessings of adequate communications and a free press surely were not given to us to exploit solely for our own benefit and to keep just for ourselves. Here in the United States the principle of true and unbiased news was first developed. If we would keep out of another war, then in self-interest we should see to it that the principle is given to the world in a militant effort to improve international relations. Availability of the truth, the most powerful force in the world, through a free press served by an adequate system of world-wide communications established for the purpose, should be our aim. For we should not forget that when we plan to enshrine freedom in any field, the first requisite is the right to know.

This Changing World

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article by Constantine Brown which appeared in the Evening Star, Washington, D. C., on Tuesday, March 6, 1945:

THIS CHANGING WORLD

(By Constantine Brown)

The Polish problem, at least so far as the American and British Governments are concerned, is not yet settled. The solution appears to depend on whether Archbishop Prince Sapieha, head of the Krakow archbishopric, is prepared to accept the thankless

task of becoming leader of the Polish Government of National Unity which was created, on paper, at the Yalta Conference.

Pope Pius is reported to have been approached by American emissaries, such as Harry Hopkins and Ed Flynn, with the view to counseling the Polish archbishop to accept the assignment. There is no definite news whether the Vatican has taken the suggested steps or what the reaction of the Polish prelate has been.

The 74-year-old archbishop is a member of an old aristocratic family, tracing his ancestry back to the twelfth century. He is known to be very proud and independent. It was he who objected to the interment of the late Marshal Pilsudsky in the royal crypt in the Krakow Cathedral. During the 5 years of German occupation of Krakow he stubbornly refused to receive the representatives of Hitler, including Governor General Frank, who used threats and cajolery in an effort to obtain an interview with this intransigent prince of the church.

To Frank's threat he let it be known that life is far less important than principle. Throughout the German occupation of his city he did not permit any of the German hierarchy to enter his cathedral. While Archbishop Sapieha cannot be described as a popular man with the masses he is highly respected for his unbending attitude.

Because neither the British nor the American Governments could swallow the idea of employing men of the Lublin Committee at the head of the compromise Polish Government and, on the other hand, Premier Stalin was equally determined not to have any dealings with members of the Polish Government in exile, the thought occurred to the representatives of the western democracies that Archbishop Sapieha might be the ideal man for the job. Should he accept the responsibility of heading the new Polish Government the future steps taken in Poland would not appear in the eyes of the world as being unilateral actions of the U. S. S. R.

For the time being, it is not known whether the archbishop is going to accept. He has been approached from various quarters and urged to take over the job which, thankless as it is, might help his country. But it is assumed in some official quarters here that he has presented certain minimum conditions and demanded guaranties that they would be put in effect before he definitely makes up his mind.

In the meantime, neither the American nor the British Government is as happy as they appeared at first over the Polish solution.

Prime Minister Churchill seems to have some misgivings about the future witch-hunting to which the returning Polish soldiers may be subjected after the fighting in Europe is over, and he has offered British citizenship to these men to enable them to find a home in England or any of the British possessions which may be able to receive them.

Foreign Secretary Eden is not convinced that the Yalta compromise is final. In his speech of last Wednesday before the House of Commons which for some reason or other was not fully reported in the American press, Mr. Eden reiterated the British Government's dislike for the Lublin committee which "His Majesty's Government does not regard as representative of Poland at all."

The foreign secretary added that the representative of that committee, who had made "an unfavorable impression on Mr. Churchill and myself when we met them in Moscow," had caused the Lublin radio station to pour out streams of contentious stuff after the Yalta Conference. But what is surprising to read in Mr. Eden's speech is his statement that "we have recognized the government in London and shall continue to recognize it until a new government is created" and added emphatically, "if it is created at all."

Mr. Eden ended his reference to Poland's difficult political conditions by saying that the new government would have Britain's approval "only if it is broadly representative of the Polish people."

It has been frequently emphasized that the fate of Poland has become of paramount importance in the United States, Great Britain and all the other countries in Europe, not for sentimental reasons, but because it is the touchstone which will show whether the Big Three intend to live up to the principles of the Atlantic Charter or have discarded it in all but name.

Address Before Chamber of Commerce, Gardner, Mass.

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Gardner Chamber of Commerce, Gardner, Mass., March 13, 1945:

Mr. Toastmaster, distinguished guests, ladies and gentlemen and friends, I respond this evening to the very kind invitation of your officers and committee with a deep sense of honor and genuine pleasure. The work which your outstanding chamber is contributing during these troubled days is so very important and so essential, not only to the war effort, in which we all take such overpowering interest, but also to the well-being, stability, and prosperity of this beautiful and constructive community, that it is a matter for special commendation.

As some of you may know, the work of the chamber of commerce and its affiliated organizations has long been close to my heart and has also commanded my deep interest and attention. Both as an individual citizen and as your Congressman, I have had many occasions to observe and certainly to recognize and highly appraise the great amount of public good that this organization has done; its substantial help in solving many complex local problems its invariable response through its united membership to every worthy appeal in behalf of community and country; and its ever-present zeal, unselfishly and generously expressed, to advance, as it has a right to do under our American system, the special interests of its members, but, also and more importantly, the high-minded and invaluable cooperation that it has rendered to many great public causes which have been of inestimable benefit to all the citizens of the city, State, and Nation.

First of all then this evening, I must offer my heartiest congratulations to your fine group of public-spirited citizens, both men and women, who have made this organization the vital and constructive force that it is in the affairs of this city and in the far more important work of promoting our common war effort, which is steadily but inexorably moving toward victory and peace. Every member of this body—indeed, every citizen of Gardner—may well take justifiable pride in the achievements and accomplishments of this chamber, and no more abundant evidence could be found for past successes and the present vitality and spirit of this chamber than the splendid enthusiastic outpouring of your fellow members and citizens, men and women alike, who by their presence in such large numbers have graced this occasion this evening.

I referred a moment ago to the fact that one of the purposes of this organization has been and is to advance the interests of its membership in their particular business affairs, but of course you have had a much broader and a much more unselfish purpose. You have been genuinely concerned with the progress of your city, your great Commonwealth, and your beloved Nation. You have taken a sincere and effective part in promoting prosperous conditions in all your business relationships that have inevitably resulted in enriching the life of the entire community. In more ways than I could mention, after the fashion of true, untrammeled Americanism you have generously given of your time, efforts, and finances to every worthy charity, and public and patriotic object, and these efforts on your part have redounded, I repeat, to the interest of every group and class who reside within this city and to the larger benefit and interest of the country which we all desire to serve these days with all our hearts. That you will continue in this spirit of mutual helpfulness with this purpose of promoting the common good to serve and enhance legitimate private objects and commendable public ends, I have not the slightest doubt.

During the past few years the burdens of all-out global war have fallen upon all our people with ever-increasing intensity. Unprecedented taxes, sweeping and exceptional interferences with management and labor, control of basic materials, price and wage regulations that in peacetime would be entirely unwarranted if not unconstitutional, and a host of other encroachments upon the affairs and daily lives, liberties, and property of our citizens deemed necessary by the desperate need for total and effective mobilization of all our resources for the successful prosecution of the war, have been our lot. But these burdens, as onerous and perplexing as some of them undoubtedly have been, in the main have not affected, for the most part, the material or economic conditions of our people.

We should never overlook, indeed we can never forget, the most frightful burden of all this terrible war has imposed, and that is the demand that it has made upon all our able-bodied young manhood who have been called upon to leave their schools and their work, their homes, and their loved ones to face death, if necessary, in defense of our democracy against ruthless enemies on widely separated foreign battlefields. Nor can we ever forget they are emblazoned in gold upon the most heroic and glorious pages of American history, the valor, the indomitable spirit, and the immeasurable sacrifices of those who have offered their life's blood and in such large numbers have paid the supreme sacrifice to sustain our country's cause in this most destructive and horrible of all world wars.

In the homes of America where grief-stricken mothers mourn the loss of their loved ones and still other mothers, their hearts filled with anxiety and sorrow, keep their lonely vigil by day and by night, these burdens have been most keenly felt, and whatever else has been or will be required of us before this conflict comes to an end, it is our solemn duty as Americans to recognize the great debt we owe as a Nation to the brave boys and patriotic families upon whom the weightiest, most sorrowful burdens of war have fallen.

I am sure that I am speaking earnestly for everyone gathered here tonight and for every true citizen of the land when I say that regardless of the other costs of this war, regardless of taxes, the staggering debt, and other many material demands upon our people, it is our firm purpose to keep before us at all times, with deepest appreciation and gratitude that cannot truly or adequately be exressed, the inutterable sacrifices of those who have struggled, bled, suffered, and died

to maintain our country as a sanctuary of freedom and opportunity.

It is clear as we meet here this evening that one phase of the war in Europe is rapidly moving toward its close though the end is unpredictable and may well be preceded by obstinate resistance and additional heavy casualties. Unfortunately, however, that successful result, welcome and gratifying as it is, will not finish our ordeal. Another determined enemy fighting with fanaticism and desperation must be overcome and conquered in territory remote from the shores of America. I will not venture tonight to prophesy the duration of the war against Japan but would point out that according to our military experts the problems involved in conducting that war are gigantic.

If we meet with the same kind of resistance that we have met up to this time in the Pacific, stupendous military and naval operations embracing massive quantities of materials and supplies, thousands of ships, airplanes, tanks, other engines of destruction and millions of American boys will be required to gain victory. While there is always the hope and the possibility that the terrible punishment being visited upon them by naval bombardment and all-out aerial bombing may suddenly crack the Japanese morale and lead to capitulation, as realists, our military and naval leaders cannot afford to rely on that eventuality. When the Nazis are overpowered, these leaders must straightaway concentrate full attention and energy upon the vigorous and unrelenting prosecution of the Japanese war, and our people on the home front, not to speak of our gallant armed forces, must steel themselves with renewed determination, perseverence, and courage to the demands and requirements and consequences of extended warfare, firm in our common faith that, whatever may befall us, we will continue until we have completely overpowered the enemy, or brought him to surrender.

When that day of deliverance and liberation from horror, suffering, and sacrifice comes, as we hope and pray it will come in the not too distant future, our Nation will be confronted with another set of complex and most difficult problems which almost escape the imagination.

First and foremost, of course, when victory has been achieved, we must immediately turn our attention to the making of a just and durable peace. If civilization, as we have known it, is to survive, war as an instrument for settling international disputes will have to be outlawed, and the nations of the earth, large and small, secure in their right to self-determination and freedom, must take full responsibility for keeping and maintaining the peace. Let us make it clear that our country, which has contributed and sacrificed so much of its wealth and blood to suppress tyranny and oppression, is prepared, in good faith and with high purpose, to join in the perfection of those arrangements and undertakings which may be necessary through wholehearted international cooperation to make another great war unthinkable and impossible.

The old systems of power politics, spheres of influence, secret understandings between nations to exploit territories and peoples have served only to breed wars. In renouncing them, it is our clear duty to recognize the fact that only a peace based on justice and humanity can possibly endure; that if we would avoid the repetition of the slaughter of the flower of our youth, the repetition of the spectacle of 17- and 18-year-old boys being torn from their homes and loved ones and fed as cannon fodder into the maws of international selfishness, greed, and lust for power, we of this generation must insist upon the kind of peace that can and will be maintained in this world for centuries to come. We must keep before our minds always that no peace machinery and no peace instrumentalities, however elaborate, can be effective to accomplish these ends unless the underlying treaties and agreements which they seek to enforce are honorable and just and accord to all other nations, the powerful and the weak alike, their God-given right to freedom and self-determination. Any other kind of a peace which permits the previous tragic methods of power politics and exploitation to continue in any part of the world will merely be sowing the dragonseeds of another horrible world conflict that will spell the ruin of modern civilization and leave the world in shambles and destruction. There can be no compromise on this issue. As Americans, as Christians, as human beings who abide by the judgments of the Almighty and who love our fellow men, we must pledge our energies, efforts, and resources to the realization and attainment of a just, durable peace that will make it impossible ever again, so far as we can assure it, for power-crazed despots and fanatical tyrants to threaten our liberties, slaughter the flower of our youth and turn the whole world into a turmoil of destruction and death.

I would like also to refer briefly to two other very important matters, first, the need, more urgent than ever while our boys are away, of upholding, maintaining, and preserving the principles for which they fight and die—the American principles of freedom and opportunity which have served as the basis for the unequaled prosperity and happiness which our country has enpoyed in the past.

It is an undoubted fact that historically war is a time of social unrest. But it is also a time when radical activity reaches its peak. Throughout the world and in our own country this war has been no exception. Much of the world is being brought into the orbit of absolute, despotic systems of government totally at variance with the democratic ideals of our own. While we fight for freedom at such tremendous cost, apparently successful assaults are being made upon free institutions in many countries. Americans cannot look upon these changes and developments with approval or complacency because to a very great extent they have nullified, and if continued will entirely nullify, all of the enlightened principles of democracy which have been our alleged objectives in the war. These radical movements are not evolutionary; they do not seek improvement by orderly growth, they are revolutionary and seek to destroy, in fact in some areas they have destroyed representative government and civil liberties—freedom of worship, freedom of speech, freedom of assembly, and all the other freedoms of individual thought and action upon which true Americans and all believers in democracy lay so much emphasis. Thus, for many parts of the world the war for liberation from tyranny, in which American arms have played such a notable part, may simply serve to change the controls, so to speak, may simply serve to transfer the sovereignty of some nations from one group of tyrants to another, may simply serve to effectuate the complete destruction of democratic forms and substitute arbitrary totalitarian creeds which repress the dignity and liberty of the individual, stultify initiative and blanket all basic freedoms under the stagnating, stultifying influence of radical collectivism and regimentation.

That these influences are actively at work within our own country is abundantly clear. They are at work in every community, in every strata of American life, they are at work in our legislative halls. Even at this crucial time of peril to our institutions and our democracy they are carrying forward their carefully planned objectives to reshape and remake our social and economic institutions. Some of them openly preach and advocate the doctrines of Communism or Fascism or other socialized economic organization alien to our American tradition.

Step by step, piece by piece, often under the guise of promoting the war effort, these dangerous forces of radical social change have been infiltrating into our economic and governmental structure. Taken individually, their proposals are apparently ofttimes calculated to mobilize the country more effectively for war. Taken as a whole, however, the net effect of their proposals is to fasten new controls upon business, industry, labor, education, the family, and the people themselves which, in truth, will destroy their rights as individual citizens and ultimately enlist them as subjects of a vast regimented federalized bureaucracy possessed of full power and control over all business, the individual worker, and the individual citizen. If these aims can be accomplished during wartime on the theory that they are required for efficient prosecution of the war, or on any other theory, because of misunderstanding or inertia, before the people realize it all Americans will be fitted into the totalitarian straitjacket and American freedom, opportunity and civil liberties will be things of the past.

This sweeping concentration of arbitrary governmental power I refer to is not confined, let me reiterate, to business and management alone, but would also embrace even the humblest worker in the land.

These proposals are in violation of the plainest lessons of history and our experience in this war. American industry, the American farmer and American labor working hand in hand in voluntary cooperation animated by the spirit of patriotism have together achieved the greatest production miracle of all time. They have not only furnished the foodstuffs and fashioned the equipment, the weapons and the materials to supply our own armies and navies but also to supply in titanic quantities the armies and navies and civilian populations of our allies. This accomplishment is not in any sense attributable to bureaucratic controls which in some instances have been necessary to allocate materials and prevent inflation, and which in some instances have exercised a hampering influence on production, but they are due preponderantly and unquestionably to the genius, the organizing ability and the zeal of free enterprise and the skill, the reliability and the unexampled loyalty and devotion of free American workers than whom there is no finer or more highly productive labor in the whole world.

The American people want to get on swiftly with this war and they are prepared unitedly and willingly to bear any burdens and to make any sacrifices that are necessary to win it at the very earliest moment. The are eager for victory, peace, and the early return of their sons. But they do not want, and they will not tolerate, any further meddling by radicals, reformers, and visionaries with the fundamental basic institutions and patterns of our country. They do not want and will not tolerate, unreasonable restrictions on free management, small business, and our devoted American laboring men and women by the millions who have demonstrated unmistakably to the whole world that under our free way of life and our free methods of work, voluntary response, and application to duty that they are capable of producing speedy concrete results more astounding in scope and character than were ever produced by any people in the entire history of the world.

The next matter I wanted to mention is the question of post-war organization of our American economy which is of greatest importance to all. With a national debt of $300,000,000,000 or conceivably even $400,000,000,000 by the time the war is ended, a sum which far exceeds the total assessed valuation of all the wealth in the Nation, 50,000,000 Americans will have to pay very heavy taxes for years and years to come in order to meet

the obligations of the Federal Government and to save the country from bankruptcy. It will cost, for example, over $6,000,000,000 a year alone, and possibly more, to meet the interest payment on the national debt, which is over $2,000,000,000 more than the normal peacetime cost of running the whole Government of the United States. It will require a sum of money estimated by some experts to be in the neighborhood of twelve to fifteen billions of dollars a year to meet our post-war obligations to the gallant veterans of this war and their dependents and I think that everyone will agree with me that these are primary obligations which will have to be met in a wholehearted spirit of gratitude and generosity for those who have made such striking and unspeakable sacrifices to perpetuate our democracy.

These expenditures do not take into account what may well be necessary to provide for pressing post-war needs for readjustment, reconversion, and rehabilitation of American industry, the encouragement of foreign trade and for assuring to our worthy laboring groups who are truly the veterans of industry, aids to full employment and decent high-standard social security, health, and general welfare opportunities. With such a prospect there will be occasion for intensified demands and propaganda by radical groups even before the war has ended and in fact some of these demands are now being made and urged.

When victory comes, America will be at the crossroads of her future destiny. Will we yield to the importunities, the threats, and oily promises of radical reformers, and like the Greeks, the Romans, and other peoples of historic fame, join in our own self-destruction and patiently sit back and watch the decay and disintegration of the greatest free government and the greatest, most fruitful, and most beneficient economic system ever devised by man? Or will we, with the brave, resolute spirit of our gallant sons who are fighting successfully and marching forward to victory against our foreign enemies, accept the great challenge of American history and demonstrate that we, as a people, still possess the vigor, the genius, the ability, the backbone and the courage, and yes—the sense of social justice—to grapple with these problems manfully and fairly and solve them in the American tradition and in the American way?

For myself, and I am sure for an overwhelming number of the American people, I know what course we ought to choose and what course we will choose. With justice and mercy toward all the nations of the world and with justice, equity, fairness, and toleration toward all groups of our own people undaunted and fearless, confident and optimistic, we will move as promptly as we can, and as vigorously as we must, to reorder our own affairs, to recapture and revitalize our democratic institutions, to clear away the wreckage and ruin—material, moral, and human—that has been left in the wake of this horrible war, to bestow solicitous, merciful, and just care upon our veterans and their dependents, to take the fetters off American enterprise, and to strike the shackles from free American farmers and workers so that once again every citizen of our great country whatever his origin, race, creed, or station in life, however humble he may be, will have the opportunity again and in the future, under our Constitution and free institutions, consecrated by the precious blood of our sons, to work out his own destiny under the American flag, so that the wounds of war may be healed, class strife and bitterness may be dissipated, and the sunlight of peace, amity, and friendliness may shine upon our land and upon the world and so that as Americans we may go forward, God willing, to brighter, healthier, happier, and more prosperous days for all our people.

Lo! The Poor Indian

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. MUNDT. Mr. Speaker, one of the most complete reversals of form ever witnessed in Indian legislation was seen in the Supreme Court yesterday when that body, reversing the policy of 150 years in liberally construing Indian treaties, held against the Shoshone Indians in a claim dating from 1863.

The opinion of the concurring judges shows an utter unfamiliarity with the method of governing Indians in this country and, as I see it, the effect of this decision is to relegate the American Indian to virtual peonage. To my knowledge, it is the first time that a decision of the Supreme Court on Indian claims has so shocked the conscience of the press that it has felt bound to editorialize that decision.

I would like to call to the attention of the House the fact that in effect the editorial favors an Indian Claims Commission as the only forum of equitable relief for the Indian. May I say that a Special Investigating Committee of the Seventy-eighth Congress, of which I had the honor to be vice chairman, has already recommended such legislation and that the Indian Affairs Committee of the House is about ready to report out that legislation.

Under unanimous consent, I include the following editorial in the RECORD at this point:

LO! THE POOR INDIAN

One of the strangest opinions to be handed down by the Supreme Court in recent years was read from the bench yesterday. Justice Reed spoke for the Court, although his opinion reflected the views of only three of the Court's nine members. Justices Jackson and Black teetered on the fence through four pages of a concurring opinion, leaning heavily toward support of the Shoshone Indians' claims and then flipping to the Court's conclusion against them. Justices Frankfurter and Murphy joined Justice Douglas in his dissent and then Justice Murphy wrote a long dissent of his own, apparently to show that he was doubly repelled by the majority's conclusion. Justice Roberts dissented without writing an opinion.

It was an old treaty with the Northwest bands of Shoshone Indians signed at Box Elder, Utah, in 1863, that produced this five-way split. The Court was called upon to determine whether that treaty recognized title on the part of the Indians to 15,000,000 acres of land in the Western States. The Indians were seeking damages amounting to $15,000,000 for loss of those lands. To find the meaning of an 82-year-old treaty with nomadic tribes who kept no records and did not understand the English language was admittedly a difficult task. We have a good deal of sympathy with the contention of Justices Jackson and Black that the Court "could not satisfactorily apply legal technique to the interpretation" of such a document.

The white man had ruthlessly encroached upon the Indians' hunting lands and killed off their game. Left destitute, the natives began to prey upon caravans of white pioneers moving westward. United States troops reduced the Indians to submission. Then a treaty was signed granting the whites transit right over Indian lands and in return giving supplies and recognizing their "claim" to vast tracts of lands. To be sure, the language of the treaty suggests that something less than title to the land in our language was intended. But the Indians had no word or even the concept of legal title. They wanted only the right to roam over the lands and hunt as their ancestors had done for centuries. That right, of course, has been taken from them.

Because of the great advantage of the learned white man dictating terms to the illiterate conquered natives, the Supreme Court has heretofore resolved ambiguities in such treaties in favor of the Indians. Five Justices made vigorous pleas for similar treatment of the conquered aborigines in this case. But Justices Jackson and Black addressed their appeals to Congress. Even if the Court had found favor of the Shoshones, they pointed out, the only effect would have been to allow for attorney fees and to earmark the balance of the recovered fund in the Treasury for future appropriation in the interest of health, education, and industrial advancement of the Indians. In these circumstances they felt that Congress should take over the whole problem of aiding these peoples whom we have despoiled.

By casting their vote the other way, the two pivotal Justices would have effectively dumped the problem into the lap of Congress. As matters stand, they have merely handed down an essay on the Government's moral responsibility. We hope that Congress will heed their advice, but we are not convinced that the Court has done its full duty to right the wronge inflicted on this minority. Incidentally, these opinions, revealing as they do the shameful conduct of the master race in America toward conquered peoples, will make good reading for those critics who think that full justice in all parts of the world must be a condition precedent to our joining an international organization to keep the peace.

The Manpower Bill

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MARCH 9, 1945.

Hon. GEORGE B. SCHWABE,
House of Representatives,
Washington, D. C.

DEAR SIR: I have heard so much about this work or draft bill and as my blood is just boiling, I thought I would let off a little steam. I am one of the many war workers and I get tired of hearing about this not enough production. If the men were turned loose where they could work instead of held up so production would be hindered, we would all have a better production and better morale too.

Here at Tulsa in the war plants they have too many men and no one to let us go on and turn out these planes. The main fellows take a plane ready to fly, get a bunch on it just to tear it back up so the mechanics

will have something to do to them the next day. They have capable men to take care, but they want production cut so they can hire and make more money.

I think something should be done. Every time someone is coming around they hear it and tell everyone to act busy. So the best way to find out for yourself is to find someone to work two or three months time to see how much fraud there is and I feel it's in all Government-owned plants.

I have two brothers in the Army and I'm as anxious to have this thing over as you, and I thought it my duty to write to you as my representative to let you know and there are millions like me over there. I won't sign my name for reasons, but I'm glad to help, so I will sign just

X.

P. S.--You understand these plants in Tulsa are on a cost-plus basis. I think that is detrimental to the war effort. This is not my viewpoint alone in this letter, it is of millions who work in these war plants.

O. P. A. Poultry Ceilings

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. HINSHAW. Mr. Speaker, as the Representative of one of the greatest poultry-producing areas in the United States, I take pleasure in presenting herewith a resolution adopted by the poultrymen's department of the Los Angeles County Farm Bureau, in which I heartily concur. The resolution follows:

Whereas recent publicity in metropolitan newspapers has claimed sales of poultry meat 10 to 15 cents above legal ceilings, and

Whereas in 1943 California Farm Bureau Federation submitted from southern California on January 20 and from northern California on March 11 to O. P. A. briefs requesting establishment of ceiling for poultry meat at 37 cents for broilers, 35 cents for fryers, and 28 cents for fowl, which reflected costs at that time, and also was the general market price just prior to reduction of prices by O. P. A., and

Whereas the poultrymen's department of Los Angeles County Farm Bureau feels that existing black-market conditions have been created by inequitable, below-cost-of-production poultry meat ceilings which would not have been the case had the briefs submitted in 1943 been put into effect, because prices actually did continue generally at about the suggested level until recently; and

Whereas War Food Administration has for this year requested increases in production of poultry meat to relieve other meat shortages; and

Whereas supplies of poultry meat for civilians and military needs are still today inadequate; and

Whereas cost of labor since January 1943 has risen and at the same time the efficiency of labor has decreased and general poultry supplies and equipment have increased in cost; and

Whereas contrary to statements recently issued by the regional office of the Office of Price Administration—

(a) mortality has increased in the last 2 years due to a new disease, pneumoencephalitis, and a greater amount of other diseases such as bronchitis and coryza;

(b) Greater over-all output has actually resulted in relatively higher costs of production due to decreased labor efficiency and poorer feeds and limited equipment;

(c) Mash formulas have been fixed beyond the control of the poultryman and feed costs have risen considerably, regardless of anyone's idea of what should have happened. Typical net mill door Los Angeles prices on January 25, 1943, and March 8, 1945, are:

Corn	$2.63	$2.82
Barley	2.35	2.90
Milo	2.43	2.68
Free wheat	2.50	3.08
Government wheat	2.30	2.84
Mash, 2½-ton lots:		
Chick starter	3.50	3.60
Broiler-fryer	3.10	3.41

Whereas, in line with Government policy to produce more pounds of meat, it is desirable there be an incentive to produce heavier birds, a combined price for all young meat birds should be based on the price for the heavier weights, thus making a combined young-bird price of around 36 cents desirable; and

Whereas the poultrymen's department of Los Angeles County Farm Bureau feels that a proper increase in the ceiling will result in the return of poultry to the normal channels of trade and greater poultry meat production, which will ultimately result in a decline of present prices to consumers and elimination of the black-market problem; and

Whereas it always has been, and is at present, the sincere desire of the poultrymen's department and its members to operate their businesses legally and in accordance with the best war effort: Therefore be it

Resolved, That the poultrymen's department of Los Angeles County Farm Bureau urgently requests the War Food Administration and Office of Price Administration to adjust the base ceiling prices in Los Angeles marketing area for locally produced broilers, fryers, and roasters to 36 cents per pound, and for fowl to 28 cents per pound.

Adopted by poultrymen's department, Los Angeles County Farm Bureau, March 7, 1945.

Communication for Transmission to President Benes

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of a communication which was presented by Mr. Peter H. Bergson, chairman of the Hebrew Committee of National Liberation, to Dr. Vladimir Hurban, the Czechoslovak Ambassador in Washington, for transmission to President Benes on the momentous occasion of his return to Czechoslovakia from which he has been exiled since 1938:

On behalf of the Hebrew Committee of National Liberation, I wish to express our feelings of exaltation upon your return to liberated Czechoslovakia.

In the face of the moral disintegration and treachery of the Chamberlain appeasement era, you kept steadfast confidence that decent humanity would ultimately vindicate itself. It has taken a staggering toll of blood and sacrifice but that vindication is now within view, through the dark forces of national selfishness and greed have not yet been completely eradicated.

To us Hebrews, a nation most dreadfully afflicted in this struggle, your prophetic vision remains an inspiring symbol of faith and endurance, and though we are still the one people most attacked by foe and most forgotten by friend, the true justice of our cause gives us the confidence that we too will soon regain the dignity of man as a free nation, living on the soil of our forefathers with true amity and friendship with our neighbors and all the peoples of the world.

With the crushing of barbarous Germany in sight and the dawning of a new era, we extend our felicitations to you and to the people of Czechoslovakia who are truly fortunate in having a president of your great historic stature.

Address of Hon. Helen Gahagan Douglas, of California

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Helen Gahagan Douglas at the World Unity Rally at Madison Square Garden on March 12, 1945:

In an article appearing in Newsweek during December 1944 entitled "The Future of War," Major General Fuller has this to say:

"Though religious, esthetic, and other ideals have given culture to man, what we call civilization—our way of living—has in the main been fostered by discovery and invention. Thus, step by step, one invention or discovery after another—fire through friction, the bow, the wheel, the sail, smelting, forging, the use of gunpowder and of steam, oil and electricity—have led man from one phase of civilization into another. Yet it is war rather than peace which fructifies many of these discoveries. So often is this the case that it would seem Providence had decreed that man's creative endeavors could only be rapidly brought to fruition by calling in his destructive propensities."

Is man then most highly creative when he is most destructive? Or is he most highly creative when his need seems greatest?

I think that is the answer. Man uses his creative abilities to the utmost in war because survival is obviously at stake.

Our creative abilities have been marshalled for war as they have never been marshalled for peace—because the danger was immediate. We could feel it and see it.

In this war, we organized man, machines, science and government to see to it that we are the victors. We are all united in this all consuming determination.

But if for war, why not for peace?

Why can we not muster our creative abilities and use science to free men as well as to destroy them?

Why can we not use science to secure jobs, health, education, travel, creative recreation?

Why can we not use science to promote human relations?

In the past, in times of peace, we have relaxed. We have not fully used our creative abilities to provide a better life for men.

There has been no pressing fear to drive us on, no common goal to hold us all together—nothing that we could see or feel which insisted that we do the job.

But today science has taught us that we must learn to get along together or perish in another war. To get along together, the people on the earth must be able to live with a minimum of decency and security.

No wonder people are beginning to ask on every hand, "If for war, why not for peace?"

There is today a general understanding abroad that it is as important to organize for peace as it is for war. That it is as important to fight against poverty and depressions as it is to fight a deadly enemy. Want and depression are the enemy of the people—the enemy of peace.

Had we in the thirties produced as we have in the forties, Hitler would not have dared to try to enslave the world.

Women all over the world are concerned with the peace. A woman can no longer do her job by minding her own business. The business of bringing up her family, of keeping her home and of working, if necessary, outside of the home are all dependent for their success upon living in a harmonious world, in a world where there are jobs and all that goes with them.

I know that the cornerstone of the future political world is a world organization as outlined in the Dumbarton Oaks agreements. I know that the cornerstone of the future economic world is to be found in the Bretton Woods agreements. And I know, too, that these agreements, which are the foundation of world security and world trade, cannot succeed unless we have a prosperous and healthy America.

Full employment will insure a prosperous and healthy America. We can't have full employment by just wishing for it or by all agreeing that it would be very nice. We must have a plan.

As a housewife, as a mother with my husband overseas, I have little patience with the allergy of some toward plans. Fascism and nazi-ism would have overrun the earth's surface if we had not marshalled our forces according to a well laid plan to oppose them. A home is run on a plan, budgets are worked out by plan, we make plans for our children, schools and colleges have plans, a business works by plan, any shop or factory has a plan.

And now the demand on the part of the free people of this country that mass unemployment shall not be allowed to come back is so insistent that a plan must be made.

The future concerns all of us. Therefore, the plan to insure that future must be undertaken by government.

We have the beginnings of such a plan in the Murray-Patman bill for full employment. The bill is a blue print to fulfill President Roosevelt's promise of 60,000,000 post-war jobs. The purposes of the bill are to promote free competitive enterprise and the investment of private capital in order to secure full production and to assure the existence at all times of employment opportunities sufficient to provide jobs for all.

The Murray-Patman bill provides that the President shall submit to Congress at the beginning of each regular session a national production and employment budget.

This budget will state:

1. The estimated number of people who will be needing jobs for the coming year.

2. An estimate of the amount of capital necessary to be invested and spent by private enterprise, consumers, and Government to provide these jobs.

3. The probable amount which will come from private and public investment and expenditure for the year.

4. The deficiency, if any, to provide full production and full employment.

5. A program for increasing private investment and expenditure to meet this deficiency, if any.

6. A program for supplementing private investment and expenditure by Federal investment and expenditure to close any remaining employment gap.

Of course, to make the sixth point work, further legislation is necessary. For example, the extension of the social-security program, authorization for a shelf of housing and public works projects, river developments such as the proposed Missouri Valley Authority and most importantly, liberal and flexible policies on Federal finance and distribution of Government-held plants.

An early enactment of this bill will help the war effort. It will stimulate production by assuring jobs after the war. Moreover, it will decerase shifts in employment now and after VE-day.

This is an orderly beginning because it begins at the beginning. With a future of full employment, a guaranteed annual wage can become a reality.

Full employment is not only a national but an international problem. It is the key to future world peace.

That is why the World Trade Union Conference in London was so important. It is right that the working men and women of the world should band together. Their will and determination will be needed to insure the world we are about to enter.

Our great President has said this will be a people's peace. Yes, this peace will be a people's peace, for we are all neighbors on this shrinking globe, and it is important that we understand that our future cannot be built by 3 men at Yalta alone or by the representatives of 44 nations in San Francisco. It will take the concerted efforts of all of us to do the job.

An ever-growing understanding between peoples is necessary to support a world organization. We must work for that understanding. There are really no greater differences between the nations who will be partners in the world organization than there are between the States of our own great democracy.

When there are differences of interest between States, delegations don't pack up their bags and go home. For instance, the freight rates which have been adjusted to the seeming benefit of the industrialized East at the expense of southern and far western States have not broken up Congress. We Americans have developed an instinct for staying together to solve our differences. This must be our inspiration to the world. The greater good holds us together just as the greater good must hold the nations together in the future.

In a world where science tells us that tomorrow we may be able to harness the sun's rays, in a world where we will soon be able to unlock the energy stored within the atom, the people of the earth now have a common concern—survival. In this decisive moment, labor—organized labor—has a leading responsibility. "If for war, why not for peace?" can be the slogan. This must be a people's peace.

Value of Lend-Lease

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. HAND. Mr. Speaker, I was on the floor of the House yesterday during most of the discussion of the lend-lease bill, but unfortunately, at the moment of final vote I was called from the floor on a matter of great importance to my district. Of course, my vote was not necessary because the overwhelming support of the extension of lend-lease by the House was a foregone conclusion. However, I am reluctant not to briefly record my views and what, I believe, also represents the views of the people of my district.

Lend-lease, which when originally proposed in 1941 was a new departure in government, has been a major factor in winning this war, in shortening its duration, and in saving the lives of countless thousands of American soldiers. The arms which we have furnished to our gallant allies have been used to a great advantage, and it has been estimated that in the recent Russian advance, half of the transport used in that gigantic effort has been furnished by the United States.

Of course, this has been very expensive. All phases of war are very expensive, but the cost in dollars cannot be measured against the saving of American lives.

I am happy that the House acted so promptly in extending this act, and particularly happy that it was passed almost unanimously. Prosecution of war is and should remain the first object to which the Congress should devote its whole effort.

Japanese Atrocities in the Philippine Islands

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

HEADQUARTERS,
THIRTY-SEVENTH INFANTRY DIVISION,
OFFICE OF THE COMMANDING GENERAL,
Philippine Islands, February 25, 1945.

THE HONORABLE FRANCES P. BOLTON,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR MRS. BOLTON: Thank you so much for your wonderful letter of the 4th, and for the heart-warming expression of confidence in us which you wrote. It meant a great deal to me and I wish it were possible for me to show such letters to all of the officers and men of my division—for it is their hard work and their courage and determination which inspire letters such as yours.

As I write this the final phase of the campaign has been reached and only a little mopping-up remains to be done. The enemy has been destroyed but his destruction was not cheap and before we had wiped him out he reduced this once beautiful city to an utter shambles. As long as I have fought the Japanese I never dreamed that even he would be capable of the heinous crimes he committed here. I am unable adequately to describe the unutterable atrocities he committed against thousands of men, women, children, and even babies. My heart is sick

from what I have seen. It is almost incredible that such beasts could exist in the human form. It is too much to expect our people at home even to believe what we have seen for nothing in their experience could have prepared them for it. Surely if there is justice in this world the Japanese people will not be permitteed to escape from this war with only a military defeat.

Thank you again for your wonderful letter. With my warmest personal regards, I am

Cordially,

ROBT. S. BEIGHTLER,
Major General, United States Army,
Commanding.

The Manpower Issue

EXTENSION OF REMARKS
OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. ANDREWS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Arthur L. Williston, of Dedham, Mass.:

FACTS AND DATA REGARDING THE MANPOWER ISSUE

These facts fall naturally under the following heads:

1. Shortages of weapons, materials, and supplies * * * and the consequent unnecessary loss of life.
2. The nature and the extent of the manpower requirements. And procedures by means of which these can readily be met when each registrant with a needed skill is classified and can be called by name.
3. The Selective Service System as the natural agency.
4. Absenteeism, turnover, and labor stabilization.
5. The ineffectiveness and futility of all of the sanctions, directives, and procedures that the War Manpower Commission has adopted, or is recommending for adoption, including its centralized attempts to control and employment ceilings.
6. The sources and the nature of the opposition to national war service.
7. The attitude of industry.
8. The experience of other democratic countries where national war service has been thoroughly tried.
9. The successful experience of the Selective Service System and the local draft boards.
10. The defective character of the Senate committee's substituted Kilgore bill.
11. The Bailey-May bill now imperative.
12. The real issue when reduced to its simplest terms.

1. SHORTAGES AND UNNECESSARY LOSS OF LIFE

This is not a question of just filling the existing war contracts. The matter is far more critical. War with Germany is very far from over. The toughest fighting lies months ahead—perhaps many months if the German Army retreats to the mountains. And the war with Japan when it reaches the continent of Asia, as is likely, may be seriously prolonged. The question, consequently is one of developing a maximum effort in order to overpower these two determined enemies in the shortest time, thus saving untold human lives.

It is perfectly obvious that with more weapons, more ammunition, more supplies, more and more transportation, and more men of right age for replacements at all the fighting fronts, we can crush these enemies faster, and can give them less time to entrench and mass strength.

In general, in an absolute sense, our war production has been magnificent. But relative to the need of destroying the enemy in the shortest time, in many items it has been insufficient. In many particulars it has fallen far below what we can do, and must do.

Schedules in many, many items have been cut and trimmed and cut again far below the needs because of shortages of materials—shortages of copper, of lumber, of rubber, of cords for tires, of steel, of coal, etc.—and each one of these shortages is a manpower shortage.

As a single illustration of the effect, the invasion of France was delayed beyond dates originally planned because of shortages of facilities, and each day and week and month of delay gave the enemy time to move troops and to build up resistance, all of which was paid for in thousands upon thousands of added casualties.

And this list of specific shortages varies from time to time, but continuously it has been a long list—each item caused by failure to have the right men at the right place at the right time.

2. THE NATURE AND EXTENT OF THE MANPOWER REQUIREMENTS

The shortages of manpower in total are relatively small in proportion to our population. Nevertheless, they are critical, and they seriously affect the progress of the war.

These shortages in the main are shortages of specific skills and experience. In almost every instance surveys have shown that men or women with the required skills are to be found in sufficient numbers in the immediate vicinity in nonessential occupations. Their absence causes great trouble.

To illustrate, everyone knows what would happen to an army in the field without any sergeants or officers of supply. It would be almost worthless. And every army has to have its quota of men of all grades from privates and corporals up through the ranks, lieutenants, captains to officers of top command, all in proper proportion.

And each industry is organized in just the same way. Each requires the corresponding grades of skill and experience. Each has to have its nonskilled, semiskilled, and its skilled workers, its subforemen, foremen, inspectors, supervisors, superintendents, and what not, all the way up the line, and all in the right number.

With any of these key skills or special abilities lacking, there is almost hopeless confusion, and production suffers most seriously.

The shortage of a few thousand skilled miners in the copper mines has slowed up the entire war production ever since Pearl Harbor, and schedules have had to be limited to the insufficient copper production.

This illustration might be multiplied with parallel examples of shortage of skilled workers in lumbering industries, iron mines, ball-bearing works. B–29 airplane factories in the Pacific Northwest, managerial experience in the shipyards of the Atlantic coast—and scores of others. Collectively the total effect is extraordinarily serious.

Beyond all question this has slowed up, and is slowing up, and will continue to slow up the progress of the war at a terrible cost in blood until it is corrected.

3. THE ONLY PRACTICAL METHOD OF CORRECTION

And it is perfectly obvious that there is but one practical method of correction. A way must be found to classify all types of workers occupationally and to call them individually by name so those who can change their jobs with least hardship, and who are found to be essential to the war effort, may intelligently volunteer or be asked to transfer.

And it is equally obvious that the 6,500 local draft boards, who are familiar with the experience records and home condition of the registrants, are the only practical agency to make the selection of the persons to transfer.

4. ABSENTEEISM, TURN-OVER, AND LACK OF STABILIZATION

With absenteeism and turn-over running at the excessively high rates that still prevail in a very large number of important war production plants, effective organization is quite impossible. Under such circumstances efficient production schedules cannot be maintained, and output of war material is delayed beyond reason.

Group action, admonition or exhortation of workers is found to have little effect. Again, it is only the draft board who can deal with workers individually, who are the only appropriate agency to correct this situation

5. THE INEFFECTIVENESS AND FUTILITY OF PRESENT MANPOWER PROCEDURES

In May 1942, nearly 3 years ago, the War Manpower Commission in the Baltimore area tried out its first experiments with an intensive campaign of persuasion to make its "voluntary manpower efforts" effective. It failed here utterly. With an untapped labor reservoir of 371,000 persons, a figure more than 50 percent larger, the total number of workers then employed in war industries in the Baltimore area, the Commission altogether failed to supply from these local sources even one third of the 32,000 estimated additional workers needed.

And the United States Employment Service after calling for interview 2,734 selected rgistrants, succeeded in placing in war jobs less than 1 percent of those called.

The results here given are typical. Failure in one industrial area after another has followed failure. In no case did the Commission cure the difficulties encountered.

In Dayton, Ohio, in the summer of 1943, after a much advertised and expensive campaign, turn-over in the air fields was still at the rate of 88 percent per year. And, with a poll showing 108,000 unemployed women in the area, an intensive effort to increase the number of women in war work resulted in an addition of only 255 workers or but six-tenths of 1 percent.

In the fall of the same year, the widely heralded west coast plan was put into effect, and after 4 months trial:

1. The major evils still persisted.
2. Labor shortages still existed in aircraft industries, and in ship building and ship repair were still critically serious.
3. Labor turn-over and quitting of war jobs remained at an extremely high level.
4. There still remained the failure to reach the very large unused and potentially available labor resources of the area.
5. But worse than all, important features of the over-all war-production programs were curtailed, delayed, or altogether removed from the area.
6. And the regimentation and restrictions caused bitterness, distress, and resentment, and tended to disturb the general economy and morale of the area.

In the spring of 1944, the average turnover for the aircraft industry of the country, even including the more stable plants, was still at the rate of 75 percent per year.

Just imagine the total loss in aircraft production over say a 2-year period due to the disorganizing influence of such a turn-over—hiring and training 100 persons each year in order to retain 25 workers.

And more recent surveys in Detroit, Boston, New Bedford, and Newark show even more distressing results as the situation becomes more complicated and the measures of the War Manpower Commission become more restrictive.

And perhaps the most unfortunate influence of the sanctions and regulations of the Commission is that in total effect they tend

to reduce total war production instead of increasing it.

It is a tragic fact that the total volume of war production shipped overseas for 1944 was less than the corresponding amount for 1943.

At present, too, there are nearly 200 of the so-called labor shortage areas in the United States including almost every important industrial area in the country in which the above restrictions are being applied, with the above unfortunate result.

With such a record of continuous failure, how is it possible for any Member of Congress to seriously consider using this agency as a means of improving the manpower problems in time of war.

6. THE SOURCE OF OPPOSITION TO NATIONAL WAR SERVICE

During the hearings, lasting for many months before both the Committees on Military Affairs of the Senate and the House of Representatives, the only opposition to national war service of consequence was from top leaders of organized labor.

Please read with care the enclosed pamphlet giving a summation of the testimony presented by these labor leaders.

Their arguments, and they have presented no new arguments since, are entirely without validity and again and again have been completely refuted.

They claim that they will support national war service when it becomes necessary. Surely that has arrived, and long ago.

The claim of unconstitutionality has been thoroughly reputed by the best constitutional authorities.

The claim of slave labor would be ridiculous if they had not so confused the issue as to cause delay and thus tragically prolong the war.

Capital and industry are already conscripted. The Government has legal authority to take over any plant and management that fails to cooperate as requested in the war effort.

To claim that for a worker to be requested to work on a Government contract or in an effort that the Government declares is essential to the conduct of the war at wages and under conditions that the Government sets and supervises, and on production for which the Government sets the price, is any different from a soldier working for an Army officer who receives the pay that the Government gives is so far fetched in time of war as to be unworthy of serious thought.

Furthermore the rank and file of men in organized labor do not privately support their leaders. They have their proportion of sons and near relatives at the fighting fronts. They understand the issue and they do not want this war unnecessarily prolonged.

The polls in the intensely organized areas show in general about the same large majority in favor of national war service as polls in other areas.

And, personally, I have interviewed hundreds of these men. Because of my educational experience in helping their cause they talk frankly with me. And I have yet to find a single instance of a worker who took the slave-labor claim seriously.

And likewise the claim that volunteer labor will do a better job than Government-directed labor is equally false.

In fact, this claim is, in my opinion, the worst insult that I have ever known to be directed toward a thoroughly loyal group of men.

Organized workers, by and large, are as patriotic as the boys in the service, and are as ready to serve their Government and protect their country and their homes as are the servicemen.

The real difficulty which seriously affects the top leaders of organized labor is that national war service would tend to decrease the flow of money into their swollen treasuries and would thus tend to decrease their political power.

Such legislation would make for the duration of the war further labor organization with high initiation fees very difficult.

7. THE ATTITUDE OF INDUSTRY

The opposition of business and industry is half-hearted. Their representatives did not appear at the protracted open hearings of Senate and House committees in regard to this issue 2 years ago.

For the most part the men in these fields have not read the bills and do not understand the terms. They have been misled by the highly paid propaganda of labor, and they see things in the light of the situation within the four walls of their own plants.

They greatly dread increased Government regimentation. But they do not know that the substitution of 6,500 local draft boards of unpaid volunteers for the Federal Manpower Commission would definitely decrease Government regimentation.

And they shrink from open opposition to the leaders of organized labor.

A good example of the above is found in a carefully prepared letter to the New York Times under date of February 10, 1945, by Ira Mosher, president of the National Association of Manufacturers.

Mr. Mosher is emphatically in favor of whatever will give the fighting men the best support, and will most surely bring the war to the most prompt conclusion.

But he simply does not know the facts regarding the three points upon which he bases his argument:

First. He calls for "action at the local level." And he does not know that the draft boards distributed in 6,500 different localities are far nearer the local level than are the two-hundred-odd centrally controlled offices of the War Manpower Commission.

Second. Mr. Mosher believes in democratic procedures, but he does not know that these draft boards scattered as they are throughout the country, made up of unpaid volunteers and close to the people, are far more democratic in their procedures than are "employment ceilings", "controlled referrals" and "compulsory releases" under statutory authority of the politically controlled War Manpower Commission.

Third, Mr. Mosher rightly claims that the problem is not one of millions and is not one for dragnet solution. But, he does not know that the draft boards make selection, as need requires, one by one; and that by contrast the autocratic regulations of the central commission are for more of the dragnet variety.

This blundering in thinking is typical. And, one of the chief errors in this whole situation is that both organized industry and organized labor and the War Manpower Commission, controlled as it is by organized labor, unconsciously and consciously endeavor to keep all war production within the ranks of the 12,000,000 organized workers.

They fail to consider the 48,000,000 unorganized workers who desire to play their appropriate part in winning the war.

It is for the Congress to see that these 48,000,000 citizens get their fair and proper consideration.

8. THE EXPERIENCE OF OTHER DEMOCRATIC COUNTRIES

The Senators must know that in Australia, New Zealand, England, and even Canada, that national war service has worked effectively and without trouble.

The people in those democratic countries take the compulsory law just as we in America take our compulsory school laws. There is close parallelism between them. Both are for the preservation of our democratic institutions.

And the Senators must know, too, that with 3 years' experience in England there have been fewer instances requiring the need of penalties than with us in the United States, even in proportion to population, with our compulsory school laws.

Even in Canada where in certain Provinces there has been definite objection to the military selective service, nevertheless, national war service has been taken in the stride as a matter of course and taken with a smile.

No one in Canada, with a population like our own, speaks of slave labor. But neither Mr. William Green nor Mr. Philip Murray resided in Canada.

If national war service works so well in these other countries, is it not almost ridiculous to deny its usefulness here?

9. THE SUCCESSFUL EXPERIENCE OF THE DRAFT BOARDS

During World War No. 1, I personally had a most interesting and valuable experience with the skillful working of the local draft boards. The pains that they took and excellence of their work in selecting qualified persons according to specifications were truly remarkable.

The boards sent for training in technical and skilled occupations 23,000 men. Hardly without exception, these men filled the requirements. And if, in even a single instance, there had been 1 case where a registrant felt either injustice or undue hardship, it would have come to my attention. I recall no such instance.

And the morale of these men was really most remarkable. I would like to dwell upon it at length.

Throughout the country there were about 350,000 men selected in a similar way. I was familiar with the results, and they were uniformly excellent in all sections.

If only the shipbuilding plants and the aircraft factories and the other rapidly developed war industries could have their personnel selected with the corresponding care and skill, it would be a marvelous boon to them and to the country.

10. THE DEFECTIVE SENATE COMMITTEE'S SUBSTITUTE KILGORE BILL

I hope the Senators will carefully contrast the futile and defective Kilgore substitute bill with the workings of a true national war service law.

* * * * *

And the War Manpower Commission has no facilities for classifying or selecting the persons of the needed skills, which is the vital need. With these key skills or special abilities lacking there is great confusion.

* * * * *

11. THE PROVISIONS OF THE BAILEY-MAY BILL WHICH NOW IS IMPERATIVE

This bill is extremely simple and democratic. It rests upon the principle of equal obligation for all men between the ages of 18 and 45, and is just.

The Selective Service System—that is the local draft boards in whose fairness and wise judgment the public has learned to have confidence—is to be utilized to register and classify those persons who are liable for service.

With aid and advice from other Government agencies it shall be the responsibility of the draft boards (the neighbors who know the home conditions of the registrants) to classify them occupationally, and to make all selections, if and when necessary. And this classification is an essential feature of the law.

This law makes an effective war-production program possible, and furnishes for the first time a procedure for classifying all the skills and abilities of people, and for then obtaining the relatively few persons who are needed to accept jobs in places where the war absolutely requires them. No plan is possible—the required labor is known to be available.

But, it is found true that nearly everybody wants to help the war effort when it is clearly and definitely indicated where his abilities are required. Consequently, these provisions of the law will be taken as a matter of course.

This bill furnishes for manpower problems the only practical answer that has been suggested, because it defines duty and obligation and gives direction to each individual.

No one need fear that the law would work arbitrarily or unfairly. It provides traveling expenses, appropriate compensations, and in no way interferes with existing labor regulations, nor with the procedures of the military selective-service law. And, the law automatically terminates at the close of the war.

12. THE REAL ISSUE REDUCED TO ITS SIMPLEST TERMS

The issue reduced to its simplest terms is extraordinarily simple.

On the one hand is the Bailey-May bill, without weakening amendments, endorsed with overwhelming testimony, and demanded by War and Navy Departments and officers responsible for winning the war. A vote that will shorten the war and save life.

On the other hand is a vote to increase the cash in the treasuries of organized labor and thus to enhance the political power of their top leaders.

And, if American history is a guide, sooner or later the reaction of the American people to this latter course will be sharp and severe indeed.

The Veterans' Part in Our Peace Pact

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Chicago Daily Tribune of Tuesday, March 13, 1945, commenting upon Gov. Dwight Green's recent letter to Senator VANDENBERG and Representative EATON:

GOVERNOR GREEN'S LETTER

Governor Green's letter to Senator VANDENBERG and Representative EATON is a reminder to them that the Republican Party has a foreign policy, which they in particular are pledged to follow, since they both helped draft it.

It is likewise a reminder to the whole American delegation that however secluded a chamber they may select for bargaining or intrigue, someone will be looking over their shoulder. When Governor Green asserts that the men who are fighting the war must make the peace, he is preaching not simply justice but practicality as well. Even if the American delegation were possessed of superhuman vision and unselfishness, and their colleagues from other nation were equally disinterested and wise, the San Francisco Conference could only propose, not dispose.

The disposal will be at the hands of the 13,000,000 men who are now bearing arms for this country. No formality, no empty promulgation of treaties, no congressional ratification under pressure, can alter this fact. Any undertakings by this Nation will be valid only insofar as they appear wise to the veterans, who upon their return are going to be the predominant political force in the United States. It is they who are acting while the planners are talking. They know the realities of the war. They have a clearer picture of our allies, and our enemies as well, than have the people at home, who must depend for that picture on the distorted glass of a dozen propaganda bureaus.

Governor Green conceded in his letter the impracticality of taking a poll in the Army and Navy to determine whether its members want an international organization and, if so, what kind they want. They can only express themselves when they regain the complete political freedom that goes with civilian life. It may be contended, by those anxious to commit the United States to a course which they mistakenly view as irrevocable, that it is impossible for the veterans to express themselves. The answer is that nothing done now can be irrevocable. The veterans will hold the veto.

Yalta stripped most of the sham from the proposals to be presented at San Francisco, it is not a league of nations that is to be constructed, but a new holy alliance. The voting arrangement that came out of Yalta makes it certain that no one can use the proposed new international organization to question or dispute the spoils of the strong. The charter recognizes that only the voices of the strong shall be effective. The little countries can debate, but they cannot act, nor can they force action against the will of any one of the Big Three. There are only three, Russia, Britain, and the United States; France and China do not count. They have not and will not have for decades the military power to put weight behind their words. And of the three, Britain's only hope of survival as a major power, is to play its two partners off against each other. The United States and Russia will hold the real power in the post-war world. The hope of peace rests not in any debating society but in the fact that as yet we and the Russians have no large or irreconcilable conflicts of interests.

The proposed league has lost its reputation before it is formed. The partition of Poland, the other day's unilateral action of the Russians in restoring Transylvania to Rumania, the refusal to honor the British pledge to the Lebanese and Syrians that they would be treated as free nations if they would renounce the authority of Vichy France, have thoroughly disillusioned the world. The little nations know before they sign that the league will never save them. At the best it will be only a paternalistic force to prevent them from cutting each other's throats.

Some of our internationalists have mourned plaintively that their propaganda has fallen on sterile ground among our armies fighting in Europe. The soldiers there are interested in only one thing, to whip the Nazis and come home. They do not feel themselves to be saviors of all the nations of the world. It is well that they feel as they do. Their disillusionment will be less bitter when they return and see the fraud enacted in their absence.

Mel Price Gets Off on the Right Foot

EXTENSION OF REMARKS

OF

HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the St. Louis (Mo.) Labor Journal of March 8, 1945, which pays merited tribute to our distinguished colleague, MELVIN PRICE, from the Twenty-second Congressional District of Illinois:

MEL PRICE GETS OFF ON THE RIGHT FOOT

The Labor Journal is glad to take this opportunity to congratulate MELVIN (MEL) PRICE, freshman Congressman from the Illinois Twenty-second District on his record thus far in the Congress of the United States.

His stand on vital issues has proven sound.

This is true with special force in the matter of veteran's legislation in which his stand obviously is based on practical appreciation of the fact that veterans of this war will be the backbone of the country for the next 50 years.

In his consideration of veterans' problems PRICE fortunately is not an arm-chair theorist whose only knowledge of the Army has been gained at second hand. Nor did he learn about the veterans as a commissioned officer.

No; PRICE, himself, was a G. I. Joe. He had become a corporal just before his discharge to assume his duties as Representative in Congress. For almost a year prior thereto he had been a private.

Thus you have a man who is familiar with the hopes and aspirations of the enlisted men and who is in position to judge whether their best interests are being served by legislative proposals.

More power to him, and may he continue in the course that he has set for himself, confident that his constituents will be duly grateful and show that gratitude at the right time.

The Intent of Congress With Reference to the Regulation of the Business of Insurance

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. SUMNERS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD with reference to the moratorium bill recently enacted—the bill to express the intent of Congress with reference to the regulation of the business of insurance—I submit the following statement which I hope will be of some assistance to all who are concerned. There is certainly a very broad concern.

The effect of this act is to establish as far as can be done a moratorium until January 1, 1948, insofar as the effect of the Supreme Court decision in the Southeastern Underwriters Association case is concerned, except that boycott, coercion, and intimidation are not included in that moratorium. This moratorium or suspension is for the purpose of giving an opportunity for the States, the insurance companies, Congress, and the people of the country generally, to determine what can be done to adjust the confused situation in which we find ourselves as a result of the Supreme Court decision referred to, and to determine as a people where the control of the insurance business should lie.

I respectfully submit to the States that for them to have a chance to retain the control of the business of insurance—and it seems to me the preponderance of judgment is that they should—they must demonstrate their ability properly to gov-

ern the business of insurance. Insurance companies should do their best to remove from their practices anything which may be detrimental to the public interest. In my mind there is something far more important involved than insurance. This shifting of governmental power away from the States to the Federal organization is an increasing threat against our democratic system of government. Federal organization cannot handle all of this accumulating business except by bureaucratic control. It is fortunate for us that there is considerable sentiment developing in this country that if we are to preserve free government, responsibilities for general government must be established in and must remain in the States. It seems clear that if that is done, and only if it is done, will there be a chance to reduce the Federal business sufficiently to bring it within human comprehension and make it possible for the Federal organization to be governed by laws enacted by the Congress rather than by directive emanating from an appointed personnel.

The following is the conference report, which by its adoption has become the law. The vote in the House on this report was practically unanimous; the vote in the Senate was 68 for, and 8 against. This report is not long. It ought to be understood by the people:

EXPRESSING THE INTENT OF CONGRESS WITH REFERENCE TO THE REGULATION OF THE BUSINESS OF INSURANCE

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (S. 340) to express the intent of the Congress with reference to the regulation of the business of insurance, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

"*Be it enacted, etc.*, That the Congress hereby declares that the continued regulation and taxation by the several States of the business of insurance is in the public interest, and that silence on the part of the Congress shall not be construed to impose any barrier to the regulation or taxation of such business by the several States.

"SEC. 2. (a) The business of insurance, and every person engaged therein, shall be subject to the laws of the several States which relate to the regulation or taxation of such business.

"(b) No act of Congress shall be construed to invalidate, impair, or supersede any law enacted by any State for the purpose of regulating the business of insurance, or which imposes a fee or tax upon such business, unless such act specifically relates to the business of insurance: *Provided*, That after January 1, 1948, the act of July 2, 1890, as amended, known as the Sherman Act, and the act of October 15, 1914, as amended, known as the Clayton Act, and the act of September 26, 1914, known as the Federal Trade Commission Act, as amended, shall be applicable to the business of insurance to the extent that such business is not regulated by State law.

"SEC. 3. (a) Until January 1, 1948, the act of July 2, 1890, as amended, known as the Sherman Act, and the act of October 15, 1914, as amended, known as the Clayton Act, and the act of September 26, 1914, known as the Federal Trade Commission Act, as amended, and the act of June 19, 1936, known as the Robinson-Patman Antidiscrimination Act, shall not apply to the business of insurance or to acts in the conduct thereof.

"(b) Nothing contained in this act shall render the said Sherman Act inapplicable to any agreement to boycott, coerce, or intimidate, or act of boycott, coercion, or intimidation.

"SEC. 4 Nothing contained in this act shall be construed to affect in any manner the application to the business of insurance of the act of July 5, 1935, as amended, known as the National Labor Relations Act, or the act of June 25, 1938, as amended, known as the Fair Labor Standards Act of 1938 or the act of June 5, 1920, known as the Merchant Marine Act of 1920.

"SEC. 5. As used in this act, the term 'State' includes the several States, Alaska, Hawaii, Puerto Rico, and the District of Columbia.

"SEC. 6. If any provision of this act, or the application of such provision to any person or circumstances, shall be held invalid, the remainder of the act, and the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected."

And the House agree to the same.

HATTON W. SUMNERS,
FRANCIS E. WALTER,
C. E. HANCOCK,
Managers on the part of the House.

PAT MCCARRAN,
JOSEPH C. O'MAHONEY,
HOMER FERGUSON,
Managers on the part of the Senate.

Hon. Robert L. Doughton

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. KNUTSON. Mr. Speaker, our beloved and distinguished colleague, ROBERT L. DOUGHTON, chairman of the Committee on Ways and Means, recently entered upon his eighteenth term as a Member of this body and when he completes this term he will have given to the people of North Carolina and the Nation 36 years of outstanding service. The people of North Carolina have faith in BOB DOUGHTON, as have his colleagues in the House. That faith is founded upon his solidity of character, industry, and an exemplary life. The great faith that the people of North Carolina have in our able and conscientious colleague is admirably attested by an editorial which appeared in the Charlotte (N. C.) Observer of February 10, which I insert at this point as a part of my remarks:

THAT'S FAITH

Faith shown in Representative ROBERT DOUGHTON by residents of the northwestern counties of North Carolina has apparently no limits.

A slice of Wilkes County wants to be annexed by Caldwell County in order to avoid being flooded by the upper Yadkin flood control dam and proposed project.

Representative DOUGHTON was reported to have said that none of Caldwell County would ever be flooded no matter what shape the project took. So, an annexation bill has been presented to the legislature.

These trustful people—not now in his district—wouldn't move an inch if annexed by Caldwell. They would be just as close as ever to the river and the dam. Their bottom lands wouldn't be transported one foot. The Yadkin, dammed, could rise within sight of them and the waters come backing up to the corn crib—but not if they were in Caldwell County. Farmer Bob said so. That's all they wanted, just his word. If he said Caldwell wouldn't be flooded, it wouldn't. It couldn't be. If they wore the Caldwell label they would be safe. He would protect them.

A man doesn't get a reputation like that overnight nor inspire such faith unless he has shown himself faithful in many things, big and little, for a long time.

It is a great compliment these people pay him; this simple, blind trust that his word is always good; that what he says stands and that if he promises anything it will be just that way.

They believe he can keep the floods away; that they are safe with him. And if he says Caldwell County will not be flooded the chances are about 100 to 0 that it will not be flooded.

For the Biggest Army, Navy, and Air Force in the World

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial by David Lawrence, appearing in the United States News of March 16, 1945:

FOR THE BIGGEST ARMY, NAVY, AND AIR FORCE IN THE WORLD

(By David Lawrence)

Yalta has changed the face of modern history.

From an era in which collective security has been the primary objective, the pendulum has swung now to an era in which all the major nations are to be above the law prescribed for the smaller nations.

Surrender No. 1 at Yalta was acquiescence in the seizure of Latvia, Estonia, and Lithuania by Stalin in 1940 when he was a partner of Hitler.

Surrender No. 2 was the ratification of a deal made in 1943 between Stalin and Churchill to take away from Poland—an ally—one-third of her territory.

Surrender No. 3 was the acceptance of Stalin's demand, first raised at the Dumbarton Oaks Conference, that Russia reserve a power of veto over the security council of the proposed United Nations charter. Hence all major powers now will sit in judgment on their own acts and decide their own disputes in international affairs without being required to submit either to arbitration or conciliation unless all major powers agree to such submission.

Cumbersome procedural voting, according to the formula just announced, is to determine whether a dispute is even to be investigated. In the old League of Nations covenant not only was investigation of disputes by the council written into the original charter and made an obligation in advance on the part of every member, but once the investigation was made and decisions published, the members of the League were bound by their agreement not to go to war against the side that complied with the recommendation. Even the party that did not wish to comply was required to wait 3 months before resorting to force. Violation was

specified to be an act of war against all members.

MORAL FORCE DEFEATED

Under the Yalta formula, when the results of the investigation are published nothing can be done about it on the Security Council if one of the parties to the dispute happens to be a major power.

This, for all practical purposes, means that a combination of physical forces is not to be set up to enforce peace as we were promised in the Presidential campaign in 1944. It means also that moral force—the power of publicity in disputes—is to be seriously curtailed in its effectiveness because there is no provision for mandatory publicity within any country which is a member of the United Nations.

Russia, for instance, does not have freedom of the press and need not publish the findings of the Security Council to her people or, indeed, anything about the views of other peoples. We have seen how between 1933 and 1939 in Germany, and in Japan also, the peoples there were not permitted to know of the conciliatory efforts of other nations friendly to them. Instead, speeches of hate and antagonisms were published widely, and the other powers were always represented as the aggressors.

NO SAFETY WITH TOTALITARIANISM

So long as there remains in the world a single totalitarian state where there is no access to public opinion and where one man, without consulting the people's will in either a parliament or a congress, can make a deal with some other ruler and plunge this country into war—as happened in 1939 when Hitler and Stalin plotted together—there is no safety for an unarmed democracy.

If the world cannot rely on moral force—and apparently as long as dictatorship and totalitarianism wield power over large areas we cannot rely on it—there must be reliance on physical force.

It is significant to note that the newspapers which editorially sounded off so quickly their applause for the Yalta communique are now conceding that the voting formula is a disappointment. But they reiterate the platitude that, of course, the important thing is unity, and the spirit behind the major governments.

True enough, unity depends on the spirit of peoples. But how much chance is there for solidarity of peoples when dictatorships kill the freedom of the press, or freedom of information, as the President phrases it?

And if there is no freedom of worship, how much chance is there for the development of those aspirations to civilized order which could come from the spiritual impulses of a free people?

Moral force suffered its worst defeat of our times at Yalta and subsequently in the American press. The alternative is a reliance on physical force.

But where does this leave the United States?

Does it not mean that, just as Stalin insisted that a defense line miles and miles away from a soon-to-be-dismembered Germany must be Russian for security reasons, we too must look to our own security?

The best defense is a line that keeps the potential enemy as far away from our shores as possible. We must prevent the building of submarine or air bases or rocket bases within reach of our country. We can no longer depend on a fleet to patrol the coasts of continental United States. We must base our fleet and air forces thousands and thousands of miles away from continental United States.

If the might-makes-right rule is to prevail, then the United States must have bases in Africa to prevent any enemy from flying bombers across the Atlantic or occupying any of the string or air and submarine bases that start at Casablanca or Dakar and threaten the approaches to North and South American coasts.

We must not give up any bases in the Atlantic or the Pacific—some of them won at the heavy cost of American lives.

The Third World War must be kept far away from our shores. Never again must we permit an enemy to approach as close to our coast as Pearl Harbor.

To man these bases and to defend ourselves, we shall need the largest army, the largest navy, the largest air force in the world. We must expand our Marine Corps into the largest amphibious force the world has even known, with a big enough corps in the Atlantic and in the Pacific, respectively, to garrison bases from north to south where a potential enemy might attack. We must particularly fortify and enlarge our bases in Alaska, which represents a dangerous approach to our Pacific coast by air.

OUR PEACEFUL AIMS

We should not aim at any country as a potential enemy, for we have no offensive designs and no purpose to commit an act of aggression. But we should aim our theoretical defense against all countries that could by a combination of alliances wage war against us.

But, it will be asked, isn't this turning the clock back? Doesn't this mean heavy taxes and burdens on our economy that we had hoped to reduce materially.

Yes, it is turning the clock back. But the initiative was taken as a consequence of totalitarianism which for expediency reasons, we have apparently chosen to condone in one case and condemn in another.

This does not mean we must pursue such a policy of bigger armament indefinitely. Our objective should be to express American policy in terms of physical might—because that unhappily is the language the European rulers understand—and when we have demonstrated that we mean not to dominate the world but only to make our own defenses secure and that an armament race against us is futile, we can again ask other nations to join us in a system of collective security to make possible a reduction of armament.

THE PRICE OF SECURITY

We are in this war and have raised an Army of 8,200,000 men and a Navy of 4,000,000 because we found to our sorrow that we could not rely for our defense on the British Fleet or the French Army. We divided our one-ocean fleet in 1940 and 1941 and sent much of it to the Atlantic to help the British, and thus exposed ourselves to an attack from Japan in the Pacific. We neglected to build up airpower and amphibious forces to protect the Philippines. We now must retain a two-ocean Navy and enough airpower to make impossible another such attack on our interests or possessions. We cannot rely on Britain or France or Russia or any other power to defend the people of the United States. We recently planned to rely on a combination of all major powers in a new international league to enforce peace, but this has been made impossible now by the unilateral attitudes displayed at Yalta and by the sacrifice of the collective-security principle in the new voting procedure announced last week as having been agreed on.

We have assumed, moreover, a vast responsibility by our signature to the Act of Chapultepec. We are about to guarantee each of the nations of the Western Hemisphere against aggression. This is a large order, and we must not allow our means of enforcing such obligations again to run behind our diplomacy.

Will it not mean military cliques, compulsory military service in peacetime? Yes, and it may mean factors of greed and selfishness as always happens in an armament economy. But all these disadvantages may be the price the United States will have to pay for the failure of Allied statesmanship to build the United Nations organization on a basis of true collaboration and mutual responsibility. It is the price we have to pay for proclaiming high-sounding pledges in the Atlantic Charter of 1941 only to discard them in 1945 when one ruler puts selfish interests above the law, and other heads of States agree and call it unity.

The only safe course now is for the United States to rely on its own power in the coming era of power politics.

Democracy and Public Supervision of Industry

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. KNUTSON. Mr. Speaker, under permission granted me I desire to insert in the RECORD a timely and thought-provoking article by Norman Bohn, president of the British-Norwegian Chamber of Commerce, entitled "Democracy and Public Supervision of Industry." My purpose in bringing this ably prepared article to the attention of the House and to the country is in the hope that it may contribute something toward the solution of our post-war problems. The article follows:

[From the Norseman of May–June 1944]

DEMOCRACY AND PUBLIC SUPERVISION OF INDUSTRY

(By Norman Bohn)

The present spate of discussion upon planning and control reminds me of a phrase used by Ivor Brown "everyone mapping the New Jerusalem and nobody remembering the Old Adam." Yet if the family is to remain the social unit, then the Old Adam in the shape of the acquisitive instinct is bound to assert itself, and must be fitted in to the framework of our post-war society.

Of course a good deal of the urge for planning springs from a well-deserved admiration for the achievements of the Russians, as well as from a recognition of the successful organization of industry for war by the governments of democratic countries. Let us remember, however, that the first fruits under a new system often grow from seed sown under the old. All the belligerent governments employ machinery and use technical progress which they have inherited from private enterprise. No doubt existing equipment and processes have been developed under the stimulus of war, which in itself provides a patriotic incentive comparable to that of personal interest, but there is no evidence that government direction can produce conditions conducive to creative enterprise in peacetime, when economic cost cannot be disregarded.

Although much has been learned under pressure of hostilities, for "necessity is the mother of invention," wartime industrial experience offers no criterion for winning the peace. In democratic countries production must proceed with an eye to the variety, adaptability, and flexibility required for overseas trade, whereas government control owes its success to either the degree of isolation attained, or to its ability to ignore any commercial measurement of cost.

Wars can be won by arms. Peace can be lost by politics. It would be a tragedy indeed if, in trying to solve the problems of

peace, we were to lose the political freedom so dearly bought in war. Total war compels us to a certain degree of totalitarianism, and our enthusiasm for our great European ally may lead us to undervalue our democratic heritage. After all, Russia is not a democracy. It is a federal union of states organized to secure the economic possibilities denied to their peoples by the czarist regime. On the basis of this primarily economic society the Russians are beginning to erect the structure of their political liberties, and before the war an important advance was made by the establishment of the Stalin constitution. In democratic countries, on the other hand, economic progress has followed and been dependent upon the extension of political freedom.

So we come to what seems to me to be the essence of our problem today. Can we have planning and control under Government auspices without jeopardizing our democratic principles, and, if so, how? And how are we going to maintain the voluntary associations of organized interest or opinion, such as trades unions, chambers of commerce, employers' associations, which are indispensable to democracy? Before the war democratic people were inclined to take their political liberties for granted. In some countries such freedoms were rather lightly surrendered in exchange for loose assurances of ordered progress and social security. The result was fascism, under various names, with all the cruelty, horror, and degradation it has wrought. It is all too clear in the countries suffering German occupation that political freedom is not only valuable for its own sake, but also as the essential guarantee against servitude or slavery. We must take care that in planning for our material welfare we do not put on the shackles of economic bondage and thereby invalidate our political liberties. A paternal government may be benevolent (as in Russia), or it may be or become tyrannical (as in Germany). Now the democratic idea is that governments should not have the power to be either; they should be merely the instruments by which "government of the people, for the people, by the people" is carried on. How can we resolve this dilemma, of wishing to give governments power to plan for good yet to prevent them from, willy nilly, undermining the freedoms enjoyed by the citizen?

Another aspect of this question is that in democratic countries there does not exist, apart from war improvisation, the organization and administrative machinery necessary for the efficient control of industry. The integration of national industry whereby each factory and each branch of production could be fitted into a national plan might well occupy a decade, even if it could be done at all under the continual and inevitable fluctuations inseparable from extensive overseas trade. Its operation in Russia involved the acceptance by the people of a harsh discipline, which in their case was relieved by the crusading spirit aroused by the prospect of victory on the home front; of better times ahead than those people had ever enjoyed. The same cooperation is hardly to be expected from the democratic peoples who chafe under controls and associate them with the lowered standards of living due to the war. By and large, I am inclined to agree with the view stated in the program for reconstruction by the Canadian Chamber of Commerce:

"Not unless personal initiative is encouraged and allowed freely to function, can we hope so to limit the tasks of the state as to make possible an efficient performance of them."

It should not escape attention that a certain element of defeatism is discernible in this urge for planning: a desire to shift burdens onto the state. Those who wish to float on the broad stream of the national endeavor should remember that a river cannot rise higher than its source and rarely attains greatness unless fed by contributories. The river of national progress will soon dry up unless it is constantly fed by the springs of enterprise.

The broad division of democratic political parties is between those of the right, who support private enterprise with the minimum of Government interference, and those of the left who favor a large measure of nationalization of the means of production. There should be a middle course, the way of compromise so dear to the heart of the democrat, if only we can discover it.

I submit that, after a period of transition from war to peace economy, a solution of this problem might be found through the organization and development in democratic countries of an annual census of production, adapted and extended so as to include distribution and some other services. Each undertaking could, in addition to more general information, be required to furnish particulars as to the percentages of gross and net profit to turn-over, the percentage relationship between wages and materials and wages and profits, the unit cost and sale price, the proportion of advertising for home and export sales respectively, the proportion of production exported, and so on. A secial department of each nation's ministry of commerce could be organized to receive, record and compare these returns, which should be treated as confidential except when incorporated in the record of any one industry. There would then exist in official archives the material necessary for a complete review of the nation's production and trade, and from this could be evolved a method of "remote control" by legislation. In course of time this department could organize a system of works inspection by an official corps of those trained in scientific management and costing, supplemented by technicians for the various branches. This corps could be recruited in the main from that branch of the accountancy profession which specializes in works costing in contrast to financial accountancy. Each inspection should be made in the light of the annual return of the undertaking, and its object should be to confer with the management and workers with a view to the promotion of efficiency. This scheme, if as feasible as it seems, offers the following major advantages:

1. The day by day control of industry, etc., would be left in the hands of existing owners and management, whose initiative and enterprise would be unhampered by official interference except through general regulations imposed by legislation.

2. Government relations with industry, etc., would be guided and conducted by those with knowledge of industrial problems, not as at present by civil servants trained in office administration.

3. The workers would feel that their interests were protected by public authority. This should help to prevent trade disputes.

No doubt there are many objections that could be advanced against this proposal, some arising because in this brief outline it is impossible to discuss many variations which might be necessary to adapt the system to the peculiar conditions of some industries and some countries. Broadly, however, I would suggest that industrialists should not allow themselves to be led by usage and tradition into the belief that public interest in industry must always be confined to the granting of protective tariffs or other State assistance. On the other hand, workers who believe in nationalization would do well to remember that they may thereby lose the right to strike or even to change their jobs. Would it not be better to confine democratic assemblies, such as Parliament or the Storting, to the role of legislative chambers and courts of equity rather than convert them into national boards of directors?

A systematic annual census of production should also provide the information required for the control of combines and cartels. Lord McGowan, chairman of Imperial Chemical Industries, has suggested that the agreements by which these cartels are created should be registered with the governments concerned. This would certainly be a valuable safeguard, but the implications of these cartel agreements would still call for close scrutiny. For example, it ought to be widely understood that import and export statistics cannot afford evidence of the degree of trade reciprocity between two countries if one of them is prevented by cartels from obtaining certain commodities in the other.

This brings me to another important issue that may hang upon the method of democratic control of industry. In the decade before the war, governments in every country became closely identified with many forms of economic nationalism, and it is almost certain that suspicion will attach to any goods produced for export in nationalized industries. Under private enterprise invoices between seller and buyer must, in most cases, reflect commercial costs of production, and it is upon the acceptance of these invoices that ad valorem tariff administration depends. Apart from the danger of a fresh orgy of heavy specific tariffs, it may be doubted whether sufficient versatility and elasticity could be preserved under impersonal public management. These and other considerations lead me to the conclusion that if industry is placed under government control, then we must abandon hope of a freer and expanding international trade. Governments can set trade free; they cannot conduct free trade.

Finally, the information provided by an annual census of production should also enable governments to form their fiscal policies on the facts, instead of being the butts, as hitherto, of a public often ill informed, prejudiced, and misled by nationalist and protectionist propaganda. It is to be hoped that in the expanding world economy to which we all aspire after the war, it will be unnecessary for every country to protect every bit of productive industry with little regard to its real value to the national economy and with no regard to the damage inflicted upon natural industries overseas. If only the world can shake off the economic defeatism of the thirties, if only we can destroy the fallacy that we have at any time come anywhere near the limit of world trade, then there should be room for every reasonably efficient industry wherever situated. But if, at any rate for a time, it is necessary to parcel out overseas markets, then such a census will at least afford a basis upon which each nation can decide, from a long-term point of view, as to which of its industries are most important and in accordance with its national traditions. If there must be a division of markets then it should be carried out in a spirit of give and take, and vested interests should not be allowed to rob the world of the benefit of the international division of labor. The aim of democratic governments should be to advance the welfare of their peoples, and that can best be done in the economic sphere by releasing them from the burden of maintaining industries which are not self-supporting, and granting freedom to all nations from the threat that special skill, or enterprise or the exploitation and development of natural resources, or national aptitudes, will be strangled or offset by higher trade barriers abroad.

Within the limits of this essay it is impossible to examine all the many facets of this great problem, but I hope the foregoing will suffice to convey a warning that in considering planning schemes democratic peoples should remember that constant vigilance is the price of freedom. Planning and democracy cannot easily be reconciled, but I believe that a marriage can be arranged if partisans do not forbid the banns.

Outstanding Americans Hail War Department's Stand

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. DE LACY. Mr. Speaker, under leave extended me, I want to call the attention of the House to a statement in support of the War Department's sound position in judging the loyalty of members of the armed forces.

As I said upon the floor of the House recently, the War Department has selected the only possible yardstick of loyalty—one which is American and democratic and one which meets the rigid tests of time and practice.

I am happy that so many outstanding Americans from all walks of life have now informed Members of Congress, and the War Department of their understanding of this yardstick, that "the basic consideration is not the propriety of the individual's opinions; but his loyalty to the United States."

The statement, which was presented to the gentleman from Texas [Mr. THOMASON], chairman of the subcommittee of the House Military Affairs Committee, to the Secretary of War, and to all Members of Congress by the National Federation for Constitutional Liberties, was signed by a distinguished list of Americans. These included 37 religious leaders, 12 businessmen and industrialists, 34 Negro leaders, 8 authors, 6 civic leaders, 4 doctors and dentists, 7 persons from stage and screen, 10 artists, 7 farm leaders, 12 editors, and 18 labor leaders.

The statement and its signers follow:

STATEMENT IN SUPPORT OF ARMY ORDER REGARDING CRITERIA FOR JUDGING LOYALTY IN GRANTING COMMISSIONS AND IN MAKING OTHER ARMY APPOINTMENTS, MARCH 1945

With regard to the question of rendering Communists and Communist sympathizers eligible for Army commissions, we support the War Department position as reported in the press that in granting commissions and making various other Army assignments the basic consideration is not the propriety of the individual's opinions; but his loyalty to the United States. Any position short of this would constitute a denial of constitutional rights, would fail to utilize all qualified soldiers, and would undermine national unity. The question of what one thinks of Communist philosophy is not involved. The issue is one of full utilization on a democratic basis of all forces dedicated to winning the war. Using this as a yardstick, the Army has apparently taken its position as a result of the excellent record of Communists and so-called Communists, including a number who have been cited for gallantry and a number who have died in action. The War Department's order is common sense and the only sound policy for a democracy. It carries out our country's stated policies of unity of all forces seriously supporting the war effort. It is consistent with our close cooperation with the Soviet Union and with other United Nations members, whose governments include Communists, for winning the war and building a durable peace. The virulent opposition of the Chicago Tribune and other divisive forces must not be permitted to block the War Department's sound democratic decision.

Signed:

South Faces Bright Future

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial which appeared in the Ft. Smith Times-Record:

SOUTH FACES BRIGHT FUTURE

Will the South after the war continue to answer the description President Roosevelt once gave of it—that of economic problem No. 1?

That remark caused considerable protest in the South at the time it was made. Yet, remembering that the President was referring only to the South's economic situation, it must be admitted that he had reason for his comment. Back of it was the old story of agricultural dominance in the South, which, as James A. Farley recently pointed out in a speech at Birmingham, Ala., meant a lower total gross income in dollars per average family, a higher birth rate, a higher death rate, and a lower school attendance than in other parts of the Nation.

Farley pointed out that the often-heard remark that the South is the last frontier in this Nation can mean only that it is the industrial frontier—"that it is the section of the Nation where industry has developed least and has more room for expansion." Like many others who have seen the wartime industrial development of the South, he extolled this section's resources which present possibilities for industrial development, commented on the added advantage the South has in the possession of a great market close at hand, and added that it has now proved it has another essential—a population capable of training to any degree of skill in industrial work.

Of special interest were two bits of advice given Alabamans by Farley. The first of these was that Southern States will be wise to consider whether, as a result of their agricultural economy, their tax systems may be such as to place an undue share of the tax burden on the assets of an industrial enterprise and thus discourage development. The second was that the South make no effort to buy business through special grants, guaranties, and concessions to industries. "Substantial concerns," he said, "do not ask or expect these baubles." He urged the Southern States to make those adjustments obviously needed to encourage industrial development, adding, "Make up the bed with a good mattress and a good spring, have clean linen and let the bed be inviting, but charge the going rate for the lodging."

The advice of the former Postmaster General is good. In the main it has been echoed by many a nationally known man since the South's wartime industry has given dramatic proof of its possibilities in peacetime. Incidentally it is of interest to note that Mills B. Lane, of Atlanta, Ga., known as the dean of southern bankers, declared the other day that the South is no longer dependent upon northern sources for financial backing. "The South," he said, "stands on the threshold of the greatest industrial expansion in its history. The deposits and resources of our banks * * * will be adequate to meet any loan requirement, even of the largest industrial unit."

The Georgian may be right. Certainly much industrial development can be financed with southern money. But northern money, too, is welcome in this long-awaited industrialization, so long as it is available under conditions which do not exploit the South. It should be remembered, though, that it will be foolish passively to await development. It must be invited, planned, urged—and the initiative must come from the South.

American-Filipino Soldiers in Mindanao

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. STEFAN. Mr. Speaker, under leave granted me, I include with my remarks an overseas broadcast made for me on March 12, 1945:

It is to be expected that when the veterans of Maj. Gen. Jens A. Doe's Forty-first Division landed on Mindanao in the twenty-first triphibious operation undertaken by the American forces engaged in the liberation of the Philippines they met the same high degree of cooperation with the Filipino guerrillas on Mindanao that has characterized action throughout the campaign.

Here in the United States, Americans have long held a sincere appreciation of the contribution of the guerrillas of Mindanao. Prior to the recent landings, Mindanao's freedom-loving guerrillas carried on their unrelenting warfare against the Japanese under the most difficult conditions. Not only did they have to contend with a large Japanese garrison, but they armed themselves and fought their battles under the daily watchfulness of some 26,000 Japanese colonists who had infiltrated into this area before Pearl Harbor. For some time the Mindanao guerrillas have been a source of supply for their comrades in the neighboring islands, even as the discipline and organization of their fighting group has served as a model for other similar groups throughout the Philippines.

Not only have Filipino guerrillas distinguished themselves in direct warfare against the Japanese. Their never-to-be-forgotten participation in such missions of mercy as the expedition to release the prisoners of Cabanatuan, in conjunction with the Alamo Scouts and the Sixth Ranger Battalion, is a tribute to the enduring strength of Filipino-American relationships, unabated during 3 years of Japanese occupation.

From the northernmost province of Luzon to the southernmost province of Mindanao, the undying devotion of Filipino guerrillas to the cause of liberation has more than justified the lasting faith and confidence of Americans. It is heartening to know that the Philippines can build for the future in peace on the same organized thinking and disciplined action which have formed the basis of Filipino guerrilla operations against the Japanese aggressor.

At His Side

REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

AT HIS SIDE: THE AMERICAN RED CROSS OVERSEAS IN WORLD WAR NO. 2, BY GEORGE KORSON, TO BE PUBLISHED MARCH 19 BY COWARD-M'CANN, NEW YORK

Mr. FLOOD. Mr. Speaker, the first book to be published about the American Red Cross overseas in World War No. 2, At His Side, by George Korson, capsules United States military campaigns and shows how closely Red Cross operations are integrated with those of the fighting forces.

Beginning with the account of how the Red Cross went into action 2 minutes after the first bombs fell on Pearl Harbor, the book plots the course of the Red Cross program overseas as it moved with our troops into England, Australia, Burma, China, India, North Africa, France, Belgium, Germany, the islands of the South and Southwest Pacific, and to the Philippines with MacArthur. It describes what is being done for the American soldiers in Alaska, Greenland, Iceland, Brazil, the Caribbean, and Iran.

This book also tells of the prisoner-of-war program of the American Red Cross and how the organization, through the International Red Cross Committee, reaches into the prisoner-of-war camps with medical supplies and clothing and food. It describes how the organization has aided merchant seamen in all parts of the world. And it tells of the part the Red Cross nursing service has played in this war. Many of the incidents in the book are told in the words of the Red Cross men and women who participated in them.

At His Side is the story of Red Cross men—former football coaches, salesmen, hotel managers, and college professors, many of them veterans of the last war, who preferred overseas service with the Red Cross to the security of the home front. And it is the story of the Red Cross women—former stenographers, fashion designers, editors, and salesgirls who rapidly adjusted to life in tents with mud for floors and no plumbing.

These Red Cross workers go into battle areas without benefit of military training and quickly learn the shortest route to a foxhole or a ditch when the enemy opens fire. Like the soldiers themselves, some have been killed in action, some have been decorated for bravery, and many have led a charmed life.

The chapter on the steamship *Mactan's* escape from Manila in January 1942 has timely significance now in view of General MacArthur's return to Manila with his victorious troops. Told for the most part in the words of the Red Cross Field Director Irving Williams, who was in charge of the ship with its cargo of wounded servicemen, the story of the 27-day trip from Manila to Sydney gives another picture of the teamwork between Americans and Filipinos.

There is the story of Field Director Thomas "Tiny" Montgomery, former Stanford University athlete, whose height of 6 feet 8½ inches proved a liability as far as induction into the armed forces was concerned, but did not prevent his being accepted by the overseas service of the American Red Cross. Montgomery was with the marines on Guadalcanal during their final drive against the Japanese.

On the advice of the marines, Montgomery took with him to Guadalcanal: 4,000 books, 2,000 sewing kits, 2,500 cakes of soap, 1,000 cigars, 500 cans of snuff, 250 packs of chewing tobacco, 600 tins of pipe tobacco, 2,500 toothbrushes, 40,000 sheets of stationery, 15,000 envelopes, 1,000 decks of card, 5,000 packs of gum, 500 pounds of candy, $1,000 worth of games, $700 worth of fishing tackle, $400 worth of athletic gear, $200 worth of musical instruments (harmonicas, banjos, ukuleles, and so forth); three portable phonographs with $300 worth of records, two shortwave radios, a sewing machine, a washing machine, and—a piano.

From Burma comes the behind-the-scenes story of Merrill's Marauders told by one of the Red Cross workers assigned to the recreation club built especially for the Marauders. And from France and Italy have come many other stories of Red Cross girls driving clubmobiles up to the front lines to take doughnuts and hot coffee to the men. These stories are recounted in Korson's At His Side.

Through these personal stories the activities of the American Red Cross are shown in their full scope. Chapter titles indicate the global coverage of the book: Pearl Harbor, the S. S. *Mactan's* Escape from Manila, Australia and the Southwest Pacific, the Buna Campaign, Guadalcanal, El Alamein to Tripoli, the North African Campaign, China—Burma—India, Along Allied Supply Lines, New Guinea to the Philippines—Island Hopping with MacArthur, Glory and Death in Sicily—Italy, in Great Britain Preparing for D-Day, On to Berlin.

George Korson, who is a member of the American National Red Cross staff, took 6 months' leave to write the book. He obtained much of his information from official Red Cross files and from the workers themselves through interviews. An editorial committee of top Red Cross executives helped him check his figures and facts. So did Army and Navy officials. Korson, a former newspaperman, is the author of four other books.

KORSON WRITES RED CROSS EPIC—FORMER RECORD REPORTER RECORDS HEROIC DEEDS IN WORLD WAR NO. 2

At His Side, the first book about the American Red Cross overseas in World War No. 2, to be published March 19 by Coward-McCann, is written by George Korson, formerly of Wilkes-Barre, whose books on mining folklore are well known to Pennsylvanians.

A member of the American National Red Cross staff since March 1942, Mr. Korson wrote the new book while on leave of absence and obtained much of his information from official Red Cross files and from the Red Cross overseas workers themselves.

About 40 Pennsylvanians who have been overseas with the Red Cross are mentioned in the book. Many of the incidents in the book are told in the words of the Red Cross men and women who participated in them. At His Side is the story of Red Cross men—former football coaches, salesmen, hotel managers, and college professors, many of them veterans of the last war, who preferred overseas service with the Red Cross to the security of the home front. Men like James P. Shaw, former director of the Neighborhood House in Erie, whose rescue of survivors from a bombed ship in Sicily is described in At His Side. As a result of this rescue, Shaw was awarded the Silver Star by the War Department, the first Red Cross man in World War No. 2 to be so honored.

And it is the story of the Red Cross women—former stenographers, fashion designers, editors, and salesgirls who rapidly adjusted to life in tents with mud for floors and no plumbing. Women like Joan Walsh of Philadelphia and Ada Wattenmaker of Charlerol, clubmobilers in France who ploughed through knee-deep mud to take doughnuts and coffee and song to the men in the front lines.

He was the founder and director of the Pennsylvania Folk Festival, witnessed by some 50,000 persons during its 4-year history—Allentown, 1935; Bucknell University, Lewisburg, 1936 and 1937; and Beaver College, Jenkintown (in connection with Swedish Tercentenary celebration) in 1938.

Mr. Korson was graduated from Wilkes-Barre High School and studied at Columbia University. He started his career as a reporter on the Wilkes-Barre Record and subsequently served as reporter on the Pottsville Republican and the Allentown Chronicle & News, among other newspapers in a 15-year newspaper career.

Hemisphere Ties, Labor and the State Department

REMARKS

OF

HON. JOHN M. COFFEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. COFFEE. Mr. Speaker, the reinforced liberal group in Congress along with labor and liberals throughout the hemisphere will watch the Department of State closely during 1945. Organized labor and liberals intend to have a voice in world affairs.

In Latin America, the Confederation of Latin-American Workers under Vicente Lombardo Toledano mobilized its members for vital war production and now seeks to unite closely with workers of this country, Russia, and Britain, to secure the peace. The American Federation of Labor, Rail Brotherhoods, Congress of Industrial Organizations, and both the National Citizens and C. I. O. Political Action Committees likewise are determined that labor shall participate fully in our foreign policy. Labor wants to "extend the New Deal in the new world," and the P. A. C. proposes to broaden its scope so as to "get in the world at large the kind of good-neighbor policy we have in the Americas." Liberals and a growing number of women's groups know that our chief good-will asset in Latin America is Roosevelt-Wallace idealism. Until our diplomats learn this, our diplomacy will remain sterile.

Labor will have the full support of the progressive group in Congress in its le-

gitimate ambition for an international role. Working together, we can see to it that the powerful Department of State, which holds so many of the keys to the winning both of the war and the peace, gives the American people the kind of liberal foreign policy for which they voted last November. Progressives in Congress can see to it that the State Department balances the ultraconservative new team of top officials by appointing liberals to every division and every embassy.

I propose to examine the badly needed streamlining of the antiquated State Department in terms of hemisphere unity and the interests of labor As one active among the progressive group in the House of Representatives, I call the attention of liberals everywhere to the unparalleled opportunity before Secretary of State Stettinius and his new team to give the United States a democratic and effective foreign policy. Liberal Members favor abandonment of the Senatorial two-thirds approval of treaties which helped pave the path toward a second world war, and favor majority approval of treaties by both Houses as a move toward greater democracy and national and world security

As a member of the House Committee on Appropriations, I am glad that President Roosevelt and Secretary Stettinius seek an additional $28,000,000 for the next fiscal year to expand, modernize, and strengthen our Department of Peace. Columnist Marquis Childs fears that Congress will slash even this modest increase for our first line of defense, this small insurance premium on our vast investment for security and peace. Congressional liberals will vote the increase but will in turn expect more liberal foreign policies and more democratic hiring of personnel, preferably through Civil Service.

I shall speak further on this, but first I want to praise President Roosevelt for appointing Nelson A. Rockefeller and Archibald MacLeish to the streamlined State Department, which needs many more such men to balance the entrenched career tories. In the crucial years ahead we need a strong, democratic Department of State to help unify the United Nations, protect freedom, promote trade, and maintain prosperity and peace abroad so we may enjoy it at home.

NELSON A. ROCKEFELLER'S TASK

The appointment of Nelson A. Rockefeller to be Assistant Secretary of State for Latin-American relations is important because of the criticism from all sides of our bungling of the crisis in hemisphere affairs. Many Latin Americans disapprove the Dumbarton Oaks proposals and our appeasement of dictators, who have been aided, whitewashed and given lend-lease arms. Several republics have asked to be represented at the peace conference, and seek assurances regarding the rights of small nations. Experts are worried about economic and political unrest in the other American republics, which may seek to play off Britain, Russia, and the United States against each other. Hence it is urgent that we achieve hemisphere unity and cooperation.

Nelson Rockefeller must face the issues raised by the Peruvian progressive, Dr. Luis Alberto Sanchez in the January 1945 Inter-American magazine. The good-neighbor policy in the opinion of Sanchez is almost a war casualty, a victim of fear that our armed forces fight for democracy in the Old World while our tory diplomats betray it in the New World. These men have committed errors which, if not quickly corrected, may undo the good work accompiished by the Office of Inter-American Affairs, headed by Nelson Rockefeller for over 4 years. I have lauded Mr. Rockfeller's achievements as coordinator in my speeches of May 1 and September 20, 1944.

Latin-American dictatorships bolstered by us crush freedom of speech and religion, and freedom from want and fear. They ban legislatures and free elections, charges the Peruvian Sanchez, himself exiled to pro-labor Chile. This situation threatens continental unity and mocks our ideals. Expediency is the shameful excuse for our pressure on certain Latin-American countries, notably Argentina, and our appeasement of vicious tyrants in others. The war has further impoverished the poor and enriched the wealthy in Latin America, declares Dr. Sanchez. Living costs have skyrocketed with inflation, which is hard to control in poorly organized and largely illiterate lands. The common people have yet to receive material or moral benefits from the war. Sanchez says that unless we convince Latin America of the nonimperialistic aims of this war, we will have ploughed the sea. He suggests a Western Hemisphere charter and the setting of democratic standards which the American Republics would have to live up to before joining the United Nations.

The prolabor New York Post recently reviewed inter-American events of 1944, pointing to revolutions in six republics, unrest and economic troubles in all of them, charged persecution of Protestants, and expressed resentment of State Department support of dictators. The Post cited International Labor Office reports of "unspeakable" living conditions among the sickly and undernourished masses, asking how we can trade with people suffering such misery. The answer lies in a revised good-neighbor policy with even more emphasis on labor relations, diet, health, social welfare, and the lifting by cooperative efforts of living levels.

ROCKEFELLER AND LABOR

The Department of State should greatly enlarge its Division of International Labor, Social and Health Affairs, the new name for Dr. Otis E. Mulliken's small Division of Labor Relations, which I praised in my speech of September 20. This division might compile and publish a Who's Who in Labor and Social Welfare in Latin America to answer criticism of the lack of labor information and ties during this era of crisis. As I have stated before, such a book would prove an invaluable reference for the A. F. of L., C. I. O., and many Government agencies. I hope, moreover, that Mr. Rockefeller will see that labor attachés are sent to most of our embassies and to our consulates general in such growing industrial centers as Monterrey in Mexico and Sao Paulo, "the Los Angeles of Brazil."

PRAISE OF ROCKEFELLER'S APPOINTMENT

The brilliantly edited international daily, The Christian Science Monitor, which so ably reports the intrigues of Spanish falangism and Argentine fascism, is pleased with the selection of Rockefeller. The Monitor wrote that his 4 years as Coordinator gave him experience which "will be utilized to help rebuild the good-neighbor policy into an effective hemisphere program."

Sumner Welles recently wrote of Rockefeller that he is liked by Latin Americans and has devotedly served the ideal of inter-American solidarity. Mr. Welles hopes that Rockefeller will "arrest the disastrous recent deterioration in our relations." Edgar Ansel Mowrer feels that a conference to reformulate the good-neighbor policy and settle the vexatious Argentine situation is urgent. Mowrer adds that the Americas have not sacrificed for victory over fascism in order to permit Argentina to become a refuge for the tyranny of Madrid and Berlin.

The New York Post praised Rockefeller as "a capable, energetic, democratic young man" who has stressed social and economic aid, leaving liberals few grounds for criticism.

The naming of Rockefeller resulted in many eulogies in Latin America of C. I. A. A.'s educational, health, sanitation, and transportation activities, and of President Roosevelt's policies. A typical editorial saw the appointment as Presidential approval of Rockefeller's work and an indication of Mr. Roosevelt's desire to devote more attention to Latin American problems. The editorial termed "Rockefeller a dynamic young statesman who has worked for the welfare of all classes, truly a democratization of diplomacy."

Rockefeller told the Senate Committee on Foreign Relations last December that democracy must be a vital force constantly working for the well-being of the peoples of the Americas, and that we must find solutions which benefit all. He expects to heed congressional views, which is wise since Congress is far closer to the people than are our diplomats.

The New Republic denounced the choice of Clayton, Dunn, and Holmes as Assistant Secretaries, but was less critical of Rockefeller, saying in part:

> There is little doubt that Nelson Rockefeller will be able to do his present job better from within the State Department. There are indications that he has demanded a free hand, in which case it is pretty certain that he will insist on an improved system of reporting by our embassy staffs, which are such notoriously inadequate sources of information today, and that Latin-American affairs generally will be better off than now.

The Office of Inter-American Affairs under Wallace K. Harrison, coarchitect of Rockefeller Center, as Deputy Coordinator, will seek an appropriation for the next fiscal year. C. I. A. A.'s strictly wartime activities are expected to be gradually liquidated, and much of its personnel and program it is hoped will be integrated into permanent Government

agencies. However, many C. I. A. A. employees and officials will presumably quit Government, since they had little or no previous experience in the Latin American field and were hastily hired to do an emergency job. I am anxious as a member of the Appropriations Committee to see the best of C. I. A. A.'s social and economic work continued for as long as necessary to assure mutually profitable hemisphere cooperation and commerce.

ROCKEFELLER'S TEAM

Assistant Secretary of State Rockefeller as head of the Office of American Republic Affairs will have under him divisions for Brazil, Argentina, for the rest of South America, for Mexico, and the Caribbean and Central America, and a sixth of analysis and liaison. Much of the liaison will be with Mulliken's Labor Division and with Archibald MacLeish's Office of Public and Cultural Affairs.

I feel that The New Republic in criticizing Mr. Rockefeller in December for "exceptionally bad judgment in choice of staff" for C. I. A. A. was too severe. Several of his assistant coordinators have done excellent work, especially in the field of direct economic and social aid. Nevertheless, I have heard unfavorable reports about some high officials chosen by Mr. Rockefeller. Rafael Creamuno, Rockefeller's vice-chairman of the Inter-American Development Commission, is considered thoroughly reactionary. John Lockwood, selected by Rockefeller to be his No. 2 aide in State, is said to have little knowledge of the languages, people or problems of Latin America. Avra Warren, Rockefeller's chief aide in State as Director of the Office of American Republic Affairs, was vehemently assailed by PM and progressive publications for his policies as chief of the Visa Division in 1938–41. Warren was accused of denying visas to scores of European exiles with splendid anti-Fascist records and of admitting to this country many rich, reactionary members of the international white trash. Perhaps he merely carried out the orders of career tories like Grew and Dunn. In any case, Mr. Rockefeller would do well to have Warren transferred and persuade the highly capable and liberal Laurence Duggan to return to this work which he handled so well. Mr. Duggan has the confidence of liberals of the Americas and of many Members of Congress.

If Mr. Warren stays on, I trust he has profited from what he has seen of Latin American mass misery, from the sweltering tropical plantation gangs of Negroes to the shivering, ill-clad, hungry miners of the bleak Bolivian plateau. The Bolivian tin contract renewal offers this wealthy nation a chance to help Bolivia's wretched miners through labor clauses. Martin Kyne, Catholic liberal and C. I. O. member of the group probing Bolivian labor conditions, recently hit State Department efforts to betray Bolivian labor and benefit the tin tycoons. If Warren wants more data on this issue, he can get it from Dr. Ernesto Galarza, the crusading Mexican who heads the Pan American Union's Labor Division. Dr. Galarza risked his career recently in forcing our diplomats to study the tragic situation which culminated in the Catavi massacre. He won his fight, but unhappily a revolution in Bolivia brought to power totalitarian elements which need to be put under the same spotlight as the Argentine militarists.

Incidentally, Mr. Rockefeller might cooperate with the Treasury Department in helping to finance the war by forcing Bolivia's bloated tin tycoon Patino to disgorge some of his ill-gotten fortune, largest of any Latin American. Patino lives in splendor in the Waldorf-Astoria in New York City and is a notorious tax-dodger, as are his children, who married into the fascistic ranks of Europe's nobility.

Throughout the reorganized department, most officials come from prospercus backgrounds in the Northeastern States. The old-school-tie personnel policy has apparently become a habit in the State Department. But it must cease. Pacific coast and midwestern universities have been training men and women for years, yet the State Department has continued to recruit its officials from the Northeast. I will explain my remedy for this shortly.

ARCHIBALD MAC LEISH, SPOKESMAN OF DEMOCRACY

If for no other reason than his courageous stand on Spain, both in 1936–39 and before the Senate Committee, I approve the appointment of Archibald MacLeish to be Assistant Secretary of State for public and cultural affairs. Librarian of Congress since 1939, he has always opposed the fatal policies of sycophantic fellows like Dunn, who stood by while the Axis destroyed the Spanish republic and won its first great victory against us.

Probably I was the first Member of Congress to say publicly that Archibald MacLeish is the type of official whom we need in the State Department to counteract Wall Street betrayers of freedom. On March 25, 1941, I told this body that Mr. MacLeish is the ideal official to lead our cultural war for democracy. I pointed out that he won his spurs fearlessly defending Loyalist Spain, and that he believed in organized labor and in making the Americas a bulwark of democracy. MacLeish feels deeply about the problems of racial injustice, the exploitation of labor, and poverty like the poverty of Puerto Rico, about which Congress must legislate soon and drastically or face loss of prestige for our Nation in Latin America.

Sumner Welles, whose fame in Latin America rivals that of President Roosevelt and Henry Wallace, lauded MacLeish recently. Welles declared that nothing is more important than a full understanding of our foreign policy by the American people, and that only a drastic change in the State Department's public relations policy can bring this about. Welles charged that our former policy seemed to be to disseminate only such facts as the "omniscient" department deemed good for the people to know. Welles added:

Obviously no democratic control of the foreign policy of this Nation can be hoped for under such conditions. Mr. MacLeish is ideally qualified to reverse this trend. He has preached democracy. He also believes in its practical application. He will be an eloquent and liberal spokesman for the Department.

Friends of mine have had disillusioning experiences in trying to get information from the State Department's divisions of public and cultural relations, meeting stony silence, evasion, or delaying tactics, for which Michael McDermott was considered chiefly responsible. Now named a special assistant to the Secretary, McDermott is utterly unfit for any post involving freedom of the press, which he betrayed for years. He should be retired to well-earned obscurity.

Mr. MacLeish understands the issues at stake in the restoration of unity among the American republics. In 1938, he published in Fortune magazine articles on Argentina and Chile after visiting South America. His analyses are still commented on, being mentioned in December in New York by the visiting Latin-American women journalists brought here by the Office of Inter-American Affairs. He understands my resolution to break with Franco, since he knows the damage done to the good-neighbor policy to continued appeasement of falangism.

The Christian Science Monitor likes MacLeish and wants him to "let the winds of information and public opinion blow through the musty department corridors," and is glad that he plans to make cultural relations the "friendship of peoples for peoples." The Monitor in December charged that our foreign policy has not been "frankly, continuously or intelligently expounded to the American people," and asks for full press frankness to insure public support or needed criticism of department plans. The paper wants a diplomatic chief of staff to balance the combined Army-Navy Chiefs of Staff.

MacLeish will be keenly interested in Waverly Root's Secret History of the War which supplies monumental evidence on the terrible price paid for our diplomats' stupidity in stubbornly clinging to appeasement of Japan, Vichy, and Spain, disastrous blunders against which I pleaded in vain for years. Root ascribes this folly to State Department misinformation, short-sightedness, small-mindedness and zeal for self-justification. Journalists like Root have penetrated "the pretense and hypocrisy with which governments hide reality from their peoples." He wants writers to war ceaselessly against secret officialdom, for if the latter wins, "there will be no more journalists in the future, only scribes setting down slavishly what they are told to write."

Archibald MacLeish is one of the outstanding spokesmen of our way of life, and as such will doubtless seek to publicize notable examples of democratic achievement everywhere. Of special interest is the new democratic ferment in the coffee Republic of Guatemala, which in 1944 ousted its benevolent tyrant and is now engaged in a remarkable experiment. New ministries of labor and public works, health, and welfare, and of national economy are now functioning. A new constitution is being drafted

by the reform regime with provisions for votes for women, greater rights for labor and the exploited and landless Indian majority, and full freedom for all. The Guatemalan Army's new oath pledges soldiers to oppose anti-democratic officers, something unique. A Guatemalan reform leader in New York in January credited much of this democratic ferment to our information program, and said that the changes in governmental structure and plans were influenced by the sanitation and basic economy programs of C. I. A. A.

Mr. MacLeish will want his staff to study and publicize many movements for human betterment on which the peace must be built. There are many experts and scholars able to help him. Among them are Robert J. Watt and Boris Shishkin of the A. F. of L.; Mrs. Maria Astigarraga Hoge, California lecturer; Hubert Herring of the Committee on Cultural Relations with Latin America; Jacob Potofsky and his associates of the C. I. O. Committee on Latin American Affairs; Prof. L. A. Mander of my State university in Seattle; Prof. J. Fred Rippy, economic historian of Chicago; Dr. A. Curtis Wilgus of the Latin American Economic Institute, to which I belong; and Professors Bolton, Simpson, and Sauer, of Berkeley.

John S. Dickey is director under MacLeish of the Office of Public Affairs. Dickey attended Dartmouth with Rockefeller and served with him in C. I. A. A. The New York Post hails MacLeish's appointment and terms Dickey "one of the most promising young liberals in the whole State Department." But the Post wonders how MacLeish, Dickey, Wilder Foote, and Homer Byington as the new team for publicity will work with the unpopular, reactionary, and superfluous McDermott. The paper in January carried a blast by Philip Wylie, the noted author who served with MacLeish in the Office of Facts and Figures in 1942, at McDermott's incompetent set-up which for years kept news from our people. Wylie suggests that Stettinius fire about one thousand "uppah clawss" State Department employees and hire a thousand who know what American voters think, as well as what can be traded advantageously with Latin America.

I. F. Stone, the tireless contributor to PM and The Nation, who rivals Drew Pearson as an exposer of spiritual wickedness in high places, wrote a pointed editorial in PM in December captioned "Let's end hush-hush diplomacy." Stone wants our diplomacy to be widely discussed and, if necessary, sharply questioned. This would strengthen our position. Latin-Americans feel better about the future when liberals in and out of Congress concern themselves with our diplomacy. MacLeish as an expert on human feelings and aspirations knows this to be true.

MAC LEISH AND CULTURAL COOPERATION

Dr. Bryn J. Hovde, Chief of the important Division of Cultural Cooperation under MacLeish, is apparently one of the few examples of new blood and a fresh, practical viewpoint resulting from the reorganization. Mr. Herschel Brickell has been promoted from senior cultural-relations officer at our Embassy in Bogotá to help Raymund Zwemer handle cultural cooperation with Latin America, long the chief concern of Hovde's Division. I do not know whether Brickell's new book deals with the dire need for mass education in health, housing, and agricultural and industrial skills, which should be a major aim of our activities abroad. I hope that Mr. Brickell and Mr. Zwemer will make this their chief interest and will give labor and progressives a large voice in these matters, since workers are the majority of the people of the world.

In any case, Dr. Hovde knows a great deal about housing, social welfare, and cooperatives as means for raising standards of living. He wrote several volumes on Scandinavia, which has sent thousands of its sons and daughters to the Evergreen State of Washington. Governor Wallgren, Senator Magnuson, Paul and Ernest Olson, and a host of other leaders of labor and liberal politics in my State are of Scandinavian descent. They have helped make Washington the most progressive State in the Union, with the most progressive delegation in Congress. Bryn Hovde is a practical former professor who for years directed public welfare and then housing in the great labor city of Pittsburgh. It is gratifying to see a specialist on basic problems head cultural cooperation, since he knows the needs of the common man.

Our cultural attachés and visiting professors might be chosen for Latin America from among those willing and able to produce a useful book like the new volume Costa Rican Life, by Profs. John and Mavis Biesanz.

The American Story is the title of MacLeish's latest book, a collaboration with Muna Lee, wife of the dynamic laborite whose party swept the elections in Puerto Rico in November, Luis Munoz Marin. The Christian Science Monitor captioned its laudatory review "The common experience of the Americas." The novelist of racial understanding, Howard Faust, whote in PM that these 10 radio plays contain a very real good-neighbor policy which promises well for future hemispheric unity. Norman Corwin, C. B. S. producer-director of radio plays, calls MacLeish the first top-rank United States poet to produce by radio gems of lyricism and historic depth. The reviewers agree that MacLeish has brought stirringly to life their past for both North and South America.

DEMOCRATIZING THE STATE DEPARTMENT

Coronet magazine, in October 1944, published my article Why Not a West Point for Diplomats? Now is a good time for all departmental and Foreign Service personnel to be put under civil service and for us to plan a foreign-service academy. Let us recruit Americans of ability, regardless of sex, race, or ancestry. Coronet might let the Department study the entries in its $1,000 contest for the best letters on this topic. Since foreign policy is the key to preventing further world strife, I propose to introduce legislation to put the State Department under civil service and to create a foreign-service academy.

The Inter-American for January 1945 contains a letter from a Californian who favors rigorous training for young Americans for Latin-American service with either Government or business. Markets and friendship are at stake, and we must improve our training centers or create a new special institute. He urges that the teachers fluent in the languages and with years of experience and residence there be paid well. Then we can hope to meet the competition with other powers for markets and friendship. All such thinking is in the right direction.

If we had had a democratic Department of State before Pearl Harbor, it would have heeded my warning of March 25, 1941, to abandon expediency lest the Axis prepare unpleasant surprises for which we might be unwarned and unprepared. If we had a democratic department today, it would at once cease appeasing dictatorships in Spain, Portugal, and Latin America, and would create an enlightened, modern, liberal foreign policy suitable for the world's greatest democracy.

Julius C. Holmes, assistant secretary for personnel and administration, has a chance to disprove the charges made against him by democratizing the Department. Not till this is done will we have a sound foreign policy as our first line of defense in the troubled years ahead. Our diplomats must be men able to understand the liberal aims of our people. Personnel is the key, as I pointed out in the hearings on the National War Agencies appropriation 2 years ago. It is up to the A. F. of L. and the Political Action Committee to make known to the Department labor's aims, so that the common man will come into his century as in Henry Wallace's memorable address.

General Holmes can demand the selection of personnel for the departmental and foreign services which will bring this about. Every embassy should be staffed with attachés drawn from the ranks of women's groups, labor unions, and small business. We need representatives abroad who really have worked to improve our way of life, not more men from Harvard and the Boston and New York elite.

An excellent blueprint for further reorganization is in the little volume entitled "A Modern Foreign Policy for the United States," by Joseph M. Jones, who quit the Department in despair to join

THE OTHER TOP OFFICIALS

Progressives in Congress should periodically ask Under Secretary Grew and the Assistant Secretaries about the progress made in improving the Department's efficiency and in democratization. Will Clayton, whose record contains unsavory exploitation of North and South American labor in his cotton empire, should be queried regularly about labor's rights in our Government's foreign deals, and about cartels. An excellent letter on Clayton from James Patton, of the Farmers Union, appears in the Senate hearings of December. Dunn should be influenced to draft the note breaking relations with his fascist friend Franco. And incidentally, I note that the jobs of

both Dunn and Holmes are supposed to be temporary.

The New Republic says of the tory members of the new team that they are men who cannot work with Soviet Russia, a labor government in Britain, or new republican regimes in Spain, Portugal, or Brazil "except on terms of stiff formality, hostility, or contempt." We can only hope that this view is not justified, and see that our diplomacy deals firmly with Spanish and Argentine fascism, and fairly with the popular movements sweeping the world.

Liberals may be suspicious of Dunn, Clayton, Grew, and Holmes. But they approve of many of the new advisers and assistant chiefs of ability and progressive ideals. Some of them are Dean Grayson Kefauver and Prof. Graham Stuart, of Stanford; George L. Warren, the expert on refugees; Dr. Roland Hussey, Los Angeles specialist on Latin America; Dr. Dudley Phelps; the liberal molasses magnate Charles Taussig; Dr. Kenneth Landon, a Quaker expert on southwest Asia; and Burke Knapp, a former Rhodes scholar from the Pacific Northwest. To get more men like these, I would like to see all salaries raised sharply. It is urgent that we put our best young men and women in the State Department in 1945–46.

As the bloody battle against Japan continues, let us hope that Mr. Grew is seeking to persuade war-weary Soviet Russia, despite the loss of millions of lives, to help us defeat Japan. We may wish to ask Mr. Grew if it is still planned to spare Emperor Hirohito from death by bombing or post-war execution as a war criminal. Can Mr. Grew say whether killing Hirohito now would not save thousands of lives and billions of dollars by shortening the war? Could bombing Hirohito increase Japanese fanaticism and resistance, already at their peak, or would the removal of the head of Japan's state religion of world conquest disrupt Nipponese civilian and military morale? Does Mr. Grew expect to use Hirohito after victory to crush labor and leftists in Japan who might seek to set up a republic, in the manner of British Tory intervention in hapless Greece? The Under Secretary can make up for some of his errors while Ambassador to Tokyo by renouncing expediency entirely.

Marquis Childs put it well when he said that the times cry out for men unafraid to think along bold new lines. I hope that the new team meets this challenge. President Roosevelt promised to replace any who betray democracy, and liberals should help the President watch those with poor records. I. F. Stone put the liberal postion clearly by stating that we have great faith in President Roosevelt, but realize that he does his best when prodded.

OUR AMBASSADORS TO LATIN AMERICA

Charles Anderson Gauld, a specialist on Latin-American labor and economic development, who comes from my State of Washington, suggests using the qualifications of the Honorable Morris L. Cooke as a yardstick for measuring prospective Ambassadors to Latin America. Because of the growing importance of economic forces, we need envoys able to recommend sound, cooperative steps whereby our capital, technicians, and equipment can join those of Latin America to develop mutually profitable trade and enterprises.

Morris L. Cooke has served our Government with distinction as an engineer of broad vision and practical achievements. He is no appeaser of dictators and wears no old school tie. In his youth Mr. Cooke worked as a machinist and in a shipyard and is prolabor. His rise as a consulting engineer was not due to marrying wealth, the success formula of many career diplomats, but to hard work and ability. Mr. Cooke's volume, Brazil on the March, is a real contribution to inter-American economic cooperation and points the way to the building of markets which we will badly need to avoid post-war unemployment, Charles Gauld informs me. If all our ambassadors in future are chosen from among men of Morris Cooke's caliber the good-neighbor policy will pay dividends to the entire continent.

THE AMERICAN COMMITTEE FOR SPANISH FREEDOM

I do not wish to close without reviewing the work of the American Committee for Spanish Freedom, which seeks to arouse Nation-wide support for my resolution to break with the Nazi-Falangist regime of Franco. This step would speed victory over both nazi-ism and Argentine fascism, help guarantee lasting peace, and do wonders for the good-neighbor policy.

The committee, which is headed by the Methodist bishop of Boston, Lewis O. Hartman, is located at 55 West Forty-second Street in New York. There Miss Jean Campbell helps Allan Chase and other experts on Franco and Falangism wage a campaign to free Spain. I would like to mention some of the authorities on the board who resent further appeasement of Franco because of the deep injury to hemisphere unity.

Perhaps the foremost is Dr. John A. Mackay, president of Princeton Theological Seminary, and an outstanding liberal leader of my church. Dr. Mackay studied at Scottish and Spanish universities before lecturing throughout Latin America. He has written several fine volumes involving spiritual and social problems in the other republics. So also have Dr. Samuel Guy Inman, of the University of Pennsylvania, and Dr. W. Stanley Rycroft, head of the Committee on Cooperation in Latin America, whose news letter exposes Falangist propaganda against freedom of religion. Kenneth Leslie, editor of the Protestant magazine, is on the board. So is Dr. Frederick A. Blossom, of the Library of Congress, a scholar and veteran of the progressive movement who wants to see a liberal lobby established in the Capital to do research for the liberal bloc in Congress. Finally, there are Benjamin C. Marsh, the tireless director of the People's Lobby, and Congressman A. CLAYTON POWELL.

And I must mention another committee sponsor, the noted New York radio commentator William Gailmor, with whom I spoke on Spain December 20 before the Citizens Committee of the Upper West Side in Manhattan. On January 2, I addressed the mass meeting organized in Madison Square Garden by the Nation Associates, labor and liberal groups, and Catholic laymen like Prof. Francis McMahon, of Chicago, and James B. Carey, of the C. I. O. The meeting was told that the war will not be won until Spain is liberated.

The Nation Associates, of which Freda Kirchwey and Alvarez del Vayo are leaders, plans to have its anti-Franco committee join forces with the American Committee for Spanish Freedom. This will involve some prominent people like Senator Guffey, whose friend, the progressive publisher of the Philadelphia Record, David Stern, is staunchly anti-Franco and alert to State Department tricks. C. B. Baldwin of the P. A. C.; Rockwell Kent, the famed artist; Bruce Bliven, of the New Republic; and Prof. Stephen Duggan, father of Laurence Duggan, are others.

The committee is delighted that several Latin-American Republics, including Cuba, are studying congressional resolutions to break with Franco. Guatemala recently severed diplomatic relations with Fascist Spain. Habana University students threaten to strike unless the Fascist Spanish ambassador is expelled from Cuba for his antidemocratic intrigues. Also, French progressives have formed a committee to help Loyalists in France and to overthrow Franco. It now remains for the United States Congress to set an example.

If we wish to prevent a third world war, we must see that Fascism does not shift its base from Berlin to Madrid and Buenos Aires. We must help restore the Spanish Republic, and help destroy dictatorship everywhere. The world cannot exist half Fascist and half free.

Pvt. Clifton Jarnigan

REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. JENNINGS. Mr. Speaker, "Killed in action"—these fateful words appeared above the picture of a private soldier in his home-town paper. Beneath the picture is this short recital:

Pvt. Clifton Jarnigan, son of Mr. and Mrs. Clint Jarnigan, Route 3, Clinton, was killed in action February 5 in Germany.

In these brief words are compressed the supreme sacrifice of this 18-year-old Anderson County, Tenn., boy and the tragic sorrow of his parents, his brothers and sisters.

Jarnigan was inducted on July 5, 1944, and had been overseas about 2 months.

Every member of our armed forces is a potential hero. In this war death is no respecter of persons—generals, colonels, majors, captains, and lieutenants have mingled their blood and given their lives side by side with the noncommissioned officers and the private soldiers.

In brave deeds beyond the call of duty, men and boys from every rank have

written their names high on the scroll of fame. And countless thousands have gone to their death in heroic and selfless sacrifice, unheralded and unsung. And of each and every one of them it may be said, "He is dead on the field of honor."

We know not the circumstances under which Pvt. Clifton Jarnigan gave his life. When the command to advance was given, it was—

His not to make reply,
His not to reason why,
His but to do or die.

With the dews of youth yet damp upon his brow, he may have died instantly. If he was fatally wounded and lingered in pain and anguish before death in mercy came, we may well think that before his ears became cold and dull he heard again his father's voice, and felt once more upon his wasted brow his mother's loving kiss.

To his father and his mother, to his brothers and sisters, to all who knew and loved him, he is from henceforth but a memory. They may call but he will not answer; they may reach out but they cannot touch him. This boy is but one of the thousands whose dead and broken bodies will pave the roads to Tokyo and to Berlin.

From the time this boy was large enough to work he was employed by Judge T. L. Seeber, county judge of Anderson County. Judge Seeber is a veteran of World War No. 1, and I insert as a part of these remarks a letter from him on the death of this brave boy, condemning the War Department's practice of putting 18-year-old boys into combat without 1 year's training, and certainly without the adequate training Congress, the boys, and their parents were assured they would be given:

ANDERSON COUNTY,
STATE OF TENNESSEE,
Clinton, March 3, 1945.

Hon. JOHN JENNINGS, Jr.,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN JENNINGS: Our people here are very much disturbed over the fact that the 18-year old boys are being rushed into the front lines of battle in Europe with practically no training at all.

On behalf of the mothers of this district, I am asking that you get with your colleagues and start a fight that will stop this outrageous practice.

I am enclosing a clipping taken from the Knoxville News Sentinel, dated March 1, 1945, in which General Marshall is purported to state that a boy can receive sufficient military training in a period of 13 weeks. Any man who has ever been in the Army knows that 13 weeks is not sufficient training for a lad of 18 years to go into combat against the steel helmeted Huns of Germany.

I am enclosing a picture of a boy who has worked for me most of the time since he was big enough. He was just an awkward, country lad, who received very little education and knew nothing of the world outside of a few miles radius of his home. The footnote on the clipping tells a true story of what so often happens to such kids who have received only a few weeks' training.

There is something wrong with a Nation that has to rush its children into the front lines at the age of 18, with 13 weeks' training.

Yours very truly,

T. L. SEEBER.

Americans Betrayed

REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. POWELL. Mr. Speaker, on Monday, March 12, Mr. Thomas E. Dewey, "using 22 pens," signed the fair employment practice law passed by the Legislature of New York State, which will go down in history as one of the greatest advances in law making that that State has ever known.

The approval of this measure came from every political, religious, social, educational and trade-union group in New York State. The members of the Democratic Party voted for it 100 percent and the vast majority of the Republican Party did likewise. Protestant, Catholic, and Jewish church groups supported it wholeheartedly. In truth, it received the greatest support that any legislation had received in the history of the State of New York.

I rise to speak today because a few perverted un-Americans have distorted the truth concerning this act. It is high time that we start winning the war at home as well as abroad; that we make America safe for democracy as well as the world. It is my intention, therefore, to refute these distortions. Fortunately, there are only a few such souls left in this Nation and their number is rapidly dwindling. They are the buffoons of American life, but they are still so twisted, so perverted, so vicious, so malicious, so pernicious, so Fascist that they must be revealed for their un-Americanism.

Any fair-thinking American will respect another's point of view even though he radically disagrees, but none of us will respect a point of view that is based upon distortions.

Distortion No. 1 is that the New York State Fair Employment Practice Act was a betrayal of the white Americans of New York. The Senate of New York State is composed entirely of whites and the lower house is 97 percent white; yet these two houses virtually unanimously passed the State F. E. P. C.

Distortion No. 2 is the use of Biblical quotations to support race hating, and other forms of antireligious prejudice. I am a minister of the Gospel, pastor of the largest Protestant church of this country and the second oldest Baptist Church in the city of New York. From the depths of my religious convictions I state that anyone who is vicious enough to use the word of God to support hatred will be dealt with by a God of vengeance and that God might use the people to execute His own wrath.

Distortion No. 3 is the statement that the object of the F. E. P. C. was to persecute white Americans and drive them from the business world. Recently 300 employers were chosen at random by the National Urban League for a survey. They were employers who had never used Negro workers. They now use such workers in all capacities. They were asked if they would retain Negro workers in the post-war period. Two hundred and forty-two of them said that they definitely would because Negro workers are just as good as workers of any other race. Henry Ford proved this long before this war or the concept of a F. E. P. C. was born.

Distortion No. 4 states that the white gentiles of this country still have some rights left. This is true. Fortunately, the best thinking, and, therefore, the majority of the white gentiles of this country, have consistently fought for, not the rights of whites only, but for the rights of all Americans. Only a limited few who are vicious disgraces to the white race and any other race have continued to try to make America a stewing pot instead of a melting pot, but they have failed.

Distortion No. 5 is one of the most vicious distortions ever conceived. It is stated that 98 percent of the men dying in this war are white gentiles. Over 30,000,000 of those already killed came from two oriental countries. The American men whose lives have been placed upon the high altar of patriotism came from every race, color, and creed in our national life.

Distortion No. 6 is that the present temporary F. E. P. C. has harassed white Americans. If it had not been for the work of the temporary F. E. P. C. over 10 percent of this Nation would not be engaged now in turning out the material of warfare. American workers, black and white, Jew and gentile, Protestant and Catholic, have given to our Nation the armament for the greatest Navy and Army that any country has ever possessed.

The truth of it is the people are on the march and they are going to crush every Fascist, not only in Europe and in Japan, but also in America. The people, together, united, are not going to stand much longer for any rabble-rousing, demagogic, son of a Fascist to continue to besmirch the name of these our United States with outright, downright, filthy distortions.

Man's Best Friend

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1945

Mr. LEMKE. Mr. Speaker, not only is the dog man's best friend in peacetime, but he has proven himself as man's best friend on the field of battle. It is because of the splendid service rendered to our armed forces on many foreign battlefields that many people feel that the dog has now earned his freedom from the cruelty of vivisection.

No harm can be done to hear all sides on this issue. It is for that reason that I include in my remarks the following article by Lionell Calhoun Moise:

America's valiant canine soldiers, it seems, may win a fifth freedom for all the oppressed and hapless dogs of the country, freedom from cruel and useless vivisection.

It's a very necessary and important freedom, too, as you know if you read an article titled "Torture—the Reward of Man's Best Friend," which appeared in the American Weekly October 29 last.

The article told of a bill pending before Congress which would specifically prohibit the vivisection of dogs in the District of Columbia.

The bill has again come up before the new Congress just convened. And this time, it has the support of countless humanitarians who are determined that America's canine war heroes shall at least be protected from the indescribable tortures of the vivisection table.

How the public feels about this particular phase of the matter is attested in a flood of letters that have poured in upon Congressmen from pet-lovers throughout the Union.

Copies of many of these letters were sent to the American Weekly.

"My husband's life," writes the wife of an Illinois soldier, "was saved by an Army dog who found him while he was bleeding to death in a Philippine jungle. A Jap sniper kept shooting at the dog, but he wouldn't leave. Finally, the Jap hit him, but the dog remained until help came.

"Fortunately, this dog survived. Yet I have to face the fact that some day, after the war is over, this noble animal may become just another victim for the vivisectionists—a quivering bundle of pain to be carved and probed and mutilated until merciful death comes at last.

"Something just has to be done about this terrible business, and the time for Congress to do it is now. Otherwise, there are going to be a lot of soldiers who will have something to say about it later. And, while our war dogs don't have a vote, their human buddies have."

Many other letters of like content could be quoted—all showing that the loyal service of the K-9 corps in the current war has awakened people anew to the unique qualities of man's most faithful friend.

Some of the writers—though not many—are doctors. Generally, the medical profession is on the side of vivisection, contending that it is necessary to experiment on animals in order to save human lives, and that, in most cases, the subjects are anesthetized and are insensible to pain during the vivisection process.

This is unanimously disputed, however, by officials of antivivisection societies, who particularly cite reports in medical journals describing experiments in which the animals are kept alive for long periods and subjected to repeated operations.

Included in this category are experiments in bone and skin grafting, in the removal of glands and organs, and in operations on the brain, nerves, and eyes. The most ardent defenders of vivisection concede that, in research of this type, the unfortunate victim suffers prolonged and excruciating torture, often extending over weeks and months.

The position of the antivivisectionists is expressed by James P. Briggs, of Washington, D. C., president of the National Society for the Humane Regulation of Vivisection, which sponsored the pending measure.

"The torture of animals in the name of science," he says, "will never be stopped except by law.

"Just recently the general public has begun to realize that there are no such laws in the United States—that vivisection is actually regulated only by the vivisectionists themselves.

"This understanding can be credited chiefly to that great humanitarian, Mr. William Randolph Hearst, who, through his newspapers and magazines, has been so influential in promoting the cause of kindness to our animal friends everywhere.

"Of course, it is not enough to apply that prohibition only to the District of Columbia. But it is a start in the right direction, and one that I am confident will lead to the eventual outlawing of cruel, unnecessary, and unregulated animal experimentation throughout the country."

The proposed measure was introduced in both Houses last year. In the present Congress it was introduced by Representative WILLIAM LEMKE, Republican, of North Dakota.

To aid its passage, he urges all humanitarians to write their Congressmen. And, he adds, it may be well to remind them of the canine heroes who will return to homes from which a loved master or mistress has mysteriously vanished.

Such pathetic orphans of war will need special protection against the fate that has overtaken many another "lost" dog—the noose in the dark, the sinister scent of the soundproof kennel, the horrible and pitiful awakening beneath the vivisector's knife.

Canol Project Finally Abandoned

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. HARRIS. Mr. Speaker, one of the most significant chapters in our production program to provide our gallant men on their march to victory is the Canol development by the Army at Whitehorse, Canada.

The War Department announced a few days ago this costly project would be terminated June 30. It is now revealed that the date for shutting down the Canol project has been moved up from June 30 to April 1. It is well understood the War Department had good intentions early in the war in establishing this project regardless of the cost to the taxpayers of this country. The judgment to construct the Canol project was questioned from many sources. The attitude of those responsible for this tremendous and costly development has, as time has shown, been most unwise.

It is claimed by those who advocated the establishment of the Canol project that it was an absolute necessity to provide refined products in that area for our defense. The difficulty of getting the materials and supplies in the Whitehorse area was tremendous. Those who thought such an adventure wholly unwise contended that it would not provide sufficient gasoline and oil to justify the undertaking.

The result has been that $134,000,000 of the taxpayers' money has gone into this project and been completely wasted. It is a travesty on our people who will pay for this unfortunate experience.

In addition to costing the taxpayers of this country $134,000,000 and perhaps more, hundreds of men skilled and experienced in the production and refining of petroleum have been used in connection with this project and thereby made no contribution to the war program. It is tragic to think that these men could have been used to a tremendous advantage and have during all of these months been frozen on this worthless project. The petroleum industry, the refiners throughout the country, have been crying for men and I am advised that had these men on the Canol project been permitted to give their time and efforts in the refineries of this country, it would have increased the production of 100 octane by several thousand barrels per day.

Even if such a costly adventure had been justified early in the war, millions of dollars could have been saved by the taxpayers of this country and our manpower shortage partially alleviated by its abandonment when it became obvious that no worthwhile contribution to the war could possibly be made. There could be no justification for the continued waste of money and manpower, when there was no longer a threat of any enemy invasion more than 2 years ago.

The question may well be asked why we cannot liquidate the project, and at least salvage a large part of the money expended. It is well known that Canada has an option to buy this property at its appraised value, but it is hardly thinkable that even Canada would pay any substantial amount for a project whose value would be practically nil compared with the cost. Certainly in view of the limited production yielded from this project, no one would want to pay a substantial sum for it.

It seems to me that responsible persons should give a thorough accounting to the Congress and to the people of this country in connection with this project, and we should give immediate consideration as to its disposition and the possibility of realizing even a small percentage of the millions of dollars unjustly and unwisely spent.

The Big Bankers and Bretton Woods

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 15 (legislative day of Monday, March 12), 1945

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able address entitled "The Big Bankers and Bretton Woods," by Rev. E. A. Conway, S. J., of the Social Action Department, National Catholic Welfare Conference.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Bretton Woods agreements on an international bank and a monetary fund have been presented to both House and Senate.

Already the lines are forming for a fierce debate. The outcome of that debate will go

far toward revealing how the general Dumbarton Oaks plan will fare when the final treaty is submitted for ratification.

Opposition is coming chiefly from the big bankers, through the American Bankers Association. The association, while favoring the international bank, is widely propagandizing against the international monetary fund. In favor of both the bank and the fund are the Farm Bureau, the National Grange, the Farmers' Union, the A. F. L., and the C. I. O.

In anticipation of the coming debate on the economic questions affecting world peace it might be profitable to recall one of the most important sections of the recent bishops' statement on international order. Heretofore this section has not received the attention it deserves. In its report, Judging the Dumbarton Oaks Proposals, just off the press, the Catholic Association for International Peace puts special emphasis on the passages which the bishops devote to the economic question.

BISHOPS ON STEWARDSHIP

The bishops declare: "Nations rich in natural resources must remember that ownership of property never dispenses from the social obligations of stewardship."

To what nation on earth is that sentence more applicable than to the United States?

The bishops continue: "Nations gifted with inventive and productive genius are obligated to serve the reasonable needs of other nations. Nations should open, under effective guaranties, world lanes of commerce and world avenues of communication to all law-abiding countries. Protective national legislation for legitimate national economic interests must not impede the flow of international commerce and the right social function of international exchange."

The Bretton Woods conferees urged that in addition to implementing the specific monetary and financial measures which were the subject of the conference, the participating governments should agree on ways and means of:

1. Reducing obstacles to international trade and promoting mutually advantageous international commercial relations.

2. Bringing about the orderly marketing of staple commodities, at prices fair to the producer and consumer alike.

3. Facilitating the harmonization of national policies of member states designed to promote and maintain high levels of employment and progressively rising standards of living.

Until these objectives are attained, objectives the bishops have emphasized, the political measures outlined in the Dumbarton Oaks plan will not avail much.

THE AMERICAN DOG IN THE MANGER

We would be well advised to watch carefully how the principles outlined by the bishops are heeded in the coming discussions. And we would do well to remember that no nation violated these principles more flagrantly during those years in the 1920's when the conditions that contributed to the rise of Hitlerism were developing.

We then had about one-seventeenth of the world's population. We occupied about one-twentieth of the earth. Yet normally we produced more than two-thirds of the world's oil, three-fifths of the world's corn, more than half of the world's cotton and lumber, and far more than our proportion of the wheat, livestock, and coal of the world. We not only produced, but we possessed, an overwhelming proportion of the automobiles, trucks, telephones, bathtubs, and radios in the world.

Undeniably, we were "gifted with inventive and productive genius, with which we were obligated to serve the reasonable needs of other nations," to quote the bishops. We should have "opened world lanes of commerce * * * to all law-abiding countries." That was common sense as well as good morals, because it is neither reasonable nor moral for one-seventeenth of the world's population to use up nearly half of the world's oil, corn, cotton, lumber, and so on.

But somehow, after the First World War, we became sold on the idea that our prosperity depended on our building tariff walls so high that would-be competitors could not get their goods into our land. Other nations, too, built up their tariff walls, and tried to make themselves economically independent, but succeeded only in aggravating international frictions.

A LESSON WE MUST LEARN

Are the big bankers just a new breed of Bourbons, who forget nothing, neither do they learn anything? Will they try to make us repeat the mistaken foreign trade policy which contributed to the depression of the thirties, and helped to bring on the Second World War?

Today the United States is even more predominantly the wealthiest, the most productive, and the most inventive nation on the earth. Our obligations to the rest of the world have grown correspondingly. After this war we shall be like a poker player who has won virtually all the chips in the game. Either we must take the other players' I. O. U.'s and distribute some chips among the other players, or the game will break up. And if the game of international trade should break up, we would experience the worst depression in world history, and the rise of a new crop of dictators to take advantage of the miseries of men.

The debate in Congress on the Bretton Woods agreements will bear watching. Let's watch with one eye on the bishops' statement of principles governing the "social obligations of stewardship."

Bretton Woods Agreement

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 15 (legislative day of Monday, March 12), 1945

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Samuel Grafton and published in the Philadelphia Record of February 27, 1945, and an editorial from the Milwaukee Journal of February 14, 1945, both dealing with the subject of the Bretton Woods agreement.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record of February 27, 1945]

I'D RATHER BE RIGHT

(By Samuel Grafton)

A number of American bankers want us to kill the most important half of the Bretton Woods agreement. They do not want this country to put $2,750,000,000 into a world stabilization fund. They say it would be risky. They say we might lose our money. And, to be sure, $2,750,000,000 is no pittance, or tip. That is an impressive amount of dollars. It is—how shall I put it, to show how truly vast it is?—why, it is the amount we spend every 10 days to keep the war going.

We might lose part of our $2,750,000,000, the American Bankers' Association says, if we invested it in a world stabilization fund to keep the peace going, not for 10 days, but for a hundred years. It seems fairly peculiar that no one worries about whether a General Sherman tank is a gilt-edged investment, or about the amortization rate on an antiaircraft gun, for it has none. And who will pay for the smashed landing boats at Iwo Jima? I leave out the question of the smashed lives, for they are carried in a separate account.

A MAINTENANCE FUND

The bankers are not convincing when they talk about the "risk" of putting something less than $3,000,000,000 into a world stabilization fund to insure a peace which will have cost us more than three hundreds of billions of dollars to buy. The next peace will be the most expensive property the American people will ever have bought.

Certainly it is not an extravagant suggestion that we put an amount equal to less than 1 percent of the purchase price into a maintenance fund to keep the property in good condition. It costs that much, or more, to keep any property running, just to do an occasional paint job, and keep the sidewalk clean.

WERE WE SAFE?

But suppose we don't do it? Would that be safe? We didn't do it last time. We didn't set up a world stabilization fund after the last war. Did we avoid a "risk" thereby? Yes, if the bankers' committees are right in their present argument. We must have been very safe after the last war, because we didn't take any wild chances with a world fund. But I turn to a 1941 publication of the Council on Foreign Relations, entitled, "Dollars in Latin America," and I find a table telling about American bonds on which the world had defaulted. As of December 31, 1939, the last year of approximately normal business, the world had defaulted on $3,335,000,000 of our bonds, an amount almost $600,000,000 greater than the amount we are now asked to put into a stabilization fund.

It is a matter of simple historical fact that these bonds were sold to Americans by substantially the same interests which today declare that a world stabilization fund involves a wild risk.

There was no stabilization fund last time; oh, no, nothing dangerous like that. We played it safe. So safe that by the end of 1938, 77 percent of our Latin-American bonds were in default while 45 percent of our European bonds were in the same unhappy condition. A chief reason for default was the violent gyration of foreign exchange values, so that in one year a South American country might have to put up 2 pesos to get a dollar with which to pay off, and in another year 5 pesos for $1.

After a while this becomes monotonous, and you stop putting up pesos.

WHAT IF WE FAILED?

A world fund would tend to keep all currencies level, and even. We are told it might fail. What if it did fail? Even so, we would lose rather less than last time; while if it succeeded the next generation might save a handsome sum on tanks, ships, planes, and other such costly items.

It is true that the banking interest might lose control over the trade in foreign exchange; one man's safety is another man's poison. But if we are going to lose $3,000,000,000 again let's lose it gloriously, this time, in a bid for a stable world; instead of losing it sordidly and privately, and without dignity or grace or greatness.

[From the Milwaukee Journal of February 14, 1945]

RATIFY BRETTON WOODS PROPOSALS

The Bretton Woods proposals for an international bank and an international fund to

facilitate rebuilding of war-ruined industries and to encourage consequent revival of world trade must be accepted by each of the 44 governments represented at the conference, if they are to participate.

Without acceptance by the United States and Britain and Russia, it is doubtful that the bank or fund could prove effective. It is for this reason that President Roosevelt has twice urged Congress to take the lead in ratifying the Bretton Woods proposals.

The arguments for ratification seem overwhelming, with the objections running more to details than to principles. The feeling of Bretton Woods proponents is that if the United States starts quibbling over details, and sets a pattern for other nations to quibble, the entire work of the conference may prove in vain.

No one, even with the greatest optimism, believes that the bank or fund would solve all, or even most, of the problems of foreign exchange and international trade. But the proposals offer hope that some difficulties can be minimized.

In this country, and in England, the principal objections come from bankers, though not from all by any means. Some of the best financial men advocate ratification of the Bretton Woods proposals. Part of the hostility is merely opposition to anything new. Wall Street, for instance, opposed the Federal Reserve System when it was first proposed. One writer has said there is opposition by some bankers who have a kind of "dog in the manger attitude and no program for the revival of international lending, but hate to see the Government do it."

In view of the billions of dollars unwisely lent abroad by bankers in the twenties, and subsequently lost by American investors, it does not seem reasonable that the objections of these gentlemen should be given great weight.

A good many of the suggestions of the American Bankers' Association are thoughtful, but—since they agree in principle with the Bretton Woods outline—it would seem wiser to ratify the proposals as the 44 nations worked them out than to risk losing all by starting a confusing series of amendments and changes.

The Bretton Woods proposals, as the President has pointed out to Congress, are not panaceas, nor do they stand by themselves. They are part of several closely related plans for international cooperation—like U. N. R. R. A., Dumbarton Oaks, the Crimea Conference and the forthcoming meeting at San Francisco.

With all of these undertakings we must build toward a peace to be secured by international cooperation. The Bretton Woods proposals should be ratified.

The West Offers Opportunities for Servicemen

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. SHORT. Mr. Speaker, when the 12,000,000 men and women now in our armed services return to the pursuits of peace, following total victory over our ruthless enemies, they will be confronted with the grave and difficult problem of readjustment and rehabilitation.

Most of them in due time will want to marry, establish homes, and live in peace with their neighbors. It will require much fortitude for them to successfully find their proper niche in our civic life. They will need all the assistance and encouragement that we can possibly give them.

Last Tuesday evening our distinguished and able colleague from Minnesota, the Honorable HAROLD KNUTSON, delivered over the Columbia Broadcasting System a remarkable address which is filled with faith, hope, and encouragement for our returning heroes. I wish it could fall into the hands of every discharged service man and woman. Indeed, it would be well if every citizen of our country could read it. It is full of sound sense, wise counsel, and heartening cheer. It will fire the imagination of the dullest mind and give hope to the despairing heart.

For nearly 30 years Congressman KNUTSON has represented his State and Nation in the Congress of the United States. He is the ranking Republican Member of the powerful Ways and Means Committee and is a keen student of politics, economics, and finance. Because of his vast fund of knowledge gained through long experience, earnest study, and wide travels, he is eminently qualified to speak with authority on almost any subject of national importance. He knows our country well and is steeped in our best American traditions. In this age of cynicism, skepticism, and despair, we need the spirit of optimism, the fire of faith, and the ray of hope that his address contains.

HAROLD KNUTSON knows and appreciates the past but he lives in the present and looks to the future. His inspiring and challenging address follows:

Many Americans may indulge the delusion that with the end of the war our troubles will be over. As a matter of fact they will have just begun. Indeed, those who have given thought to the matter, know that peace will bring the greatest crisis in American history.

We shall have 12,000,000 soldiers waiting for demobilization. We have promised to give them jobs, and that is a promise we intend to keep. But at the same time we shall have 20,000,000 war workers who must shift from war work to the products of peace. We must find jobs for them also. We shall have a war debt of $300,000,000,000, with a burden of war taxes that only the richest nation on earth can bear and then only if its manpower and its resources are employed to the last man, the last dollar, and the last acre.

We face one great problem at the outset. The industrial centers of the East are overcrowded. The population map of the United States looks like a bus, with all the congestion at the front end. What we need is to distribute this surplus population to the rear of the bus. Then the bus will ride more easily, and we will all be happier and more prosperous. If we do not do this, we face a serious danger of unemployment and disorder when our returning soldiers crowd into these congested areas.

So I have come to the microphone tonight, to inject into our discussions of post-war planning, a note of courage, of optimism, and of hope. I have come here to tell you how, with the help of our returning soldiers, and the vast forces we have mobilized for war, we can build a greater America by creating in the States west of the Mississippi River, the world's newest and greatest industrial empire.

The program I offer you will bring home our soldiers from overseas, furnish employment for our demobilized armies, convert our war factories to the products of peace, and put our billions of war-saved dollars to work in the United States. The opportunity is an inspiring challenge to our statesmen, to our industrial leadership, and to our free American enterprise.

We did the same thing once before—80 years ago—at the end of the Civil War. Then we converted the same Western States into the world's greatest agricultural empire by giving homesteads to the soldiers of the Civil War. Today the West offers far greater opportunities, not for farms but for industries. If 10,000,000 soldiers or war workers and their families make their new homes in the States west of the Mississippi, the West will have a greater population than the whole United States had 50 years ago. With them would go from fifty to one hundred billion dollars of new investment capital—the most richly endowed migration that has ever built an empire.

About 100,000,000 people in the United States are thinking now about what they are going to do after the war—and what our country is going to do. In Congress we have spent much of the past year on that problem. We have discussed demobilization, unemployment, conversion, termination of war contracts, and adjustment of soldiers' pay, to say nothing of debt limits, post-war taxes, and relief for Europe.

As minority leader of the House Ways and Means Committee, I have spent day after day listening to hearings, and night after night reading programs and projects and proposals of what must be done to save this country from disaster when the guns are silent and the sun of peace shines on the desolate ruins of war.

Most of the testimony we have heard and most of the proposals we have read have been filled with forebodings of disaster. We have been warned that we will have 20,000,000 unemployed; that there will be no work for our returning soldiers, so that they will have to stay in the Army or go on relief. Others have told us that we must send our war savings to Europe and Asia, so they can buy our products and keep our factories working. Then we must keep our soldiers abroad to police our debtors and to collect our debts, and if we want our money back we must buy what Europe produces, even if we have to close our factories and lower our wages and our standards of living to do so.

Then they point to our great burden of debt and tell us that the United States has reached the end of its rope. We cannot expand our industries or our commerce; we cannot increase our production. All we can do, say these pessimists, is to resubdivide what we have and spread it out more evenly. Our frontiers are gone. Capitalism is through. Only communism can save us.

They tell us that private enterprise, individual initiative, and ambitious manhood were all right when the country was young. Then land was free. Then the Nation was being built. But the building is finished, and there is nothing left to be done today. We have reached the farthest frontier. The farthest horizon lies under our feet—only the abyss of disaster beckons the daring man who would march farther.

Nonsense! America has just begun to grow. Our future lies ahead. The troubles that lie behind us—even the two world wars into which we have poured our manhood and our wealth—are but the childhood sicknesses of the greatest Nation in the history of the world.

If peace is to be won, if the Nation is to be restored to prosperity, there can be but one way—and that is to use private American enterprise and individual initiative to give employment to our homecoming armies and to put our billions of war-earned and war-saved dollars to work in the United States.

The plan which I believe will best accomplish this—among all the programs which have come before Congress—is the work of my old-time newspaper and radio friend, Oswald F. Schuette, of Chicago, and Washington. He was a war correspondent in the First World War and has been for 25 years an outstanding writer on national and international affairs, as well as an adviser on industrial problems. He is an enthusiastic believer in the future of the United States and of the contribution which our great continental empire will make in the rebuilding of the world. He emphasizes the important distinction we must make between a continental empire and a colonial empire. A continental empire exploits the resources of its territories for the benefit of its people. A colonial empire exploits the people of its colonies for the benefit of a favored few.

We had the same problem of debts and demobilization at the end of the Civil War, and then we solved them by the same means which are at our command today. To understand just what those problems were, think of what we would have had to do in 1865, if the Mississippi River had been the western boundary of our war-wracked Republic, and if the Pacific Ocean had come to the Twin Cities and St. Louis.

The factories of the North were as surcharged in 1865 as they are now with war contracts which peace would cancel. To find work for the million Union soldiers who returned from the battlefields, 2,000,000 workers would have been dropped from the overloaded pay rolls. No Government relief that was then available could have bridged such a gap.

What did we do? We opened the great frontiers of the West. We gave each soldier a certificate good for $200 worth of land and told him to go out and find it. Citizens who were not soldiers could buy the same homestead at the land office for $1.25 an acre. We gave these men no further help—no Government-guaranteed loans, no pledge of unemployment relief, no subsidy. We said, "Go west, young man," and the ambitious men who went west to open that prairie frontier, converted our Western States into the world's greatest agricultural empire. For 35 years—to the turn of the century—it absorbed all our surplus money, energy, and men, and half of Europe's.

The miracle of that day can be repeated now by reopening the same frontier of the West, this time as the frontier of an industrial empire instead of an agricultural domain. For the West has resources in raw materials and power for industry greater than its resources for agriculture. Its mines and quarries, its oil wells, and its water power are richer than its farms and its forests.

It is the lesson of history that every great crisis brings with it the forces needed for its solution. Whether the event is to be a catastrophe or an opportunity depends upon wise leadership—wise leadership and vision.

We have all heard the story of the great Chicago fire. It is part of the thrilling history of the Northwest. I heard it in all its dramatic detail from my father. When that fire swept Chicago in October 1871 the city had 300,000 people. The fire destroyed half their homes, two-thirds of their factories and all of the business district—with a loss of $200,000,000. That was an enormous sum in those days. To make it worse, the insurance companies went into bankruptcy.

Let us say this for the Chicago pioneers: They did not come to Washington to ask either for a Government subsidy or for Government planning. By their own initiative, and with private loans, these men built, on the ashes of their homes and hopes, a billion-dollar city. The fire, and the building of the new city, brought to the shore of Lake Michigan a tide of money, material, and, above all, ambitious men. High wages and high prices were no obstacle. Time was the important element. Farmers drove their teams 60 miles to Chicago that winter—because a man and team could earn $6 a day hauling ashes to the lake. Nor was it only Chicago that felt this revival. The fire brought a tide of prosperity to all the surrounding States, and presently—because it was the metropolis of this great area—Chicago became the second city on the American Continent.

This is no isolated instance of the way in which fearless, ambitious men can turn defeat into victory. Twice in the last 50 years, the hardy pioneers of my own State of Minnesota have done the same thing although on a smaller scale. The first came after the great forest fire that swept the Hinckley area in 1894, and the second was the aftermath of the devastating Cloquet forest fire in 1918. In both, the rebuilding of cities and villages was a miracle of the power of men to overcome disasters, when they have the will to victory.

The plan proposed by Mr. Schuette to create a new industrial empire in the West calls for no Government planning and no Government subsidy.

Instead, it will utilize the great, half-developed natural resources of those States, converting them into new sources of national wealth. It will give better distribution in people and production throughout our country. It will relieve the congested population which has dragged down the standards of living in so many overcrowded eastern communities.

The first beneficiary of the conversion of the agricultural West into an industrial empire will be the factories and the workers of the East. For these will supply the billions of dollars worth of plants, machinery, transportation and other equipment necessary to create this new empire. The East was the greatest beneficiary of the agricultural empire which developed the western prairies after the Civil War.

In the first crucial post-war years, it will be the products of eastern factories which will build and equip the new cities, new farms, new factories, and new mines in the West. As a result, there should be an immediate and enormous expansion of the producing and consuming capacity of the entire United States—enough to increase our normal annual income to $150,000,000,000 a year. The initial construction work alone, in building and equipment the new industries, farms and residences, would absorb a huge capital investment. The progressive industrial corporations of the East—Ford, General Motors, Chrysler, United States Steel, Bethlehem, Du Pont, International Harvester, General Electric, Westinghouse, Aluminum, Pullman, to name but a few—will not wait long before they will erect branch factories in the midst of this new empire, in addition to the great war plants already constructed there. With such a tide of west-bound migration of consumers and purchasing power, they will realize that no foreign market can equal our own great West.

The second great beneficiary of this empire will be the railroads of the West. The creation of the new empire will increase their traffic and equalize their east and west bound hauls, thus making possible the general lowering of rates.

So I expect the railroads—which played so important a part in pioneering the agricultural West—to play an even more important part in the promotion of the new industrial West.

For therein lies the dynamic power of the Schuette plan. With their high standard of living, their initial consuming capacity, and the great wealth which the new pioneers will create beyond these new frontiers, there will arise an irresistible power to attract even more men and more money to accelerate the exploitation of the West. This will be no slow migration like that which followed the Civil War.

When the soldiers of that conflict went west to claim their $200 worth of homestead lands they had little capital, except their character and their courage, with which to conquer the trackless wilderness of that day, and to convert it into homes and farms. Only one railroad had been built across the mountains and it was unfinished. There were few cities and fewer roads—the men who went west left civilization behind them.

The veterans of the present war who will answer the new call to "Go West" will find a different welcome. The West now offers them modern cities, comfortable homes, highways, railroads, air routes, churches, schools, hospitals, movies, and above all, a hospitality that is the proudest boast of our American civilization.

But the settlers of today will not go west without capital, as they did 80 years ago. Congress has already authorized the governmental guaranty, for each veteran, of one-half of a loan—up to $4,000—to buy a house, a farm, or a business enterprise. No tide of migration in history ever brought with it such an immediate power to buy and to build.

Other soldiers will go west to obtain the education which Congress has promised to give them at Government expense. They are entitled to choose their own schools. Those who decide to go to western high schools, colleges, and universities will find them as fine as any in the United States, and it will be a rare student who will go to a western school and then return to the east to live.

The first step in carrying out this ambitious plan will be to start soldiers and war workers—and their wives, mothers and sweethearts—to thinking about the great opportunities which the West has to offer them. The Government as such should take no part in this urging. The West should say "Come west, America," but no one should undertake to tell anyone, soldier or worker, where he must go. The future settlers will decide for themselves where they want to live. The attractions of the West will be their best guide. The West—through its railroads, its chambers of commerce, its civic organizations, its banks and industries, its newspapers and radio stations—will have no difficulty in helping prospective settlers to find the specific opportunities that will best meet their specific needs.

The important thing is that such a migration will of itself be the power that will create the new empire. The producers it brings with it, will at the same time be the consumers that will keep the producers at work.

The point which all must remember is that no single State or group of States can solve this problem for itself. Even a great State like California or Minnesota cannot solve the problem alone. The new industries which the war has brought to these States cannot be converted to peacetime profits unless there are customers enough west of the Mississippi to buy their products.

Only the creation of an empire of truly continental size, capable of absorbing 10,000,000 men and $100,000,000,000, can give to this program the dynamic momentum necessary to meet the crisis of peace. Only in that way can an empire be created that will overcome all economic uncertainties and all political controversies, and turn the eyes and hopes of America to the boundless heritage of its Golden West.

Iowa on the Road to Joining Arkansas and Wisconsin in Repealing Former Endorsement of Vicious Twenty-second Amendment

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. PATMAN. Mr. Speaker, I would like permission to extend my remarks on the activities of the Committee for Constitutional Government and other proponents of the proposed twenty-second amendment to include an excerpt from the publication of the Honorable W. D. Jamieson, a former Member of this House from the State of Iowa, and also a former member of the Iowa State Senate.

Senator Jamieson publishes a very interesting paper, which he calls the Window Seat, with which a great number of you are familiar—a paper which contains a lot of common-sense philosophy and an analysis of national events in a friendly, homespun way.

Not long ago Senator Jamieson called me to inquire about the group advocating the twenty-second amendment and about the proposal. Senator Jamieson had just discovered this plot and was instantly aroused. I do not mention this with any thought except to show that the activities of the proponents were so devoid of announcements of results that it escaped the attention of almost everyone of those whose aim is to keep abreast of all such developments. You would think that a group sponsoring an amendment and interested in its adoption would grasp at every success and publicize it to as great an extent as possible; but no. Not in this case. This was something that should be promoted in a roundabout way through back doors and would not stand up for general public scrutiny.

In 1941 the House and Senate of Iowa passed a resolution endorsing the twenty-second amendment. This was House Concurrent Resolution 15.

On January 23 of this year a number of members of the Iowa House introduced House Concurrent Resolution 9, which would rescind the former endorsing resolution. Some of these legislators wrote me and commended me for my part in bringing out the truth on this subject. On February 14 the House of Representatives of Iowa passed this rescinding resolution unanimously. The Iowa Senate now must concur in this action to remove the name of Iowa from the list of States which endorses this scheme to benefit the rich. The March 1945 issue of the Railroad Trainman says it would be tax relief to the greedy, not to the needy.

Senator Jamieson wrote me a few days ago relative to the Iowa situation, as follows:

I am grateful to you for your good letter of March 6, giving interesting and helpful details about the Iowa situation in connection with the disastrous amendment proposed by the Gannett crowd. I read it with keen interest and with benefit.

You will be glad to know that as a result of your explanation about the situation in my home State, I have sent to each one of our State officials and to our 50 members of the State senate a copy of the enclosed Window Seat. I hope it will help set our good State right.

As you can see, I handled this amendment proposition without gloves. You are at liberty to use it in any way in which you think it will serve our common purpose in that matter; namely to kill this wicked proposition.

Your statement Wednesday night that none of the proponents of this amendment nor any of those favoring it had the superb nerve to appear at the hearing before the Maryland General Assembly is revealing. I declare, I don't see how these folks could have accomplished so much and not have had the whole country making terrific protest.

My hat is off to you, sir, and to my friend. The country is better off because you are in Congress.

Cordially.

W. D. JAMIESON.

Following is what Senator Jamieson had to say about the proposed amendment and its proponents in the March 14, 1945, issue of the Window Seat. I think this will be of interest to the Members of this body from Iowa and to the legislators of the Iowa State Legislature and to the citizens of that State:

AMAZING

It is hard to believe, yet it is true, that a little group of reactionaries of the worst hue—the "Gannett group" of New York City, under the holy name of Committee for Constitutional Government—are trying to sneak through an amendment to the Constitution to limit the powers of Congress to tax incomes not more than 25 percent. The amazing thing is the progress they have made.

Corporations and money-making people could make incomes by the millions, yet 25 percent is all the Congress could tax them to pay our war debt and to run the Government.

If you think this through, you will soon see that this would allow the rich to get away from paying their fair share, while it would tax the little fellow beyond his ability to pay. Further, it would prevent the Government from extending social security and education, and doing many other things in the interest of the common people.

You should do everything you can to kill this rotten and sneaking effort.

FACTS

This slick gang, this millionaire tax-dodging group, has for one of its brains a cunning fellow by the name of Rumely, who was convicted as a German agent in World War No. 1.

Its scheme was turned down by Congress.

It seems to have money without limit to carry on its sneaking, undercover lobbying.

It refused to disclose this money source to a Congress committee last fall.

It is taking an unused scheme, that of getting two-thirds of our State legislatures—32—to ask Congress to call a constitutional convention to pass on their low scheme. If they do get these 32, Congress must call.

A millionaire who now pays $800,000 tax out of his $1,000,000 income would only pay $250,000 under this rich tax-dodging scheme, while the little fellow with a $2,000 income, who now pays $175, would then pay $500.

It would cripple the Nation viciously.

My friends, don't let this innocent-looking little package explode—it has enough dynamite in it to destroy us.

ASLEEP

Yes; nearly all of us except the gang who are working their heads off quietly to put this awful thing through, have been asleep at the switch.

For instance—did you know that 17 of our State legislatures have passed this resolution? I didn't. Many of the members of the legislatures themselves didn't know it—sometimes passed in the rush of the last day.

Arkansas and Wisconsin passed it, but a year or more later, when their eyes were opened, rescinded. Pennsylvania passed it, and the Governor vetoed it. But I doubt if the governor has any part in a resolution of this kind. Where I put "yes" after the State it means a rescinding resolution has been offered—passed one house in cases.

Illinois, yes; Iowa, yes; Massachusetts, yes; Michigan, yes; New Jersey, yes; Rhode Island, yes; Alabama, Delaware, Kentucky, Maine, Mississippi, New Hampshire, and Wyoming—15 still valid and 17 to go.

GET BUSY

Please do. Here is a place where good citizens can show themselves.

If the people knew all about this it wouldn't have a chance in the world.

EVEN IOWA

Yes, I'm sorry to say, our general assembly passed this vicious resolution, without knowing what it is.

This State has almost everything to lose by it and little to gain.

But I'm thankful that when our boys woke up the house voted to rescind, and I'm told it's now in the senate. If I were back there again as a member of that senate I'd be the busy lad undoing that mistake.

GREAT CREDIT

If this wicked thing is killed deader'n a nit, our country will owe a big debt to Congressman WRIGHT PATMAN, the vigorous fighter for the good of the common people who hails from Texas.

He says it is "the millionaire's amendment to make the rich richer and the poor poorer." And how right he is.

My hat's off to you WRIGHT PATMAN.

Senatorial Cooperation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 15 (legislative day of Monday, March 12), 1945

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senatorial Cooperation" published in the Washington Post of March 6, 1945. It gives great praise to Members of this honorable body. I feel that we cannot too often say the good about each other. I am very happy to ask that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATORIAL COOPERATION

The job of advising and consenting, which is the Senate's prerogative in our treaty relations with the world, has been given a new definition at Mexico City. Hitherto the initiative in treaty making has been retained by

the Executive. All Presidents have been jealous of it. But at Mexico City Senator AUSTIN took the ball as soon as he arrived here and we were treated to the spectacle of a Senator determining the administration's approach to the continental security pact, and an opposition Senator at that. It was the earnest and disinterested Vermonter who framed the formula on which action was taken Saturday at Mexico City. Senator CONNALLY made senatorial intervention complete by adding to the declaration what might be called the Connally reservation. Not the slightest resentment has been caused by this senatorial intervention; indeed, it has been welcomed, for, as Assistant Secretary Rockefeller says: "The administration wants to know what it can deliver to our Latin-American friends." Senator AUSTIN'S work is especially the object of comprehensive compliments.

The phenomenon is all the more notable because, along with the Senators, the administration included in its advisorate in Mexico City representatives of business, agriculture, and labor. All of them took an active part in framing the economic proposals. Assistant Secretary Clayton saw to that. The readiness, even eagerness, of the administration to consult with all interested parties will have two results. One will be that the resolutions arrived at in Mexico City will be heavily buttressed with support from quarters outside the administration when they are offered for American approval and action. The other result will be personal. Men of the most diverse interests and backgrounds have been working together in the United States delegation. They have been working together so harmoniously that a friendly feeling has been generated which will yield fruit in domestic affairs. It is one of the minor miracles here, for instance, to hear James G. Patton, president of the Farmers Union, praising Assistant Secretary Clayton. The American correspondents have been gladdened to witness these representative spokesmen, one after another, stand up in the conferences with the world's press and testify by their presence and their words to our domestic cooperation. What their hearers, the delegates, will say when they get home may be imagined. It will certainly enhance good will for America. To have seen this cooperation in the United States delegation at Mexico City is to have one's faith renewed in the ability of men around a table, granted they are reasonable men, to reach an agreement.

The phenomenon we have been watching in Mexico City of this kind of advisorate in action deserves to be cultivated. The job confronting the United States is to make our Government system more viable for our positive world tasks of tomorrow. Our separation of powers was devised on the assumption that we should always be negative and on the defensive in a tyrant world. That is why the domestic machinery creaks when foreign relations are involved. The necessary lubricant is precisely the kind which has been applied to the relations we have seen developing in Mexico City.

This Changing World

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown from the Washington Star of March 13, 1945:

THIS CHANGING WORLD

(By Constantine Brown)

In the last two weeks Rumania—a small country compared with the great European powers—has become the most sensitive point in the relationship among the Big Three concerning the carrying out of the Yalta agreements. Although only meager reports are being published about developments in Bucharest, the highest authorities in Washington and London admit that they are concerned.

The Rumanian personalities involved in the recent political seesaw are of little consequence. What is worrying our State Department and the British foreign office is that so soon after the Crimean Conference was ended in full harmony, the ugly head of "unilateral action" seems to have been raised again.

Soon after Mr. Roosevelt's return to Washington a political crisis developed in Bucharest. Gen. Nicholae Radescu, who had been appointed Premier of Rumania with the full approval of the Russian Government, was overthrown by the new "Democratic Front."

Thus far nothing happened to upset the Yalta apple cart. King Michael advised the representatives of the Big Three that he was charging Prince Barbu Stirbey with the task of forming a new government. In the meantime, Vice Commissar Andri Vishinsky flew over from Moscow and took the whole matter in hand. When Stirbey was unable to form the government, Peter Groza, a man known for communistic leanings, was placed at the head of the cabinet. The political views of the new Prime Minister are of no consequence to Washington and London. But the British and American Governments were astonished that they had not been consulted when Groza was selected by Vishinsky to head the new administration.

During the ministerial crisis, some of the highest officials in Rumania are reported to have appealed to American authorities in Bucharest for shelter on the plea that their lives were endangered by the purges which the new government had pledged itself to carry out. The Americans informed Washington that these people had made the appeals on the ground that they were political refugees. In order not to upset the Yalta agreement Washington decided to turn them down.

Giving the men refuge would have been interpreted by Moscow as a "unilateral action" and the American Government was determined to do nothing which would give Premier Stalin the impression that we were disregarding the Crimea agreements. The British Government, however, was more disturbed by this unilateral action of Vice Commissar Vishinsky and when the former Rumanian Premier, General Radescu, appealed for refuge he was allowed to come to the British Legation and thus enjoy immunity from arrest. The Foreign Office decided to mark its attitude by making public its decision to shelter Radescu as a political refugee.

According to reports which the United States Government has been receiving from Rumania, the Communist Party represents only about 5 percent of the total Rumanian population. In order to strengthen the hands of Premier Groza, Moscow announced last Saturday that the portion of Transylvania which had been handed over to the Hungarians by the previous Fascist Government of King Michael, was being returned to the Rumanians.

This was another bombshell thrown at the State Department and the Foreign Office.

Hungary, like Rumania, had signed an armistice with the Big Three. According to the Yalta agreements, the Russians were not entitled to dispose of the territories of either satellite without previous consultation and agreement with Washington and London. It is probable that neither the United States nor the British Government would have objected either to the placement of Groza at the head of the Bucharest Government or to the return of Transylvania to its rightful owners.

But since it had been agreed at the Crimea Conference that none of the three governments would do anything without consulting the others, the single-handed action of the Soviet Government necessarily was regarded as a departure from the agreements signed less than a month ago.

The whole matter is now being taken up with the Moscow Government by Ambassador Harriman and it is hoped that he will obtain some satisfactory explanation together with a promise that the Yalta agreements henceforth will be scrupulously observed.

Rail Unions Reject This Imposture—Claim That Workers Favor Limiting Taxing Power of Congress Is Without Foundation

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. NEELY. Mr. Speaker, in pursuance of permission duly granted, I extend my remarks in the RECORD for the purpose of inserting an able editorial which appeared on the 10th of March in Labor, the outstanding national weekly newspaper owned and published by 15 standard railroad labor organizations of the United States. In this editorial the author, Mr. Edward Keating, a distinguished former Member of the House, blasts to oblivion a brazen propaganda article in support of an amendment to the Constitution which is demanded by organized wealth to prohibit Congress from levying a tax of more than 25 percent on incomes, inheritances, and gifts. The article which Mr. Keating annihilated appeared in a comparatively insignificant publication entitled "The Railroad Workers' Journal," which the legitimate American labor movement has never recognized. The editorial is as follows:

RAIL UNIONS REJECT THIS IMPOSTURE—CLAIM THAT WORKERS FAVOR LIMITING TAXING POWER OF CONGRESS IS WITHOUT FOUNDATION—STORY OF MAURICE FRANKS

One of the most brazen fakes ever perpetrated against our national lawmakers has just been called to the attention of Labor by Members of Congress.

On several occasions we have registered vigorous opposition to a proposal put forward by the Committee for Constitutional Government, Inc., to write into the Federal Constitution a provision forbidding Congress to levy a tax of more than 25 percent on incomes, inheritances, and gifts.

Obviously, such a constitutional amendment would benefit the very rich and would increase the tax burdens of Americans of modest incomes.

The Committee for Constitutional Government, Inc., is spending tremendous sums on propaganda to advance its pet scheme. Its

latest contribution is an article from the Railroad Workers' Journal. It was written by Robert D. Dresser, and argues that the 25-percent limitation would be of inestimable benefit to American workers.

We don't know Mr. Dresser, but we do know the Railroad Workers' Journal. It is edited by Maurice Franks and is described as the official organ of the Railroad Yardmasters of North America, Inc.

It is doubtful if this organization has a thousand dues-paying members. The American labor movement has never recognized it. Apparently the chief object of its existence is to provide background for the Railroad Workers' Journal. Thereby hangs a strange tale.

Years ago Maurice Franks entered into a contract with the Railroad Yardmasters of North America, Inc., by which he was to run the Railroad Workers' Journal and divide the receipts with the Railroad Yardmasters of North America, Inc.

Since then Franks has concentrated on two lines of activity—abusing labor unions at meetings of chambers of commerce and similar organizations and conducting advertising campaigns among businessmen who like to hear labor unions denounced and who may imagine their ads will appear in a magazine of general circulation.

How much Franks has been able to clean up, Labor does not know.

Now he has joined forces with the Committee for Constitutional Government, Inc., and is endeavoring to make it appear to Members of Congress and others that the railroad workers favor the vicious proposal to hamstring the taxing powers of Congress. There is no foundation for that claim, Labor reiterates:

"The Railroad Yardmasters of North America, Inc., is in no sense representative of the standard railroad labor organizations, which have a membership of more than 1,500,000; the Railroad Workers' Journal is more of an advertising medium than a labor newspaper; and, so far as we know, no responsible labor organization has ever indorsed the proposed 25 percent limitation on incomes, inheritances, and gifts."

Address of Lt. Gen. Brehon Somervell

EXTENSION OF REMARKS
OF

HON. D. LANE POWERS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. POWERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Lt. Gen. Brehon Somervell, commanding general, Army Service Forces, over Columbia Broadcasting System, Friday, March 9, 1945:

Today, on our third anniversary, I address myself to the men and women of Army Service Forces. I want to talk to those of you here at home, and to those other millions trained in A. S. F., who serve with our armies overseas.

We were born in a moment of urgency and urgency has driven us ever since. After 3 hard years, let us look backward for a moment and then forward to the tasks ahead. Let us take stock of our position today and ask ourselves how well we are prepared for the future.

A year ago I reported to you on our accomplishments in 1943. We were proud of that record; we had every right to be proud. But let us now compare it with 1944.

Last year we increased production by $2,000,000,000. We shipped overseas nearly 50,000,000 tons of supplies as compared with less than 29,000,000 in 1943. We carried 3,000,000 men overseas, a million more than in the previous year. We dispatched three times as much soldier mail, nearly three times as many overseas radio messages, did three times more work in our maintenance shops, paid out twice as much money in family allowance accounts.

Statistics, however, do not tell the whole story.

They don't indicate the quality of medical care or the effort involved in setting up convalescent hospitals. They don't show the superb service rendered by Army communications 24 hours a day, linking the battlefronts with the War Department.

In 1944 we established a correction division in the Adjutant General's Office to supervise rehabilitation centers and disciplinary barracks. We opened redistribution stations for personnel returned from overseas.

We all know what the encouragement and guidance of the chaplains mean to our soldiers everywhere.

We have extended our program to provide information, off-duty education, and recreation to our soldiers. They are well informed, but they have never been propagandized.

In dollar value 20 percent of our contracts in 1944 went to small businesses compared with only 13 percent in 1943. This is a decided improvement, and I congratulate you on it.

In the year prices in A. S. F. contracts declined 5 percent. We continued to meet our lend-lease commitments.

Even under extreme conditions no overcrowded ports marred the record of the Transportation Corps and of the railroads. This is an outstanding achievement.

We have closed about one-fourth the capacity of the posts we manage in the United States and are holding them ready for troops back from Europe for redeployment or return to their homes.

Perhaps our most noteworthy achievement last year was handling supplies for the European invasion. It required all our power of divination and ingenuity to insure that we had what the troops needed where it was needed. We met every requirement on more than 200 critical items. We met all last-minute requests.

Since then demands that tax the entire resources of the Nation in their fulfillment have been laid on us.

Nor have we forgotten the needs of our troops in the Pacific. We even sent supplies directly for new bases before our troops made their landings.

In 2 months we ship overseas as much tonnage as went to General Pershing in all of World War No. 1. In 1 month in Europe we fired as many artillery shells as General Pershing's army fired in the whole of the other war.' Our military railway service reaches across western Europe, Asia, and north Africa. Sixteen hundred ships under direction of the Transportation Corps carry men and supplies around the globe.

This war has demonstrated clearly the importance of supply as a factor in military strategy. It is a war of supply. In Europe we have fought the Germans on a basis of manpower equality, most of the time with one American against one or more Germans. Our air strength, artillery, and other equipment gave us the preponderance of power. We hear that the Russians in their offensives have a strength of three or four to one against the Germans but they have fewer supplies. The difference in supply superiority and in mobility between the Germans and the Americans is the contribution of the Army Service Forces.

Our production goals for 1945 are larger than ever because in Europe we need more heavy guns, ammunition, tanks, more of everything than was expected and more than was used in previous campaigns. We need supplies to equip French troops, supplies for the Philippine Army, for the Russian Army, and for the Chinese. The supplies provided our allies are well spent. Their effort is heroic and they need our help.

Overseas civilian supply is an increasing problem. As we liberate new areas we must rehabilitate their plants, utilities, railroads, and farms to help them support themselves. Even aside from our eagerness to help our friends, we cannot have starvation and unrest behind our fighting fronts. We use French railroads from the ports to our front lines. Already we have sent to France some seventeen hundred locomotives and 20,000 freight cars and 600 other locomotives are on the way. We have rebuilt 7,000 miles of railroad in France and Belgium including hundreds of long bridges. We use French production facilities as far as we can to make tires and clothes, and even heavy equipment needed by our troops. As we liberate more territory demand for civilian supplies will rise. Finally more will be needed for prisoners of war.

Some 400 items are now in short supply. Only the utmost production effort will meet our need.

At some time we must face the problem of redeployment. When it comes we must handle our part efficiently and expeditiously. We will face a big load in moving troops back to this country, handling their furloughs, re-equipping them and shipping them to the Pacific. There will be a movement of men and supply directly from Europe to the Orient. Our job will be larger, not smaller, after VE-day. We will rejoice when Hitler is defeated but it will be too early for celebration or relaxation.

The war in the Pacific will be hard and it may be long. It will require great effort to defeat the fanatically stubborn, close-knit power of the Japanese.

At best our losses will be heavy. Operations of greatly increased scope and magnitude in the Pacific will be required to assemble and drive home the preponderance of force necessary to assure the complete defeat of Japan. Everyone of us must remember this every day.

The redeployment problem is by all odds the most difficult the War Department has yet had to face. At the same time our troops move into position to occupy Germany we must inventory and rewarehouse millions of tons of supplies and equipment. Some must be set aside for troops who remain, some be rehabilitated and supplemented for those who go direct to the Orient. New staging areas and port facilities must be provided. Procedures must be installed for controlling the whole business.

Equipment for troops redeployed here must be returned from Europe and supplemented from new production. Camps must be reopened and stocked with training equipment while slow-moving items are being shifted to the Orient to be ready there when the troops arrive. All of this must be woven into intricate shipping schedules. On the receiving end, great reception centers and staging areas will be required to bring men and equipment together and to put the finishing touches on training prior to assault.

During this period, production schedules must be adjusted to fit shipping and training schedules. Some increases will be needed for certain items, as for example, tropical clothing. We dare not fail to meet the load placed on us. We must move in order and with precision, yet must take our redeployment with maximum speed to end the war. There will be a general feeling at this time that the game is in its last inning and war weariness will provoke criticism which will be the result of brittle tempers, understand-

able impatience and just plain being fed up with the whole business.

I tell you again this will be by far the toughest assignment the War Department has ever had and we in the Army Service Forces will bear the brunt of it. I know you will accept the challenge and see it through.

Once more let me say, I am proud of the performance of the Army Service Forces in 1944. I deeply appreciate what all of you have done. We have worked closely together. I know what you have done to make this record possible and I want you to know my deep gratitude for this accomplisment.

Rev. Duncan Howlett's Sermon on Cord Mill Crisis

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following sermon by Rev. Duncan Howlett entitled "The Truth in the Cord Mill Crisis" at the Unitarian Church, March 4, 1945, which was published in the Standard-Times, New Bedford, Mass., March 5:

The city of New Bedford has been much in the Nation's news of late. The efforts of W. M. C. to transfer workers forcibly from one mill to another has met with determined opposition on the part of the community as a whole. The facts have become confused and often the issues lost sight of. The patrictism of the city is in question.

In view of all this, it seemed to me someone in a neutral position should speak on the situation as a whole, summing up the pertinent facts, and pointing out the issues involved without bias and without partisanship. Insofar as it is possible for humans to be nonpartisan and without bias, I shall attempt to present the situation as best I have been able to determine it after a lengthy investigation and careful thought.

WHAT ARE THESE FACTS?

Last September the Priorities Committee of W. M. C. granted first priority on manpower to the Fisk and Firestone mills in this city. Early this year the Army and W. P. B. asked all the tire mills to go on a 7-day, three-shift basis for the next 90 days because there was an impending shortage of tires. This order included the two tire and cord mills in New Bedford, Fisk and Firestone. Each was already on a three-shift basis, but schedules were advanced to 7 days a week. A bottleneck occurred, however, when the cord mills were unable to man their third (night or so-called graveyard) shift. This precipitated the trouble.

W. M. C. is not attempting to start a third shift at the tire cord mills. They have always run on three shifts, and did so even before the defense program was started. Furthermore, until the defense program began, these mills had no trouble manning their third shift. Each had a list of applicants. With the coming of the defense and war programs, other mills increased their first and second shifts, new mills came into operation, and many workers were drawn off into more attractive positions with more attractive hours.

New Bedford is not the only city in which tire cord is manufactured. Its output is but a small percent of the total. Elsewhere the third shift is no better manned than it is here. But New Bedford is the only city where a large number of other textile mills are also present, which creates a labor pool from which to draw. This is why the crisis arose here rather than elsewhere. W. M. C. chose this city as the one best suited to the forcible transfer of workers.

New Bedford men, capital, and labor alike, maintain that workers could have been provided for the tire-cord mills on a voluntary basis. When it became apparent that Fisk and Firestone could not man their third shifts, the New Bedford Cotton Manufacturers Association amassed a list by name, address, and job classification of 3,700 former workers who had worked within the last 14 months, not now employed in any of the mills of the association, and in conference with a W. P. B. representative and the unions, agreed to a plan to canvass the workers, the C. I. O. carrying the brunt of the canvass.

BLIZZARD OCCURRED

This agreement was concluded on Friday, February 9, at a conference at which representatives of the New Bedford Cotton Manufacturers Association, the unions, the W. P. B., and the Fisk and Firestone mills were present. Representatives of W. M. C. did not appear. The canvass was made Saturday. Out of the first 60 people canvassed, 20 agreed to report to work Monday. On Sunday came the blizzard, which halted traffic everywhere. None of the workers showed up Monday. Tuesday, before there was any opportunity for a check-back, W. M. C. ordered forced transfers, which brought to an end the efforts of a voluntary solution of the problem.

But the forced transfers produced few, if any, recruits for the tire-cord mills. Why? What is a forced transfer anyway? It is an order by W. M. C. that a certain plant release a certain worker. The worker is then required to report to U. S. E. S. for a new assignment, and he must take the job to which he is assigned or he cannot work at all, for no one else is permitted to hire him, including his old employer.

A worker can appeal a forced transfer, however, which is the stage the tire-cord situation reached in New Bedford last week. One of the chief grounds of appeal is that the conditions surrounding the new work are substandard. This has been the chief ground of the appeals of the workers in New Bedford from assignment in the tire-cord mills. They allege that the work load is heavier; the yarn is heavier, the bobbins much larger, the laps are larger and have to be changed more often, the slubber bobbins are much heavier, the doffing is more frequent, the frames are much higher and longer, making a greater distance for the worker to travel. Yet they allege a worker usually must man more sides than in a fine-goods mill where the work is much lighter. Moreover, it is alleged that the use of the heavier yarn makes very much more lint in the air. All these factors tend to make work at the cord mills less desirable in the eyes of the workers.

They say the 7-cent differential which W. L. B. has allowed is not enough to make the work attractive. Many of the workers (about three-eighths) whom W. M. C. seeks to transfer are women who would feel the increase in work load greatly. And many of these have only returned to the work they are now doing on a patriotic basis. Many are unable to do the heavier work.

MOVE FUNDAMENTAL

W. M. C. has also recognized the inability of a worker to undertake a job assigned to him because of his health as a valid ground of appeal. This might seem an easy explanation of the W. M. C. complaint that only cripples had been referred to it, but all these so-called cripples were at work in other mills in the city when referred. It should also be said that referrals have in every case been made from the bottom of the seniority lists according to the union contract. The mills had no power to select the infirm for referral even if they had wanted to.

Down beneath a worker's natural aversion to leave his present job, down beneath the usual aversion to carrying a heavier work load than necessary, there are motives far more fundamental which are keeping the workers out of the night shift at the tire cord mills. Most of these workers have men very close to them facing the enemy overseas. Iwo Jima is not so far from New Bedford as some might think. Brothers, fathers, husbands, and sweethearts of New Bedford workers are there, and they are with Eisenhower and MacArthur, too. The workers know what production means to the fighting man overseas.

Consider the record of this city for patriotism: Almost complete freedom from strikes, Army and Navy E's flying everywhere, some plants having been awarded several; War bonds oversubscribed in each drive, and the Red Cross blood bank more than supplied on its quarterly visits. Why, in view of all this and with the rest of the Nation calling in question its patriotism, has New Bedford failed even under duress to transfer workers to the tire cord mills?

The real reasons are these: The workers are not reassured by the fact that labor disputes at both mills are now pending before W. L. B. Workers at these mills are not given company-provided insurance as they are at the other textile mills in the city.

MEANS GREAT DEAL

Most important of all the deep-seated complaints of the workers, however, is the fact that the transferees have no assurance they will not lose their seniority rights. Seniority means a great deal to the worker. It can only be built up through long and faithful service at one plant. It gives him all sorts of privileges, among them vacations with pay and promotion status. Seniority gives the worker a right to keep his job if the mill cuts down production and has to lay off some of the help. The longer a worker remains in a plant, the higher his rating against a lay-off. Many of the proposed transferees already have several years of work accumulated for their seniority status.

Some people have forgotten the depression in the midst of this war boom. But it is so recent, that when I came to this city only 7 years ago, members of this parish who could not find employment were begging me to try to help them get work on W. P. A. During that awful period, New Bedford people were hungry and they were cold and there is a lively fear that those days may come again.

But I do not believe even these factors would dissaude New Bedford workers from manning the third shift at the tire cord mills if they believed that the lives of their loved ones depended upon it. They are not convinced that these forcible transfers are necessary, and for two reasons. In the first place they know from its past record that when W. P. B. wants a product and at once, it has been able to get it. The fact that the demand for more cord was made some weeks ago and W. P. B. has not caused an uproar because of the delay makes them feel that the need is not as immediate and pressing as it would seem.

In the second place, the fact that other mills have held themselves ready to make the cord, first at the rate of 50,000 pounds a week and now at 100,000 pounds a week, and that this offer was not taken up, at least pending a solution of the cord mill manpower problem, and has now been refused, makes the workers feel the need is not as immediate as they have been told. New Bedford citizens, workers, and employers alike, have the impression that the issue is not really tire cord at all. To this community, the issue seems to be the right and need of

a Government agency forcibly to transfer workers from one job to another, to the great disadvantage of the worker.

To sum up, New Bedford believes this whole thing could have been done voluntarily. New Bedford wants to know why it was not done voluntarily and why the workers' rights are not safeguarded. This is why New Bedford has opposed and continues to oppose the forced transferals of its workers under a directive of W. M. C.

The stand which has been taken by the people of New Bedford in this controversy is on a fundamental issue. It is an issue involving the rights of American citizens; it is an issue involving the rights of men. Let us look at this issue for a moment.

A Government like ours exists to protect the rights of the governed, the inalienable rights with which the people are endowed by their Creator. This is why Governments are instituted among men. We hold this to be self-evident, and have so held since the signing of the Declaration of Independence.

Persecuting America's Best Citizens

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. HORAN. Mr. Speaker, the following editorial very graphically illustrates one of the most justifiable criticisms of O. P. A.; that is, the action of certain individuals in the Compliance Department without due regard to the effectiveness of industry:

PERSECUTING AMERICA'S BEST CITIZENS

(By C. C. Crow)

Like Hitler's expiring Gestapo, the Enforcement Division of the Lumber Section of O. P. A. in Portland is now bringing into final play all of the ruthless vindictiveness that has characterized its high-handed career of persecution.

For complete indifference to the established processes of administering justice, the history of the activities of the enforcement division of O. P. A. is a record of abuse of authority and the exercising of punitive judicial power which has made this organization a constant liability to the war program as it has run amuck in the ranks of those engaged in doing something genuinely constructive. From the unfortunate victims of the coercive blackjacking of this O. P. A. Enforcement Division huge sums of money have been taken in the form of fines for loosely established and more loosely calculated, alleged evasions of the terms of price ceilings. Often intricate and complicated in their draft, clear interpretation has not been possible even by the original authors after other legal crackpots have put into words and phrases a conglomeration of meaningless and disconnected provisions that have opened wide the gate for administrative impositions on the unfortunate and busy groups of our citizens engaged in the production and distribution of timber products.

Staffed for the most part by men whose limited experience has deprived them of the responsible jobs in private industry this O. P. A. band of time teredos has come to learn that as a bureau they are held in low esteem and consequently this realization has developed an esprit de corps that has carried them to great extremes.

Busy men and concerns engaged in producing and getting to our fighting forces needed lumber supplies have in cases too numerous to mention here, submitted to outrageous impositions from these New Deal ax men and have paid "kangaroo court" fines for baseless charges, not due to any sense of guilt but because they could not afford the time and expense to go into court over the amounts involved. In instances without number lumbermen have been told by their attorneys, "from the standpoint of constitutional law these charges are without foundation and you can go into court and beat the O. P. A., if you can get into a court which is not presided over by another New Deal appointee and in this connection the higher up you go the poorer your chances are and we advise paying the extortion and going about your business, because they are out to get you one way or another and the soundness of their accusations is the least important."

Now as time has moved along the attitude of intolerance in the O. P. A. enforcement division has grown with it. When the worst scrub in this marauding organization comes back to the office and reports that he has been offended by some hounded executive, that unfortunate individual is due to get a working-over.

The above statements are best proved by reciting a specific case. The Goose Lake Box Co., at Lakeview, Oreg., operating by Sam Jaksick, stepped out of the ranks of mediocrity and into the spotlight by being awarded the Army and Navy E for practical patriotism and distinguished service in supplying the Government with lumber required in carrying on the war. This aroused the jealousy of another Government employee in another entirely different department contacting the pine manufacturers and soon an automobile, burning scarce gasoline and wearing out scarcer tires, was on its long way to the Goose Lake plant to dig up something, somehow.

To make a long story short, an O. P. A. field man slipped into the Goose Lake plant one day like a skunk crawling into a poultry house full of laying hens and proceeded to hunt for something wrong. Without any permission whatever he shut down various parts of the operation so that he might query the employees who were busy trying to make lumber to help support the boys in the foxholes. Finally, when his arrogant obstruction became unbearable he was summarily ordered from the property, something that should have been done 5 minutes after he entered. What did this do? When the supersnooper returned to headquarters and reported the temerity and insubordination of Sam Jaksick in insisting that he and his men be allowed to produce lumber for the Government, Goose Lake's fate was sealed.

Recently the O. P. A. filed charges against Goose Lake Box, assessing a triple fine and asking the right to impose a further penalty on another separate charge involving some 280 carloads of lumber and a correspondingly large sum of money.

In the meantime, what has happened? Out of a clear sky the Army and Navy has awarded the Goose Lake Box Co. a second E, and written them as follows:

"To the Men and Women of the Goose Lake Box Co., Lakeview, Lake County, Oreg.:

"I am pleased to inform you that you have won for the second time the Army-Navy production award for meritorious services on the production front.

"You have continued to maintain the high standard which you set for yourselves and which won you distinction more than 6 months ago. You may well be proud of your achievement.

"The White Star, which the renewal adds to your Army-Navy production award flag, is the symbol of appreciation from our Armed Forces for your continued and determined effort and patriotism."

Who is best qualified to appraise the service and lumber which has been supplied to the Government during this emergency, a small group of nondescript bureaucrats or the Army and Navy heads who have been using this lumber?

In receiving the second E award the Goose Lake Box Co. stands by itself, as this recognition for service performed and the good quality of material supplied has been given to no other manufacturer of pine in the entire West, and that is a real record.

The youthful attorney who heads the enforcement division's office of O. P. A. in Portland is the same man who was caught redhanded last summer on a long fishing trip which he made that involved traveling over 400 miles in an automobile operated by one of his field men, who was paid for its use by the Government. Fine sense of honor by a man who is receiving his monthly stipend for the purpose of enforcing the law and war regulations instead of deliberately doing something widely publicized as forbidden.

Sam Jaksick has made a contribution to his country in helping to win the war and has gone far beyond his outstanding record of supplying lumber for the Army and Navy, which has been publicly proclaimed as a top job. Sam Jaksick has also given to the war his 19-year-old son, a promising lad who was late last year so seriously wounded while serving with the Army in Europe that he will be a cripple the remainder of his life. While the head of the enforcement division of the O. P. A. office was on a fishing trip being made with Government-bought gasoline this boy of Sam Jaksick's was in the service of his country, working for a mere pittance and his reward is a shattered body. Would you enjoy this if you were Sam Jaksick? Would it kindle love and kindness in your heart to know that your own son was lying in a hospital in France terribly crippled, while a band of able-bodied O. P. A. employees, all of whom should have long since either been working in the shipyards or serving in the Army, was descending upon you purely for spite and pique, trying to intimidate you into paying a fine on a charge of which you were not guilty?

War Mobilization Director James F. Byrnes should order the Portland office of the enforcement division of O. P. A. closed at once and the men and women employed there placed on essential jobs, preferably in the Army, Navy, or the shipyards. Sam Jaksick should be immediately relieved of the persecution of boondoggling imposers, who have from the start been a liability to the war program, having done nothing but annoy and delay those patriotic men like Sam Jaksick and hundreds of other producers of lumber who, in spite of O. P. A. snoopers and not with their aid, have made a maximum contribution toward winning the war.

The Manpower Situation

EXTENSION OF REMARKS

OF

HON. DUDLEY G. ROE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I make a brief statement in reference to the manpower situation, and include a letter from one of my constituents.

The R. D. Grier & Sons Co., of Salisbury, Md., is one of our largest business concerns. They have made a study of

the manpower situation in Wicomico County, the largest county from a population standpoint in my district, and they have ascertained that there are today over 500 men classified as IV–F who are able to work and who are not working. We desperately need the May bill to take care of the situation.

The letter follows:

THE R. D. GRIER & SONS CO.,
Salisbury, Md., March 7, 1945.

Senator MILLARD E. TYDINGS.
Senator GEORGE RADCLIFFE.
Congressman DUDLEY C. ROE.

GENTLEMEN: We have all been reading with a great deal of interest the labor bills that have been presented in Congress and from newspaper reports it seems as though nothing will be done, and that we will be left without any legislation requiring people to work.

The records indicate that about one-third of the men between the ages of 18 and 38 are rejected by selective service boards of examination for one reason or another and are classified in IV–F. In this particular county, Wicomico, we have some over 3,000 in the armed forces. We have over 1,000 classified as IV–F. There are approximately one-half of these, or about 500, who are working or who are physically disqualified for work. The other half, about 500, are loafers, some of whom do not work at all and are on relief; others work 2 or 3 days a week.

If some legislation could be enacted whereby local draft boards would still retain supervision over these IV–F registrants that they be compelled to work their full week or be reclassified in I–A and accepted by the armed forces for some kind of duty which they could perform, or be given a term in jail, I feel confident that we could put to work on a more or less steady basis 500 men in this county, and I think this would be true with every other county—that is, in their relative proportions, depending of course upon the size of the county and the number of registrants.

We hear complaints from every source that as soon as a man is classified in IV–F he immediately becomes indifferent toward his responsibilities to the farm or industry. There, of course, may be some out of the 500 in this class who may be able to produce a doctor's certificate as to their inability to work. These, of course, would have to be released from any penalty which could be imposed. We are all quite anxious that some legislation be enacted whereby this particular class of man can be made to work in some essential job.

Very respectfully yours,
RALPH H. GRIER.

Baseball in Wartime

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1945

Mr. PRICE of Illinois. Mr. Speaker, I was pleased to read newspaper stories in the past few days to the effect President Roosevelt has expressed his desire to see baseball carry on this season, despite wartime difficulties. The President told newsmen that he is all in favor of baseball as long as it does not require perfectly healthy people who could be doing more useful war work.

Baseball has asked no special favors and it has been granted none. It has contributed much to the war effort and it is my hope that the game will be continued to provide healthy relaxation for the men in service and for the war workers of the country.

I am indebted to Mr. Clark C. Griffith, president of the Washington American League Baseball Club, for the following summary of the contribution baseball has made to the war effort since Pearl Harbor:

THE CONTRIBUTION SINCE PEARL HARBOR

American baseball has played to 100,000,000 paid attendance throughout the Nation.

More than 4,000,000 soldiers and sailors have been admitted free to major league parks alone.

More than 6,000 men from organized baseball have been inducted in the armed forces.

More than 800 exhibition games have been played in various Army camps, cantonments, hospitals, etc., by major league clubs alone.

More than 5,500 major league players and officials have made personal appearances at camps and hospitals to entertain men in uniform.

Six individual groups of from 5 to 6 men each, have visited every foreign war theater under the auspices of U. S. O. to entertain front line troops with baseball gossip and information. (This at the requests of the commanding generals in the various theaters).

Major league baseball alone has purchased and shipped to men overseas and in camps and hospitals 30,748 dozen baseballs; 88,383 bats; 52,922 rule books; 2,160 complete catching outfits.

Major league baseball alone has bought and provided more than 15,000 copies of the Sporting News each week for the armed forces.

Major league baseball has contributed to the war charities $2,716,289.20.

Major league baseball has been credited by the United States Treasury Department for the direct sale of War bonds totaling $1,227,923,225.

Baseball has been credited by the American Red Cross with obtaining blood donations totaling 450,000 pints.

The American League world series picture has been shipped, at the request of the armed forces, to every single war front and has been viewed by probably 15,000,000 men and women in uniform.

Radio furnishes to 8,000,000 shut-ins baseball broadcasts.

Recent surveys show 35 percent of the radio audience tune in on baseball programs.

A recently completed survey reveals that 78 percent of all men and 38 percent of all women in the United States read the sports pages.

Col. J. M. Johnston of the O. D. T. has congratulated baseball for its splendid cooperation.

Tydings Amendment Still Ignored

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, I have recently received a number of letters from the farmers of my district indicating that the drafting of boys from the farms and further curtailing production of farm products and food for our fighting men continues, apparently disregardful of and still ignoring the Tydings amendment.

There seems altogether too much of a tendency on the part of bureaus to construe the acts of Congress to suit the convenience of the particular bureau to which the act is applicable. The Tydings amendment enacted by the last Congress has been disgracefully ignored by many draft boards, as has been pointed out by numerous Members of Congress from this floor during the present session.

A few days ago I received from one of my farmer constituents, whose name I cannot use for he fears it would make his plight the worse, which is typical of many other letters I have received from different parts of my district:

FEBRUARY 27, 1945.

DEAR CONGRESSMAN: I am a farmer and stockman, and if ever in my life I need help, it is now. As Draft Board No. 2 at Pawhuska, Osage County, has classed my boy I–A and will take him in March or April, leaving me to take care of a big crop of wheat, oats, and barley, and other rowed crops. We have 358 acres of farm land besides cattle and other farm stock. My boy has 56 units to his credit. I told the board according to the Tydings' amendment he was entitled to a deferment, and he said, "To hell with the Tydings' amendment."

We are giving our boys to fight dictatorism, and I hope our Government will not allow it to be practiced in our own country. I am not the only man that says this about Board No. 2.

If taking all of our farm help is necessary and our Government says so, then I say, "O. K." But I don't believe in a draft board taking charge and using their own judgment over our United States governing body. Farm help is impossible to obtain, as labor can go to other work for more money and short hours, and where they don't have to wade snow and mud and milk kicking cows and be exposed to all kinds of weather.

Now for myself, I am 62 years old, been in the care of a doctor for the past 2 years with high blood pressure and leakage of the heart, and I am not able to do hard work. I have another boy that wears a steel brace on one leg, has bone trouble, has broken it five times, 16 years old, and I can't depend on him. Now, if you Government men think this boy of mine that they are drafting is worth more in the Army than he is on the farm, it is all O. K. with me. He is 19 years old, 6 feet high, and sound as a button. He is a good farmer and a good hand with a tractor. We have a M. Farmall and plenty of tools to go with it.

Now if this boy is entitled to a deferment in your judgment, I would be grateful to you for you to see that he is treated according to law and order.

Immediately upon receipt of the above letter I addressed the local draft board having jurisdiction of this case, calling its attention to the fact that the Tydings amendment is just as much the law of the land as any other portion of the Selective Service Act. I also referred to General Hershey's statement to the effect that there was no intention on his part to circumvent the provisions of the Tydings amendment and that he had sent out a corrective or explanatory order, which, in my opinon, was not much better than the original directive. I suggested to

the board that it attempt to comply with all provisions of the Selective Service Act, including the Tydings amendment. I have had no reply from the local draft board.

However, this morning I am in receipt of a letter from the author of the letter above quoted, my farmer constituent, in which he says:

We got notice yesterday that—

Naming the son—

is to be inducted the 21st of March. So you'll have to hurry if there's anything can be done.

It thus appears that the provisions of the Tydings amendment are still being ignored with impunity.

Federal Judges' Pay Raise

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following preambles and resolutions unanimously adopted by the board of directors of the New York County Lawyers' Association at its meeting held at the association building at 14 Vesey Street, New York 7, N. Y., on March 12, 1945:

Whereas the Committee on the Judiciary of the House of Representatives of the United States heretofore has been advised under date of June 17, 1944, that the committee on the Federal courts of the New York County Lawyers' Association approved salary increases for district judges, particularly in metropolitan areas; and

Whereas since that time a bill (H. R. 2181, 1st sess., 79th Cong.) has been introduced by Representative HOBBS and referred to the Committee on the Judiciary whereby flat increases of $5,000 per annum would be made in the salaries, not only of district judges but also of supreme court justices, circuit, and other judges therein enumerated; and

Whereas the committee on the Federal courts of the New York County Lawyers' Association has approved unanimously the increases in judicial salaries recommended in said bill and has requested the board of directors of the association to approve the same: Therefore be it

Resolved, That the board of directors of the New York County Lawyers' Association approves the salary increases for the Federal judiciary as enumerated in the Hobbs bill (H. R. 2181, 1st sess., 79th Cong.) and authorizes the committee on the Federal courts of the association to support the same, and to transmit its report to the Committee on the Judiciary of the House of Representatives.

Resolved further, That the board of directors record its opinion that such salary increases are so necessary at the present time that the provisions of the Hobbs bill (H. R. 2181, 1st sess., 79th Cong) deferring its effective date until the termination of the Stabilization Act of 1942 should be eliminated from the measure.

TERENCE J. MCMANUS,
Secretary.

Maj. Paul Douglas

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the March 8, 1945, issue of the Chicago Daily News.

I had the honor to serve in the City Council of Chicago with former Alderman Paul Douglas, husband of the distinguished Congresswoman at large from the State of Illinois, Mrs. EMILY TAFT DOUGLAS. In the city council, Alderman Douglas distinguished himself as a champion for the underprivileged minority groups and made one of the most outstanding records of any man who ever served in that body:

MAJ. PAUL DOUGLAS

Chicagoans will be gratified to learn that former Alderman Paul Douglas has been promoted to the rank of major of the Marine Corps and has been awarded the Bronze Star for meritorious service in the Pacific theater.

Opposed to war by training and conviction, Major Douglas nevertheless felt compelled to champion support by this country of the nations resisting Axis aggression. Having taken that stand, he felt compelled to assume an active role in the war once we became involved in it. Despite the fact that he was past military age, he waived exemption and enlisted in the Marines. He went through the vigorous battle training, was commissioned, sought and received an assignment at the front.

Last fall he was wounded in action, but his wife, EMILY TAFT DOUGLAS, was running for election to Congress. Major Douglas had announcement of his wound held up until after election day. Chicagoans can be proud of Major Douglas. They will hope that he may soon be back and that he will become an even greater force for good in Chicago affairs. Chicago needs men like him.

Further Editorial Comment on Franco Fascist Spain

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. COFFEE. Mr. Speaker, I have a resolution pending in the Congress, purporting to express the sentiment of the House of Representatives to the effect that the United States should sever diplomatic relations with Franco Fascist Spain.

There is overwhelming sentiment throughout the country in support of this proposal. Newspaper editorials and radio commentators have pointed out how inconsistent it is for us to claim our devotion to democracy and our antipathy to fascism while, at the same time, we continue to appease fascism's stepchild, Franco Spain.

In this connection, I draw the attention of my colleagues to some recent vigorous editorials in the Nation's dailies.

Here they are:

[From the Montgomery (Ala.) Advertiser of February 1, 1945]

FRANCO REBUFFED

Generalissimo Francisco Franco's course since, through the farce of "nonintervention" and the active assistance of Hitler and Mussolini, he gained control of Spain, has been a devious one indeed. When the Hitler forces were spreading through Denmark, Holland, Belgium, and France, Franco showed every evidence of being greatly pleased at the success of his benefactor. When Mussolini fell upon his prostrate and defeated neighbor so as to be in at the kill, the Spanish dictator was still glad. Totalitarianism was showing that it was the form of government which, through efficiency, could overcome the decadent democracies and force its will upon the world.

Then, partly because one of these decaying democracies was able to achieve a miracle of production and turn the tide against the Nazis, the world picture changed, and Franco was an uneasy witness of a decline in the greatness of those who had established him in power in Spain. But to this moment, though it has been obvious that Germany had failed in this attempt to dominate the world, Franco has persisted in aiding the Germans by whatever means he could command, while at the same time addressing fair words to the British and Americans.

It was from Spain that innocent shipment of oranges went to feed British children, only to explode with hidden bombs on arrival in English ports. It was from Spain that a picked force went out to join the battle against the Russians. It was from Spain, allegedly, that many a submarine sneaked out to sink American and British shipping. It was the Spanish threat which delayed our progress through north Africa, because Franco chose the moment of our landings to increase the strength of his garrisons in Spanish Morocco.

No wonder many expressed surprise that shipments of American and British supplies were permitted to go to Spain, to keep this unneutral fellow neutral. Everyone knew that Spain's neutrality was all too similar to that of Mussolini, who stayed neutral only until the opportunity arose to seize a portion of France. Had things gone differently, few doubt that Franco would have taken advantage of British weakness to seize Gibraltar and announce that he, too, was at war with the democracies.

Now this little dictator, seeing that his friends are lost and can offer him no further assistance, has had the impertinence to address a message to Churchill suggesting that, since Germany is defeated, Europe is threatened with Sovietization, and proposing that he negotiate a peace between Germany and Britain, and then Spain and Britain may take the lead in organizing western Europe to save it from communism. One correspondent reports that Franco explained this new proposal as stemming from his Christian principles. In any event, he proposed a world security organization in which Spain and Britain would be the main pillars.

Mr. Churchill has been condemned for his dallying with this little admirer of Hitler and Mussolini, but this time the British Prime Minister responded with a slap from which Franco may not soon recover. Mr. Churchill spurned the Spanish offer to act as

mediator between Germany and Britain and discounted the alleged threat of Russia, and not only did he do this, but he sent a copy of his message to Moscow, so that the Russians might know how Britain stood in the matter. Furthermore, according to some reports, he advised Franco that it was most unlikely that the Spanish dictator would have any part in the peace negotiations or any immediate role in the United Nations organization.

Mr. Churchill is right in thus rebuffing the generalissimo. While Franco has not been an actual belligerent, his actions have cost us ships and time and lives. He deserves to be treated with coolness and suspicion.

[From the Washington (D. C.) Post of February 1, 1945]

A SPADE IS A SPADE

There is a refreshing directness and simplicity about the explanation by the Guatemalan Government of its severance of diplomatic relations with the Franco government in Spain. The Franco regime, in the words of an official Guatemalan decree, is "of a totalitarian type whose ideology and procedure are repugnant to the principles of the Guatemalan revolution and the postulates of a democracy. The Spanish Falange constitutes a reactionary focus whose maneuvers represent a risk for continental security and perturb the transquillity and peace of the Guatemalan Republic." The charges are, of course, undeniable. They are common knowledge. They apply with equal force to every republic of this hemisphere which subscribes to democratic institutions, not excluding the United States of America.

The Guatemalan reaction, however, is highly irregular. As diplomacy is conducted nowadays, the totalitarian nature of the Franco regime simply affords a reason for strengthening our ties of friendship with it. And the mere fact that its creature, the Falange, is striving to undermine Pan-American unity and our democratic form of government suggests only that we should turn the other cheek. The Guatemalans apparently still regard this as an ideological war and have gone so far as to put a literal interpretation upon President Roosevelt's assertion, made in 1943, that "we will have no truck with fascism in any way, shape, or manner. We will permit no vestige of fascism to remain."

The Guatemalan action is not only unconventional; it is downright embarrassing. For here is the United States, sponsor of the Monroe Doctrine, on terms of perfect amity with a European government which is perturbing the tranquillity and peace of one of our good neighbors. It is a trifle irksome, too, to have the leadership in championing democratic postulates wrested from us so unceremoniously by a country which makes no pretense of being a great world power. There is no justification for what Guatemala has done to us—no justification save candor and conviction and common sense.

[From the St. Louis (Mo.) Star-Times of February 9, 1945]

CHURCHILL'S INDIGNATION HAMMERS FRANCO'S BRASS

For sheer, unmitigated gall, there is no matching the Spanish usurper, Gen. Francisco Franco. The way the man who came into power on Nazi and Fascist bayonets struts around as a friend of the Allies is almost beyond belief.

A new and amazing example of his effrontery was revealed yesterday by Frederick Kuh, London correspondent of the St. Louis Star-Times and the Chicago Sun. Kuh was able to disclose that El Caudillo had not only offered to negotiate a peace between the Allies and the two remaining Axis partners, Germany and Japan, but that he had also brazenly proposed a British-Spanish alliance against the Soviet Union.
